The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 444. New Series. SATURDAY, JULY 7, 1906. (Registered as a Newspaper.) Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new sts of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Some Motor 'Bus Promotions.

Company promoting, like many other trades, frequently becomes, as it were, specialised. Once the public mind gives evidence of partiality for one particular method of losing money, a whole crowd of impecunious and hungry men will immediately be found ready to cater for its taste. Many such incidents have occurred during the last decade and will be readily recalled. At one time it was the cycle boom. Then horseless carriage companies of any kind, shape, or size were certain of a sympathetic reception. The textile trades also had their turn, and soon after that the public was giving its savings away to vendors of over-capitalised iron and steel companies. A cold storage mania has likewise been witnessed, the promoters, with a craftiness that can only be admired, placing their wares before the public in the dog days. The latest lunacy, but by no means the least, is the motor 'bus craze. In this case, happily, it is the promoter more than the investor who has given signs of incipient insanity. A rare lot of money has been spent or wasted on registering, promoting, underwriting, and advertising numerous motor 'bus ventures during the last six months, and at an offhand guess we should say that, taking one company with another, the public response has scarcely repaid the initial outlay. In circumstances like these it is not a bad usage, to borrow Mr. Morley's classic phrase, to follow up the appeal to the public by searching the records at Somerset House just to ascertain what has actually happened. The time spent in research is frequently amply repaid. It certainly was when we overhauled a few of these motor 'bus indiscretions some days ago. The London Motor Omnibus Company was one of the enterprises we took in hand, but it can be passed by for future reference, because it is probably the most legitimate concern of the lot and does not come into the same category as some of the others. It is, of course, not surprising that one of these ventures has provided the opportunity for a Stock Exchange rig. We told part of the story some weeks ago in the columns of the REVIEW. About the middle of May the prospectus of the Alliance Motor 'Bus Company made its appearance, offering one-half of a total capital of £200,000 in £1 shares. Let it here be stated, in order that there may be no misunderstanding, that the directors and their friends underwrote 10,000 shares out of a total of 35,000 shares so dealt with. The public response, however, proved to be of the very poorest, and we gather from the list of shareholdings that the ordinary outsider took up only a few hundred shares. Thereupon, so the story runs, the underwriters were informed that they would have to take up about 98 per cent. of the shares guaranteed. Now, some kind of a market had been made in the shares, and in order to free themselves of liability, and perhaps "make a bit" at the same time, the underwriters proceeded to sell. Whether they overstepped the mark and sold beyond the shares underwritten, in the almost certain expectation of getting as many shares as required, we do not know, and should not care to express an opinion. Anyhow, the shares sold seem to have been bought by the "shop," and one day—we are just re-

iating the story as it has been told—the underwriters were politely informed that they had been relieved the subscriptions having gone beyond the amount guaranteed. Now, the question is, who subscribed the shares, and why this sudden outburst of enthusiasm for the company by about half-a-dozen men who certainly do not give the impression that they have oceans of wealth lying rotting? Getting no allotments, the underwriters were naturally "out," or short of the amount sold, and the quotation for the £1 shares was very soon in the neighbourhood of £10. We may as well introduce the list of shareholdings at this point, because it will assist towards a proper understanding of the position. The minimum subscription as mentioned was £35,000, and the total amount allotted was £35,842, as follows :—

Irene Hore	50	D. Mackenzie	5
George Carter	25	Percy Gibbs	6,000
Thos. Brookbank Simpson	100	Bromley and Co.	3,000
Algernon H. H. Armes	10	Richard Edgar Wrightson	4,000
†Hugh F. Clutterbuck	200	Augustus Chas. Baker	2,000
Henry R. Harvey	10	Alexander Rawlinson	750
Christopher Copeland Grimes	5	Futcher, Head and Co.	500
Walter Budd	5	George Edward Miall	250
Kate Mayes	20	†Stephen Kurtesaw Albright	350
James L. Melham	2	Chas. Harrington Moore	100
E. Hyde	20	†Hon. Geo. E. Hill-Trevor	1,477
Z. de Stulick	10	†Horace Westropp Dawson	1,764
Wm. Fredk. Pym	50	†John Alexander McCandlish	662
Thos. Clementina	30	†Frederick Wm. Kerr	200
Helen Sibeth	20	D. A. Palikoff	2,000
Arthur Westcott	100	Ernest Werder Mullar	2,000
Edward Glossop Wills	60	John Barwise Lee Roberts	4,000
Albert Edward Harding	10	Ada Edith Wells	500
Edith Cox	10	Hetty Cooke	1,620
Aubrey Woolls	50	Adolf Franc	2,000
Isabel Lucy Hall	10	Albert Wm. Connolly	842
Rose Klamber	10		
Charles Abbott Gale	5		
Louise Diob Gourville	5		
Rees Whitehorne Williams	1,005		

† Directors.

We hold no brief for the underwriters, but why were the directors, who were also guarantors, given full allotments while the others got none? In a singularly unconvincing and feeble letter Mr. H. F. Clutterbuck, who is also a director of the Union of London and Smiths Bank, congratulated the shareholders, probably about 30 in number, on the confidence shown by the board in their excess subscriptions. But the company offered 100,000 shares, so why go to allotment on 35,842 when many more could have been disposed of if everything was above board? The directors between them took 4,653, and there are sundry allotments between 1,000 and 4,000 that we cannot understand. The company's broker, Mr. J. B. Lee Roberts, gets 4,000. Is it true that most of these allotments took place after the lists were closed? Application has been made for a special settlement, but the matter is to be fought out in the Law Courts, and pending that the Stock Exchange Committee will hold their hands. There we may safely leave the matter, merely intimating that we have no bias in favour of either party. But a wretched affair of this kind does more damage to legitimate Stock Exchange business than most people have any idea of.

The Amalgamated Motor 'Bus.

Here we have a promotion that is a lot more humorous. It seems rather doubtful whether we shall ever hear of the thing again. This particular concern made its appearance at the end of May with a capital of £200,000, divided into 100,000 7 per cent. preference and 100,000 ordinary shares of £1 each, subscriptions being invited for all the preference and 76,000 of the ordinary shares. No underwriting was done, but the directors and friends agreed to take upwards of 26,000 shares, and no allotment was to take place unless 50,000 shares were subscribed. Whether the public applied for a single share we are unable to say, but if it did we assume the money was returned, as the first allotment covering the period from April 11 to May 18 appeared as follows :—

†Chas. Wm. French	250	Walter Ed. Bennett	1
†Wm. H. Hills	250	Thomas Bower	1
Sydney Emile Garcke	1	Wallace Murray Morse	1
E. F. Cecil Bennett	1		

†Directors.

Subsequently Lord Vaux of Harrowden and John M. Fells appeared as holders of one share each, and a resolution seems to have been passed absolving these gentlemen from taking up their qualification. Messrs. French and Hills have resigned their directorships, and although Mr. Wm. L. Madgen appears to have come in, there can surely be little for him to do because the whole of the contracts forming the basis of the appeal for capital seem to have been rescinded. A preliminary balance-sheet shows total receipts from capital issued of £506, which is raised to £513 3s. 10d. by interest received. Of this £505 seems to be out on loan, expenses have amounted to £1 7s. 9d., and £6 16s. 1d. is in hand. So far as the public aspect of the affair is concerned, we fear the only thing to do is to write across our records—Amalgamated 'Bus *est mort*.

London Central Motor Omnibus.

Slightly better success attended this company's appeal, made early in April, but we cannot help thinking that a more prudent course would have been the return of the application money. Of the 230,000 shares offered out of a total capital of £260,000, just one-twentieth or 11,503 were subscribed, including the allotments made to the directors for qualification, &c. The company, while actually taking over eight working 'buses, had a most ambitious scheme, and worked out its profits on the basis of 150 vehicles running 100 miles per 'bus per day, and earning 2d. per mile. It seems impossible that the company can work to proper advantage on the slender sum provided, and even at this late date we are quite sure that the best course will be the reconversion into a private enterprise and the return of the £10,000 or so put up by the public. Subjoined is a list of the shareholdings, and it may be worth noting that a new director in the person of Mr. Wm. Tessimond Windsor has been appointed :—

Henry Hepworth Abbott	100	†Sir Wm. Frederic Miller	100
Salmon Abbas	200	Frederick Peacock	150
Chas. Baxter	160	Gwendoline Price	400
Janet Cullen	100	Juliette Emily Reckett	500
Thos. Cox	100	†Daniel Henry Redhead	1,000
Nicholas Condonyis	800	Emily Mary Ruddach	150
Howard Elkington	500	James Hurley Rosseter	100
Edwin Ramsay Adair, Hull	200	†Wm. Benjamin Richardson	100
Mary Carmichael Johnstone	200	Clarence Smith	100
James Kellas	100	Joseph John Smith	100
Reginal Lethbridge Kingsford	300	†Sir T. Skewes Cox	100
Frederick Maunder	250	Lewis R. Tomalin	100
William Munro	150	Edward Chas. Walker	200
Alfred E. Mayhew	100	Chas. Webb	100
Hugh Mayberry	100	†Wm. Tessimond Windsor	100
		Emma Porter Jule	500

†† Directors.

London Standard Motor Omnibus.

For the present our investigation concludes with a few details about this undertaking. The minimum subscription on which the directors could go to allotment was seven shares, but they promised not to proceed unless at least 30 fully equipped motor omnibuses could be in due course placed on the road. Apparently the £31,774 provided is deemed sufficient for this purpose, this total being made up by a subscription of £6,000 from a concern called the Motor Contract and Trading Corporation. This gives about £1,000 per 'bus which we suppose is sufficient. The total amount offered to the public was £200,000 out of a total of £250,000, so that in this case the sum gathered was about one-sixth of the directorial hopes. A couple of hundred 'buses was the original idea, giving a profit of over £50,000, but the annual accounts and the prospectus figures

will make a doleful comparison. We shall pursue further this motor 'bus inquiry as opportunity offers, and need now only express our satisfaction at the sensible attitude taken up by the investing classes towards these risky ventures. Appended is the Standard Company's list:—

Walter Seymour Adams	200	†F. J. E. Horstmann....	3,200
Wm. Berry Clarkson ..	500	†John Goode	3,000
Peter M. Debs	300	Tyndale White	3,400
Samuel Hutchings.....	150	Fredk. Maunder.....	250
Hy. James Knowlden ..	300	Chas. Ellis Youngman ..	200
Robert D. Wells	200	Thos. Morgan and Son..	500
Wm. Johnson Crockett..	200	Chas. Hy. Ramsbottom	350
Henry Greenwood.....	200	Josiah Smart	250
Jas. Dunlop Wilson	200	Motor Contract and Trading Corporation	6,000
†F. W. Kerr.....	200		

† Directors.

Economic and Financial Notes and Correspondence.

The Past Quarter's Revenue.

In the proportion paid into the Exchequer there was a nett increase of £1,083,750, the total being £29,981,592. In addition £1,854,708 was handed over to local authorities, being nearly £10,000 less than in the first quarter of last financial year. All branches of revenue except stamps, house duty, and income-tax show increases, that in Customs being no less than £718,000. In making his forecast Mr. Asquith looked for a decrease of £245,000 in the yield of Customs for the entire year. He also expected a nominal decline of £30,000 in the Excise receipts, but for the first quarter of his first Budget year Excise has gone up £87,000. He has also been favoured by the death duties, which yielded £145,000 more, or upwards of half the expected increase for the entire year. The Post Office and Telegraph services continue to do well, and yielded last quarter £200,000 more between them. It would thus appear that the revenue is beginning in a much more satisfactory fashion than it did twelve months ago, and in everything except the yield from stamps may be said to show some traces of the greater business prosperity now enjoyed by the country; but it is too early yet to draw inferences of any dogmatic kind from the figures, and many changes may occur before March 31 next. One thing is, however, certain, whatever money comes in will be wanted, for the expenditure gives no sign of diminution, if we are to make anything at all out of the summary of receipts and charges issued with the revenue accounts. This indicates that while from all sources the income of the quarter was £42,573,882, the outgoings, including £5,433,000 due for debt charges at the end of the quarter, amounted to £44,142,971, so that there was a deficiency of fully £1,839,000 to be met out of the current quarter's income. These totals, however, tell us almost nothing, and we wish Mr. Asquith would bend his acute intellect to the study of the nation's quarterly balance-sheet so that we might get it in a shape that would enable critics and students to separate the items up and to see what represented cross entries, what new expenditure. If he would also include in his return the incidental spendings of the various departments, together with the non-classified or non-budgeted receipts, we should be in a better position from time to time to estimate whether the Treasury was flourishing or the reverse. For the sake of clearness and for future reference it may be well to recite the items of the quarter's receipts, taking the gross figures. Thus Customs yielded £8,496,126, of which £43,126 was paid over to local taxation. Excise gave £7,536,689, and of this total £649,689 also went to local authorities. Estate and other death duties produced £4,976,893, of which £1,161,893 went to sustain local extravagance—in the Poplar style now and then. Then stamps yielded £1,906,000, land tax £50,000, house duty £280,000, property and income tax £3,837,000, the Post Office £3,100,000, the telegraph service £1,000,000, crown lands £110,000, and Suez Canal share and other receipts £5,000, while miscellaneous accounted for £538,592. It follows that about £23,245,000 of the quarter's gross income of £31,836,000 came from taxation.

Spiers and Pond.

It is not difficult to imagine the state of mind produced by a perusal of the annual report of this crumbling enterprise. It must be one of absolute despair because there is not a single alleviating circumstance to set against the deplorable position unfolded, and we fear the only difference between this year and last is that the company is 12 months nearer the inevitable end. It appears that in May last the directors did so far unbend as to admit that the continued shrinkage in the company's earnings was causing some anxiety, and communicated with 10 of the largest shareholders, holding in the aggregate over £635,000 in the various shares and debentures. Why was the decision to act thus left so late that those appointed to investigate the affairs of the business have evidently not had time to report? The directors say they placed at the committee's disposal every facility for investigating the causes of the heavy drop in profits and the general position of the concern and its management. This committee seems to have appointed a small sub-body which will no doubt report their views to the meeting to be held on Monday, but it is not fair to ask shareholders to be content with a mere verbal statement. At best a report submitted in this way can reach only a very small section of proprietors—the few in a position to attend the regular gathering—leaving the great majority with little or no knowledge of the way matters are going. We give the directors their due, and record the fact that they do not ask for proxies, but the truth of the matter probably is that they would like to be quit of the whole business if they can depart without giving an impression of bad faith. We are forced to conclude that this is the true meaning of the statement that the chairman and managing directors, who are under contracts having unexpired terms, have placed the question as to the continuance of their offices in the hands of the committee. These gentlemen, whoever they are, ought to have a very illuminating report to make, but even more important should be the light which the two directors appointed a year ago can throw on the present situation. They have had far more opportunity of probing and getting at the true facts, and we are looking to Dr. James White and Mr. W. B. Hopkins for the most enlightening information. Does anyone know the real causes of the breakdown? Time was when the accounts showed profits sufficient to pay 10 per cent. on the ordinary shares, and although such rate was never justified it goes to prove that good business was possible once on a time. We know the company's hotels have a lot to answer for, but everything cannot be put down to their discredit, and we fear that an absence of enterprise, initiative, and ordinary prudence are potent causes of the distress. Competition and rivalry were ignored as something beneath contempt until they had undermined the company's trade, and be as lenient as one may, there seems to be no disguising the fact that much of the present trouble has been self sought. Nor can the shareholders be held entirely blameless. Their supineness and apathy in face of repeated warnings, lulled the directors into a policy of drift until the ordinary £10 shares have a nominal quotation of 1-2—a transaction took place the other day at 20s.—and arrears have commenced on the preference shares. What the next thing will be we dare not think of, as a comparatively small further drop in profits will produce a shortage in the debenture charges.

As we know, the debenture debt is a terrible one. Including a mortgage of £40,000 on the Blackpool property, its total is £1,046,000, requiring £46,340 a year in interest, and as the nett balance for the 12 months to March 31 was £54,882, we can see what

a desperately near thing it is. The leases of the Dover Harbour refreshment bars and the Freemason's Tavern have expired without being renewed, and although the turnover has been increased by the opening of the Central restaurant at Ludgate, the business done fell off no less than £115,662 to £1,347,326. It would be difficult to overrate the far-reaching nature of this slump, because it is probably business gone never to return, and it is almost enough to rouse savage feelings to hear the directors saying that the company has been greatly affected by the ever-growing competition, the increase in rents, rates, and taxes, and the very serious depression in trade generally, causing a decrease in the sales of wines and other articles of luxury. Of course there has been competition, but it has been competition of the directors' own inviting. Rivals are certain to spring up when business can be captured as easily as it can from this concern. As for trade, that has probably been better than for quite half a dozen years, and we doubt if the public who used to patronise this company has bought or consumed less. More likely is it to have transferred its custom elsewhere. With £100 for transfer fees the total revenue is raised to £1,347,426, but we find that the drop in outgo was only £81,909 at £1,292,543, so that the profit from this still enormous turnover was no more than £54,882, the startling decline of £33,764. Amazing to relate, we now discover that from last year's credit of £12,778 carried forward there had to be deducted £6,677 for managerial bonuses, and as £1,000 was placed to a bad debts suspense account, the sum now brought in is merely £5,101. This is added to the balance of £8,542 remaining from the profit, after providing £46,340 for debenture interest, making £13,644 at the directors' disposal. The board has almost entirely foregone its remuneration this time, the total charge for directors' fees being only £91. Auditors' fees take £500, debenture trustees' remuneration £840, and income-tax £511. Then £1,410 is contributed to the debenture redemption fund, and £7,500 has provided one quarter's dividend on the preference shares, leaving £2,791, which is too small for any useful purpose and will be carried to next account. This means nine months' preference dividend in arrear, and nothing short of a drastic clear up and reorganisation will meet the case. The ordinary share capital of £600,000 has now had nothing for two years, and must suffer severely when an attempt is made to close up the gaps in the assets. Now we can take a final glance at the balance-sheet. The floating liabilities, including £13,000 borrowed from bankers, run over £210,000, and the only really free assets against this are debtors £62,234, cash £13,662, and bills receivable £1,042. Wines, spirits, provisions, and other goods, £206,324, could hardly be reduced below that figure, and investments of £53,917, we presume, belong to the debenture holders against their redemption fund of £40,055. In addition we have amortisation of leases reserves £51,232, and general reserve £29,380, but what are they against freehold and leasehold properties £1,776,448, and plant, furniture, &c., £465,220? Each shows small decreases compared with the previous year, but ordinary shareholders dare not think of the figure which ought to be written off to bring the items down to bed rock.

British Fire Insurance Business in 1905.

No traces of the San Francisco fire losses appear in the accounts of our fire offices for the year 1905, a summary of which is given below in the form used for many years now by the authority to whose courtesy we owe the table. This fact makes the study of these figures possess unusual, if rueful, interest. They are good, better than the average of former years, and had no catastrophe happened since the books were made up we should have seen a rise in the price of insurance shares instead of the distressing fall which recent months have witnessed. No company in the list used up its entire premium income in meeting losses and expenses last year. The very first company on the list, the British Law, was peculiarly fortunate in the matter of losses, for if these had reached the figure of the next one, the Norwich Union, it would have seen upwards of 99 per cent. of the premium income disappear. Why its expenses should be so excessive is a point that surely requires to be cleared up. All fire office expenses, however, are high, in no case less than 30 per cent. of the premium income, and in this direction there surely is ample room for reform. Perhaps the most consoling fact in the subjoined table is the magnitude of the reserves which the companies most deeply involved in the San Francisco calamity possess. Two of the worst stricken amongst these companies are the London and the Royal Exchange, and both possess funds amply sufficient, one would hope, to meet their losses to the full without involving any sacrifice by shareholders other than what may be implied in a temporary reduction in the dividends. This is satisfactory as far as it goes, but the lesson of the San Francisco losses is also a kind of summons to the companies to economise in expenses. If they could bring down their charges to an average of, say, 25 per cent. of the premium income, and utilise the difference, the 10 per cent. or so saved, to at one and the same time augment their reserves and grant concessions to the public, their future prosperity would probably be greater than any yet seen. And surely the gradual consolidation of fire insurance business into the hands of a comparatively small number of powerful companies must tend to economy as it also ought to tend to liberality of treatment to the insured. Last year, for instance, the County and Westminster Fire offices both disappeared into the Alliance, and the Sun absorbed the Patriotic. Other amalgamations are, we believe in the air, and will probably soon be accomplished facts. It is in the law of progression that this should go on, because small companies possessed of insignificant reserves cannot hope to stand the shocks given by occasional fire calamities. The stronger an office is in reserves and income the better able it will be, not only to deal generously with its clients, but to withstand misfortunes of all magnitudes, the better able also to regulate and reduce excessive working expenses :—

ABSTRACT OF BRITISH FIRE OFFICE ACCOUNT FOR 1905.

Company.	Premiums.	Losses.	Per Cent. of Losses to Premiums.	Per Cent. of Commission and other Expenses.	Funds in hand beyond Paid up Capital.

The Hudson's Bay Company.

A very interesting speech was that delivered by Lord Strathcona at the shareholders' meeting of this company held on Monday last, and we are glad that he did not lend countenance to the extravagant estimates of the company's assets for which the "bulls" of the Stock Exchange have been responsible. At present the market price of the shares indicates a valuation in

excess of £8,500,000, and there are plenty of market prophets to be found who maintain that it ought to be £10,000,000, that the £10 shares, in other words, should be valued at £100. It may be that these people will ultimately prove right, but in the meantime, and on what may be called full estimates of the value of the company's assets, the price of 85 would seem to be quite a high one. We cannot make the assets quite pan out to that big figure. Assume that the value of the trade equipment and of the capital and reserves together is £2,000,000, and that the land of which the company still possesses nearly 4,000,000 acres unsold is worth £1 per acre; put also the town sites at £1,000,000, and we only reach £7,000,000, as what may be called the present value of the assets. No doubt as time goes on the price of land may increase, at least we hope it will in reason, and that is the view of the board, else it would not have adopted the policy of restricting sales, especially sales of town sites. On the other hand, there will be ebbs and flows in the prosperity of the Canadian North-West, and the present price of the shares in the market does not seem to leave a margin for any set-back whatever. A bad harvest would be certain to knock at least 10 per cent. off the current price of the shares, and a succession of two or three bad harvests might easily bring them back to the neighbourhood of 40. Meantime the whole territory over which the company's possessions are spread is wonderfully prosperous, and it has still 3,820,446 acres of its allotted land left unsold. Moreover, the prices have been rising, so that in the three months, April, May, and June, of the current year, the average price obtained has been £1 14s. 11d. per acre, while in June the average rose to £1 17s. 2d. per acre, the land being mostly disposed of to real settlers. The land of the company at Edmonton available for town sites is also rising in price in a remarkable way, thanks to the influx of population, and to the concentration of railway routes at that point. Edmonton is to be the capital of the province of Alberta, and will have several lines of railway converging upon it or passing through it. It will therefore be a centre for immigrants, whence they will spread over the surrounding country, where the population is increasing faster probably than in any other region on the American continent. Last year, for example, 146,266 settlers arrived in the west, the majority of whom made their homes in the provinces of Saskatchewan and Alberta. Of this number 54 per cent. were British, 34 per cent. American, and 12 per cent. from the continent of Europe. Such an increase of population implies an enormous extension in the area under cultivation, so that at present the outlook is good, and even the fur trade did remarkably well last year, although it is a branch of the company's business which must decline as the territory fills up with settlers. For all that, we should not be too eager to buy the company's shares at the current price.

The Mutual Reserve Swindle.

We hope Mr. Lloyd-George, who is a person of energy and resource, will not rest satisfied with the impotence of his department in relation to alien or other insurance companies. He was asked some questions on Tuesday about that shocking American imposture, the Mutual Reserve Life Insurance Company of New York, which has taken to its heels and fled the country, leaving nothing behind, not even the £20,000 originally deposited as caution money with the Board of Trade. He had to admit complete impotence. His department has no power over insurance companies, can do nothing to check fraud or even extravagance in any company, domestic or foreign. Good will come out of the Mutual scandal if the Government can be persuaded to strengthen the law so as to give the Board of Trade much fuller powers than it now possesses. At least some provision ought to be enacted similar to that which has come into force in France, whereby alien insurance companies seeking to do business in this country would be compelled not only to lodge a heavier amount of caution money than is now demanded, but to keep the money collected from British insurants always in the control of British trustees. No life office or insurance office of any kind, no matter how strong or rich it may seem to be, ought to be allowed to convey the securities representing the money of British policy-holders out of the country. This does not mean that the money may not be invested in foreign securities. We are not so unreasonable. What we should stipulate for is that the funds wherever invested ought to be entirely in the control of trustees resident in this country, British citizens. If a law of this kind had been in force the Mutual Reserve imposture would have never plundered to the extent and with the impunity it has done for a quarter of a century. Up and down the country it went in England, Scotland, and Ireland, beguiling citizens to enter into contracts with it mainly for the purpose of robbery, that a "boss" or two and a few agents might live royally. It has been a scandalous imposture from the first, as we have never hesitated to proclaim it, and now the policy-holders are left absolutely without remedy of any kind. The company has gone, leaving nothing behind, and we do not believe that there are any assets worth gathering in the United States even if the policy-holders went there to maintain their claims. The imposture is played out, and many hundreds of people in this country are left to rue their folly. This ought not to be. The powers of the Board of Trade must be strengthened.

Canada and the Canadian Pacific.

Canada last Monday celebrated the fortieth anniversary of its erection into a Dominion, and the opportunity was taken by some folks to glorify the Canadian Pacific Railway above every other product of that great political unification. This was natural and not unreasonable, for if the Dominion Government has made the Canadian Pacific a great corporation by its gifts and land alienations there can be small question that the railway has in turn consolidated and become master of the Dominion. The text, however, was the wonderful prosperity of the country, which we are delighted to note always, and to sometimes criticise. And quite an eloquent tribute to the Canadian Pacific Railway was given by the Ottawa correspondent of the *Times*. He quoted Senator Purley, "one of the pioneer farmers of the North-West," as having declared last year that within a decade Canada would produce sufficient wheat to feed all the people of the British Isles, only to enable that gentleman to correct his then prophecy by reducing the time to five years. We shall be delighted if Canada can give us all this wheat, and so soon, but how is she going to sell it to profit in competition with the wheat of India, the United States, Argentina, the Danubian countries, Russia, and possibly other sources of supply? It is not a safe foundation to build "national prosperity" on, this capacity to produce wheat. What else is the Canadian North-West going to produce? We ask this in no carping spirit, for the country has unquestionably done wonders. "Twenty-five years ago," says the correspondent, "when Lord Mount-Stephen and Lord Strathcona took up the enterprise of the Canadian Pacific Railway, they were told that the road would never pay for its axle grease." Not quite that, but they were told, by this writer amongst others, that for many years it might not do more than pay for axle grease over large portions of the line. We were wrong in this, not realising the extent to which the backing of the Dominion Government, its money gifts, its land grants, and tax exemptions, together with the well-rewarded liberality of the British capitalist and the skilfully stimulated inflow of population would build up the country and the line with it. "Yesterday the books of the Great British Canadian Railway closed with gross earnings for the year aggregating over $60,000,000," says this same correspondent, "although it is but 20 years last Thursday since the first Transcontinental train of the Canadian Pacific

pulled out of Montreal." This business showed an increase of $2,000,000 over that of the preceding year, and $4,000,000 over that of 1902, and we are asked to accept this as one of the truest indications of Canada's present prosperity. Well, in a measure we do so, and trust the prosperity will continue and increase, in spite of land booms, hard winters, and competition. Some people, however, are not satisfied with what nature and the art of government, together with the skill of the financier, have done, and endeavour to make out that the glowing record of progress is all to be put down to the credit of high protective Customs duties. "But for this Canada would never have risen," some of the tariffites are declaring. What on earth has protection to do with wheat growing, and how does it serve the farmer who has his wheat to export, if the doors of the country are shut against imports? Is he helped by dearer machinery, ploughs 50 to 100 per cent. more costly than if they had been admitted duty free, threshing machines, every implement he uses augmented artificially in price for the benefit of the few in a similar way? Does it benefit the great, the all-powerful Canadian Pacific Railway itself that it should have to pay 50 per cent. more for all its appliances, its rails, its coaches, its locomotives, and wagons, almost everything it employs in its business? Can it carry its goods cheaper because of these higher prices? No, and there lies the trouble ahead. If Canada continues to be a wheat-growing country, that and little more so far as the North-West is concerned, its population will soon have plenty of troubles to wrestle with unless the present foolish tariff is swept away.

The Italian Debt Conversion.

No one will question the right of the Italian Government to reduce the interest on its debt. That is a natural, or, at least, the fashionable, consequence of the improved position of the country's finances, which has been remarkable and encouraging of recent years. The nett surplus, for instance, upon the budget year ended June 30, 1905, was about £1,525,000, and it was estimated that the surplus on the year just closed would amount to nearly £1,900,000. To some extent the figures may be mixed up a little with the capital outlays upon railways and other public works, but it is none the less true that the revenue of the country is steadily expanding, so that it is becoming increasingly able to meet the public charges. Therefore, the Government is justified by its improved credit, and by example, in endeavouring to convert the existing 5 per cent. Rente into a stock bearing 3½ per cent. interest. This is not such a big reduction as it seems, because for many years back 20 per cent. has been taken off the nominal interest payable, and the effective yield of the debt has consequently been no more than 4 per cent. But at 4 per cent. nett it is a very heavy burden, costing the kingdom nearly £16,000,000 per annum in interest alone, for the total of this form of the debt is almost £320,000,000 out of an aggregate debt burden of over £508,000,000. It is now proposed to reduce the interest upon the old 5 per cent. Rente to 3¾ for the current six months and the five following years, at the end of which time the rate will come down automatically to 3½ per cent., the Government giving a guarantee that no further conversion will be attempted before December 31, 1920. When the interest ultimately reaches 3½ per cent., the saving to the State will be about £1,600,000 per annum—a substantial gain.

While this is all true, and the step one to be on the whole commended, we are inclined to agree with the market in thinking that the change is being forced upon holders with too little notice. A good deal of Italian Rente is held by the British public, not so much, perhaps, as in former years, but still a considerable number of millions, and these holders, together with all others in Italy, France, and elsewhere, have only been given one week in which to decide whether they will be paid off at par or submit to the prospective reduction in the rate of interest. Evidently there are many holders who are not inclined to accept less than 4 per cent. on money advanced to the Government of Italy, and the notice issued by Messrs. J. C. Hambro and Co., and Baring Bros. and Co., Limited, had the immediate effect of bringing a considerable number of sellers into the market. The offerings of stock were at first taken at about 2¼ premium, but the pressure soon brought the premium down to 1¼, and by Wednesday afternoon the market felt gorged and disinclined to take up any more. If they are unable to sell, and do not give notice meanwhile of a desire to be paid off, the holders of Italian 5 per cent. Rente will after to-day have no option but to accept the lower rate of interest tendered by the Italian Government. There is thus an air of sharp practice about the brief interval of time granted, which will not have a favourable influence upon the immediate future course of the markets for this security. Many holders will hear nothing whatever about the contemplated change until too late to do anything, and if those who do see a notice and decide to demand repayment of their capital should represent a sensible amount of stock the Italian Government will be compelled to come into the market with a large issue of a conversion loan at the time when the feeling there will be rather against it. There is no help for it now, and we hope the soreness may soon pass off, because Italy deserves to prosper, and to find a free market for her public obligations.

The United Kingdom Temperance Institution and Star Life Office Amalgamation.

No more important step than this has been taken amongst insurance offices for a considerable time back, and on the whole we welcome the step. This is the age of powerful corporations, and if insurance fusions are effected in a spirit of economy they ought to be good for policy-holders. Both these offices are excellent, and stand well in the forward ranks of British life insurance societies. The Star Life Assurance Society is a limited company, and the United Kingdom Temperance and General Provident Institution is a mutual one, so that it may at first sight seem a little difficult to bring the two together. It is proposed, however, to pay off the Star Company's shareholders by giving them £50 for each of the 4,000 shares with 25s. paid up. In other words, the Star shareholders will receive £200,000 to wipe out a paid up capital whose par value is only £5,000. Such a tiny capital has always been something of an eyesore, and has subjected the company to many a gibe because, owing to its great prosperity, large sums of money have been distributed to the shareholders as profit bonuses at each quinquennium. Within the last 15 years, for instance, they have received £115,000 over and above the interest of 5 per cent. regularly paid. To buy these shareholders out for £200,000 is therefore by no means an extravagant operation. The price may be full, but it seems also fair in the circumstances, and the money will easily be found without touching any of the resources set aside for the policy-holders.

Having thus brought the two businesses into harmony on this point, and put the United Society in a position to devote the whole of its future profits to the policy-holders, the directors have gone on to take another important step, good also for its clients, in that the rate of expenses to premium income is to be limited to 10 per cent. henceforth upon the business of the Star Life Assurance Society extant at the date of the amalgamation. This alone will in future years mean a sensible addition to the profits of that branch of the business for, until quite recently, the Star's ratio of expenses was rather high, and in spite of a reduction of about 4¼ per cent., comparing 1896 with 1906, the proportion was still almost 14 per cent. in the past year as against less than 12 per cent. for the United Kingdom Temperance Office, whose ratio, however, has rather crept up during the last few years, though still quite low. Presumably the expense ratio of the United business will as far as possible be brought down towards this standard fixed for the Star Life Society's portion of the amalgamated business, and

that being so the future of the company should be one of rapidly increasing prosperity. The united assets will amount to upwards of £14,500,000 at the date of the amalgamation, and this alone will constitute the fusion one of the most important among British life insurance societies. Of recent years the Star Office has been increasing its accumulated funds at a more rapid pace than the United Kingdom Office, but it does not follow that its business was the stronger or more profitable of the two. It may be that the United Kingdom Temperance Institution gave larger benefits to its policy-holders, and provided its resources are always ample against its liabilities, there can be no fault found with this method of handling the resources. Altogether, the amalgamation is to be welcomed, and all the more perhaps that the new business of the Temperance Mutual Office has in recent years been growing in a satisfactory fashion, while that of the Star Office has declined.

The Banking Half-Year.

Last half-year should have been good for London banks. They have gained, indeed, where the discount houses have suffered, thanks to the higher rate of interest earned by their resources. The average Bank rate for the past half-year, for example, was £3 17s. 11d. per cent., as against £2 13s. 9d. per cent. in the first half of last year. At the same time the average open market discount rate for three months' bills was £3 10s. 8d. per cent., against £2 4s. 6d. Great as this improvement is it shows that money rates were actually against the bill discounter on the average for the past half-year, and in the circumstances it is wonderful how well the discount houses have managed to surmount the difficult time. They were helped a little by a more genial state of markets towards the end of the period, but it was never very bountiful. Banks no doubt suffered to some extent by the low average rate of discount compared with the higher average rate for short money, but this does not affect them at all in the same way as it does the discount houses. They are not compelled to go into the market and bid for money in order to provide for the daily wants of their business. Whatever deposits they have get only a fixed rate of interest, which rises and falls automatically with the movement of the Bank of England rate. And their average deposit rate for the past six months was only £2 7s. 11d., so that they had a profit and margin of 22s. 9d., as against one of only 20s. 9d. in the first half of 1905. Moreover, they did well all through the half-year with their Stock Exchange money, getting an average of about £4 11s. 2d., against one of only about £3 2s. in the corresponding half-year. Are we therefore to look for increased dividends from the banks? We trust not, and rejoice to see that, so far as announced, no upward movement has been made. Larger profits have been carried forward, as in the case of the Union of London and Smiths Bank, or added to reserves, and dividends have merely been maintained. This is as it should be, because dear money does not necessarily imply a continuance of improved profits, and the current half-year might give results of another kind.

The Allsopp Tangle.

The Allsopp reorganisation proposals are clearly leading up to a nice little squabble. During the past week Mr. Hugh Mayberry, of Glasgow, the chairman of the advisory committee, made his contribution to the general discussion, and characterised the scheme in its major details as financially weak, and not likely to bring a permanent improvement to Allsopps' affairs. That opinion will be readily endorsed by those who have studied the recommendations at all carefully. Mr. Mayberry is doubtful as to how the £87,300 cash to be found by Allsopps is to be applied, and it must be confessed that there is much mystery on the point, but the question that bothered us most was the source of this £87,000. Where Allsopps are to get such a sum of money from we have not an idea, and shall be glad of further details. A jumbling up of interests like that suggested will not put things straight again, because three derelicts have never made a solid whole yet, and it is absolutely ridiculous to pile a further huge amount of capital on top of the £5,500,000 that Allsopps are already sinking under. Lessening trade and ruinously bad investments have put a lot of this capital completely out of existence, and the fact that one of the two companies to be leased or taken over is in the hands of a receiver shows how hopeless the whole plan is. A reduction of at least £50,000 is needed in the management expenses, Mr. Mayberry says, and hints that the best course open is the formation of an assets company which would take over the whole of the unproductive and unremunerative investments. These would be liquidated to the best advantage, while that portion which was either paying its way or earning a profit would form a new Allsopps company with an adjusted capital. To carry through such a proposal, the appointment of a committee is suggested with necessary powers, the whole matter to come up for consideration at the forthcoming annual meeting next month or sooner. Some reduction or the total abolition of the £9,000 now being paid in pensions is also suggested, and without doubt this matter ought to be carefully discussed. Anyone who can afford to do without the pension should give it up. Objection is further taken by Mr. Mayberry to the methods by which future profits have been estimated, and since these profits are regarded as quite illusory he thinks the authors of the amalgamation scheme have entirely overlooked the primary point of the risks involved. So much for the opinion of the chairman of the advisory committee. Other members, however, seem to think differently, and Mr. David Jackson, who is also described as chairman, hastened to say that a majority of the committee are favourable to the plan. Mr. Mayberry's report merely expressed his own opinion, which is not shared by the remaining members, and while this is no doubt right enough, we fear that Mr. Mayberry has most accurately gauged the position.

American Business Notes.

Last week's return of the New York Associated Banks was not particularly comforting, in spite of the slight increase in the surplus reserve, which was up £228,000 to £2,411,000. That is to say, there was this margin between the banks and their legal minimum, but it was a surplus very difficult either to attain or to maintain, as is proved by the weekly detailed figures issued by these banks. The latest return available, the one appearing on June 23 last, shows that there were 16 of the Associated Banks out of a total of 53 whose reserves were not up to the legal minimum of 25 per cent. It consequently remains true that the New York Money market is still in difficulties, and the high rates to which money rose in the beginning of this week emphasise this fact.

No wonder, therefore, that the Secretary of the Treasury at Washington has been casting around to see what he could do to relieve the tension. Gold is not easy to obtain from abroad, can only be borrowed, in fact, because great as the export trade of the Union is, it is not sufficient to form a basis for the stupendous financial operations in which the Wall Street magnates have involved the banking interests of the country. Therefore, a little additional currency is to be provided for the banks, and in quite an ingenious way. The Panama Canal is under construction, and may some day get finished, so what can be more handy than to issue bonds to provide the funds necessary to pay the salaries and wages, the excessive prices for plant, &c., or part of them. The United States Treasury accordingly has printed $30,000,000 of 2 per cent. Panama Canal bonds, dated from the 1st prox., and offers them at par. Now 2 per cent. is not a rate of interest that tempts the investor, and the only

use of such bonds is to form a basis for the inflation of the banknote circulation. The banks will no doubt take this issue up because nothing is easier. They have only to print the notes and hand them to the Treasury in exchange for bonds. The notes then pass into circulation and contribute to the inflation of the paper currency already distended enough. In the present state of the American Money market, however, with its enormous over-burden of unsold and for the present unsaleable securities, this £6,000,000 of new 2 per cent. National Debt is not nearly enough. A crisis in the autumn will not be averted unless much more far-reaching measures are taken to provide the means with which to stave it off.

Some surprise was felt in New York when the evening papers of June 22 came out with the announcement that a series of trials of rebaters in the United District Court in Kansas City, in the State of Missouri, had ended in their conviction and sentencing to heavy fines and varying terms in a penitentiary. The following companies were fined in the amounts after their names:—Swift and Co., $15,000; Cudahy Packing Co., $15,000; Armour Packing Co., $15,000; Nelson, Morris, and Co., $15,000; Chicago, Burlington, and Quincy Railroad, $15,000. George L. Thomas, of New York, was fined $6,000 and sentenced to four months in the penitentiary, and L. B. Taggart, of New York, was fined $4,000 and sentenced to three months in the penitentiary. The fine imposed on the Burlington line covered four counts. Appeals were filed in each case, and a stay of execution was granted to June 29. The bonds in the cases of Thomas and Taggart were fixed at $6,000 each, and those of the packing companies and the railway at $15,000 each. Motions for new trials on the part of all the defendants were overruled. The case of the Chicago and Alton Railroad and two of its officials was sent over to September. The offences were that the freight rates on the carriage of the products of the different companies had been rebated from 35 cents the hundred pounds to New York, the published tariff, to 23 cents special rebate rate. Thomas and Taggart had acted as rebate brokers between railways and a number of wholesale shoe and leather dealers and others to the extent of $61,892 in six cases.

Washington dispatches of June 22 received in New York stated that the entire time of the Cabinet meeting held that day at the capital was devoted to a consideration of proceedings contemplated by the Department of Justice against the Standard Oil Company. An investigation, it appears, has been going on for several weeks into the transactions of the Standard Oil Company, with a view to procuring evidence that would justify a prosecution if it were found that the law was being violated. The sensational character of these announcements and the sudden and quite unexpected vote on the Panama Canal question left the general public in New York in a somewhat sceptical frame of mind, as it was called to mind that Congress was to adjourn on June 28, and that the campaign for the November elections opens after the summer recess. On Wall Street the adjournment of Congress was considered a "bull" point, because it will temporarily end disturbing legislation.

The election of a Colonel H. A. Du Pont as Senator from Delaware to the Federal Senate promises to bring a powder trust scandal of considerable importance to light. A charge is made that in return for a contribution of $70,000 to the Republican Campaign Fund, a commission of which Colonel H. A. Du Pont is a member, was allowed to fix the price at which powder should be sold and the proportion each member of the trust would be allowed to sell, this being to the prejudice of independent companies. A further charge is made that the Du Pont trust enjoys a monopoly of furnishing smokeless powder to the United States Government for the Army and Navy, which can be made for 35 cents a pound, but for which it makes the Government pay 75 cents. In connection with this affair, it is also stated that not long before the election of Colonel Du Pont to the Senate the Government was about to send agents to investigate the doings of the Powder Trust, but orders were suddenly issued changing the destination of the agents from Delaware to Pittsburgh to look into another trust. The significance of these charges, which there has been no effective attempt to refute, does not need to be pointed out to the intelligent reader.

There appeared in New York evening papers of June 19 a note to the effect that although Mr. Charles A. Peabody had not officially given out the names of the members of the general committee which is to have supreme control of the affairs of the Mutual Life Insurance Company, it was known that, in addition to President Peabody and Vice-President McClintock, who are ex-officio members, the committee will consist of Messrs. George F. Baker, Dumont Clarke, John W. Auchinloss, Charles R. Henderson, and Charles D. Dickey. Commenting on this list, one of the papers says that it appears likely that the fight to free the company from the control of the large financial interests that practically dictated the Mutual's policy and business during the McCurdy *régime* will have to be continued for some time, as all of these gentlemen are connected with many big corporations. It then proceeds to give the list of companies to which each belongs as director or in some other capacity. Mr. Baker is a multi-director, being a director of the First National and of 11 other banks and trust companies, of the United States Steel Corporation and a number of others in which the Morgan interests are influential, and of the Erie, the Lackawanna, the New York Central, and 11 other railroads, and of a number of other corporations. Mr. Henderson is head of the firm of Henderson and Co., bankers, and director of the United States Mortgage and Trust Company, the Title Guarantee and Trust Company, of several banks, trust companies, fire insurance companies, and other corporations. The other three figure as presidents, directors, or members of firms, railway, trust and insurance companies, cable, express, and sugar beet companies, and of a variety of other corporations. To all these enterprises the having of their directors on the supreme committee of a company like the Mutual, with its enormous surplus, could not fail to be an inestimable advantage, but whether it would be the same for the policy-holders is another matter, about which they should have something to say later on.

Four indictments were filed by the Federal Grand Jury in New York on June 18 in the Tobacco Trust inquiry. They were concerned only with the monopoly exercised in the case of the liquorice paste, which is a necessity to every maker of smoking and chewing tobacco and to most cigar makers. Bail was fixed at $5,000 in each case.

Just when everyone in Washington understood that President Roosevelt and the leaders in the House of Representatives had agreed upon an effective substitute for the Beveridge Meat Inspection Bill, passed without a moment's consideration by the Senate, a discussion in which Senators Proctor, Beveridge, and Lodge led, was started in the Senate on June 21. The points on which they laid special emphasis were, that the meat-packers should pay the cost of inspection, and that the labels on all canned goods should bear the date of inspection. The packers' lobby had succeeded in getting the cost of inspection thrown on the public, and the clause requiring the date to be stamped on the label, thrown out. The Speaker of the House, Mr. Cannon, and Representative Wadsworth from New York, have been zealous champions of the packers, the former basing his opposition to making his clients pay the cost of inspection on constitutional grounds. In the course of the discussion Senator Lodge went off into a heated tirade, not only against the packers for having by their obstinate resistance to legislation regulating their business compelled the President to make public the Neill-Reynolds report, and thus injure American trade, but also against the British criticism of American corruption. He threw back the *tu quoque* vigorously, and read despatches and extracts from articles showing that there was as much corruption in England as in America. He brought up the Hooley and Whitaker Wright affairs,

the guinea-pig aristocrat directors of public companies, the horse-buying scandals during the South African War, and other matters to show that commercial probity was no higher in England than among the meat-packers of Chicago, and spoke of the British brother as "rolling up his eyes and holding up his hands, and saying how wicked we are, and, by inference, how good he is." "I weary of this talk," he said, "which I see in virtuous foreign papers of how bad we are."

An interesting fact, and one which British food inspectors may find worth following up, is that oleo exports from the United States go chiefly to the butter-making countries, the largest part to the Netherlands, which in 1905 took $6,500,000 out of the $11,500,000 worth exported.

To show how large a trade there is to be affected by the Chicago meat scandals, it needs only to mention that the total value of the exports of meats and meat products from the United States in the eleven months of the fiscal year 1906 ended with May, aggregated more than $180,000,000. This is a larger exportation of those articles than in the corresponding period of any other year in the history of the export trade, and an increase of practically 60 per cent. when compared with 1896. The increase is in all the principal products, but especially in lard, oleo, salted pork, and fresh beef and pork. For the ten months ended with April, up to which complete returns are available, the exports of various articles were: lard, $51,500,000; bacon, $29,000,000; fresh beef, $20,000,000; hams, $16,666,000; oleo oil and oleo margarine, $15,000,000; salted pork, $10,000,000; canned beef, $5,750,000; salted beef, $4,000,000; tallow, little less than $4,000,000; sausage casings, $2,225,000; and fresh and canned pork, $1,000,000 each. Great Britain, according to the report of the American Department of Commerce and Labour, is by far the largest purchaser of American meat products, taking in 1905 practically 90 per cent. of the total.

On June 21 the Inter-State Commerce Commission met at Washington to continue its inquiry into the coal and oil traffic on the railways. The sitting was mainly taken up with the examination of Mr. J. B. Thayer, fourth vice-president of the Pennsylvania Railroad Company, and Mr. Trump, general superintendent of transportation on the questions of mine rating and car distribution. The statements made were involved, the operations of the road and its relations with the coal companies and small dealers being complicated by the strikes, and the great increase of business, which rose from 16,418,000 tons in 1899 to 29,446,000 tons in 1905; and there were 301 coal-owners to deal with. Mr. Thayer, on resuming his seat after making his statement, said, with some warmth, "there is no underhanded business in the matter of car distribution." The general aim of the two witnesses was to establish the fact that the railway had acted as fairly as was compatible with the business interests of the line, always giving preference to those collieries with whom they had contracts over merely speculative shippers. They also contended that during the coal strike and famine they had worked for the relief of the consumer, and Mr. Trump acknowledged that though they had made some mistakes, they were honest ones bound to occur during such a period of warfare. Mr. Frank Hoff, chief accountant in the office of the general manager of the Pennsylvania, was interrogated regarding a meeting he had a week before with the chief clerk Bayer, who was dismissed recently for "grafting," and replied that he had seen him at the latter's request. Asked whether he had owned shares of coal-mining stock, he said he had received some as a gift, but had returned them two months ago. "Since this investigation began, wasn't it?" suggested the chairman of the Commission. "It was," replied Mr. Hoff. He further admitted owning a one-sixth interest in some undeveloped coal mines. Mr. Thayer, on being recalled, expressed the opinion that railway officials should not own coal properties, but thought some of the Pennsylvania men who had received shares of stock had accepted them, believing "they were actually helping the interests of the railroad." The arguments of the Pennsylvania officials were essentially for the defence. It transpired during the course of the sitting that two coal companies had begun suits against the Pennsylvania Railroad for breach of contract. In connection with the subject of "grafting" by railway officials, it was stated in Washington that at a long conference between the President and five members of his Cabinet on the evidence already obtained, it had been decided to prosecute those guilty of it.

By a vote of 36 to 31, on June 21, the United States Senate decided in favour of a lock canal at Panama against the advocates of a sea level canal. The decision came rather as a surprise, it being expected that the question would be kept open some time longer. The American people, however, seem to have been getting impatient over the endless pouring out of public money for works of preparation, costly commissions without result, balls and banquets to Mr. Taft and his picnic party, and no work done.

The board of directors of the Equitable Life Insurance Company of New York met on the afternoon of June 21 for the purpose of nominating the 28 policy-holders to be elected at the annual meeting next December. The list is spoken of as the "administration ticket," and includes all of the present policy-holding directors except two, who retire for business reasons, and five others, outsiders, who are said to have received the support of a large number of their fellow policyholders.

Messrs. Olyphant, Holden, and Miller, three of the Mutual Life Insurance Company's trustees, who were members of the committee on expenditures that passed vouchers for hundreds of thousands of dollars of padded bills on "O. K.'s" of Mr. Fields, and on approval of Mr. Gillette and Dr. Granniss recently indicted, have resigned from their positions in the company. Mr. Holden, who is more than 80 years old, has also resigned the presidency of the National Safe Deposit Company, one of the subsidiary concerns of the Mutual, with what are described as "palatial quarters" in the Mutual Life Building.

It is reported from Philadelphia that a new locomotive construction company, with a capital of $12,000,000, has been formed and will have its works at Baltimore. The Pennsylvania and Baltimore and Ohio railway companies are said to be interested in the new enterprise.

The Mexican Central Railroad Co., Limited, has sold $33,000,000 of four years' 5 per cent. gold bonds to a syndicate organised by Ladenburg, Thallmann, and Co. and Hallgarten and Co., of New York; the Bank für Handel und Industrie and the Berliner Handelsgesellschaft, of Germany; J. Henry Schröder and Co., of London; and the Swiss Bankverein, of London and Basel. In arranging the transaction the railway company stipulated that the holders of its 6 per cent. bonds maturing January 1, 1907, its 4½ per cent. collateral trust bonds, maturing February 1, 1907, and its 5 per cent. bonds, maturing September 1, 1908, should be allowed the option of exchanging their holdings for the new bonds. The old securities are to be deposited with the banks representing the syndicate not later than July 16. The new bonds will be exchanged on the following terms:—For each $5,000 6 per cent. note with the coupon maturing January 1, 1907, attached, $5,000 par value in new bonds and $125 in cash; for each $1,000 4½ per cent. collateral trust bond, with the coupon for February 1, 1907, attached, $1,000 par value in new bonds and $13.33 in cash; for each $5,000 5 per cent. bond with the coupon for September 1, 1906, and all subsequent coupons attached, $5,000 par value in new bonds and $108.33 in cash. The new bonds will bear the coupon due January 1, 1907, and all subsequent coupons.

Mr. James Hazen Hyde, late of the Equitable Life Insurance Company, has also dropped from the directorate of the International Mercantile Marine Com-

pany, and Mr. Thomas W. Joyce was chosen to take his place.

A summary of the proceedings already taken or to be taken by the Federal Administration in the task of attempting to curb the trusts and their accomplices in violating the laws regulating railway transportation and other matters is of interest just now, as the results must affect both finance and commerce. They are:—

1. Criminal proceedings against the Standard Oil Company.
2. Suit to enjoin the tobacco trust.
3. Suit to enjoin the elevator trust.
4. Suit to enjoin the North-Western paper trust.
5. Suit against rebates by private cars from the Pabst Brewing Company.
6. Suit to abolish the monopoly of the St. Louis Bridge and Terminal Company.
7. Indictment of persons in the fertiliser trust.
8. Suit to punish for rebates given the sugar trust.
9. Suit to enjoin the drug trust.
10. Conviction of railroad companies and railroad officials for paying rebates in violation of the Elkins Act.
11. Suits contemplated against certain railroads for violation of laws regulating commerce.
12. Suit against the meat trust.

All these are so many plums for the lawyers, who are becoming in the United States what the clergy were in Europe in the middle ages, the devourers of the public resources.

In Wall Street these prosecutions are variously regarded. Some attribute the deadness of the market to their disturbing influence on investors. Bulls and bears draw antagonistic conclusions from the same facts, but the public seems to have come to the conclusion that a waiting game is the better course, the uncertainty not being so much as to whether the prosecuted parties are guilty or not as to whether they will be found so if they are. In all cases so far the official prosecutors show a strange disinclination to go too high in their more or less sincere attempts to fix the guilt of law-breaking and corruption. They dare not, on the other hand, go too low, knowing that the American public is keen-sighted enough to detect the imposition, and so, as some of the American law officials have been avowing in the case of the Standard Oil, they are going to find a ground for compromise between too ridiculous and too serious prosecutions by trying to procure the convictions of men to whose positions some shadow of responsibility for action can be attached, while letting the men at the head, who should be held culpable either of wilful negligence or deliberate connivance, go free. The most notable thing in connection with the inquiry into the affairs of the Equitable Life and the other two companies was the way in which probing into the ultimate destination of the funds contributed to the Republican Presidential Campaign Fund was avoided. Yet the names of the three men who controlled the application of the money are on the tip of everybody's tongue, and no individual or paper dare name them, because it might shake the foundations of the White House at Washington, and bring it and the Republican party down together. It is these and other patent facts that leave a very large portion of the American public sceptical as to the sincerity of the President's action just as Congress is about to adjourn, and before the Congressional elections in the early part of November, when the fate of the Republican party will be decided.

At Washington it was expected that the first cases in the criminal proceedings against the Standard Oil will be instituted either at Chicago or at Indianapolis, the probability being in favour of the former. The most flagrant violations of the law on the part of the Standard had originated in what is known as the Whiting, Ind. case, on shipments from Olean, New York, to Rochester, and thence to points in Vermont, in the north, and to St. Louis, in the west. In the Whiting case several railways are involved. In the Garfield report it is pointed out that the published tariff rate from Whiting, where the great western refinery of the Standard is located, was 44 cents per hundred pounds. For at least 10 years the Standard had been shipping oil from there over certain railways to Birmingham, Alabama, at 29½ cents, while their competitors at Toledo, Ohio, had to pay 47½ cents for the same distance. A great area in the south was covered by secret rates to the Standard, averaging 25 per cent. less than the published rates. In the Olean-Rochester case, in which the Pennsylvania is concerned, the Standard enjoyed a rate of 9 cents per barrel from Olean to Rochester, while independent refineries in neighbouring territory paid 38 cents. By means of this and other secret rates the Standard could get its oil over other lines into Vermont at from 15 to 21 cents per hundred pounds, while the independent companies paid from 33 to 50 cents. The rates to the Standard were not shown on the way-bills. The part of the Garfield report already completed deals only with transportation and freights; the remaining part for which the material is being collected will deal with a variety of subjects connected with the petroleum industry from its source at the wells to the final distribution in the world market, including the organisation and relations of the companies engaged in it.

It was announced in the American Press on June 25 that an International Policy-holders' Committee had been formed, with headquarters at 30, Broad Street, New York, having for object to oust the present managements of the Mutual and New York Life Insurance companies. The governors of six States are among the members, as also are Cardinal Gibbons, of Baltimore, without whose name no committee on any subject would appear to be complete, and President Roosevelt's son-in-law, Congressman Nicholas Longworth. Mr. Richard Olney, who was Mr. Cleveland's Secretary of State at the time of the Venezuela dispute; Judge Parker, the democratic candidate at the last presidential election, and Judge Gray, who was a member of the Peace Commission at Paris in 1898, are members, and spoken of in connection with the chairmanship. The German member is Mr. Heinrich Wiegand, and the names of the British and French delegates will be announced when selected. Mr. Untermyer, the well-known lawyer who was described by Mr. Fields as Pecksniff, is general counsel to the committee, and a Mr. Seymour Eaton is secretary. The American members of the committee number 24, and glancing over the list one is inclined to ask how some of them got there. The first meeting for the organisation of the committee will be on July 10.

It was currently reported at Philadelphia that the next move of the Federal Government against the Pennsylvania Railroad Company will be taken there in connection with the relations between it and the Standard Oil. The principal question under consideration was the advisability of proceeding against Mr. Cassatt, the president, individually, rather than against the whole of the presidents of lines comprised in the Pennsylvania system separately. The charge to be made is that of conspiracy, the evidence clearly showing that relations existed between the Standard Oil and favoured coal companies and railroads, which, it is held, constituted conspiracy. The defendants' lawyers were anxiously at work arranging and preparing plans for the defence.

The Venezuela Government has taken an exceptionally important step by beginning proceedings against the Manoa and Orinoco Companies, Limited, with a view to the annulment of what is known as the Fitzgerald concession, involving the ownership and right to exploit some ten thousand square miles of territory on the Orinoco river. The original concession was made in 1883, and since then has been annulled, regranted, and partitioned at different times by executive decree; and this is the first time that the matter has been brought before the Venezuelan Courts for decision as to the legal status of the present concessionaires under the grants made by the sole authority of President Guzman Blanco and his successors. The

case is almost inextricably involved on account of the multiplicity of claimants, some of whom appear to have been men of straw, and the differing conditions attached to the various concessions and their subdivisions. Some of the territory involved figured in the Venezuelan dispute between Great Britain and the United States in 1895. The affair may possibly become one implicating the United States and Venezuelan Governments.

Passing Events.

The Hon. J. G. Jenkins, Agent-General for South Australia, gives notice on behalf of his Government that he will pay off in cash £500,000, being one-half of a loan falling due on January 1 next, and will exchange 3½ per cent. inscribed stock for the other half of the loan. If this offer is not accepted by the bondholders, the whole million will be paid off as it falls due, the necessary funds being already in the hands of the Agent-General, having been obtained in South Australia, partly from local loans, and partly from the increased general revenue of the State. Naturally the Agent-General is pleased, and thinks "It should be very assuring to holders of South Australian stock in England, when the Australians themselves have such faith in their own securities, and when the revenue is increasing at such a rate as to enable a portion of it to be utilised for the redemption of bonds." Long may prosperous revenues and debt redemption go together.

We do not think the report of the Committee on Bond Investment Companies amounts to much. The vital question to be solved was:—Do these alien expedients for transferring money possess any genuine actuarial basis to justify their existence? If not they ought not to be allowed to do any business whatever in this country. Can a Bond Investment company, so-named, of the kind with which the actuary who analysed the system in the *Manchester Guardian* made the public familiar, do an honest business, let alone one profitable to its clients? If not, why tinker and "safeguard," and demand this and that amount of a deposit. Stop the mischief at the start. There is far too much easy toleration of financial chicane, not to say common roguery, in this country and among its lawmakers. We are so self-righteous about it too—lotteries forbidden, but sham insurance gambling and gamblers allowed wanton freedom.

If the whites of Natal go on killing the blacks at the rate they say they are now doing they will soon be face to face with the necessity of having to work their lands themselves, to be their own menials, black labour being no longer available. We were told some weeks ago that the war was over, and now it seems to assume larger proportions week by week, until an army of 8,000 Zulus is talked about. Not only are these Zulus being killed in great numbers, according to the official reports, but the whites at Pietermartizburg seem to have completely lost their heads, and are now taking measures to send the captured natives out of the country. Already batches have been sent to the compounds of Kimberley, one of the vilest spots in all South Africa, and forced labour will evidently be imposed upon all who fall into the hands of the Government forces alive. And Natal declares it is quite able to stand the strain. We do not believe it. The country was sunk in debt before this trouble was provoked, and cannot be improving now. But "war is war," you know, and a poll-tax an excellent incentive to rebellion.

We fear the Tsar has come forward too late with his proposals to bestow Crown and other lands upon the Russian peasants at moderate prices. Events are probably moving much faster in Russia than we can grasp here, but it does seem to us that the power of the Duma over the country is steadily increasing, in spite of its outbursts of passion, such as that against General Pavloff, the scourge of the Baltic provinces. It will be impossible for the bureaucrats to resist the moral momentum in and behind this new power much longer, and the Tsar's absolutism is being rapidly undermined and brought to nought by the spread of disaffection amongst all sections of the army. We are, therefore, not disposed to take a despairing view of Russia's future, in spite of the apparent inability of the Duma to force a constitutional ministry upon the Palace clique at Peterhoff. But the delay and the land grant sop, with other proofs of irresolution, timidity, or impotence of will, may throw the whole empire into convulsions.

In the circumstances, however, we trust that our Foreign Secretary will not allow the British Baltic fleet to go to Kronstadt. If he does let it go he runs danger of doing no small harm to the cause of civil liberty in the Russian Empire, and the visit cannot possibly do anything whatever to strengthen the position of the Tsar. Sir Edward Grey said it was merely a visit of courtesy, and in ordinary times that doubtless would be a true description of parades of the kind, but these are not courtesy times, and we look for something more sympathetic towards democracy on the part of one of the leading members of the Liberal, not to say Radical, administration in this country than this hob-nobbing with a dying autocracy. No hostility to the Tsar would be implied in the return of the fleet to Western waters without going up the Baltic at all. It would simply be an abstention from a step in the highest degree impolitic and pernicious.

That appalling disaster at Salisbury ought to cause the managers of our railways to review their position in relation to high speed trains. They have yielded to a passion of rivalry and to popular clamour in this respect with consequences that promise to provide us with many similar disasters unless the policy is changed. All sorts of speculations are being indulged in as to the cause of that Salisbury calamity, and the officials naturally protest that the high speed at which the train was running had nothing to do with it. This does not follow at all. The heavy rain in the end of last week might have unevened the ground so as to impair the perfect alignment of the curve, and a difference of half an inch in the tilt at the bend might have been quite enough to cause the flying engine to jump the rails. It has always seemed to us that the flanges upon the wheels of our heavy modern rolling stock are much too shallow, and whether or not it is time for the railways to slow down a little, to pause and study a little science. A difference of half an hour in the schedule time of that boat train could not have materially affected the lives or pleasures of any one of those passengers who entered the train to be slain.

We have received a long letter from Mr. T. A. Brockelbank dealing with the question of automatic railway couplings. His name has been long before the public as a strenuous and consistent advocate of this reform in our methods of handling traffic, and we are wholly in sympathy with his efforts. The letter, however, is too long to find a place in our limited and always crowded columns, so we can only refer to it and remind railway shareholders that if they took enough interest in their properties to study a simple point of administrative detail such as this they might quicken the intelligence of their directors and managers, and improve their dividends. In the United States the automatic coupler has contributed materially to a reduction in working expenses, and still more to a rapid and efficient handling of the enormous traffic sent over the railways there, most of whose mileage is still single track. Here the automatic coupler is hardly known. Our managers are too busy stealing traffic from each other or fighting each other before Parliamentary committees to be able to spare time to deal with a question of this kind. And yet it is no exaggeration to say, as Mr. Brockelbank does, that "within the grasp of the English railways on the universal adoption of automatic couplings lie countless savings in money, time, life and limb of servants, reduction in compensation, saving in charges for accidents and damaged goods, and last but not least, an early limitation to additions to capital account for extensions in goods sidings."

We are disposed to wish the Allgemeine Elecktricitaets Gesellschaft joy of its newest enterprise, which is no less than the execution of enormous works designed to provide a supply of electricity for the Rand mines. And there does not seem any reason why the enterprise should not be profitable if it be true that this powerful German manufacturing trust and its associates have no intention of bringing the power all the way from the Victoria Falls on the Zambesi. T atwo uld indeed be a formidable enterprise, little likely to be profitable, and it is now denied that they have any such intention, a Berlin Reuter telegram of the 4th inst. stating it to be likely that the power will be derived from the Vereeniging coalfields, near the Vaal River, where a powerful steam generating plant will be erected. This means that the electric energy will have to be transmitted over a distance of only 35 miles instead of one of upwards of 700 miles, whoh would be the case if the water of the Victoria Falls had been harnessed to the work. Some day possibly these Victoria Falls and other natural forces may be utilised to generate motive power, but the time is not yet. Will the German banks finance this great enterprise, which even on the more moderate scale contemplated will involve an expenditure of several million pounds?

From a very interesting and graphically written pamphlet issued by M. Yves Guyot we learn that France is not without its insurance troubles. It seems that in 1897 or thereby a concern called *La Prévoyante* was started for effecting life insurance upon the mutual principle, with a guarantee of certain payments in the case of death. This concern, founded by Mr. Antony Joly, seems to be a kind of mixture of the "assessment" and "bond investment" styles of doing business. Each sum levied for the purpose of insuring the amount set forth in the policy was limited to Fr.600, payable in 10 annual amounts of Fr.60 each. In addition to this there was an entrance fee of Fr.10 and loadings for expenses to the amount of 6 per cent. of the aggregate of each individual subscription, plus 1 per cent. on the gross amount accumulated. Each year's series of policies was treated as a separate class, and the whole of the loading for expenses was payable in the first two years of the 10, 4 per cent. the one year and 2 per cent. the next. Obviously this was found insufficient, and a very adroit change was made in the method of levying assessments. Instead of charging 6 per cent. upon each individual policy, that amount was levied upon the totality of all policies, whether they were in existence or not, whether they were genuine or not, and the result of the change has been that those who were imprudent enough to enter this trap have been finding their assessments growing without limit, just as was the case with our "natural-premium," "Mutual Reserve," and other excrescences of the kind. M. Guyot complains that the Government has taken no notice of the infringement of the statutes originally granted to this society, although the facts have been officially stated on more than one occasion, and particularly in a valuable report drawn up by M. Louis Veber, one of the officials of the Ministry of Commerce. When it does wake up, however, the French Government is certain to make short work of practices of this description.

Another pungent circular has been issued by the Beira Railways debenture-holders' committee. It deals in very plain language with the Chartered Company, and in effect repeats the charge that the said company is holding back revenue which ought to be utilised to pay the debenture interest in arrear. The debenture trustees also come in for a well-earned drubbing, as it seems to us, and on the whole independent debenture-holders will be neglectful of their interests if they do not forthwith respond to the committee's appeal and send their bonds to its bankers, so that it may be placed in a position to dominate the "Chartered" blight, whose controllers or dependants by acting *en bloc* can do infinite mischief. And the Chartered Company itself has never risked a shilling in the railways; but its Mashonaland Railway is hard up, and the Chartered Company possesses dangerous and unwarrantable powers over the Beira Railways under their memorandum and articles of association.

The *Railway News* in an excellent summary of Home Railway traffic returns for the half-year just finished states that the gross aggregate increase in the published figures of fifty-three companies is £1,424,000, of which £218,000 comes from coaching in the case of thirty-eight of the companies, and £1,116,000 from goods and minerals. A year ago the English and Welsh systems gave a decrease of £189,000 and the Irish a decrease of £10,000. Comparing the adjusted figures of a year ago with the weekly aggregates now added up, the English and Welsh lines show a gain of no less than £1,664,000, of which £1,201,000 is attributable to goods. All this should mean increased dividends, assuming that expenses have been normal and in spite of the steady additions to capital charges.

A company called the Egyptian Delta Land and Investment was registered early in 1904 under the auspices of the Egyptian Delta Light Railways with the primary object of trading in land in proximity to these railways or their proposed extensions. Up to a point the directors seem to be satisfied with the operations so far carried out, but feel that the restrictions as to local area are militating against the company's success. They therefore propose alterations in the articles which will free the undertaking from existing limitations and enable it to work wherever a favourable opportunity presents itself. The Delta Light Railways control is also to come to an end, that company having sold its shares, and it is further proposed to increase the capital to £500,000. Directors' fees are to be fixed instead of being dependent upon profits, and finally the board recommends that the assets of the Egyptian Land and General Trust should be taken over, six of this company's shares, 10s. paid, being exchanged for an equal number of the Land and Investment Company's shares, having the full amount of £1 paid. All these matters will be considered at an extraordinary general meeting called for Thursday week, and when the shareholders have heard a full explanation they may be able to judge if the proposals are worth adopting. It is quite impossible to say on the slender information at present available.

Answers to Correspondents.

Timothy.—You might average your holding as you suggest. The stock is one of the best in that category. As your question is only about one security the fee sent is too large and we hold the balance to your credit.

H. D. R.—The course you propose to adopt seems to us one full of danger. We do not see any immediate prospect of prices in that section reaching a level where it would be safe to buy, and so long as the market is in the hands of the manipulators they are not likely to come down to an extent which would make it profitable to speculate. All three securities you name are good to hold, and certainly safer, but if you really wish to sell you might let No. 2 go first and No. 3 second. (4) We cannot name a security in this column, but the one you mention has as good possibilities as any of the Western roads. At present, however, it is much too dear to be worth buying.

"Old Subscriber."—(1) In the neighbourhood of par these might be a fair speculative purchase, but not at the present price. (2) A fair security of its kind, and capable of improvement.

B. W. J.—(1) This offers a moderately good speculative chance, and the small investment named should do no harm. (2) With such a history as this business has behind it our advice must be—leave the shares alone. (3) No, we certainly should not make this exchange; the South African company's shares can be manipulated at the will of the controlling clique, and a movement of several pounds could easily be engineered. That means a very dangerous prospect, and while the other company has recently given poor results, there is at least the satisfaction of knowing it is honestly managed. These questions leave a balance of 1s. to your credit.

Messrs. Matthew Oxenford and Co., 1, Royal Exchange Buildings, E.C., and Stock Exchange, have removed to 85, Gresham Street.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended June 30, $3,615, decrease $750.

Argentine North Eastern.—Traffic receipts for week ended June 1, $23,388, increase $11,119; aggregate from January 1, $409,122, increase $16,403.

Assam Bengal.—Traffic receipts for week ended June 2, Rs. 68,272, increase Rs. 18,262; aggregate from January 1, Rs. 15,30,008, increase Rs. 2,36,610.

Canadian Northern Railway.—Traffic receipts for week ended June 21, $144,700, increase $54,800; total from July 1, $5,368,900, increase $1,628,900.

Lucknow Bareilly Railway.—Traffic receipts for week ended May 26, Rs. 42,292, increase Rs. 5,677.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 4th week of June, $31,394, increase $1,717; aggregate from January 1, $425,131, increase $60,727.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended May 26, Rs. 23,800, increase Rs. 9,773.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 30 amounted to $71,354.

English.

Cleator and Workington Junction.—Receipts for week ending June 30, £1,296, increase £192; aggregate from January 1, £31,995, increase £9.

Cockermouth and Keswick Railway.—Receipts for week ending June 23, £892, decrease £46; aggregate from January 1, £19,184, increase £898.

East London Railway.—Traffic receipts for March, £4,206, decrease £188.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending June 30, £315, increase £72; aggregate from January 1, £10,731, increase £932.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Birmingham and Midland.—Traffic receipts for week ending June 29, £1,440, increase £62; aggregate from January 1, £36,587, increase £4,436.

Blessington and Poulaphouca.—Traffic receipts for week ending June 24, £16, decrease £3; aggregate from January 1, £285, decrease £22.

Bristol Tramways and Carriage.—Traffic receipts for week ending June 29, £5,306, decrease £738; aggregate from January 1, £129,486, increase £4,136.

British Electric Traction.—Receipts of all the Associated Companies for the week ending June 29, £31,068, increase £1,815; aggregate from January 1, 1906, £750,338, increase £103,526; 431¼ miles, against 423¼.

Burnley Corporation.—Traffic receipts for week ending June 30, £1,189, increase £40; aggregate from January 1, £29,856, increase £2,339.

Dublin and Blessington.—Traffic receipts for week ending June 24, £143; aggregate from January 1, £2,919, decrease £70.

Dublin and Lucan.—Traffic receipts for 8 days ending June 30, £158, decrease £21; aggregate from January 1, £2,815, decrease £174.

Dublin United.—Traffic receipts for week ending June 29, £3,794, decrease £139; aggregate from January 1, £125,438, increase £798.

Edinburgh and District.—Traffic receipts for week ending June 30, £5,336, decrease £148; aggregate from January 1, 1906, £124,988, increase £2,876.

Harrow Road and Paddington.—Traffic receipts for week ending June 22, £141, decrease £146.

Hastings and District.—Traffic receipts for week ending June 28, £759.

Isle of Thanet.—Traffic receipts for week ending June 30, £857, decrease £50; aggregate from October 1, £13,770, decrease £885.

London County Council.—Traffic receipts for week ending June 23, £27,381, increase £11,278; aggregate from April 1, £319,591, increase £144,019. Miles 98⅞ against 51¾.

London General Omnibus.—Traffic receipts for week ending June 30, £25,789, decrease £1,727; aggregate from January 1, £580,466, decrease £30,192.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending June 30, £3,703, increase £2,870.

London Road Car.—Traffic receipts for week ending June 30, £9,368, decrease £24; aggregate from January 1, £207,791, increase £3,373.

Rossendale Valley.—Traffic receipts for week ending June 23, £216, decrease £21.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending July 1, £802, increase £13; aggregate from January 1, £20,893, increase £3 532.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 1, £12,581, increase £36; aggregate from January 1, £385,606, increase £39,904.

Barcelona.—Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for May, $33,489, increase $5,297. Nett earnings from July 1 to May 31, $453,631, increase $120,539.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 1, £2,986, decrease £456; aggregate from January 1, £92,259, increase £5,503.

Buenos Ayres Electric.—Traffic receipts for week ending June 2, £1,257, increase £165; aggregate from January 1, £30,835, increase £6,182.

Buenos Ayres Grand National.—Traffic receipts for month of June, $271,500.

Calcutta.—Traffic receipts for week ending June 30, Rs. 42,071, increase Rs. 1,095; aggregate from January 1, Rs. 11,37,235, increase Rs. 1,02,759.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,623, increase £2,238. Total from January 1, £27,466, increase £10,928.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of April, $415,413, increase $60,200; aggregate from January 1, $1,621,914, increase $232,398. Nett traffic receipts, $218,256, increase $33,852; aggregate from January 1, $832,339, increase $131,992.

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

With the new month we have had cheap money in the short credit market. Instead of paying 3½ per cent. for seven-day loans bankers had to take 2¼ per cent. for the first two days, or 2 per cent., which became the prevailing quotation in the latter part of the week. Call money has been plentiful at 1½ to 2 per cent., with not very much "two" in it sometimes. How long will this last? That is the supreme question. Bill brokers have endeavoured to take advantage of the uncertainty to maintain their discount rates, and have been thus far tolerably successful; that is to say, while paying 2 and 2¼ per cent. for money, they have been buying three months' bills at 3 1/16 and sometimes 3⅛ per cent. discount. Rates for long bills have been even stiffer, as is natural enough seeing that a six months' bill now carries the holder into January of next year. Many things may happen between now and then, dear money amongst them. Had it not been for fear lest developments on Wall Street or the Continent might exercise a hurtful influence upon our short credit market the three months' rate would have been below 3 per cent. before the middle of the week, and it is tending that way, in spite of the bill brokers, for yesterday and to-day the joint-stock banks took August bills from the brokers at 2¾ per cent., September bills at 2⅞ per cent., and full three months' bills at 3 per cent. This was good enough business for them, seeing how little they could obtain upon seven or even fourteen-day money, let alone call money.

But will this ease prevail for any length of time? We do not see why it should immediately disappear. Barring accidents and the unforeseen, every superficial indication points to a period of depression in the short credit, and also to some degree in the discount market. The Bank is getting most of the gold in from abroad, so that its reserve is growing stronger, and if this continues throughout the present month there does not seem any reason why money and discount rates should not be easy until, at any rate, the end of August. The gold movements, however, are the uncertain element, and New York is obviously in need of more cash, of something more substantial than new bank-notes based on Panama bonds. Wall Street bankers are said to have intercepted £300,000 in gold shipped from Australia, and although they did not compete for the large supply in our market last Monday, the New York exchange continues so low as to make it probable that they will either snap up what they can get outside or go to the Bank for eagles, just perhaps when the credit jobbers least expect any such event. And the position on the Continent is nearly as uncertain, especially in Paris, where the market is, as we continually explain, heavily weighted by its formidable mass of Russian securities, let alone its other commitments. Just because of the possibilities of gold withdrawals or interceptions our market is in a position of uncertainty, which favours those who struggle to keep discount rates at least firm.

There was less disposition to quote 3½ per cent. for three months' bills to-day than yesterday or early in the week, but the market was rather firmer at 3 1/16 per cent., as the joint-stock banks were not taking ninety-day bills from the brokers at less than 3 per cent. Money was also becoming less abundant in the short loan market. A very large amount was due at the Bank and paid off, and there is another formidable sum to be liquidated on Monday, which, if fully done, may leave the open market bare. Then the Japanese are said to be demanding 2¾ per cent. for renewals of credits granted by them into August, and the market is struggling hard to pay them off by getting the money cheaper elsewhere.

Long-dated paper has been naturally cheaper to the buyer all the time, and the finest quotation to-day was 3¼ per cent. The Americans were said to be inquiring for eagles, but there was nothing definite known on that point.

The Bank return was of the usual end of the half-year type, and notable chiefly for the fact that the market was on Wednesday afternoon still owing the Bank £5,184,000 on temporary loan. If the expanded circulation does not come back in time or sufficient gold come in from abroad between now and Monday, the market may not be able to pay the whole of this debt off.

The Bank, however, is estimated to have bought between £700,000 and £800,000 in bullion of the £1,000,000 or so available in the open market last Monday, and much of this has already reached it from the refiners. Next week there may not be more than £350,000 in the market, and should there be any foreign competition for it, the price will probably be again run up, so that the Bank's own stock may be impinged upon. In order to secure what it did last week the Bank had to pay 77s. 9⅝d. per oz., or about 77s. 10d., including brokerage and assay charges. That fact alone is in favour of confidence in the durability of steady rates for discounts whatever the short loan market may come to.

Silver.

The Indian currency return for the past week, issued on Wednesday, showed that the Government had large stocks of silver accumulated, and the market therefore thought it unlikely that any appreciable support would be forthcoming from that quarter for some time to come. Business had not been brisk before that, and prices had merely remained steady in the absence of any pressure to sell, but when the figures came out there was no inducement to keep values up, and they were allowed to drop to 29 1/16d. per oz. for spot, and 29⅛d. per oz. for future shipments. The decline, however, somewhat unexpectedly, brought inquiries from the bazaars, and a recovery to 29 1/16d. and 29 1/16d. per oz. respectively was brought about. For the Rs.40,00,000 India Council drafts offered on Wednesday applications amounted to Rs.2,77,60,000 in bills and Rs.40,00,000 in telegraphic transfers. Of these Rs.34,17,000 were accepted in bills and Rs.5,83,000 in transfers, tenders at 1s. 4d. and 1s. 4 1-32 per rupee receiving about 14 per cent. Next week another Rs.40,00,000 will be offered.

Stock Market Notes and Comments.

A good deal of discussion has been aroused this week by the continued depression of the Wall Street stock market. It was a general belief that when the new half-year came in money would be cheap in New York and prices active and rising. The very reverse has been the case. Money rose to 8 per cent. in the beginning of the week, and has continued dear, although not since rising above 6 or 7 per cent. What is the meaning of this unlooked-for pressure? Partly no doubt it arises from the operation of the new law by which the financial trusts in New York State are compelled to hold a 10 per cent. cash reserve against their liabilities on deposits. For this purpose alone nearly £2,000,000 had to be withdrawn from the market on Monday last, and hence probably the sudden spasm of dearness in the call loan market. Irrespective of this, however, Wall Street suffers from the same disease which just now afflicts all stock exchanges. They are all over-supplied with new securities, and all carrying old securities at prices still inflated, notwithstanding the set-back which has recently occurred. The creation of new securities, however, has been excessive to a degree, almost if not altogether unprecedented, and markets have become so choked up with these securities as to be unable to prevent prices from declining. From this point of view the return of cheap money will do little or nothing to assist any Stock Exchange, least of all Wall Street, where the extravaganzas of financiers have produced a most unreal and unwholesome state of affairs which can only be remedied by a prolonged and severe liquidation.

We here are in much the same condition, and it would be a most interesting return, if we could get at it, which would show how much of our South African war debt is still in the hands of financiers or middlemen. We should not be at all surprised were the total unplaced stock of the various categories of that debt alone to amount to £60,000,000 or £70,000,000, and on the top of it we have had the successive issues of Japanese loans, a continuous though perhaps somewhat more restricted output of new municipal securities, a spasmodic but in the aggregate formidable activity in the creation of new joint-stock securities of all kinds, and latterly the severe pressure of United States corporation and speculative necessities. At the very tail of the long list came the new Russian loan, which we fear did not reach the public in any appreciable amount either here or in France. Hence the weakness of the Stock Exchange, the tendency of prices after every brief rise or pause to slip away, the depression of the Consol market, and the general sense of uneasiness which frequently pervades the City. From this point of view the current half-year is not likely to show any improvement on the one just gone. Even if we had cheap money here throughout the autumn it would not be possible for banks, discount houses, financiers of all degrees of wealth and power to restore activity to markets, and to sustain an unbroken upward movement in prices. Most of these "holding" corporations and agencies want to sell, not to buy, and they will have to remain in this position until the public returns to markets with new savings, which will not be for a considerable time yet, as the greater activity of our foreign and domestic commerce proves. The profits on this great and expanding commerce have not yet been accumulated, are not free to an extent which would bring effective masses of new capital into the Stock Exchange, and we doubt whether they are being gathered upon a scale of such magnitude as former experiences in the same line have accustomed us to look for. Business is big and rapidly expanding, but it is business to a large extent conducted on narrow margins of profit, and the very fact that this is the case prompts a feeling of thrift, disinclines those who are making money to "have a fling" with some of it on the Stock Exchange. We accordingly look for dragging markets all through this year, and shall be thankful if at the end of it the gradual liquidation of overloaded positions has brought about some return of elasticity to markets.

Meanwhile towards the end of the week, as occasionally for some time past, selling of Consols has come from north of the Tweed. At the end of the month there was a marked attempt at liquidation of positions in Kaffir shares from the same quarter, and this, coupled with the persistent efforts to unload Consols, indicates distress somewhere, but where the distress actually is we are not in a position to say, may never

be, because it is just possible that by sacrificing whatever securities are available, at no matter what loss, the institution or institutions now hard pressed for money in Scotland may be able to escape bankruptcy.

That they are hard pressed would appear to be beyond question, for no uncompelled holder would sell Consols at a time like the present. So on the other hand the strained ones or things may not escape failure, and until some relaxation of the pressure now felt in the Consols market and elsewhere takes place, we shall have this feeling of uneasiness always with us, this dread of hidden dangers cropping up often when there seems least ground for it.

The Week's Stock Markets.

The best we can say about the Stock markets is that the general tendency during the past few days has not been so uniformly adverse as in the previous week. Once or twice dealers made an endeavour to pull things together, and a qualified sort of success attended their efforts. Stories were current at one time that the Russian Ministry had resigned, and that more liberal appointments would be made to the new Government. This, together with the satisfactory progress of the Paris monthly settlement, caused a sharp upward movement in Russian bonds, and a good many other things followed the lead. Absence of confirmation of the rumours mentioned, however, led to some reaction in Internationals before the end, the demoralisation in the Kaffir Circus having its inevitable influence in other directions. Home Railways were maintained fairly well after a bad start, but the Yankee market is still full of danger, faint, spasmodic rallies being invariably followed by a fresh severe break. One of the most disturbing matters is the continued realisation of Consols. The insurance companies continue to throw out stock, and when we take into account the double influence of absence of buying and persistent sales the weakness is not, perhaps, difficult to understand. None the less is it very unsatisfactory, and it is said that bulls, grown tired of the steady dwindle, are lightening their commitments. The account of one big operator, who has run a "bull" position for a long time, was being closed this week, so the gossip ran, and it is certainly very discouraging to continually pay contango charges and have to find differences as well. The monthly settlement in the premier security was carried through during the week, and the making-up price was 87⅞ against 89⅝ on the previous occasion. Allowing for the dividend of ⅝, this means a decline of 1¼, and although the carry-over charge ended at 3¼-3½ some operators paid as much as 3¾ per cent. Prices rallied with other things, after being very flat in the early days, but reacted again near the close because dealers did not quite relish the Foreign Secretary's statement concerning the unrest in Egypt. Other British Funds were irregular, but mostly moved down, and there was a reactionary tendency in Home Corporation and Colonial Inscribed stocks.

The principal incident in the Foreign bond market was the sharp improvement in Russians. The opening had been rather heavy again, and the new 5 per cent. loan touched 4¾ discount, but when the rumours were spread that a change of Ministry was impending there was a prompt rally to 3½ discount. Closing figures were not quite the best, but the advance on the week is fairly substantial. Other Russian issues also rallied in a small way, and Spanish and Turkish felt the influence of the improvement. Greeks, however, were dull and Italian dropped fully £1. Some dissatisfaction is being expressed at the short time allowed for the consideration of the conversion proposals. Chinese bonds were firm throughout, and after being somewhat neglected Japanese issues were inclined to pick up. Argentines and Brazilians were rather irregular, but some inquiry was noticeable for Brazilian Funding, and weakness in Cedulas was followed by a moderate rise, presumably on the announcement that an application against the Government was to be made in the Supreme Court. Guatemala, Honduras, Colombian and Venezuelan all went down in the Central American division, but the last-named rallied again before the end. Peruvians lost part of an early gain.

The lamentable accident to the boat train at Salisbury on Sunday caused a good deal of selling of South-Western deferred and the price fell at one time to 48½, while the ordinary was marked down 3. Apart however, from these movements and the persistent weakness in District, Home Railway ordinary stocks give very little to comment on this week. Traffic returns for the final week of the half-year with the solitary exception of the Brighton proved a fitting conclusion to a series of excellent weekly statements, and it is expected that when the figures are adjusted the North-Western and North-Eastern companies will show increases of well over £200,000 for the six months. Yet the first of these companies has only added 10s. to its price during the week, and the North-Eastern is actually a trifle lower. Lancashire and Yorkshire and Great Northern deferred were a fraction or two harder, and one or two minor things were a little better, but otherwise movements in spite of some rally towards the close were adverse.

As a rule the "bears" have had all their own way in New York and succeeded in driving quotations of several leading stocks down to the lowest points touched during the past six months. In this they were aided by the realisations of insurance companies, and it was said that not only were the fire companies selling securities to enable them to meet their losses in San Francisco, but that the life companies were busy unloading stocks which they had bought without having the power to hold them. Occasional rallies took place when the shorts deemed it prudent to buy back, but in each case they were followed by fresh attacks. Call money at times rose to 8 per cent., and the selling became so pronounced that rumours were current of large speculators and pools being in difficulties. The market, too, was upset by the issue of $30,000,000 2 per cent. Panama Canal bonds, but assurances were given that this would not disturb the money market, as a considerable part of it, representing the floating debt for earlier expenditure, would be paid out immediately. This and the closing up of accounts over the holiday on the 4th gave the market a firmer appearance on Wednesday, and the rest appeared to have revived the flagging spirits of operators, as when the market reopened on Thursday a disposition was shown to put things better and a fair recovery was established. Except in the case of Southern Pacific preferred and Missouri and Kansas issues, however, which were 3½ and 1½ up, the late improvement in market feeling was insufficient to reduce the earlier losses appreciably. The declines did not for the most part exceed $1 and were often much less than that, but New York Central, Denver, Pennsylvania, Reading and Southern Pacific ordinary ended from 1½ to 3½ lower, while Great Northern dropped 8 and Northern Pacific 3½.

Grand Trunk stocks were very little traded in, and as usual moved up and down by a few fractions daily until Wednesday. The traffic return issued on that day, however, proved that the prophets had again been too modest in their calculations, and the ordinary and third preference advanced sharply, closing with substantial gains on the week. Canadian Pacific shares, on the other hand, sagged steadily throughout the first few days, and in spite of a recovery in sympathy with Grand Trunk things finished with a loss of $1.

No great amount of interest has been shown in any particular group in the Foreign Railway markets, but the general tendency was heavy. Argentine things were inclined to give way in common with Government issues, and North-Eastern, Buenos Ayres and Pacific, and Buenos Ayres and Rosario ordinary and deferred were all £1 to £2 lower. Cordova and North-Western bonds were knocked down to 40 and Cordoba Central income debentures fell 2. Antofagasta ordinary dropped at one time to 231, and finished with a loss of 3, while the deferred relapsed 15. United

Railways of the Havana has gone steadily downwards, but amongst Brazilian things declines of 1 each occurred in Leopoldina ordinary and Brazil Great Southern debenture issues against a rise of that amount in San Paulo ordinary. Mexican Railway stocks were inclined to harden at first, but only the first preference retained its advance, and the ordinary and second preference were both down at the end. Guayaquil and Quito Railway bonds showed a disposition to rally, and, in fact, did recover about 30s., but the selling again became persistent and the price sagged to last week's level.

Miscellaneous markets are still very dull, and business shows no sign of revival. Hudson's Bays were a fairly good market, but other Land and Exploration shares developed some irregularity, Pekins being weak. Anglo "A" was realised by "bulls," and National Telephone issues were rather dull, despite the additional sum placed to reserve in connection with the past half-year's working. London Motor Omnibus shares were firmer, but B.E.T. ordinary were again heavy and London United Tramways preference dropped to 8. Iron and Steel shares were dull and often lower, and the Insurance list continues excessively weak. Royal Exchange dropped another 10, but recovered half the loss before the close. Cements gave way, Motor companies' shares were lower and British Westinghouse preference again receded. Some weakness was shown by Nitrate issues, and Textiles after being steady to firm gave way. Spiers and Pond were not affected by the poor report dealt with elsewhere, but there is little doubt that the company will have to undergo reconstruction. Other Catering shares were lifeless, Meat shares eased off and Breweries still tended downward. Allsopps eased off when Mr. Mayberry's circular objecting to the reconstruction scheme was issued, and receded further when Mr. Jackson announced that Mr. Mayberry's opinion is not shared by other members of the advisory committee. Entertainment shares were flat, Eastman Kodak common lost 10 after the recent big rise, while Telegraph Construction shares rose to 34. Waring and Gillows were easier and John Barkers better.

Egyptian affairs were blamed to-day for the continued sulky squeamishness of stock markets and the dwindling prices. Sir Edward Grey's speech yesterday was thought to read ominously of approaching disturbance to our rule in Egypt, and liquidation went on in Consols and in the Kaffir Circus after the usual style, which is painful enough. Another and probably more solid cause of the trouble afflicting markets is also beginning to leak out, but definite facts are not yet known. It is said that a firm of solicitors in the City is in difficulties with liabilities of between £700,000 and £800,000, and that the liquidation of a stupendous account on the Stock Exchange opened by the senior partner of this firm is at the root of much of the existing depression. To-night prices were heavy for home trustee securities, including Consols and for Mine shares, but steady in other directions, although markets were rather idle.

THE WEEK'S PRICE MOVEMENTS.

*** For a long time back subscribers to the Investors' Review have had just cause to complain of the tables of securities quoted in it from week to week. They were too stereotyped and too brief, while at the same time as much as we had space for.

Being unable to extend the tables, it has seemed better to curtail them still further, and to give in their place a weekly record of the price movements of all classes of securities quoted in the official list. In this way the information supplied each week will afford an all-embracing and ever-changing record of changes. Very minute movements and also the movements of securities of small amount may have to be excluded, but an effort will be made to embrace all important changes in prices among every type of security in the paragraphs as under:—

British Funds, &c.—*Fall:* 2¾ p.c., Annuities ¼, to 93-94, 2½ p.c., Annuities Account ¼, to 86¼-86¾, Irish Land Account ¼, to 88½-89, Bank of England 1, to 281-285.

Water Works—*Rise:* Colne Valley ½, to 23½-24½, Consol, of Rosario ¼, to 10½-11. *Fall:* Kimberley ¼, to 4¼-4¾.

Critical Index To New Investments.

BRITISH MARITIME TRUST, LIMITED.

Formed in 1890 as the British Maritime Mortgage Trust, Limited, this concern passed into the control of Sir Christopher Furness and Messrs. Furness, Withy and Co., Limited, in 1896, since which time it has been regarded as a subsidiary of the latter company. The policy followed has been to purchase vessels and charter them to regular lines and substantial charterers at fixed rates, with the result that for the past eight years a regular dividend of 5 per cent. has been paid, with bonuses of 7½ per cent. in 1900, and 2½ per cent. in 1901 and 1902. Contracts have been entered into for ten new steamers at a cost of £445,000, which will bring the total fleet up to 22, having a deadweight carrying capacity of 131,739 tons. The nominal capital of the company is £1,000,000 in £5 shares and £500,000 in 4 per cent. first mortgage debentures redeemable at 105 during twelve years, and of these 40,050 shares and £250,000 debentures have been issued and £20,000 of the latter redeemed. Subscriptions were invited for the remaining £250,000 debentures and 59,950 shares at par, Messrs. Furness, Withy and Co., Limited, guaranteeing the principal, interest and premium on redemption of the debentures, and an annual dividend of 5 per cent. on the shares from the date of allotment until all the debentures are paid off. On December 31 the assets, omitting two steamers built in 1905, were valued at £666,956, of which £636,032 consisted of shipping property and investments in industrial companies less depreciation, and, adding the cost of the new boats, the security for the £480,000 debentures is brought out at £1,111,956. The company at present has eleven steamers chartered, bringing in an annual revenue of more than the amount necessary to cover interest on the debentures and 5 per cent. on half the share capital after allowing for management expenses, commission and other charges. On the basis of these earnings a revenue of £103,000 is looked for, which would give £58,800 for the redemption of £42,000 debentures at 105 per cent. and reserves after providing for interest and dividend.

ANGLO-ARGENTINE SHIPPING CO., LIMITED.

This company takes over two freight contracts with important Argentine meat companies having a life of four years from the latter half of the current year.

Four steamers, insulated and fitted with refrigerating apparatus, are required at once, and two have been chartered from the Manchester Liners, Limited, and Messrs. Furness, Withy, and Co., Limited, while the other two are being built by Messrs. Sir James Laing and Sons, Limited, at an estimated cost of £110,000 each, which is payable by instalments. The capital of the new company is £150,000, divided into 50,000 7 per cent. cumulative preference shares and 100,000 ordinary shares of £1 each, of which 50,000 preference and 80,000 ordinary shares form the present issue. Under the above-mentioned contracts the vendors and their friends have deposited £30,000 in cash and securities as a guarantee for their fulfilment during the earlier voyages, of which £6,000 has already been returned, and the vendors accept £30,000 in ordinary shares for their interests. In addition, they have agreed that on the return of their deposits they will subscribe for 9,500 preference and 15,500 ordinary shares. The contracts are for four years and provide for a fixed rate during the first three, while for the fourth the meat companies have the option of shipping at current rates. For the three years the minimum freights from the two companies will amount to £190,400 per annum, and the nett profits are estimated at £62,000. Depreciation at 6 per cent. on the steamers owned by the company and 5 per cent. interest on the full purchase price will require £24,200 and after paying preference dividend and 12½ per cent. on the ordinary shares a balance of £24,300 is brought out, from which the directors propose to defray the capital charge for instalments due on the steamers pending the issue of debenture stock for the redemption of the mortgages. The business, therefore, appears to be starting under very favourable conditions, and is certainly far from being overweighted with capital.

A. W. Gamage, Limited.

An issue of 5,000 4½ per cent. first mortgage debentures of £20 each, forming part of a series of £125,000, is offered for subscription at par by this well-known Holborn business of athletic, colonial, and general outfitters. The debentures may be repaid at £21 per debenture on six months' notice at any time after January 31, 1922, and are secured by a specific mortgage on leasehold properties standing in the books at £123,690, and by a floating charge on the undertaking and all other property. Including the £79,000 to be realised by this issue after paying off the existing debentures, the total assets are valued at £370,709 and show a surplus over liabilities of £291,440, apart from any sum for goodwill. Profits during the five years ended January 31, 1906, have risen from £10,549 to £22,110, and show an average of £15,986 per annum, while the amount required to provide interest on the present issue is only £4,500.

Highlands and Lowlands Para Rubber Co., Limited.

Two estates having a total of 322,611 rubber trees planted ranging in age from eight years down to under one year, are acquired by this company, together with a block of land adjoining them, for £226,454, of which only £22,500 is payable in cash, the balance being satisfied by the issue of 181,454 shares fully-paid, and 60,000 shares credited with 7s. 6d. per share paid up. The total capital is £310,000 in £1 shares, and 63,646 are offered for subscription, payable 2s. 6d. per share on application, 5s. on allotment, and the balance in calls as and when required, but it is not intended to make any call during the current year. It is proposed to clear, open up, and plant about 5,000 acres of the reserve land during the next six years at a cost of about £90,000, and it is estimated that in the seventh year these new clearings should yield, at 5s. per lb. of rubber, £9,000, rising to £31,500 in the following year and £85,500 in the tenth year. From the area at present planted it is calculated that the revenue for 1906, 1907, and 1908, including receipts from coffee and other subsidiary cultivations, should amount to £19,564, £26,560 and £33,061 respectively. The company therefore starts with a great advantage over many of its competitors in that it is revenue earning from the outset, and as it is not overloaded with capital, it may do well so long as rubber maintains its present price.

Pampa Alta Nitrate Company.

The Bank of Tarapaca and Argentina was authorised to receive subscriptions at par for £200,000 6 per cent. first mortgage debentures of this Chilian undertaking, which has a share capital of £450,000, all issued. These debentures are issued for the purpose of providing adequate working capital, replacing profits spent for capital purposes, and enabling the company to reduce its share capital by purchasing shares recently acquired from a retiring group of members. They are secured on the company's real property, consisting of about 2,220 acres of nitrate grounds in the district of Pampa Alta, Antofagasta, estimated to contain sufficient workable caliche to produce 23,300,000 quintals of nitrate, and upon the buildings and fixed plant, on which, with stores, rolling stock, &c., about £196,000 has been spent. The construction of the oficina was completed in July last, and it has a productive power of 130,000 quintals per month. During the six months ended March 31 the average cost of production, manufacture, and placing the nitrate free on board was 5s. 2½d. per quintal, but it is estimated that this could be reduced to 4s. 10½d., and on the quota assigned to the company under the new combination, the directors calculate that profits for the year to March 31 next should be from £90,000 to £100,000.

Bristol Corporation 3½ per cent. Redeemable Stock.

The Union of London and Smiths Bank, Stuckey's Banking Company, and Robarts, Lubbock, and Co. invite applications at par for £620,000 of the above stock, or such other amount as may be necessary to raise the sum of £615,000, and the expenses of issue. Of this amount £460,000 is for the new dock undertaking at Avonmouth and other dock works, and the balance will be applied to the purposes of the Corporation as a municipal, educational, and urban sanitary authority. The stock will be secured upon the borough and general district funds and rates, and upon the revenues of the dock, electrical undertakings, and estates, and will be redeemed at par on July 4, 1965, or may be repaid at par on or after July 4, 1925, on three months' notice. On March 25 last the total debt of the Corporation for all except dock purposes was £2,635,996, while the dock debt on April 30 was £4,976,630. The rateable value of the City is £1,797,427, and is steadily increasing, while the estimated population is 363,000. A deposit of 5 per cent. must accompany the application, and the balance is payable by instalments of 25 per cent. on July 24, and 35 per cent. each on August 28 and September 25, but a full six months' interest will be paid on January 10.

Browhead Copper Mines, Limited.

The West British Development Syndicate, Limited, has a property in West Cork, known as the Crookhaven Estate, containing about 3,135 acres, and including two copper mines, which were worked down to about 1860 by a semi-private company. On one of these it has done a certain amount of preliminary work such as the building of a manager's house, smiths' and carpenters' shops, and the erection of an electrical generating plant and electrically driven pumps for unwatering the old workings. The old company worked only one lode, but the vendors claim that there are at least five lode formations in Browhead, which, in the opinion of Messrs. Pearse, Kingston, and Browne, promise much better than the one worked. Labour is said to be cheap, and it is estimated that the cost of mining, raising, sorting, and loading the ore will not exceed £3 per ton, and assuming that the average grade of shipping ore runs 22 per cent., it is calculated that a

nett profit of about £10 per ton would be earned, with copper at £70 per ton, and that an output of 1,300 tons per annum would yield sufficient to pay a dividend of 20 per cent. For this bonanza the vendors ask £30,000 in shares, and £12,500 in cash or shares, and out of a total capital of £65,000 in £1 shares, 35,000 are offered for subscription.

ISSUES BY TENDER, &c.

J. Lyons and Co., Limited.—The directors announce that they are now prepared to allot the 250,000 5 per cent. cumulative preference shares of £1 each created last month at a premium of 1s. per share to holders of ordinary or preference shares on the register on June 30.

East Surrey Water.—Tenders are invited for 700 ordinary shares of £10 each, but the particulars are not made public, and can only be had by applying to the company at Redhill.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Forced selling has again been very much in evidence in the Kaffir Circus, and in the end of last week it attained such proportions as to lead to fresh stories of unloading by the Scotch banks. Liquidation from Glasgow there certainly was, whether it came from banks desirous of adjusting their accounts at the end of the half-year, or from the vast army of speculators who have grown tired of carrying their load with the help of borrowed money. Paris, too, has been a heavy and persistent seller, and although support was alleged to come from Germany it was not sufficient to do more than put a check on the decline, and prices continued to dwindle. On Tuesday dealers were surprised to find the flow of selling orders had virtually dried up, and in their relief put quotations a trifle higher, but the recovery had not gone far before profit-taking set in. Bear covering, option buying, and some purchases to average by holders who have not yet abandoned hope of coming out on top if they can only hang on long enough, gave another turn to the wheel of fortune, and prices began to creep up again only to slip back when Paris again tried to sell. Gold Fields were prominently lower on a story that one of the Trust companies had disposed of a large block of these shares at £3 per share, and they ended with a loss of $\frac{5}{16}$, while declines of $\frac{1}{16}$ to $\frac{2}{16}$ were liberally scattered throughout the list. Deep Levels have not escaped the general tendency, and several of them are 2s. 6d. down, while Geldenhuis Deep lost as much as ¼.

Rhodesians, after drooping early in the week, have been comparatively steady, and Rhodesia Exploration were actually $\frac{1}{16}$ harder. Zambesia, however, dropped a further $\frac{1}{16}$, Globe and Phœnix and Rice Hamilton also shed that fraction, and the market as a whole was none too strong. In the Diamond group Premier deferred dropped sharply on the June return, which showed a considerable reduction compared with the previous month, owing to the stoppage of the No. 2 gear on June 5, and the partial stoppage of the No. 3 gear through lack of water. De Beers were offered from Paris, but the fall was wiped out later, and Jagersfontein deferred were steady.

One or two West African things were lifted a trifle, but there was not much doing, and prices as a rule went back when looked at, Gold Coast Amalgamated and Taquah and Abosso especially being flat. The Australasian group on the other hand was hard, and the leading counters, such as Golden Horseshoes, Ivanhoe, and Kalgoorlie rose several fractions. Like everything else, however, the market was weaker in the end of the week than at the commencement. Copper shares have fluctuated in an irregular fashion. Tintos went back on Paris selling, and Anaconda fell in sympathy with conditions in New York. Then everything picked up again, and in spite of a fresh relapse on Thursday closing values are up on the week. Tin shares continue dull, and Clitters United and Dolcoath both shed a shilling or two.

Chinese Labour.—We are glad to note that the Government intends to insist upon a more honest translation of the repatriation notices. An amended proclamation is to be issued, from which the minatory and hortatory words contained in the original draft will be omitted, and new words substituted which will give the mine-owners much less opportunity for bamboozling and deceiving the wretched Chinkee. Moreover, the Government has decided that further recruiting shall cease by November 30 next, so that all importations may be at an end before the establishment of a Transvaal Representative Assembly.

Treasury Gold Mines.—The year ended March 31 was a disastrous one for this company, owing to the subsidence of the main shaft in the upper levels in June, and the flooding of the lower levels in December through the fissures which resulted from the collapse of the 7th level stopes. All development work was stopped by the first occurrence, and with a scarcity of underground native labour it was impossible to keep all the sixty stamps at work, so that 11,059 tons less were milled at 85,688 tons. At the same time the grade of ore sent to the mill averaged no more than 8.54 dwts., compared with 10.47 dwts. in the previous year, a decrease which the directors claim could not have been anticipated 12 months ago. The output from the mill was 20,844 ozs. worth £87,508, against 28,040 ozs. and £118,071, and with 11,185 tons less at 85,183 tons of sands, concentrates and slimes treated by cyanide for 11,368 ozs., the total production fell off by 12,188 ozs., and the value by £51,837 to 32,212 ozs. and £135,001. Expenses of mining and development were only reduced by £2,798 to £55,472, milling, crushing and sorting charges took £863 less at £22,648, and cyaniding expenses were £942 down at £15,239, while general mine charges rose by £600 to £1,503, and miscellaneous expenditure was the same at £4,961. These outlays left nett profits £47,835 lower at £35,177, and interest yielded £479 less at £797, but with £8,006 more at £17,035 from the previous account the disposable balance was £40,309 down at £53,009. Debenture interest and redemption, administration charges, and Government tax on profits for 1905 having been provided, £1,687 was set aside as provision for additions and renewals, £3,478 was invested in Witwatersrand Native Labour Association shares, and £10,975 was absorbed by expenditure in connection with the subsidence at mine and reopening of No. 1 shaft. An interim dividend of 3⅜ per cent. was paid for the half-year to September 30, but as the balance left was only £3,823, out of which the profits tax for the year has to be found, no further distribution is possible. Ore reserves were considerably reduced by the subsidence and other causes which necessitated the leaving of numerous large pillars and by the decrease in the width and value of the main reef leader. This has caused the exclusion of certain blocks which were expected to be payable, and the estimates now amount to no more than 173,220 tons with a value of 8 dwts. compared with 365,600 tons at 8.1 dwts.

Transvaal Gold Mining Estates.—At the present price of 1⅝ for the £1 shares the Kaffir Circus places a value of about £900,000 on this company's property, and after we have briefly analysed the annual report and accounts for the year to March 31 shareholders and others may be able to form an opinion of these estimates. Not so long ago the value, based on current quotations, was between 2 and 2½ millions, but that can be forgotten and passed over. Last twelve months the company received a revenue of £196,609 against working expenses £151,987, and depreciation, prospecting, &c., of £18,705 leaving the beggarly sum of £25,917 as nett profit. To that is added £81,450 brought forward making £107,367, and the directors take advantage of the considerable sum left over a year ago to declare a dividend of 10 per cent. or 2s. per share, leaving £46,945 to be carried forward. The dividend is in excess of the sum earned by £34,505 and the directors talk of the improved prospects of the company as the justification of their action. We shall be able to test this better next year when the credit brought in will be so much smaller. It appears that during the latter part of the year prospecting at Pilgrim's Rest was proceeded with encouraging results, and the Psi mine, which is close to the mill, was reopened, a few thousand tons of good ore being extracted. On Theta Hill a large area supposed to contain the Theta Reef is being opened up, and assays taken from the various drives show very encouraging results. On the North Clewer claims the Clewer lode has been located in position, and the work done on the Graskop claims points to a valuable extension of the Jubilee mine being disclosed there. We hope all these operations will fulfil anticipations, but the company is said to be suffering from shortness of labour, and we cannot regard the increase in ore reserves as anything very startling. They now amount to 199,422 tons, or much less than two years' mill supply, being an increase on the year of 11,145 tons. We do not know how much tonnage the various claims are supposed to possess, but last year 112,961 tons were handled to produce a profit of, say, £25,000. At this rate something like 4,000,000 tons would be required to reimburse the capital at present market figures, without any allowance for dividends, and the company can hardly hope to produce that. The Jubilee mine is the only one to show an increase in ore reserves, the Beta and Chi having very important decreases and the Clewer a smaller decline. For the moment the Theta must be counted out altogether, as all the drives and approaches to a small tonnage in sight were destroyed during the war period. A fire which occurred to the main bridge over the Blyde River connecting the Clewer mine with the central mill threatened serious disturbance, but the company obtained permission to run over the Joubert bridge, and arrangements have been made for the permanent use of this bridge.

Eastleigh Mines.—This Transvaal mining venture has reached the break-up stage and has been duly placed in liquidation. No language in the world could express how sincerely sorry the directors are that they are unable to go on, but as far back as 1903 the working capital, together with £25,000 provided by means of a debenture issue, had become exhausted. In the hope that the financial position in South Africa would improve sufficiently to induce the poor misguided shareholders to chuck away some more money in a reconstruction—this is not quite the way the report puts it, but it means the same—the directors arranged for a banker's loan of £25,000, repayment of which they guaranteed. On top of this another £1,300 had to be scraped up to keep things together, but all to no purpose because the outlook in the Transvaal is black as ever and the crack of doom seems about the time when reconstruction would be possible. Besides, the Kaffir Circus is in a really horrible condition and the poor magnates have such a job on hand trying to hold it up that their ability to guarantee any more debt for this company is at an end. Shareholders, though, must appreciate and acknowledge the efforts of the directors to save the property because the report says so. At the end of April

the company had the nice little debt of £51,947, and as the debit to profit and loss is £124,475 matters are clearly a bit rocky. It is not quite clear what is to happen now, but winding-up resolutions have been passed and the directors are most anxious to protect the debenture and shareholders because there is always the chance that they will stump up a little more of the ready, even for a Transvaal mine in these days. Therefore those who have given the mentioned guarantees propose to purchase the property and assets at the liquidation sale, though they do not bind themselves to do so. In the event of the guarantors acquiring the property they undertake to invite all debenture and shareholders to participate with them upon equal terms, that is to say, at the total actual cost to the guarantors. Of course these unfortunate people may not desire such pressing attention but the spirit of the magnates is admirable. A new company would have to be formed, but at present it is obviously impossible to fix the capital "in which debenture-holders and shareholders would be given an opportunity to subscribe *pro rata* to their holdings in the existing company."

Witwatersrand Township Estate and Finance.—The unhappy Kaffir Circus has received another paralysing blow. Once on a time this company paid wonderfully fine dividends, and the shares soared to over £9 each. They have been steadily dropping lately, and now stand at 3, an announcement having been recently made that no dividend would this time be forthcoming. In an effort to reassure, the London committee asked for an explanation, and got the following reply by cable:—"Considered injudicious to pay dividend; must provide funds in order to develop our townships in Johannesburg and Pretoria by electric lighting installation, tramways, water and erecting houses. Under present circumstances, though fully secured on municipal corporation valuation, the time is thought inopportune to collect mortgages. Full details by letter." The unhappy shareholders have our sympathy while they meditate on the sudden necessity for developing the properties, a matter which was never allowed to interfere with the payment of dividends when it was thought good policy to keep up the price of shares.

Broken Hill Proprietary Block 10 Company.—During the half-year ended March 31 this improving company treated 72,365 tons of crude ore, which produced 10,315 tons of concentrates. These concentrates contained 6,662 tons of lead and 353,020 ozs. of silver, and it is to be noted that while the recovery of lead per ton has steadily increased since the new plant was started, the silver contents are inclined to fall off again, after showing recovery. Working account shows a total revenue of £122,147, from which the total expenditure, including £1,887 for outlay in Melbourne, Sydney, and London, was £73,688 leaving £48,459 as nett profit. Credit balance at the end of September was £159,871, and transfer fees gave £25, making £208,355. From this two dividends aggregating 12s. per share required £60,000, £8,711 was allowed for depreciation of plant, and royalty, &c., took £1,681, leaving £137,964 at credit of profit and loss. The royalty tax payable to the New South Wales Government is a new impost, which came into force on the renewal of the company's leases, and represents 1 per cent. on the nett profits for the nine months to September 30 last. Towards the close of the period under review a sale was made of 100,000 tons of tailings at 6s. per ton. On the completion of the agreement the company has the option of buying the plant and rights thereof—what plant and rights?—or of working same on joint account with the purchaser, but should neither of these options be exercised the purchaser has the right to take a further 100,000 tons at the same price. Proper financial arrangements for the security of the contract have been made, but as the first of the instalments payable was not made until the close of the half-year, the present accounts do not benefit by the sale. Total tailings now dumped at the mine reach 827,753 tons, all of which have either been sold or are under firm offer, but up to the present profits have only been credited with 162,399 tons, which realised £61,949. Thus there remain 665,354 tons, appearing in the books at the low nominal figure of £37,893. The increase of by-products during the half-year was over 62,000 tons, for which the working account was credited with £1,920. We gather from the general manager's report that the ore bodies are opening out satisfactorily at the lower levels, and to further explore these bodies it has been decided to sink the main shaft to 1,615 ft. and open out by cross-cuts and drives. As far as can be seen, all danger of the extension of the fire in block 11 of the Broken Hill Proprietary Company may now be considered at an end, but in any case energetic steps have been taken to make the portion of the company's ground adjoining this block fireproof and to prevent the percolation of noxious gases. The balance-sheet has a pretty good appearance, and there is a balance of liquid assets over floating liabilities of £88,309.

Peak Hill Goldfield.—A circular to the shareholders conveys the information that the company's claim for the recovery of the gold mining lease known as Margaretting No. 1 North has been upheld by Mr. Justice Warrington. The defendants were Mr. George Darlington Simpson, Mr. James Norman Scott, and the Lombard Syndicate, Limited, and the judge refused to stay the execution of an order for costs against the defendants pending inquiry as to sums alleged to have been expended upon the lease by Mr. Simpson. The directors in their circular laid stress on the great value that this lease will prove to the company, and seized the opportunity to remind shareholders that the time for receiving applications for new ordinary shares had been extended to Wednesday last, July 4. Failure to come to the company's assistance may endanger the scheme for placing the company in a satisfactory financial position, they say, and lead to action by the debenture-holders to enforce their rights.

Mining in Madagascar.—According to the Madagascar correspondent of the *Temps*, the new mining regulations in the island have given great disappointment, both to the prospectors, who are compelled by too heavy charges to abandon their operations and to the revenue authorities, who thus see their receipts diminish daily. The same writer adds that the economic prosperity of Madagascar is a fiction, and reposes entirely on an exaggerated fiscal system. The whole island is arid, save the alluvial strips along the east and west coasts, which cannot be properly cultivated, owing to unhealthiness and lack of communications; but it is hoped that the richness of the subsoil may make up for the difficulties of the agriculturists. For this, it is contended, there must be liberal legislation, both from the mining and customs point of view. As for the native, he is already taxed beyond his strength.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Bank of New South Wales.

A very interesting address was delivered by the chairman of this bank at the half-yearly meeting held in Sydney at the end of May. Apparently the colonists are following very closely the English model in conducting their banking operations, as in explanation of a very slight advance in the note circulation to £1,027,892 the Hon. C. K. Mackellar said it was becoming more evident than ever that notes, so far as the colonies served by the bank were concerned, were being used almost solely for what may be termed pocket money purposes. The adoption of the cheque based on a current account as a means of settling payments of even the smallest description provides the real currency of the country. Deposits with accrued interest standing at £25,352,701 showed an increase of about £1,500,000, due to the enhanced income of the producing interests, and bills payable and other liabilities were up by £809,000 to £3,303,305, mostly in bills payable. This increase was regarded as an indication that the requirements of the bank's customers to pay for imports were again on the increase after being somewhat slack. On the other side the total cash assets show the large increase of £2,418,270 at £13,958,459, money at call and notice alone being up by £1,240,000 to £2,230,000. Coin bullion and cash balances are greater by about £380,000 at £5,978,288, and bills receivable in London and remittances in transit amount to £3,587,050 against £2,866,551. Bills discounted, loans and advances are very slightly higher at £18,591,358, and bank premises have increased by £15,000 at £715,000 in spite of considerable writings off. This is due to the necessity of providing new premises at Wellington, New Zealand. Balance of profit for the half-year, after providing for bad and doubtful debts, fluctuations in the value of investment securities, writing down bank premises, and including recoveries from bad debts previously written off, was £137,680 or a decline of £4,065 compared with the corresponding period. Sum brought in was rather less at £18,232 making £155,919 against £16,211, so after allowing the rather smaller sum of £8,301 for rebate the directors provide the usual dividend at the rate of 10 per cent. per annum, adding £5,000 less at £25,000 to reserve, passing over the officers' provident fund which a year ago got £5,000, and carrying forward £6,348 more at £22,617.

Egyptian Delta Light Railways, Limited.

We learn from the half-yearly report of this useful undertaking, made up to March 31, that the average number of miles open during the period was 561 compared with 534 in the corresponding six months of the previous year. Moreover, these 561 miles gave an average revenue of £223 against £204, so that the gross receipts show an improvement of £16,149 at £125,342. Number of passengers carried was 3,078,497, producing an income of £70,192 or £7,562 more, and the receipts from goods were larger by £6,111 at £50,004. Quantity of merchandise handled was the big one of 625,318 tons, building materials 219,075 tons, cotton 125,035 tons, manure 52,840 tons, seeds 35,680 tons and coal 30,532 tons being the predominant items. The principal revenue came from cotton, a ton of that commodity being naturally charged at a higher rate than a ton of, say, building materials, owing to its greater bulk. The important additional revenue was earned at an increased cost of £3,861 only at £68,927, so that the ratio of expenditure to income is lower by 4.62 per cent. at 54.99 per cent. The principal advances were in locomotive and carriage and wagon expenses, the extra outlay under maintenance being very trifling. Balance of nett profit, therefore, shows a gain of £12,334 at £56,416, to which is added £855 brought forward and £2,285 for interest and profit on debentures purchased making £58,556. Debenture interest and sinking fund and all other fixed charges having been met, the sum remaining is £31,044, which places the directors in a position to declare a dividend at the rate of 5 per cent. per annum on the 5½ per cent. preference shares, with a credit carried forward of £6,250. The section of the line undertaken in connection with the Cairo Lime Stone Quarries has not yet been completed, prolonged delays having been caused by the non-fulfilment of conditions of contract by the local directors. Portions

of the line were, however, opened to stone traffic since the beginning of the year. Part of the shareholding in the Egyptian Delta Land and Investment has been disposed of, and the proceeds restored to share premiums account, from which the funds for the purchase were originally taken.

"Bodega" Co., Limited.

Shareholders of this well-known business will regard the past year's accounts with no little satisfaction. Not so long ago things were in a rather bad way, but skilful direction and management have apparently set the concern on a straight course again. The balance-sheet is now beginning to have a much better look, and the fact that the directors are building up a sinking fund makes us much less anxious about the properties, trade marks, plant, &c., standing at the considerable sum of £351,963. We do not suppose this item is altogether free from doubt yet, but while the directors keep down the dividend to a moderate figure and endeavour to improve the financial position there cannot be much cause for complaint. So far the sinking fund amounts to £2,118 only, being the contribution from the past year's profits, but altogether the company has £10,588 invested in a policy with the Sun Life office, apparently for redemption purposes. Stocks £66,999 have been further reduced by £12,435, and the steady decline in this item can be considered one of the best features of the past few years. Mortgages with interest now stand at £56,828, and while creditors £9,433 are about twice as much as debtors £4,826, we may note that the company has cash £20,090 and high-class investments £19,991. Actually the trading profit for the 12 months to March 31 was £1,700 less at £79,009 compared with the preceding year, but balance brought in was a good deal larger at £1,405, so that after adding £588 for interest and transfer fees the total credit comes to £81,003. Working expenditure, however, was further brought down by £2,834 to £53,636, so that after allowing £1,400 for directors' fees and £105 for the auditors the nett credit comes to £25,862 against £23,711. Maintenance and repair outlay was £3,250, and £2,118 is allowed for the sinking fund, a fresh charge, leaving the directors with £20,494 to maintain the dividend at 5 per cent. and carry forward £1,494.

Apollinaris and Johannis, Limited.

This well-known and terribly over-capitalised business again increased its profits and sales during the year to March 31 last, the total revenue, including interest and transfer fees being up by about £1,000 to £183,552. Administration charges and income-tax required £5,716, including £3,250 for directors' fees and £286 for the secretary's salary and office expenses, so that the balance left was £177,836, an improvement of £889. Sum brought forward was £15,328, making £193,164, and after providing £34,000 for debenture interest and £59,500 for preference dividend, 5 per cent. is again declared on the ordinary shares, with another £20,000 to reserve and £20,164 carried forward. We have often had our say about the balance-sheet, and it is not necessary to repeat the strictures. Reserve fund now reaches £120,000, and the capital expenditure remains at £3,243,724. Quite a trifle is due to sundry creditors, and besides the cash balance of £40,076, there is £163,877 to come in from the German companies. The company's share capital amounts to £2,380,000 in equal amounts of preference and ordinary shares, and there is a debenture stock issue of £850,000, making £3,230,000 in all.

United River Plate Telephone Co., Limited.

Gross receipts in the River Plate for the year ended March 31 amounted to £181,085 or an increase of £30,000, and with £3,494 from dividends and interest, £30 from transfer fees and £245 from premium on new shares less cost of issue, the total revenue amounted to £184,855. The directors state that during the year the cost of living in Argentina has steadily increased, and in consequence of this and of the scarcity of labour in certain departments considerable advances in wages have taken place. Expenses in the River Plate absorbed £99,151, London charges and income-tax took £6,589, and after providing for debenture interest and preference dividend the nett balance was £59,985. To this was added £2,591 from the previous account making a total of £52,076, of which £15,000 is set aside for renewal of plant, &c., £15,000 is added to reserve, and the ordinary shares again receive 8 per cent. for the year, leaving £2,076 to be carried forward. Expenditure on capital account during the twelve months was £93,028 making a total of £769,181, in addition to which the real estate owned is valued at £111,744. Against these the reserve will now stand at £140,000, of which £66,562 is invested, and the plant renewal fund at £35,000, but as these funds are fully employed the directors state that they propose to make a further issue of £100,000 in ordinary shares, which will be offered to the ordinary shareholders at par. Sundry creditors are heavy at £38,380, no doubt owing to the large capital expenditure, and there is also a suspense account of £71,091, while sundry debtors owe no more than £8,813, bills receivable come to £1,000, and cash stands at £5,809.

British Indian Tea Co., Limited.

None of this company's gardens did particularly well during the year ended April 30, and the results were distinctly disappointing. Owing to unfavourable weather the total outturn was 74,650 lbs. short of the previous season at 1,076,396 lbs., and in the depressed condition of the market for the class of tea produced by the Cachar gardens the average price was 0.19d. down at 5.37d. At the Cachar gardens the profit realised was only £659 against £2,903 a year ago, and at the Assam estate a profit of £994 gave place to a loss of £166, so that the nett profits, after paying £35 for managers' commission compared with £225, were £3,215 down at £458. With £1,682 brought forward the balance available, after making sundry adjustments and meeting preference dividend, was £1,147, and this amount it is proposed to carry forward to meet the preference dividend for the current year. Liabilities to sundry creditors are trifling at £882, but £8,000 is due on bills payable, and to meet these the company has £4,453 in stocks, £1,053 to come in from sundry debtors, and £6,771 in cash, while £11,636 has been advanced on account of the current season. Block account stands at £60,967 or about £30 per cultivated acre, and in addition the company holds £2,473 in securities which have apparently been bought out of capital not yet required for the estate.

Bargang Tea Co., Limited.

Along with an increase of 65,160 lbs. to 508,360 lbs. in the crop for the year ended December 31, this company was fortunate enough to secure a further improvement of 0.41d. to 8.56d. per lb. in the average price realised, with the result that the gross income was £3,086 at £18,172. After providing for all expenses and paying managers' commission, the nett profits came to £3,818 or £1,894 more and with £238 brought forward the amount available was £4,056. A year ago the directors were unable to put anything to reserve as they desired to keep the dividend up, but that fact has had no weight with them on this occasion, and they merely transfer £1,000 to reserve, or the same as in 1904, while raising the distribution to the shareholders to 8 per cent. and the carry forward to £856. Liabilities on bills payable have been reduced by £1,300 to £2,350, but sundry creditors, including unpaid wages, are £615 up at £1,873, and there is also an overdraft at the bank of £1,312. Against these, however, stocks of tea are £1,466 higher at £8,111 and sundry debtors have risen by £861 to £1,283, but cash is down £155 to £187.

Deamoolie Tea Co., Limited.

The average price obtained for the year ended December 31 was 5/8d. below that of 1903, but showed an improvement of 1/8d. compared with 1904 at 10 5-32d. per lb., and at the same time the crop was 55,238 lbs. larger at 661,798 lbs. On the other hand, the cost of production was further reduced to 7.28d. against 7.80d. and 9.64d. in the two preceding years, and after meeting all charges, including commission to staff in Assam, the nett profits came to £7,966. To this was added £1,202 brought in, making £9,168, and debenture interest having been paid, the shareholders receive a dividend of 10 per cent. and £5,168 is carried forward. No attempt has yet been made to establish a reserve fund, nor has anything been written off for depreciation, while the £10,000 6 per cent. debentures which fell due on January 1, have had to be renewed for a further period of five years. Bills payable come to £10,525, but against these the company has £6,000 in cash specially earmarked, and as other liabilities are moderate at £770 for garden drafts in transit, and £1,080 due to sundry creditors, while debtors for tea sales come to £9,541, sundry debtors to £552, and cash, apart from the special sum above mentioned, to £3,072, the company is well to do. Recruiting advances and advances to coolies, however, are heavy at £1,138 and £642 respectively.

The British Equitable Assurance Co., Limited.

In the past year this company issued in its life branch 846 new policies, insuring about £256,000 and yielding a new premium income of £8,432. Of this total, however, a small amount was re-insured, involving a reduction of the new premium income by £751. Altogether the revenue from premiums and income was £199,995, and at the end of the year about £6,000 of this remained to be added to the life funds, raising their total to £1,762,000. Interest at the rate of £4 2s. 8d. per cent. was on the average earned by the investments of the company, or deducting income-tax, at the rate of £3 18s. 6d. Claims by death were said to amount to only 80 per cent. of the expectation, and the small addition to the funds must therefore be attributed to the high ratio of expenses. These amounted in the past year to almost 27 per cent. of the premium income. The company has begun to do a fire business and has also an accident branch, but both of these are as yet quite tiny. The report before us, however, is the 51st issued.

The Australian Mutual Provident Society.

It is now 57 years old, and is probably the most powerful British life office outside the United Kingdom. It appears to be excellently managed also, and does not allow its expenses to run up to the high figures which competition and lax principles of business have made fashionable with so many colonial and some few home offices. It accordingly deserves its success, which was as great last year as usual. The actual number of policies issued within the 12 months ended December 31 last was 15,708, covering £4,042,505 of assurance, or adding in the business brought from the previous year and completed in 1905, £4,075,514. The actual expenses of getting this business came to little more than 9 per cent. of the premium income, which aggregated £1,798,000, including £144,140 as premiums on the new policies. This society follows the good habit of valuing its assets and liabilities each year, and the actuary in his report states that the cash surplus at the end of last year was £713,269. Out of this, £77,836 has been set aside to various reserves, leaving £635,533 to be distributed amongst the participating policy-holders, a sum sufficient to provide reversionary bonuses amounting to about £1,200,000. Last year the funds were increased by about £856,000 to a total of £21,423,081. An industrial branch was started at the beginning of the year, which seems to promise

important results in the future. If we include sundry items, such as £32,000 written off foreclosed properties and the money spent on improvements, as well as the sums written off office premises, the entire expenses of conducting the business last year are found to come to about 11.23 per cent., and there was besides £26,602 paid in taxes, which seem to be heavy, each colony in the Australasian Empire levying income-tax and other imposts upon the business, but we have not included the taxes as a portion of the controllable expenses of the society. In the balance-sheet we find properties acquired by foreclosure standing for £628,508, on which there seems to be losses, judging by the amount written off last year. Then no less than £4,481,439 represents loans on the society's policies, and £4,162,328 has been invested, mostly in the securities of the various Australasian settlements, while £9,511,092 has been sunk in mortgages, including about £15,000 of interest in arrear.

Edinburgh "Evening News," Limited.

The publication of this excellent Scotch paper seems to be a rather profitable business, as the owning company earned the nice little revenue of £15,635 during the year to May 31. With £738 brought in the disposable balance is £16,373, and after meeting the preference dividend with £5,000 the directors pay 6 per cent. on the ordinary shares, and add £5,000 to the ordinary reserve fund at the cost of a reduction in the carry forward to £373. Compared with the previous year the profit is larger by £527, a result due, the directors tell us, to increased advertising and larger circulation. The company is a little heavily weighted with capital; goodwill, copyright, &c., standing at £149,997, against a capitalisation of £200,000, but as the ordinary portion, which reaches one-half of the total, remains with the vendors this is not of great importance. The company has been spending money on premises and a new installation of stereotyping plant, the latter being nearly ready. Properties are now valued in the balance-sheet at £20,456, fixed plant, machinery, gearing, &c., at £23,046, and furniture, fittings, trade utensils, &c., at £1,781. Stocks are worth £1,648, and besides a favourable trade balance the company has £13,785 in cash. Total reserves now reach £14,000, of which £8,989 is invested in securities showing a slight depreciation.

DIVIDENDS ANNOUNCED.

BANKS.

Anglo-Foreign.—Interim at the rate of 5 per cent. per annum (3s. 6d. per share) for half-year to June 30, payable 16th inst.

Bank of Bengal.—At the rate of 10 per cent. per annum for past half-year, carrying forward 4,85,500 rupees, and placing to reserve 5,00,000 rupees.

Bank of Bombay.—At the rate of 12 per cent. per annum for past half-year, carrying forward 2,95,500 rupees, and placing 3,00,000 rupees to reserve.

Bank of Madras.—10 per cent. for past half-year, carrying forward 2,64,000 rupees, and placing to reserve 1,00,000 rupees.

Bank of Mauritius.—Interim at the rate of 6 per cent. per annum for half-year ended June 30.

Bank of New South Wales.—At the rate of 10 per cent. per annum, placing £25,000 to reserve, and carrying £22,617 forward.

Capital and Counties.—For the past six months at the rate of 18 per cent. per annum, with £15,000 applied in reduction of premises account, £30,000 towards writing down the holding of Consols, and £10,000 added to the superannuation fund, leaving £52,291 to be carried forward.

German of London.—Interim for past half-year of 5s. per share.

Huddersfield Union.—Interim of 8s. per share for half-year ended June 30.

Lancashire and Yorkshire.—Interim for past half-year at the usual rate of 15s. per share, being at the rate of 15 per cent. per annum.

Lloyd's.—Interim for the half-year ended June 30 at the rate of 17½ per cent. per annum.

London and Hanseatic.—Interim for past half-year of 5s. per share, or at the rate of 5 per cent. per annum.

London and South-Western.—At the rate of 16 per cent. per annum for half-year ended June 30, appropriating £10,000 in reduction of premises, and carrying £42,000 forward.

London and Westminster.—6½ per cent. for half-year ended June 30, carrying forward £41,000.

London City and Midland.—Interim at the rate of 18 per cent. per annum, transferring £20,000 to bank premises redemption fund, £5,000 to officers' pension fund, and carrying forward £140,776.

London Joint Stock.—At the rate of 11 per cent. per annum, carrying forward £22,700.

London Trading.—For half-year at the rate of 5 per cent. per annum.

Manchester and County.—Usual at the rate of 15 per cent. per annum, placing £10,000 to reserve, and carrying £17,410 forward.

Metropolitan (of England and Wales).—Interim for past half-year at the rate of 12½ per cent. per annum.

Natal.—Interim of 6 per cent. for half-year to June 30, being at the rate of 12 per cent. per annum.

North and South Wales.—Interim of 10 per cent. per annum for the half-year ended 30th ult., and a bonus of 4 per cent. per annum.

Parr's.—For past half-year at the rate of 19 per cent. per annum, placing £15,000 to bank premises account and £10,000 to officers' pension and provident fund, carrying forward £119,786.

Union of London and Smiths.—15s. 6d. per share and a bonus of 1s. 6d. per share on the paid up capital, carrying forward £184,558.

Union of Manchester.—Usual for past half year of 12s. per £11 paid share, placing £2,000 to premises reduction, £3,000 to reserve, £2,500 to pension fund, and carrying £5,945 forward.

Williams Deacon's.—Interim for half-year ended June 30 of 12s. per share, being at the rate of 15 per cent. per annum.

INSURANCE.

Employers' Liability.—Interim of 2s. per share, being at the rate of 10 per cent. per annum.

Liverpool Mortgage.—Interim of 1s. per share, being at the rate of 5 per cent. per annum.

MINES.

Associated of Western Australia.—2s. per share, payable Aug. 10.

New Gopeng.—For year ended April 30, 1906, of 1s. per share, making 5s. per share for past year.

Gopeng Tin.—1s. 3d. per share.

Ivanhoe Gold.—First quarterly interim in respect of 1906 of 5s. per share, payable July 26.

Jumpers Gold.—Interim of 30 per cent.

Le Roi No. 2.—Further interim of 1s. per share, payable July 10.

No. 1 Gold (Queensland).—Another of £150 per 1-17th share.

MISCELLANEOUS.

A. and S. Henry and Co.—Interim on the ordinary shares at the rate of 6 per cent. per annum for half-year ended May 31.

Apollinaris and Johannis.—Final at the rate of 5 per cent. per annum on the ordinary shares, making 5 per cent. for year ended March 31, placing £20,000 to reserve, and carrying £20,163 forward.

Brown Bayley's Steel Works.—Interim at the rate of 10 per cent. per annum for half-year ended June 30.

Callao Dock.—3s. per share for 1905.

Claud Hamilton.—Further of 5 per cent., making 7½ per cent. for year ended April 30.

Colebrook and Co.—10 per cent. for year ended April 30, carrying forward £2,591.

Costa Rica Railway.—1 per cent. for year ended June 30.

E. W. Tarry and Co.—Interim of 2½ per cent. on the Ordinary shares on account of current year, being at the rate of 5 per cent. per annum.

George Angus and Co.—Interim of 5 per cent. per annum (3s. 9d. per share) for half-year to June 30.

Goodwin Foster Brown.—Half-yearly to June 30 at the rate of 5½ per cent. per annum on the preference shares.

Henry Ford and Co.—First interim of 7½d. per share on account of current year.

Horncastle (Lincolnshire) Water.—6½ per cent. for past year.

International Nickel.—Quarterly of 1¾ per cent. on the preferred stock, payable Aug. 1.

Lovell and Christmas.—Final on the ordinary shares for six months ended June 30 at the rate of 10 per cent. per annum, making 10 per cent. for year, carrying forward £22,213.

National Discount.—At the rate of 10 per cent. per annum for half-year ended June 30, carrying £10,900 forward.

National Telephone.—For half-year ended June 30 at the rate of 6 per cent. per annum on the preferred stock, and at the rate of 5 per cent. per annum on the deferred stock, carrying £120,000 to reserve and £10,000 forward.

Netherlands Incandescent Gas Light (in liquidation).—First and final of 2s. 5d. per share.

Patent Enamel.—Interim at the rate of 1s. per share on the ordinary shares.

Prudential Mortgage.—Bonus of 1 per cent. on the paid-up share capital, making 5 per cent. for the year, carrying forward £3,842.

Raffety, Thornton.—Interim of 5 per cent. per annum for six months ended June 30.

South Africa.—Further of 10 per cent., making 20 per cent. for year ending June 30.

Sheffields.—Interim at the rate of 5 per cent. per annum for six months ended June 30th.

Stroud Brewery.—Interim at the rate of 9 per cent. per annum on the ordinary shares for half-year ended May 17.

Telegraph Construction and Maintenance.—Interim of 12s. per share.

Union Discount of London.—For half year at the rate of 11 per cent. per annum, placing £10,000 to reserve, and carrying forward £52,006.

MINING RETURNS.

Associated Northern Blocks.—Milled 3,376 tons; treated 468 tons slimes; yield, £15,222.

Balaghat.—4,450 tons, 3,522 ozs.; tailings cyanide 4,004 tons, 418 ozs.; total, 3,940 ozs.

Barratt Gold.—429 ozs. gold, value, £1,750.

Bonanza.—Crushed 6,700 tons, 2,224 ozs.; cyanide and slimes 7,229 tons, 1,643 ozs.; total, 3,867 ozs.

Brilliant Gold.—Crushed 100 tons for 140 ozs.; crushed 45 tons for 41 ozs.

Briseis Tin.—Shipped 21 tons, including 7 tons for New Brothers Home No. 1.

British Broken Hill Proprietary.—3,570 tons crude ore produced 599 tons concentrates, containing 371 tons lead and 17,371 ozs. silver.

Broken Hill South Silver.—16,400 tons crude ore treated, yielding 2,900 tons concentrates assaying 66 per cent. lead, 16 ozs.

silver per ton, and 7 per cent. zinc (contents = 1,914 tons lead and 46,400 ozs. silver).

Broomassie.—Crushed 805 tons, 1,013 ozs.; 10 tons concentrates, of an assay value of £23 13s. per ton.

Carrington's Lion.—Crushed 300 tons, £525.

Champion Reef.—15,100 tons, 11,151 ozs.; 17,399 tons tailings (cyanide), 2,087 ozs.; total, 13,238 ozs.

Chinese Engineering.—Output of coal, 17,000 tons; sales, 14,000 tons; consumption, 1,800 tons.

Coromandel.—850 tons, 323 ozs.

Day Dawn Block and Wyndham.—1,790 tons.

Durban Navigation Collieries.—Output, 16,000 tons; sales, 16,000 tons.

Giant of Rhodesia.—4,444 tons, 2,183 ozs.; slimes 4,444 tons, 296 ozs.; total, 2,479 ozs.

Golden Pole.—Crushed 1,546 tons, 920 ozs.; 1,201 tons sands, 320 ozs.; 6 tons concentrates, 16 ozs.; 627 tons slimes, 198 ozs.; total, 1,454 ozs.

Hutti (Nizam's).—Crushed 2,100 tons, 903 ozs.; tailings 2,050 tons, 280 ozs.

Hyderabad (Deccan).—Output of coal, 39,347 tons.

Kalgurli.—10,950 short tons, 8,002 ozs.

Killarney Hibernia.—Crushed 4,236 tons, 1,579 ozs.

Kelantan Gold Dredging (No. 1).—Recovered 125 ozs. of gold.

Lace Diamond.—Loads of blue ground washed 25,035, yielding 2,892 carats; blue ground floored 41,523 loads, making 911,515 loads on floors.

Lloyd Copper.—Production 150 tons copper.

Mills' Day Dawn United.—Treated 1,751 tons, value £7,900.

Mount Lyell Blocks.—Treated 6,400 tons crude ore, for 73 tons 5 cwts. fine copper.

Mysore.—Crushed 14,400 tons, 14,403 ozs.; 12,873 tons tailings (cyanide), 1,830 ozs.; steamings from plates 803 ozs.; total 17,036 ozs.

Mysore West and Mysore-Wynaad Gold.—Crushed 1,814 tons, 496 ozs.; 2,592 tons cyanided, 113 ozs.

Natal Navigation Collieries.—Output 14,442 tons.

New Vaal River.—Diamonds registered by the diggers on the Vaal River Estate £4,825.

Nundydroog.—6,450 tons, 5,251 ozs.; tailings 6,750 tons, 650 ozs.; total 5,901 ozs.

Ooregum Gold.—10,014 tons, 4,816 ozs.; tailings (cyanide) 9,970 tons, 770 ozs.; total 5,586 ozs.

Ottos Kopje Diamond.—Recovered 86 carats, including diamonds of 10 and 12 carats each; realised £199.

Premier (Transvaal) Diamond.—Loads washed—mine ground 252,379 loads; overburden 53,791 loads, yielding 65,155 carats diamonds.

Queensland Copper.—Ore treated 1,273 tons; production 249 tons matte, containing 142 tons fine copper.

Red Hill, Westralia.—Crushed 1,610 tons, 702 ozs.

St. Davids.—Crushed 1,330 tons, 59·96.

St. John Del Rey.—Gold produce, £18,960; yield per ton, ·52 of an ounce troy.

San Miguel.—Ore won, 4,068 tons; fine copper produced (contained in precipitate of about 70 per cent.), 41 tons; washed ore taken off heaps, 2,000 tons.

Sheba.—Output, 4,235 ozs., after including by-products.

Tasmania Gold.—Crushed 5,050 tons, 1,735 ozs.; 387 tons concentrates, 454 ozs.; 2,388 tons treated in the cyanide, 207 ozs.; total, 2,396 ozs.

Transvaal Gold.—Crushed 8,678 tons, 2,068 ozs.; Central cyanide, 3,690 tons, 823 ozs.; Central slimes, 2,660 tons, 442 ozs.; Kameel's cyanide, 1,250 tons, 296 ozs.; Kameel's slimes, 740 tons, 149 ozs.; old slimes, 400 tons, 105 ozs.; total, 3,883 ozs.

Vogelstruis.—Quartz milled, 6,130 tons, 1,887 ozs.; tailings, 4,460 tons, 434 ozs.

Waihi.—Bullion, 25,654 tons of 2,000 lb., yielding £62,470.

Weardale Lead.—Ore raised, 231 tons; pig lead smelted, 192 tons; average price for lead, £16 6s. 3d. per ton nett.

NEXT WEEK'S MEETINGS.

Monday, July 9.

Dumont Coffee.—Winchester House, noon.
McCracken's City Brewery.—Cannon Street Hotel, noon.
Palmer and Co.—Winchester House, 2 p.m.
Paramatta Copper Mines.—Dover.

Tuesday, July 10.

Anglo-Sicilian Sulphur.—Winchester House, 2.15 p.m.
Burma Ruby Mines.—Cannon Street Hotel, noon.
Bodega.—Winchester House, 11.30 a.m.
New Eastern Investment.—Winchester House, noon.
United River Plate Telephone.—Winchester House, noon.

Wednesday, July 11.

Dr. Tibbles' Vi-Cocoa.—Cannon Street Hotel, noon.
Jokai (Assam) Tea.—14, St. Mary Axe, 2.30 p.m.
Peak Hill Goldfield.—Salisbury House, noon.

Thursday, July 12.

Apollinaris and Johannis.—Holborn Restaurant, 3 p.m.
Chili Telephone.—42, Old Broad Street, 12 p.m.
Electrical Power Storage.—4, Great Winchester Street, 2.30 p.m.
Tyee Copper.—Cannon Street Hotel, noon.

Friday, July 13.

Argentine Land and Investment.—Winchester House, 2 p.m.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and June 30, 1906:—

Revenue and Other Receipts.

	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to June 30, 1906.	Total Receipts into the Exchequer from April 1, 1905, to June 30, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909

Treasury, July 3, 1906.

In books, as in everything else, there is the slack season, nevertheless the "Book Monthly" gives a goodly array of new books to be ready this month for those who are not too slack to read them. Also this magazine contains an interesting article by F. W. von Hubert on the Turkish novel and the methods they employ in that land to circulate its vast literature, a method that would not commend itself, we fear, to lands accustomed to book clubs and libraries. "Advance Australia" is the title under which Mr. Leon Brodzky brings into sight quite a number of colonial minor poets, a formidable array, many of whom, alas, are unknown quantities as yet over here to most people, but some of whom doubtless will "arrive," and Mr. Brodsky regards the "outlook as inspiriting."

COMPANY MEETINGS.

TRUSTEES' EXECUTORS' AND SECURITIES' INSURANCE.

The eighteenth annual general meeting of the Trustees', Executors', and Securities' Insurance Corporation, Limited, was held on Wednesday at Winchester House, E.C., Mr. George A. Touche (the chairman) presiding.

Mr. Gilbert Taylor (one of the secretaries) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, said this had been an important year in the history of the Corporation, because in the course of it they had discussed and carried to a successful conclusion a scheme for the reorganisation of the capital. That scheme had done two things; it had broadened the borders of the corporation and established it on a wider basis, while also permanently relieving shareholders from a liability of £3 per share. If they turned to the balance-sheet they would see what the difference was this year. Last year the capital stood at £1,050,000, in 200,000 shares of £5 5s., £2 5s. paid, that being £450,000 paid up and £600,000 liability. The balance-sheet to-day showed the capital as still £1,050,000, but divided into two equal parts of 4½ per cent. preferred stock and ordinary stock, and the liability had entirely vanished. The question of the liability on the shares had been the subject of discussion at every meeting since the time when he first presided in 1901. At that time and long subsequently the 200,000 shares representing the capital of the company stood at 1¼, and represented a market value of £250,000. On the date when they closed the present accounts the market value of their ordinary stock at 103½ amounted to £543,375, representing an improvement in the capital value of the shares of no less than £293,375. In other words, the capital had more than doubled in market value. It was suggested that the improvement was due to a considerable extent to profits which were made on selling part of their interest in the Mexican Southern Railway, but he had gone carefully through all the sources of extraneous profits during the last five years, and found that the improvement in the capital value of their securities far exceeded any increment of value derived from that source. The inevitable consequence, therefore, was that this meant that the increase of value was due chiefly and primarily to the fact that they had at length got rid of that immense liability which for so long was an incubus upon the shareholders of the company. The position of the holder of 100 shares was that he had a property worth in the market £125 a year ago, but to-day it was worth £270, and he had no hesitation whatever in expressing the opinion that that increased market value was fully justified. They stated in the report that their capital assets were represented by value. The chief of these assets was the amount of their investments, £1,130,830, as compared with £616,466 a year ago, and it would be observed that although they had nearly doubled the amount of their investments, they had adhered pretty closely to the old rule of putting the chief part of them into bonds, debentures, and debenture stock. The next asset was Winchester House, which appeared at £220,000, which was the figure at which it had stood for a great many years. They had spent on rebuilding £48,422, and they would probably spend another £35,000 or £36,000 to complete the building. This property would then stand at about £300,000, or possibly a little over. The architect estimated that when completed the additional rental would give them a substantial income on the additional capital spent. The other assets did not call for particular comment. The transitional character of the year was even more clearly reflected in the profit and loss account. The figures were abnormal, both as regarded interest and dividends and rentals, and therefore afforded no indication of the probable results which might be expected when things settled down. In the discussions of a year ago the fear was expressed that they would not be able to earn 4½ per cent. on their new money, and a casual observer might suppose from these accounts that this was justified. The amount received from dividends, interest and so on was £48,007, as against £44,626 a year ago. They therefore inserted paragraph No. 3 in the report, which was of an explanatory character, in order that shareholders might not fall into that mistake. After dealing with the appropriation and expressing satisfaction at the general result, the Chairman went on to deal with the Public Trustee Bill, which had become a Ministerial measure, passed the House of Lords, and been read the second time in the Commons. People already had opportunities of appointing a strong corporation such as this, with a guarantee of safety, which specialised in trustee business, and had been publicly commended by the High Court for the way it fulfilled its duties, or one of the other institutions, banks, and insurance companies of undoubted financial strength, which were prepared to administer trusts. At present these companies were impeded by legal technicalities which should be swept away, especially if the Government was coming into competition, so that the competition might at least be fair. The board did not cease to oppose the appointment of a public trustee, but claimed as a matter of common justice to have the same recognition in law as the Government official. Mr. Slaughter encouraged him to hope that a Free Trade Government would not seek to establish a monopoly in this trustee business.

Mr. W. Capel Slaughter seconded the resolution, and it was carried unanimously.

The retiring directors and auditors having been reappointed, the meeting terminated with a vote of thanks to the Chairman.

DOOARS TEA.

The twenty-first annual ordinary general meeting of the Dooars Tea Company, Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr. F. T. Verner (chairman of the company) presiding.

The Secretary (Mr. H. F. Turner) having read the notice convening the meeting and the auditors' report to the shareholders,

The Chairman said: Gentlemen,—You will have learnt from the report that we have had a satisfactory season. I stated at last year's meeting that we could not expect as large a crop as in 1904, but that I felt confident that any falling off in crop would be more than compensated by better prices. I am pleased to find that this forecast has proved correct. Although the production has fallen off by close on a quarter of a million lbs., the nett profit has increased from £24,591 in 1904 to £27,138 in 1905. The nett profit per lb., as compared with 1904, has risen from 1.30d. to 1.48d., and per acre from £3 1s. 8d. to £3 7s. 9d. All the gardens have contributed to the profits of the company. The staff in India are to be congratulated on their work. It is to the men on the spot that we have chiefly to look for the successful working of the company. The superintendents are always striving to secure uniform good management on each and every garden, but this is difficult to obtain. The results of the past season show, however, that on the whole most excellent work has been done; and, although the irregularities in the results obtained, as shown in the past, at all our gardens, are not in themselves matter for congratulation, it leaves us with the certain knowledge that we have not yet reached the acme of profits, and the strong conviction that there is every probability that the records of the future of this company may outstrip the fine record of the past. Of all the duties of the staff there are none so trying as these directly due to the labour difficulty. The labour is very fluctuating. The largest force available is in the early months of the year up to June. In the height of the manufacturing season, when most required, it is usually little more than half a coolie per acre. Every year the gardens lose some 40 per cent. to 50 per cent. of their labour, and the staff are hard pushed to recruit and replace these yearly losses. I find that in 1905 some 5,000 odd coolies left the gardens, and that some 6,000 were recruited. The recruiting districts are distant fully 300 miles. As the demand for labour in the manufacturing season is very far in excess of the supply, and as it is entirely free—the coolies leaving the garden when they like, and working only when it pleases them so to do—you can perhaps grasp to some extent the difficulties the staff have to deal with, but I do not think it is possible without practical experience to fully realise how hard and trying these are, and what firmness, patience, tact, and good temper are required to deal successfully with labour in the Dooars, for I venture to say that no industry in the world is worked in this respect under more trying conditions. With regard to the tea duty, I trust the shareholders will still continue to use every effort to secure an adequate reduction in this most iniquitous tax on a British industry. We have to thank the Chancellor of the Exchequer for a reduction of 1d., and we have to recognise his very sympathetic allusions to the industry. In the House of Commons he pointed out that "tea has become to the mass of the people a prime necessity of life," that "the duty is still the highest in proportion to its value of all the taxes levied on articles of food; the Custom duties in 1905 were cocoa 13 per cent., coffee 25 per cent., sugar 30 per cent., and tea 90 per cent." He showed "the direct relation between the duty on one hand and the consumption on the other, also that an excessive duty (such as we suffer so severely from) injures the producer as well as the consumer," that "the tea producers are our fellow-subjects developing in India and Ceylon the resources of the British Empire." I now beg to move: "That the directors' report and statement of accounts for the year 1905 be and they are hereby approved and adopted."

Mr. W. K. Darley seconded the motion, which was agreed to after a brief discussion.

The dividends as proposed having been agreed to and other formal business transacted, a vote of thanks to the Chairman closed the proceedings.

SINGLO TEA COMPANY.

The 11th annual ordinary general meeting of the shareholders in the Singlo Tea Company, Limited, was held on Wednesday at Winchester House, E.C., Mr. W. S. Wells (Chairman of the company) presiding.

The Chairman said that the directors appeared before the shareholders with a somewhat improved statement of accounts, but the tenor of the report showed that they were not satisfied with the past year's working. In the opinion of the directors the Assam gardens had not worked up to their full capabilities. Having regard to the past three years' working, the directors decided to abolish the post of superintendent, and to place each manager in full charge of his division. He concluded by moving the adoption of the report and accounts.

Mr. W. L. Thomas seconded the motion.

Mr. T. G. D. Reed said that it was satisfactory to note that the season was not so unhealthy as its predecessor. The directors, however, did not state the percentage of births and deaths, nor was any labour statement put in, nor was anything said about the number of absconders. The charge for recruiting coolies for the Assam gardens was put at £2,737, but no details were given as to the number and class of coolies obtained

and the cost per head. The average cost of the coolies might be very considerably reduced in the company's Assam gardens by the employment of Kachari coolies. These coolies are strong, healthy, and acclimatised, and require no medical attention from the company, and they cater for themselves. Under the charge of the late Mr. John Gibbons they did first-class work. Free labour was what was wanted, and it could be obtained. In reference to tea boxes the cost appeared high for Assam, being about 19,000 rupees. He would ask whether the company cut up their own boxes or bought them, and what was the cost per bundle of boards representing a box. Some years ago he understood timber was cut up for boxes at Suffry at a cost of under 8 annas a bundle or chest. He asked for some detailed explanation of the general charges for Assam and the Dooars gardens, and also under what heading the Calcutta agency charges were placed, and what they amounted to. It was said that the results for 1905 were better than in recent years, but were not equal to the capabilities of the gardens, and the directors were pleased to call attention to the results of the Muttrapore division in Assam, which made a profit of £3,200, or equal to £3 13s. 3d. per acre. No mention, however, was made of the profit and loss of the other divisions. He suggested that for the future the board should furnish a statement in the yearly reports sent to the shareholders showing the profit or loss in rupees or pounds sterling on each garden of the company, and they could then see at a glance how things were working. He asked if the chairman would favour him with his view of the cause of the great fall of the crop of the Assam gardens. He asked this question because he had heard that heavy pruning and the present system of plucking had something to do with it, too large an area having been cut down and too fine a plucking introduced. As a planter of many years' experience, he held, as many others did, that the gardens should be allowed to fully mature their leaf, and should be plucked, say, every ten days, taking three leaves and a bud, so as to enable them to procure quantity and quality combined without adopting coarse plucking, which should be avoided in every possible way, as congou did not pay to pluck. Plucking in from five to seven days, as was done, he believed, by some companies, had a rack-renting flavour about it, as it took too much out of the trees and exhausted the soil. With regard to manuring, a tea plant could not live without food, and the proper application of manure should receive their earliest attention. He had intended to speak on the subjects of transplanting, extensions, abandonments, own rice growing, &c., but time did not allow. In conclusion, he advocated the issue of a full report of the meeting to the shareholders.

Mr. G. F. Moore and the Chairman having replied on the various points raised in the discussion, the report and accounts were unanimously adopted.

The retiring directors and auditors were re-elected, and the proceedings terminated.

BAKU RUSSIAN PETROLEUM.

The seventh annual ordinary general meeting of the Baku Russian Petroleum Company, Limited, was held on Wednesday at Winchester House, E.C., Colonel Ivor Philipps, D.S.O., M.P. (the Chairman), presiding.

The Secretary (Mr. A. S. Evens, A.C.A.) read the notice convening the meeting and the report of the auditors.

In moving the adoption of the report the Chairman reminded the shareholders that the company had sustained very heavy losses by the succession of strikes and political disturbances which occurred in Baku last autumn, culminating as they did in a large destruction of their property by incendiary fires. The whole of the sum standing to the credit of the profit and loss account for the year—£55,300—had been carried to a "losses by fires and disturbances account," and by December 31 last £27,000 had actually been spent in the work of restoration. No sum had this year been set aside for depreciation, but it should not be forgotten that their old works were being succeeded by new, the cost of which was being charged to revenue. As to the future, their programme had been much interfered with by the disturbances. But they were pushing on as far as they possibly could with the boring of new wells, the deepening of those already existing, and the restoration of their damaged property. The production of crude oil was at present unsatisfactory, but a telegram received that morning from their manager expressed a hope that the returns would soon prove more satisfactory. "Production prospects are favourable" was a sentence contained in the telegram. Unfortunately, they were again face to face with labour troubles at Bibi-Eibat. The manager reported that the position was one of extreme difficulty, and that he was in constant negotiation with the workmen. Still, he did not fear that the strike would become general. All the company required was industrial peace in the Baku district; that would enable them to bring their production up to a figure which would enable them to make a satisfactory profit. Five new members of the board had been appointed, Mr. R. Barber, Mr. J. Booth, Mr. A. H. Drew (chairman of the shareholders' committee), Mr. C. S. Watson, and Mr. J. B. Wimble. Their names would be submitted to the meeting for confirmation, and in the event of the shareholders approving the appointments, Mr. H. N. Gladstone, an old and valuable director, who would have left the board some time ago had he (the chairman) not requested him to retain office, would place his resignation in their hands.

Mr. C. H. Moore seconded the motion.

Dr. Whitty congratulated the shareholders on the latter portion of the chairman's speech, indicating as it did an amicable arrangement of a long and acrimonious discussion. As the whole body of shareholders would benefit in the results achieved by the agitation which had been conducted, he thought that the reasonable expenses of the shareholders' committee in connection with the summoning of extraordinary general meetings—which he estimated at £500—should be borne by the company, and he moved a rider to that effect to the motion for the adoption of the report.

Dr. Dvorkovitz also congratulated the shareholders on the termination of their dispute, and supported the suggestion that the costs of the shareholders' committee should be met by the board.

The Chairman pointed out that the rider to the report could not be legally submitted to the meeting, but he put the question to the meeting later by way of an informal resolution, when the shareholders rejected it by a large majority.

Mr. S. J. Hogg, a former director, urged upon the board to take into early consideration the question of the reorganisation of the company, declaring that the development of a valuable property should not be done with borrowed money.

The report having been adopted, the appointment of the new directors was approved by the shareholders, Mr. Holzapfel, on behalf of the committee, urging the board to take into consideration the question of the management of the property at Baku and the writing down of the capital of the company.

These points, the Chairman said, should have the early consideration of the new board.

AUX CLASSES LABORIEUSES.

The annual ordinary general meeting of Aux Classes Laborieuses, Limited, was held on Monday at the Institute of Chartered Accountants, Moorgate-place, E.C., Mr. D. Dalziel, the Chairman of the company, presiding.

The Secretary, Mr. R. Gordon, read the notice convening the meeting and the auditors' report.

The Chairman said: In presenting to you once more the accounts of your company, it is with some degree of pride that I am able to point to the fact that in spite of the many adverse influences which affected all business ventures during the past year, your directors are able to place before you a balance-sheet which shows the steadily increasing prosperity of your business. This is the ninth annual meeting we have had since the company was incorporated, and it is a pleasant duty to be able to say that it also enables us to record highly satisfactory results, the profits on the nett trading being £1,278 2s. 4d. in excess of last year. I do not know that there is very much that I can say to you with regard to the business that I have not already pointed out at the various meetings we have held in the past. No doubt you would like to know something with reference to the Au Petit St. Thomas, Limited. I am informed by the managing director, who is here to-day, and who represents our interests on the board of the Au Petit St. Thomas Company, that the business is doing better than could have been expected, and that there is every probability that the future will show that we have made a highly satisfactory investment in the shares of that company. Last year the profits were about 55,000 francs—a little over £2,200—not a very large sum of money, I admit, but still satisfactory when you consider that the Au Petit St. Thomas has branched out into a new line of business. This year, however, it is expected that the profits will show about 200,000 francs, or about £8,000, so that it is hoped that the concern will enter into its first stage of dividend payments next year. Their financial year only terminates this month, and but for the annoying situation created by the continuous strikes in France the results would have been still more satisfactory. I do not know that there is anything more that I have to say to you to-day excepting to point out that which must be very agreeable to you to contemplate—namely, that since this company was established it has actually disbursed to the holders of the ordinary shares, including the dividend we are about to declare to-day, no less a sum than £222,499, which represents in the short time of the existence of the company 90 per cent. of the face value of the ordinary share capital of the company. (Hear, hear.) I feel sure you will agree with me that this is a satisfactory result. (Applause.) Before concluding my remarks I want, on behalf of my colleagues, to express the great satisfaction we have felt at the manner in which our managing director has always conducted the affairs of this company. (Hear, hear.) When the time comes to pass a vote of thanks to him I shall be only too happy as a shareholder myself to give it my hearty support. If there are any questions that you wish to ask me with regard to the business or the accounts I shall be pleased to answer them to the best of my ability. I will now move: "That the directors' report and the balance-sheet and accounts for the year ending January 31, 1906, be and they are hereby received and adopted." (Applause.)

Mr. Henry Wolfenden seconded the motion.

A good deal of discussion followed, and the Chairman having replied to the various points raised, the resolution was put to the meeting and carried unanimously. The dividend having been agreed to and the usual business transacted, a vote of thanks to the chairman closed the meeting.

MINING IN BRITISH COLUMBIA.—According to the report of the Minister of Mines for 1905 the mineral output of British Columbia last year amounted in value to $22,500,000.

TRADE AND PRODUCE.

Wheat.—Markets have had another quiet, uneventful week, with very little doing anywhere. Speculative positions have fluctuated a little, generally with a downward tendency, and spot parcels have been partly neglected. English wheat was taken, when offered, at full prices, and foreign also ruled firm, mid-week prices at London being 33s. 10½d. for No. 1 Northern Manitoba, 32s. 9d. to 33s. for No. 2. For Australians 33s. was asked, for New Zealand 30s. 6d. to 32s., and La Plata was to be had at 31s. 3d. Farmers' deliveries for the past week amounted to 14,858 quarters, averaging 30s. 3d., against 9,579 quarters, averaging 31s. 8d. in the same week last year. From abroad we received 603,960 quarters, against 427,233 in the same week of last year, and the supplies of wheat and flour on passage to the United Kingdom show a decrease, 3,260,000 quarters, against 3,410,000 last week. American markets had a quiet week also, fluctuating according to the weaker crop news, and weakening under liberal supplies of new crop. Bradstreet's estimates for the quantities in sight east of the Rockies at 33,810,000 bushels, against 20,476,000 bushels last year.

Wool.—In their report upon last month's trade, Messrs. W. and C. Dunlop state that its chief feature has been the steadiness of prices in general, and though slightly higher rates are predicted at the London sales next week, it does not seem likely that further advances will come in the immediate future. The home-grown clip has now mostly been taken up, and farmers, as a rule, have every reason to be satisfied, though they have had to lower their prices from the original high estimate. Spinners are busy chiefly on old contracts, for at present little new business is coming forward, but in some districts manufacturers are doing a brisk trade at good terms. Home trade is for all class of goods, that of the Continent chiefly for medium and fine fancy goods. Colonial trade is active in all directions, and of late a demand has sprung up in China and Japan for several varieties of goods.

Linen.—The trade is now at its slackest season, and little can be said of it except that this year it is less slack than usual. Business done during the week has been steady, a number of small orders amounting to quite a respectable whole, and producers also are so well employed in orders that they can welcome a dull season rather than otherwise. Prices keep very firm, and occasional fractional concession is heard of in tow weft transactions, but that, says the *Linen Market*, is "inevitable, attendant on a period of quietness succeeding a prolonged upward movement." Foreign trade keeps well to the front. Barnsley is exporting a quantity of drill to South America, and of other medium goods to the United States, and Belfast is doing a very fair trade also, considering the season, with the same countries. At present Cuba is the most disappointing quarter. Reports in the home flax crop are satisfactory; in the Continent are very variable.

Cotton (from our Manchester correspondent).—A generally quiet tone has prevailed throughout our market during the past week. There have been few signs of activity in any quarter, and shippers of cloth have done very little forward business. In fact, at the moment buyers are not disposed to purchase in anticipation of future wants. The demand for India is generally unimportant. Reports from Calcutta are disappointing, and although the other outlets of our dependency provide a number of small sorting-up orders, yet the total sales are of small dimensions. The rains are understood to be satisfactory, and the prospects all round are encouraging, but stocks are so heavy in India that shippers are not eager to further enter the market. Fine goods have continued neglected, and producers of mull dhooties are turning wherever possible on to other makes of cloth. China buyers have been generally quiet, only occasional odd lots being bought, and the reports from Shanghai are not of a character to stimulate shippers here to purchase freely. The minor markets of the Continent have dealt to a small extent in goods of a miscellaneous character, but the total sales have not been at all important. The outlets of South America have continued quiet. Burnley goods are slightly irregular in quotation when tested. Glossop cloths keep firm owing to engagements. Makers of T-cloths and Mexicans hold well to late rates, sellers adopting a stiff attitude. Sateens and coloured woven goods have dragged slightly. In home-trade cloths not many fresh contracts have been placed, but clearances from the wholesale houses are on the whole healthy, and the outlook for the autumn trade is encouraging. The feature of the market at the moment is the strong position of home-trade American yarns. The scarcity of cop twist seems to be worse, and users have greatly pressed spinners for deliveries. Machinery in certain parts of Lancashire has been stopped owing to lack of supply of yarn. Considerable inconvenience has been caused to manufacturers. In export descriptions only a small trade has transpired. Producers, owing to their engagements, have continued firm. Egyptian yarns move slowly, users adopting a hand-to-mouth policy. Prices when tested are irregular, especially the commoner kinds.

Coal.—This week's demands for steams at the Welsh ports have not been quite so heavy, and though prices for the best ruby remain firm at from 15s. 9d. to 16s. per ton, and second bests at 14s. 9d. to 15s. 3d., inferior sorts are decidedly weaker. The Humber ports still keep up a brisk trade in shipping kinds, and also the requirements of the steam shipping fleet, last week's, to June 26, exports from Hull amounting to 64,888 tons, against 25,651 tons in the same week of last year, and from Grimsby, to June 29, 32,641 tons, compared with 29,308 tons in the same week of 1905. North of England coal and coke trades are both good. Best gas coals are quoted at 10s. 6d. f.o.b., but foundry coke at 18s. 9d. f.o.b.

Copper.—Messrs. James Lewis and Sons take rather a "bear" view of the copper market in their recent circulars, and point out in their survey of the market for June that stocks have increased within the month by 1,100 tons and the visible supply by 2,300 tons. Confidence in the maintenance of prices in the United States, moreover, has been shaken by the reduction, on the 25th ult., of 12.12 cents in the price of Lake Copper to 18.50 to 18.75 cents per lb. The output of many of the American mines, too, is increasing rapidly and their dividends going up. Meanwhile, the London market for the metal has been rather firmer. The opening was easier, but the demand soon improved, and with fairly good support prices were maintained for a time. Operators are acting very cautiously, and business throughout has been extremely small, quotations being £81 7s. 6d. cash and £80 7s. 6d. for three months forward.

Tin.—This market is still in a very disturbed and unsettled condition. A shrinkage in supplies caused the opening to be rather firmer, and values slightly advanced; but weaker advices from the East soon caused a set-back. American holders having reduced their quotations prices could not be maintained, and aggressive "bear" tactics soon drove the market down. The tendency was weak almost to the end, and prices were £170 for cash and £172 5s. for future delivery. Messrs. A. Strauss and Co. give the visible supply as 12,500 tons, against 13,520 tons a month ago. The quantities on the spot and landing are 1,915 tons. London deliveries for June are 1,261 tons, and the Dutch 1,147 tons, making a total of 2,408 tons compared with 2,128 tons in May. Straits shipments total 4,472 tons, of which 3,075 tons are for London, 852 for America, and 545 tons for the Continent.

Iron and Steel.—This week again sees little change in the condition of these trades. In most districts it is regarded as satisfactory, or rather the prospects of it, for July is almost always the slackest month of the year. Lancashire shows signs of some depression. Hematites are weaker in both demand and price, and orders for steel also are being withheld in the hope of lower quotations. In the North of England the demand for finished steel and iron goods is quiet, but here quotations are firm, for producers have plenty of contract work on hand. The Scottish market for pig-iron has been a little more active this week, with prices at their best. Shipments continue heavy, and Messrs. William Jacks and Co. state that shipments of pig-iron to June 30, as compared with last year, show increases of 2,442 tons, 46,080 tons, and 237,037 tons for Scotland, Cumberland, and Cleveland respectively. The number of furnaces in blast is 205, against 198 a year ago.

Sugar.—Mr. Czarnikow says that rumours of beet sales to America, though still unconfirmed, contributed to improve the tone of our market this week, especially as (in spite of nearly 600,000 tons stocks in America and Cuba) they were backed up by firmer quotations from New York, where prices are 9d. up during the last fortnight, and therefore much nearer to European parity than before. At the same time the meltings in June have been unprecedented for that month—viz., 201,000 against 162,000 and 166,000 tons in the two previous years, so that the outlook for July, with 155,000 tons last year, remains good, even if August, with 209,000 tons last year, should not compare so favourably. The German arrivals in Hamburg during four weeks were 66,400 tons against 40,800 tons (of which 48,700 against 28,000 refined), whilst the imports into U.K. show about 42,000 tons excess, which has to be deducted off shipments elsewhere. The official German exports 1st-20th June were 78,000 tons, and if we add about 40,000 tons for 20th-30th June the exports for the month would be about 120,000 against 77,000 tons; but how they will finally turn out is very uncertain, after last month's experience. The excess in U.K. imports is not supposed to represent the excess in U.K. consumption, which, after the large May figure, is not estimated over 145,000 against 125,000 tons. Other figures are not known, but the key of the situation remains in America and also in Java; from the latter only two steamers left in June, plus some shipments by the liners, so that our last week's estimate of 15,000 against 85,000 tons remains unchanged. For July only about a dozen steamers against 30 last year are known up to the present. The beetroot crop news on the whole continues good; weather mostly warm, sometimes very hot, with thunderstorms and showers. As nobody calculates on last season's extraordinary yield, there has not been, generally speaking, much disappointment, except temporarily in France. The American and European markets have alternately stimulated each other, and, as mentioned above, New York is now creeping up to the parity of this side. Business in the States has been more active.

Tea.—With the market going against common teas, it is to be hoped, says Messrs. Gow, Wilson, and Stanton, Limited, that the new Indian crop will not contain a large proportion of these kinds, to become a drug on the market. Since the beginning of the year quotations of them had gone down about 20 per cent., the lowest grades being now only 3¼d. and 3½d. per lb. This week auctions have been very quiet in the Indian market, partly on account of the small quantity offered, only 14,514 packages, and partly because that quantity consisted mostly of unattractive parcels of last year's crop. Of the new, 4,075 packages were included and sold at an average of 8.18d., but the average of last year's teas went down to 4.96d., against 6.05d. last week. Ceylon auctions amounted to 28,662 packages, and the average price also dropped to 6.83d., against 7.10d. last week, all teas under 6d. being especially weak. Java offerings of 2,612 packages met with the same reception as in other markets—that is, a fair competition for the better kinds. Common sorts neglected.

NOTICES.

SOUTH AUSTRALIAN GOVERNMENT.

FOUR PER CENT. BONDS for £1,000,000, maturing 1st January, 1907.

The Government of South Australia have instructed the Bank of Adelaide to give holders the option to SURRENDER these BONDS on and after July 2nd for cash payment, with accrued interest to date of surrender (principal and interest payable three days after lodgment of Bonds with the Bank of Adelaide), or of CONVERTING the BONDS, to the extent of £500,000 into Three and a-Half per Cent. Inscribed Stock, on the following terms

For every £100 of these Bonds, with coupon attached, due 1st January, 1907, surrendered to the Bank the South Australian Government will issue £100 Three and a-Half per Cent. Inscribed Stock 1926-36, and also pay £1 in cash. The Inscribed Stock will be dated July 1st, 1906, and a half-year's interest will be payable on January 1st, 1907.

The offer for conversion into Three and a-Half per Cent. Inscribed Stock to remain open until the 30th September, but as the sum to be converted is limited to £500,000, applications will be registered in the order in which they are received, and the list will be closed on the 30th September, or as soon as the allotted sum is applied for. The balance of the £1,000,000 not surrendered under these terms will be paid off at par on maturity.

Copies of the Act under which this Stock will be issued can be seen at the Office of the Agent-General for South Australia, 28, Bishopsgate Street Within, E.C.; or at the Bank of Adelaide, 11, Leadenhall Street, E.C. Full particulars and forms of application can be obtained from the Bank of Adelaide or from Messrs. R. Nivison and Co., 76, Cornhill, E.C.

J. G. JENKINS, Agent-General for South Australia.

London, 2nd July, 1906.

KINGDOM OF ITALY.

Conversion of the 5 per cent. Rentes (yielding 4 per cent. Nett).

NOTICE IS HEREBY GIVEN that in virtue of the law passed by the Italian Parliament on the 29th June, 1906, the 5 per cent Rentes will be converted into a new stock bearing 4 per cent. interest nett, until the 31st December, 1906, 3½ per cent. nett for 5 years following, and afterwards 3¾ per cent. interest nett, with the guarantee that no further conversion will take place before the 31st December, 1920.

Holders of Italian 5 per cent. Rentes who do not accept the conversion must present their bonds for re-imbursement on or after the 2nd of July up to the 7th of July inclusive, in London at the offices of Messrs. N. M Rothschild and Sons, New Court, St. Swithin's Lane, and all such bonds must bear the English stamp.

Receipts will be given for the bonds deposited and the actual date of repayment of the capital sum, plus interest at the rate of 4 per cent. to such date will be duly announced. The holders of 5 per cent. Rentes not asking for re-imbursement within the stipulated time will be considered as having accepted the conversion, and will have no further steps to take in the matter.

The 5 per cent. bonds will be exchanged against the new bonds after the payment of the coupon due 1st January, 1907. The exchange will be made free of charge to the holder, and the new bonds will bear the Italian stamp, and also the English stamp in all cases where the old bonds bear the English stamp.

The new bonds will be free of all Italian taxes present or future.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 445. New Series. SATURDAY, JULY 14, 1906. (Registered as a Newspaper.) Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. **Six Months - 11s.** **Three Months - 5s. 9d.**

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Six Months' Foreign Trade.

Before saying anything about the half-year it may be well to give the figures for the month of June. They are remarkable enough, for imports valued at £47,892,709 show an increase of £4,335,302, or nearly 10 per cent., and exports of home produce are 17.9 per cent., or nearly 18 per cent., up at £30,639,187, the increase being £4,653,790. Not only so, but the re-shipments of foreign and colonial merchandise have risen by £852,856 to £7,252,029, an increase of fully 13.3 per cent. This is a remarkable exhibit, because it is an increase upon an increase, especially in the exports. These a year back rose by £1,916,000 in the month, and in the past month the increase has been as above stated. Thus the trade of the country month by month swells to the highest totals ever seen, and much of the increase is due to the development of our business in finished goods so far as the exports are concerned. In imports last month it was otherwise, our imports of articles of food and drink and tobacco and all foreign manufactures having risen by upwards of £5,250,000, but that may be only a transitory development, and the broad fact remains true that the foreign business of the country appears to be in a more flourishing condition than it ever displayed before.

Looking at the figures for the half-year we find practically the same results, imports having increased by £27,442,000, or 10 per cent., and exports by £24,887,295, or nearly 16 per cent. Our exports of foreign and colonial merchandise are also higher by 10.8 per cent., or £4,364,589. Such results are to a large extent the product of the world's peace. After a war nations appear to wake up and to demand commodities of all descriptions. Foreign countries may set up tariffs against us, and endeavour to compete with us in neutral markets, but when the communities have means to spend we take a leading share in their custom, because we ourselves are the best, the steadiest buyers they have. Insofar as imports are concerned the half-year indicates that our dependence upon foreign supplies of food does not grow less. We have imported larger quantities of fresh meats of various kinds, of cattle, poultry and game, butter, cheese, and fish in the past half-year than in the corresponding half of 1905, and we always regret that the unquestionable resources of our native country should not be able to meet in greater measure the wants of the community in these respects. At the same time the more we import, whether of food products or raw materials, the more we sell. Last month, for example, the Argentine Republic sent us 3,143,000 cwt. of wheat, or nearly twice as much as in June, 1905, and when we turn to the exports and look at the figures relating to cotton tissues we find the demands of the Argentine Republic larger than they ever were, not for the month, but for the six months. On the average it is so throughout, and our manufacturers may be said to depend for their prosperity to no small degree upon the extent to which we buy articles of consumption in foreign countries. In the past six months we have imported less quantities of some of the raw materials used in manufacture than in the first half of previous years, but our export business goes on expanding, and the larger the trade the greater the hold of English manufacturers on foreign markets.

Look at our exports of iron and steel. In the items they follow ups and downs. Sometimes there is a falling off in the demand for railway iron, sometimes it is blooms, ingots, and so on which suffer, but the aggregate usually grows, and in the past six months the total weight of iron and steel and the manufactures

	£	£	£	£
Imports..	296,011,017	299,242,664	333,948,057	+ 34,705,393
Exports..	202,688,383	214,004,515	253,624,661	+ 39,620,146
Excess value of imports over exports	93,322,634	85,238,149	80,323,396	— 4,914,753

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.
The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

thereof exported amounted to 2,107,435 tons against 1,739,166 tons in the same half of 1905, and of 1,635,057 tons in the first half of 1904, and we got better prices on the whole which compensated us for the higher cost of raw material. Thus last six months' value of these products was £18,418,116 against £14,967,000 the year before, and less than £14,000,000 in the first half of 1904. We have done a larger business in the exports of cutlery and hardware this year than last; the demand for British-made scientific instruments and apparatus is on the increase, the United States being one of our leading customers. We continue to send out of the country larger numbers of locomotives and to get more money from them. Our exports of new ships in the past six months were worth £3,055,000 more than in the first half of 1905. It is true that £2,800,000 of this was due to new ships of war built for the Japanese, but the demand for mercantile vessels is also growing, and our business in the higher branches of iron and steel manufactures and in machinery and so on tends to expand. We are doing less in mining machinery than in recent years, but that is only a natural result of the stagnation of the mining industry, which may with better management and more intelligent supervision pass away.

One of the most remarkable and satisfactory points in our export business is the wonderful strength of the cotton industry. That grows no matter what happens, whether raw cotton be dear or cheap. If there are declines in one direction or another there are always compensations which tend to bring the totals up to higher levels. Thus in the past six months our exports of cotton tissues of all kinds reached nearly 3,117,000 yards against little more than 3,005,000 yards in 1905, and 2,593,000 yards in 1904. Yet we imported less raw cotton last six months than in the corresponding half of 1905, although more than in the same half of 1905, and we paid higher prices for our cotton, the quantity of which for the month alone decreased nearly 65 per cent. as against a decline of 55 per cent. in the value. Our linen manufactures continue to flourish, and so do our exports of woollen and worsted goods in spite of the lament made that the French manufacturer is beating the British in home markets, in spite also of the fact that wool is dearer. For worsted goods in particular we have a number of excellent customers on the Continent of Europe, chief among which are the Netherlands, Belgium, France, and Italy. Germany is also a good customer, and although the aggregate value of the woollen and worsted goods exported to each of these countries is not remarkable, it does indicate the power of the British manufacturer to compete no matter what tariffs are set up against him. It is unnecessary to go into many details in other directions because the general aspect of the country's business is now well understood, but it is surely encouraging to find that the higher tariff recently imposed by the German Empire has not as yet sensibly influenced our trade therewith. Germany took more cotton tissues last six months than in either of the first halves of the two preceding years, and the fierce exclusiveness of the United States does not prevent them from being improving consumers of British cotton tissues. Naturally the conclusion of peace in the Far East seems to have augmented the demands of Japan, but these may have been hidden during the war time by the diversion of part of the trade to Hong Kong, whose figures have fallen off. The fact remains, however, that this branch of our business is flourishing and expanding, and in spite of all one reads in Indian newspapers about the effect of the boycott of British goods started in Bengal the exports to all divisions of our Indian dependency except Madras this year show increases over last.

And we must again insist upon the wonderful variety of our export trade. It is not confined to two or three great lines of business, to coal and coke, iron and steel, and the manufactures thereof, tissues of various kinds, or machinery, but embraces pretty well every form of human want. Our exports of saddlery and harness, for instance, are quite respectable, so also are those of chinaware, porcelain, and earthenware, of writing or printing paper and envelopes, of paper hangings, of glass, notwithstanding the terrible ruin alleged to have overtaken that particular industry. We are, furthermore, steadily developing an export business in motor-cars, in cycles, and the United States has not yet captured our cement trade, nor has any foreign country been able to oust us from the markets for our

oil-cloths. But is this trade forced to any extent? Is the present expansion, in other words, due to speculation rather than to the augmented demands of our various customers? This we cannot yet definitely give an opinion about. On the whole, however, it looks as if the development was simply a natural fruit of the return to peace. We find, for instance, that South Africa is at length beginning to show an increased capacity to absorb British manufactures, and we have no doubt at all that were an enlightened and progressive Government to be established in Russia, a Government capable of checking the extravagance of the effete and corrupt bureaucracy, and of intelligently developing the resources of the country, our trade with that great empire would progress in a manner altogether unprecedented. Even as it is Russia displays a capacity for both selling and buying in the circumstances remarkable. There has been a great decrease in the total of oats received from that quarter in the current year, and an important decrease in wheat, but, whether in these or in other grains, the decline is really less than we should have expected looking to the disturbed condition of so much of the country. And Russia is still capable of absorbing English machinery and tools. Her merchants bought £1,540 worth of locomotives last month against nothing in the first six months of the two preceding years, and Russia is also a customer for our agricultural machinery, for textile machinery, and so on. Give us peace the world over, peace and good government, and great as our foreign trade now is it will prove capable of indefinite further expansion.

Company Law Mending.

An interesting and in some respects valuable report has been issued by the committee appointed by the Government to deal with this chronic subject of discontent. The scope of its inquiry was wide, and its composition excellent, consisting as it did of men of business of high standing and a sprinkling of lawyers. So strong indeed was the committee that we cannot avoid feeling a little disappointed over the results of its inquiries and deliberations. The evils connected with joint-stock promotion and management are sufficiently well known to make the suggestion of effective remedies one would have thought a simple matter. Sir Edgar Speyer, in his minority report, signalised the chief grounds of dissatisfaction with the law and habits relating to this form of enterprise. He gives the following suggestive lists of defects and abuses :—

(a) The growth of plurist, or guinea-pig, directors, particularly among men in public life. (b) The fact that such ornamental directors are sought after obviously in many cases as decoys on the front page of a prospectus. (c) The enormous increase in the number of companies that have gone into liquidation, and consequent losses to the shareholders and creditors. (d) Cases of company frauds. (e) The impossibility of making directors personally liable for negligence in the discharge of their duties.

To this we should add the anomalies connected with the registration of companies in foreign countries. This is particularly notorious in the case of South African mining companies, and the tendency is to register many other joint-stock enterprises abroad with a view to escape from the liabilities imposed by our existing company laws.

Does the committee deal adequately with the various defects and grievances? Hardly. In the main its recommendations and criticisms are sensible enough, but they do not often go to the root of the matter. It is quite right to object to the penalisation of directors, "guinea-pig" or other, but it is not right to endeavour to minimise the liability this class of business men, if the term may be so applied, now acts under. The committee would extend the relief the directors already have, and in this respect takes the opposite view to that prevalent in Germany, as Sir Edgar Speyer points out. Quoting Dr. Ernest Schuster, he says the German law requires the diligence of a prudent trader, and presumes negligence in case of loss, whereas the English law does just the reverse, assumes the director to be innocent until, after infinite trouble and expense, he has been proved guilty. In this laxity lies more than anything else the root of the scandals which have often disgraced the annals of joint-stock enterprise in the United Kingdom. We see no reason at all why the company director should not be precisely in the same position as the individual man of business. If a concern of whose affairs he is supposed to have charge incurs losses, and is driven into bankruptcy, the director's liability for the loss should be placed on precisely the same footing as that of the private trader would be. It is continually said that were this to be the law nobody of any responsibility would take up directorships, the fees being too small for the risks, but that is really no answer to the contention. Let there be an end of subterfuge and make-believe, let directors be, if necessary, remunerated to an extent corresponding to their liabilities. It would be no hardship were the thousands of guinea-pigs who now crowd into this profession to be pushed aside, making room for men of trained capacity. Moreover, the system under which directors now crawl out of liability under one pretence or another leads to the defeat of justice in ways that are often scandalous. Just look at the story of the International Bank of London which, a few weeks after it paraded a balance-sheet and declared a dividend, collapsed and disappeared like a pricked balloon. Nobody has been called to account, the whole thing is wrapped in the utmost mystery ; no public examination of the directors has been held. The concern has gone into "voluntary liquidation" and disappeared. We hold that this ought to be impossible, and if the prevention of abuses such as this glaring example implies involves the disappearance of the guinea-pig class of director so much the better for joint-stock enterprise and business morality in general.

Our main remedy, however, for most of the defects still existing in our joint-stock company laws in spite of the amendments effected by the Act of 1900 lies in the way of fuller publicity rather than in greater penalisation. We agree with the committee in thinking that the registration fee ought to be cut down by one-half so that there might be less temptation to register joint-stock companies out of the United Kingdom, but whether this is done or not we should not allow any foreign company to do business here even on the terms suggested by the committee. There ought to be meetings of United Kingdom shareholders in such companies held periodically, at which accounts should be submitted, and in many cases these accounts ought to have the benefit of a strict English audit. So far as South African companies are concerned, the losses which have fallen upon shareholders here have, without question, been enormously aggravated by the fact that the meetings of shareholders are held abroad, in Johannesburg and Pretoria, and that shareholders here are therefore completely out of touch with the management and deprived of all means of obtaining intimate acquaintance with their affairs. We should insist that all companies whose shares are held in this country and dealt in upon British markets should not only issue in England periodical balance-sheets, properly drawn up and audited, but full lists of their shareholders. In Scotland, as it is, many companies publish their share lists annually, and there is no reason why this should not be made the universal law where a company is not a private one, one whose shareholders do not, as the committee suggests, exceed 30 in number, and dealings in whose shares are governed by special articles of association. Publicity, in short, full and complete, on all points calculated to enlighten the investing classes is what we require above everything else.

The habit of putting shares on the market without taking the trouble to issue a prospectus has been growing rapidly of late years, and has all along been a characteristic of the South African company hatching industry. The committee makes some recommendations with a view to remedy this obscurity with its

facilities for fraud, but they are confined to the filing of statements with the registrar of joint-stock companies and other minor checks which, taken altogether, are not enough. The public cannot go to the Register Office at Somerset House and turn up files of papers. That is expensive and troublesome for one thing, and for another the papers would generally be in a form which would baffle the curiosity of the bulk of those who have money to invest. We therefore would go further than the committee on this point, and insist that full statements, whether in the form of a prospectus or otherwise, should be printed and issued to all who require information about the enterprise before any recognition whatever can be given to the new company. Such printed statements should be laid before the committee of the Stock Exchange as a preliminary to the granting of any quotation or other official recognition by that body. And the public should also have access to these papers. We do not insist upon prospectuses in all cases because it may be that there is no necessity to advertise the enterprise. The capital may have been in the first instance privately subscribed, or if not it may be the intention of the promoters to sell shares through the market without any preliminary solicitation for subscriptions from the public. We see no great harm in that, but there is immense and continual mischief wrought by the secrecy now maintained about the majority of those companies whose shares are thus traded off upon the community absolutely in the dark. Let us have the facts then by way of preliminary, and let the promoters and directors of all enterprises be saddled with the full usual business responsibility for every statement made or act done, and we are quite sure that a healthier state of things would soon come to prevail in the City of London.

Australian Finance.

It is long since the various governments on the mainland of Australia have been able to sound such joyful notes as they do at the close of their financial year ended June 30 last. Several if not all of them trot out surpluses more or less cheering—and most of them also speak of an enlarged expenditure. Still they are unquestionably in a much more comfortable or prosperous condition than they were during the seven years' drought, or for some time after it broke up, better off seemingly than they have been since the crisis of 1893. New South Wales claims a gross income of £12,267,532 in the past year, which was £931,000 more than in the previous financial year. and brings out a surplus of £902,000 after paying off debt to the amount of £360,000. The State of Victoria, too, boasts of an increase of £288,000 in its revenue, but the summary telegram says nothing about expenditure or surplus. As for South Australia, its revenue, £2,807,540, exceeded the estimate by £200,000, and after spending considerable sums on railway works and meeting the increased outlay involved by the expansion of business, the Treasurer expects to have a nett surplus of £80,000 to be devoted to paying off debt. Queensland in like manner expects to have a surplus of £128,000 after spending £145,000 more upon public works, &c., such as £48,000 on railways, £15,000 on lands, £18,000 on "public works" in general, and £26,000 on the Chief Secretary's department. The gross revenue was £3,854,000, an increase of £259,000, but the expenditure was £3,726,000. Much of this prosperity comes from the enlarged Customs receipts collected by the Commonwealth authorities, three-fourths of which, together with the like proportion of the Excise, must be handed over to the individual States by the Commonwealth authorities in terms of the "Braddon clause," as it is called. And the Commonwealth seems to have done well last year, for its revenue of £11,900,000 was £400,000 more than that of the previous year, so that after spending £4,500,000 on its own account the various States received £600,000 more than was estimated, or £7,400,000 in all.

This is all quite encouraging and pleasant, but why is it that some of the States indicate a decrease in the land revenue? Does not the prosperity of the country as a whole come from the development of the land, from "land settlement," and such like? And if so, why is it that New South Wales should have received about £25,000 less from its so-called land revenue and Queensland £33,000 less? We must await details before attempting to guess the answer to this conundrum, but it will be well, meanwhile, if the colonies are not stimulated by their present prosperity to launch into fresh enterprises demanding large sums of borrowed money. They are much too expensively governed as it is, and the Commonwealth has not proved a cheap investment by any means. On the contrary, its added burden is such that it is becoming, one may say daily, more likely that some rearrangement of the revenue will have to be made so as to give the federal administration greater elbow room. It cannot go on meeting its own growing expenditure out of one-fourth of the Customs and Excise revenues. Probably, however, politicians in these Australian settlements expect to be able to consolidate their various debts in a Commonwealth stock, and to save something by that operation, or both save and—after the long-consecrated system of the Sultan of Turkey—get at the same time a fresh supply of borrowed capital to go on with. It will be difficult, however, to consolidate their debts at the present time, because the London Money market is untoward, and likely to remain so for many months, perhaps for years, to come. Such an operation as the conversion of the debts of these colonies into a Commonwealth charge would be a stupendous business, and anything which disturbed the present holdings of the public in Australian debts would be certain to put a strain upon the resources of the London Money market it could not at present bear. The total debts of these colonies exceed £200,000,000, and it is not possible to handle half that amount in a conversion feat as our Money market now is. Therefore, if anything is to be done in this direction it must be bit by bit. As the various State loans now running fall due an opportunity might be given to investors to convert into a new consolidated Commonwealth stock, so that in course of years the entire debt might thus be changed if none of it could be paid off. Even such a step, however, involves a readjustment of the financial arrangements between the individual States and the Commonwealth, so that all is not absolutely smooth yet between these various powers in Australia. What we should like to see is not merely the consolidation of the debt, but the restriction of borrowing power, so that the individual States should not be able to go on piling up new obligations directly they had in a manner thrown off those they now groan under by converting them into a consolidated Commonwealth stock. And a reduction in State borrowing powers would mean also a reduction in their independent position as self-governing communities. The small population of Australia is now much over-provided with governing agencies and machinery. In a reduction of the paraphernalia of "self-government" may be found one of the principal methods of economising, if economy is really sought. What is the use of all these "Parliaments" with their paid members, their ministries, their growing staffs of permanent officials? They might be abolished or reduced to the position of county councils, or purely dependent and mostly administrative bodies, and the staffs they now employ be very much cut down without the slightest injury to the community that one can see. Six double-barrelled legislatures for a population of less than 4,000,000, whose birth-rate is declining, whose jealous exclusiveness keeps down immigration, was always too much of a good thing, but with a seventh over-riding Parliament on top the burden promises to grow intolerable, however the good rains may bring years of prosperity.

Economic and Financial Notes and Correspondence.

Conscription.

We are glad to see that Lord Portsmouth administered such a cold douche to those restless and unhappy people who seem to be unable to sleep quietly in their beds for fear of invasion, and who unseasonably agitate to bring the free people of the United Kingdom within the grasp of the most deadly form of military tyranny known to history. Were they to have their way we should soon see the end of the British Empire as a world-embracing industrial, mercantile, and banking State. The extra cost of conscription would, Lord Portsmouth reminded the House of Lords, be about £26,000,000 per annum according to the estimates drawn up by the previous Secretary of State for War. And he rightly added that His Majesty's Government has not the money for this, nor is it likely that any Government would submit a proposal involving to the taxpayers of this country such a financial obligation. But the money cost is only a part of the terrible burden a forced military service would lay upon the nation. There is the abstraction of labour, of wealth-producing power, involved in the drafting of the youth of the country to the colours, and there is the moral degradation which ensues. In Germany, said his Lordship, male children were from birth under the eye of the civil police, to whom any change of abode must be reported. Liability to military service lasted from the end of the 17th to the end of the 45th year, and every person so liable has to report himself to the civil authorities between January 1 and February 1 of the year in which he attains the age of 20, and afterwards twice a year, if called upon, before recruiting authorities until a final decision as to his disposal is arrived at. The Germans are not allowed to emigrate between their 17th and 25th years without permission from the recruiting authorities. There are other provisions of a similar kind which the free people of this country would regard as intolerable tyranny, and rightly so. What we want is not increased military expenditure, not a greater parade of brute force in this age when the civilised nations of the world are drawing together in amity and devoting their energies to friendly competition in the markets of the world. We want economy in all non-productive, wealth-consuming directions, the stoppage of waste, so that the resources of the nation may be applied to the further development of its industries, to the elevation of the life of the masses of the people, so that our slums and their social degradation and and dry rot may disappear. The men who disregard mankind in all its better aspects and wants, seek to draw the nation into the toils of militarism, and the despotism which lies behind it are not the friends of the people, not upholders of true Imperialism, not zealous for the predominance of England amongst the manufacturing and trading nations of the world whatever else they may be.

The National Discount Company's Jubilee.

It was a happy thought of the directors of this powerful company to celebrate the fiftieth anniversary of its creation by a dinner given to a large number of representative business men. This was held on Wednesday evening at the Ritz Hotel, the guests being invited to meet the Chancellor of the Exchequer and Mr. Wallace, Governor of the Bank of England, As it turned out the principal speaker was Lord Goschen, who once more made an appeal to bankers to augment their gold reserves. In this he has always had our fullest sympathy, for there can be no question that our enormous banking business is conducted upon too narrow a basis of hard cash, but the difficulty is to discover a method by which our public or for show bullion reserve can be strengthened. Our banking system is so haphazard in one sense; it has grown up and is not in any sense a carefully planned and scientific whole. The power of the Bank of England, great in some respects, is limited in others, its position anomalous in relation to the other banks. At the same time the actual mechanism of our banking is the most perfect in the world, and there is this to be said further—as long as the business of the country is sound, it can go on smoothly enough without large gold reserves. The proof that this is so is the history of banking since the crisis of 1866 down to the present hour, and the part played by the discount houses in the smooth working of our perfectly adjusted banking machine has been no small or unimportant one. Mr. Wallace was perfectly right in saying that it was "by reason of the existence of these discount houses in the complex machinery of the London money market that a holder of bills of approved credit on this country was never in any sort of doubt that he could get cash for them at a price." On the other hand, it was with the help of these discount houses that bankers could employ for the benefit of their shareholders a large portion of cash which must otherwise remain idle. People often say that if bankers did their work properly the discount houses might be dispensed with, but it is not so. If this had been the truth, these houses would have gone long before now, amid the keen banking competition which concentrates in London. Discount houses are valuable, not merely because they give ready outlet for floating balances in the hands of banks, but because they segregate and supervise credit instruments and their distribution. Banks would often have difficulty in dealing with the position of individual customers if the whole business of these customers came direct to them. It might not be in their power to give all the credit necessary to some particular firm on some special occasion, or circumstances may arise amid which they would deem it prudent to restrain the business energies of some of their customers. But it would often be an invidious thing to do this directly and might sometimes breed mischief. By getting their bills through the bill brokers they can keep a check upon the contents of their portfolios, weed out and compel the distribution of liabilities which seem to them excessive, and in this way friction is avoided and the functioning of credit kept smooth. We trust therefore that the National Discount Company, like its neighbours in the same line of business, will long continue to prosper and to occupy the high place it does in the confidence and esteem of the City.

The Transvaal Budget.

It is not particularly cheering for the total is heavy, about twice what it cost to govern the country in the days of the Boers. Revenue for the year ended June 30 last is put at £4,576,200, and expenditure at £4,279,772, showing a surplus of £296,428. It is proposed to devote this surplus, not inappropriately, to the completion of the lunatic asylum, the total cost of which is put at £275,000, and to a Government House costing £81,000, leaving £191,585 to be devoted to burgher settlements. There was a decrease on the year of £100,000 in the contribution from the Premier Diamond mines, and of £40,000 from mining licences, but the Customs revenue gave £75,000 more, and the native revenue £55,000 more. For the current year the estimated revenue is £4,625,000, including an increase of £250,000 in the Customs receipts, due presumably to the more drastic tariff recently imposed. A surplus of £170,000 is looked for in the current year, of which £95,000 will be swept away by a suspension of the duty on flour, and £45,000 by a reduction in the native tax. Then £10,000 is to be spent in the encouragement of the tobacco industry. Special current expenditure, it is added, includes £250,000 for public works, but we do not gather from the Reuter summary whether this is included in the budget aggregate or not. We should presume not since in spite of surpluses the balance in hand is expected to show a reduction of nearly one-half at the end of the current year. On June 30 last it was £2,282,558, and by June 30 next it is expected to be down £667,558, allowing for a possible shortage of £250,000, whatever that may

mean. Current expenditure looks severe for a country so poor and so heavily handicapped in other respects. Thus magistrates figure for £141,800, police for £356,400, prisons for £232,000, volunteers for £205,300, education for £422,000, postal service for £437,800, inter-colonial service for £660,000, and public works for £505,000, a formidable total.

Ceylon Company of Pearl Fishers, Limited.

The circumstances surrounding the inception and incorporation of this venture have given the business rather an ugly look. The facts have not escaped the vigilant eye of a good many Liberal M.P.'s, who have subjected Mr. Churchill, the Under-Secretary for the Colonies, to a searching examination on the subject. Unfortunately he has been able to throw very little fresh light on the affair, because the Colonial Office seems to have no proper record of the transaction or the circumstances that led up to it. The deal by which the Ceylon Pearl Fisheries were handed over to a private syndicate for what appears a wholly inadequate rent was carried through apparently by Mr. Lyttelton, when Colonial Secretary, and Sir J. West Ridgway, ex-Governor of the island of Ceylon. The last-named has such an honourable record that we cannot believe him guilty of anything like sharp practice, or an action which would be inimical to the interest of the Colony over which he ruled, and we hesitate to pass judgment until Mr. Lyttelton has told his story. He has already expressed a desire to make a personal explanation, and wished to intervene a few nights ago when the matter came up for discussion in the House of Commons for the 20th time. Unfortunately this was not possible under the rules of the House, but an opportunity will no doubt be provided for Mr. Lyttelton's statement on the Colonial Office vote. Under these circumstances we may content ourselves with a bare recital of the facts, merely recording that Mr. Churchill dropped a hint that the more he examined the business the more unsavoury it seemed. We take part of the story from *Reynolds's Newspaper*, which is often singularly well informed on matters like this. For a good many years the Ceylon Government directly controlled the pearl fisheries, but later appeared to have transferred the business to other hands under an arrangement by which the proceeds were divided between the authorities and those engaged in the industry. For the 10 years ended in 1902 no profits resulted, thanks, apparently, to the unskilled methods adopted, and it is to be assumed that the Ceylon Government received no return at all. In course of time, however, bad methods gave place to scientific, and big revenues began to accrue. For 1903 the Ceylon Government received no less than £55,000, in 1904 the revenue had risen to £71,000, and by 1905 to the great sum of £167,000. During the same three years it is said that the people then participating with the Government gathered £42,000, £62,000, and £150,000 respectively, but we should not like to be too certain about any of these figures, and think it probable that the smaller totals may be in some way connected with the larger, or wrapped up in them. But confusion of this kind always arises when things are kept dark.

Now it is said that coincidently with this great revival in the prosperity of the fisheries, Sir J. West Ridgway, who retired from the position of Governor of Ceylon in 1903, and who had been responsible for the introduction of scientific methods for the pearl fisheries, approached Mr. Lyttelton with a view to a lease of the fishing rights. This was in 1904. At first a 30 years' lease at a rental of £13,000 per annum and a share of the profits for the Government was suggested, but later on the lease was dropped to 20 years, and £15,000 a year was proposed without anything for the authorities. But at this time the fisheries were yielding such handsome profits that a rent of £20,660 was eventually agreed upon, the company undertaking to spend about £3,300 a year on improvements to the oyster beds. It would naturally be quite ready to do this. A company called the Gulf Syndicate was soon formed, with a nominal capital of £10,000, to take over the lease, and after spending three or four hundred pounds on the venture, the property was sold to the Ceylon Company of Pearl Fishers for £11,000. In due course this company was incorporated with a capital of £165,000 in 150,000 £1 ordinary shares and 300,000 1s. deferred shares. The ordinary shares are entitled to a preferential dividend of 6 per cent., after which 10 per cent. of the profits goes to reserve and capital redemption, or a larger percentage at the option of the directors if the revenue exceeds £50,000. Of the balance still left 50 per cent. belongs to the deferred and the remainder to the ordinary shares, but when the surplus exceeds £21,000 the directors get 5 per cent. of the excess. The company was formed on March 6 last with the following directorate:—Sir J. West Ridgway, Carl Derenburg Charles Pakeman, Wm. Henry Phillips, Alfred Gordon Salomon, and James Henry Montagu Shaw, who acts as managing director. The latest return of shareholdings is dated May 9, 1905, and will be found highly instructive reading:—

	Ordinary £1 Shares.	Deferred One Shilling Shares.
Lazare Allatini	2,000	3,300
Louis and Alfred Abrahams	7,000	10,200
Leopold Albu	10,000	16,000
Harold Bendixson	400	1,030
Right Hon. Sir J. W. Bonser	1,000	1,600
Sir Stanley Bois	1,100	1,700
Lord Arthur Butler	500	800
Samuel B. Cohen	500	500
Baron Emile d'Erlanger	5,000	8,000
Comtesse Gontran de la Baume	800	800
Carl Derenburg	2,000	13,300
Robert E. Dickinson	1,000	1,600
Mrs. Mona Derenburg	—	5,000
Exploration Company	23,993	40,000
Jacob Freudenthal	500	800
Julius Friedlander	1,000	2,200
Eugene and Paul Hahn	3,000	4,800
George Ing	5,000	8,000
Wm. H. Jones	1,000	1,600
Ernest S. Labouchere	500	800
David H. Leverson and Wm. H. Phillips	10,000	20,900
Lewis Lindenbaum	5,000	8,000
Wm. Lurcott	5,000	8,000
Leonard R. Higgins	—	11,800
Archibald W. Maconochie	1,000	1,600
Charles Morrison	5,000	5,000
George E. Morrison	400	400
John F. Moulton (Lord Justice of Appeal)	1,000	1,600
Harry Mosenthal	10,000	16,000
Sigmund Neuman	10,000	16,000
Thos. T. Oakley	1,000	4,600
James Pinnock	500	500
Sigismund Reitlinger	2,000	2,000
Alfred H. Reitlinger	2,000	2,000
Albert Reitlanger	10,000	16,900
Rt. Hon. Sir J. West Ridgeway	1,000	1,600
Max Otto Robinson	2,000	3,200
Alfred J. Swaab	1,000	1,450
Frederick S. Warburg	1,000	1,600
Oscar E. Warburg	5,000	8,000
Arnold E. Williams	1,000	1,600
George E. Sewell	—	28,420

The most significant part of the whole business is that so many of our old South African "pals" are there. We miss the names of Herr Alfred Beit and that noble English baronet, Sir Julius Wernher, but we have the Albus, the Cohens, the Friedlanders, the Mosenthals, the Neumanns, and the Reitlingers. The Exploration Company has likewise got a finger in pretty deep, and this week thought the time was ripe for introducing the shares on the market. Speculators can have the one pound ordinary shares at about 33s. or 34s., and the one shilling deferred shares at 10s.—11s. Be careful though what you are about, because pearl fishing is a curious and variable business, and in two or three years' time, when most of the shares have been disposed of, the industry may again fail to yield satisfactory profits. In that case the Ceylon Government may not have made quite such an atrociously bad bargain as now seems probable, but whatever happens

the original allottees of this Ceylon Company of Pearl Fishers will be all right provided the public bites.

Peru.

The splendid territory covered by this name ought to be prosperous, difficult of access though much of it may be, and it does make progress although the progress is slow. Mr. Consul-General St. John tells us, in his latest report to the Foreign Office, that the total value of the imports for 1905 was £4,329,151, which is just a slight increase on 1904, and an expansion of about £545,000 on 1903. Exports were distinctly larger at £5,751,621, an increase of £1,685,000 upon the figures for the preceding year, and the business of the country appears to be still growing. The expansion, however, is nothing to what it might be, if the country were opened up by railways and highways, and its ports developed so as to give decent accommodation to shipping. Meantime, the revenues of the country so far as the Government is concerned remain small, and although the income increases, its aggregate is still insignificant. It rose to £2,206,000 last year, an increase of about £210,000 upon the figures of the previous year, and of this income Customs yielded about £1,152,000. This year a revenue of £2,500,000 is looked for, including £200,000 drawn from departmental sources, all of which is to be devoted to education. It should not be difficult with judicious application of capital to the development of the enormous mineral and other resources of the country to double this revenue, and, with economical administration, to give the Republic the means wherewith to still further increase its resources by the execution of public works of all kinds. Everything mankind wants can be found in Peru, if only the energies of its population were given scope. In 1904, however, the total value of the minerals produced was estimated at only £1,369,278, and Peru contains not only gold and silver, but some of the finest copper deposits in the world. It is also possessed of coal and petroleum, of lead, mercury, iron, tin, salt, sulphur, borax, wolfram, &c., while as to agricultural and pastoral resources the statistics are eloquent of great if undeveloped wealth. Sugar, for instance, forms one of the staple articles of export, and the value sent out of the country last year was about £1,500,000, in spite of a deficiency in the crop. Cotton is also grown with success, and the crop of 1905 was estimated at about 125,000 bales. It only wants irrigation to indefinitely increase the production of this fibre, and Peru, were its water stored and properly distributed, might easily supply its own wants in rice and other food grains instead of having to depend partly upon imports. There are drawbacks, however, for the cost of living has been much increased in recent years, partly by the onerous duties paid on imports. Consumption dues are also extremely heavy, and the cost of goods is further enhanced by the expense of carriage. Mr. St. John gives an example. Sugar grown in Peru, worth about 9s. per quintal in Liverpool, is sold in Lima at from 20s. to 24s. per quintal. Most of the fruit, he adds, consumed in Lima comes from Chili and Ecuador, and is most expensive. This state of things should be capable of easy remedy, if only capital could be obtained to improve the inter-communication between the various provinces of a region largely mountainous.

A Beginning with the Army.

Every credit must be given to Mr. Haldane for making the attempt to restrain the waste of public money on an army which, according to experts like Lord Roberts, is never ready, never efficient, neither big enough nor good enough for defence, let alone defiance and the conquest of the world, no matter that its cost has risen by tens of millions in recent years. In all, a reduction of 20,000 men is to be made; that number of human "details" will be kept in a trained condition, ready to kill or be killed at the word of command, and the saving in cash is estimated at £1,500,000 per annum! It is not much, not nearly enough, but we must be thankful for small mercies. Until the nation is either half-paralysed by bankruptcy or delivered from its haunting visions of a Russian invasion of India, no far-reaching schemes of Army retrenchment will be possible. The organised power of the permanent bureaucracy is far too much for any Minister however strong, or any Parliament however zealous. The big and most costly standing Army is our part of the price we pay for holding down India in fear and trembling, and there also a change has to come before we can rise free above our terrors. The peoples of India must be taxed less, must be given an expanding system of self-government, and thereby learn to look upon us as their liberators, not their despoilers. With India on our side in any Asiatic quarrel we might dismiss our home Army, and trust our defences wholly to Volunteers. For the world is changing, whatever the military martinet, the professional befeathered and begilded manslayer, may say or dream to the contrary; and as the democracies grow in knowledge of each other and in love of liberty, the need of armies and navies will surely fade away until our descendants may come to regard our servitude, the devastation wrought by decadent Europe's 20th century militarism much as we look back upon the panoplied hosts of the first crusaders, on a world all torn by the marauders of Italy in the middle ages. And Mr. Haldane has made a beginning, and nobody sleeps less soundly in his bed.

The Gold Mines Investment Co., Limited.

It makes a poor show in its first report and balance-sheet dated June 30 last, but times have been bad for "holding" and market-playing things of this kind, and shareholders may perhaps feel thankful the story is not worse. A fine ambition was displayed in the frame-work of the company:—Capital authorised, £2,000,000; capital subscribed and paid up, £1,000,000, the shares being of the value of £4 each and fully paid, so as to facilitate unloading in Paris. And how has this capital fared? Listen to the directors, who are up to a point quite frank and straightforward about affairs: "The investments are taken in the balance-sheet at cost price, less depreciation, a valuation made at June 30, showing the quoted securities to have a value of £519,197; the unquoted securities are valued by the directors at £7,499, which, together with the cash, loans and sundry debtors, amounts to £600,319. From this must be deducted the liabilities, leaving the present value of the company's assets at £583,203, equivalent to £2 6s. 7d. per share." This means that £1 13s. 5d. per share has been admittedly lost since January 20, 1905, the date when the company was registered, and what we should like to know is whose shares was it brought into existence to take over? Did it relieve the Chartered Company of some of its rubbish, or were private individuals favoured by being given permission to transfer their depreciating and unmarketable paper to the stupid outside public by help of this well-worn device? No inkling is given of the nature of the "investments" upon which the depreciation is £414,601 within a period of less than eighteen months, but bad as the state of cosmopolite Kaffraria is, the selection must have been choice in the way of opportune reliefs to insolvents to bring about so soon a result so disastrous. What is the board going to do now? It has nothing to set against this depreciation, the "profit" of £12,951 being a mere derision and the £20,000 it has out of its fixed loan, together with £37,887 lent "at short call"—contango money probably—besides £8,517 due by sundry debtors—go but a short way in filling the yawning pit. There is still nearly £14,000 owing on account of starting expenses, gravely entered as an asset. If there are any outside shareholders in this beautiful emanation of South African finance, perhaps they will make the directors enter the confessional and tell a few things. It may be, though, that the shareholders are merely the relieved investors in another guise. Did they just put in their choice parcels of "Kaffirs," and take Gold Mines Investment shares in exchange?

American Business Notes.

Last week's return of the New York Associated Banks is not so unpleasant as it looks, and we cannot quite understand why the Wall Street market miscalculated as it did. There is a decrease of $13,300,000 in the nett deposits and the specie average is smaller by $5,900,000, at the same time that the holdings in legal tender notes have fallen off by $3,006,000, so that the surplus reserve has shrunk by $5,581,000 to only $6,475,000, compared with $7,958,000 for the same week of last year. Most of this decline, however, is due, as we pointed out last week, to the withdrawal of cash by the financial trusts. These under the new law are compelled to hold cash reserves to the amount of 10 per cent. of their liabilities on deposits, and in order to provide this, to lock up this money, they necessarily denuded banking deposits of something like $10,000,000. In other respects the market seems to be, if not well off, at least capable for the present of standing up under the tremendous strain to which it is now subjected by the mass of unplaced securities carried on borrowed money, and in reality the setting aside of reserves by the financial trusts tends to strengthen rather than weaken it.

A new law has come into force regulating the business of the National Banks of the United States. It is interesting as showing something of the ideas which govern banking in the great Republic. Formerly these banks could only make individual loans to the extent of 10 per cent. of their paid up capital, but under the new law they are free to advance to individual borrowers to the extent of 10 per cent. upon their capital and surplus or reserves combined. This, as the New York *Chronicle* points out, is undoubtedly an enlargement of their liberty, but it is not so great an enlargement as might be supposed, and it instances the Chemical Bank of New York which has a paid-up capital of only $300,000 and a surplus fund of $7,200,000. If there were no limit to the 10 per cent. requirements this bank could make individual advances up to a total of $750,000, but as it is this new law does not permit it to make any single loan in excess of $90,000. This is no doubt a restriction upon banking freedom, and we cannot say that it is wholly a wise one, but it is probably evaded.

An enormous aggregate nominal value of new stocks were listed on the New York Exchange in the past six months, no less than $671,375,000 against $642,316,000 in the first half of 1905, and only $233,857,000 in the same half of 1904. The total for the past six months, however, includes $300,000,000 of Japanese Government bonds, and deducting this the amount of fresh stocks put upon the market does not seem to be so excessive. Nevertheless the New York investment market remains clogged up, and there are more securities of a high class carried there by borrowed money at the present time than was ever known before. Either the public in America, as here, does not possess the means or it is without the inclination to invest in these securities, and the consequence is that these first-class bonds cannot find buyers. Recently, for example, the Chicago, Burlington, and Quincy Railroad issued $24,000,000 of new bonds which were taken up by a banking syndicate. The bonds bear 4 per cent. interest, and the proceeds went largely to provide for old bonds maturing. One would have thought that this first-class issue would have gone off well, but it did not. The syndicate, we are told by the New York *Commercial Chronicle*, was recently dissolved with a considerable portion of the bonds still undistributed, and its underwriting operation has resulted in a loss. This is exactly in accordance with what we have been saying for so many months, the production of new securities has everywhere been so much in excess of the public's consuming power that the markets are overburdened and incapable of digesting the paper carried by the financiers, be it good, be it other than good.

An important move has been made by the City of New York Corporation counsel, who has obtained from the Courts the nomination of three persons well known to form a commission to take an accounting of the money due to the City from the Consolidated Telegraph and Electric Subway Company, and the Empire City Subway Co., Limited. The City claims that under its contract with these companies, it was to have all over 10 per cent. of the earnings, after deducting cost of operation, and that the sum of $5,000,000 is now due to it from them. On the other hand, the defendant companies allege that they have not earned 10 per cent. since they have been in operation. The City retorts that, on the failure of the companies to pay, it may assume possession of the subways and operate them. The state of public feeling over the numerous scandals of the past months, and the approaching autumn elections are no doubt responsible for the sudden activity in the public interest of the Federal, State, and municipal authorities in the United States just now.

The State Department at Washington is said to be much embarrassed by the failure of Congress to pass the legislation necessary to put into effect the tariff arrangements, promise of which by the Department induced the German Government to make a temporary extension of its minimum tariff rates to the United States. Two vital changes in the American Customs regulations are needed which must be made by law, the President having no power to make them by executive order. One is that goods sent to the United States on consignment shall be treated exactly as goods actually sold and delivered in the United States to the purchaser. The other is that there shall be no penalty imposed when the undervaluation of goods does not exceed 5 per cent. This failure of Congress to act has caused much dissatisfaction both at Berlin and at the State Department at Washington, where representations have been made by the German Government. The time for which the German Government extended the action of its minimum tariff to imports from America expires in March next.

There are symptoms that the Canadian Government is beginning to discover that it is outrunning the constable. The appropriations demanded by the Ottawa Government from Parliament run up to nearly $8,200,000 a month, a very considerable fraction of which is simple robbery of the public in the interest of railway rings, broken down politicians, and all kinds of parasite combinations, such as the North Atlantic Trading Company, pensions to ex-Ministers, after a certain length of tenure of office, and increased indemnity to members of Parliament, together with a large increase of military expenses for preparation against an unseen enemy. The pensions to ex-Cabinet Ministers was, however, too absurd, even for Boodler-ridden Canada; it is, therefore, not surprising that the Finance Minister, Mr. Fielding, has given notice of legislation repealing the law conferring them. The way in which surpluses in the budget are being figured out by charging things to capital account that clearly ought to be paid for out of revenue is being called to the attention of the people in some of the Canadian papers. An Ontario paper, the *Woodstock Express*, gives some items that look ridiculous, but are really serious, because of the spirit shown to pervade Dominion finance. In the accounts of the Inter-colonial Railway roofing sheds, moving buildings, putting foundations to freight sheds, are charged to capital. Bearing reins for the use of the militia, woollen mops, black-leggings, and such like items appear in the accounts chargeable to capital; as also hat and coat hooks for the Parliament buildings at Ottawa. "It is no wonder," remarks the paper, "that the national debt of the Dominion was increased by $5,500,000 in the fiscal year ending with June, 1905." On the whole it would seem that it would not be a bad thing if the next time the Canadian Government came into the market for a loan, a committee of the Stock Exchange, or one appointed by the holders of Canadian Government stocks, with a competent auditor, should go through its books in order to see whether the Dominion's financial affairs were conducted in a way to warrant entrusting it with more money.

The Customs receipts for the fiscal year ending June 30 at the port of New York ran over $200,000,000, being the largest amount ever collected there. The greatest previous receipts were in 1902-03, when they were $183,000,000.

The annual report of the American Car and Foundry Company presented at the annual meeting held in New York, June 28, showed total earnings of $5,648,553 compared with $3,754,274 for the previous year. Nett earnings were $4,158,450 against $2,935,485; preferred dividend payments $2,450,000 against $2,100,000; surplus for the year $1,857,660 against $528,118; and the total surplus $14,113,094 against $12,755,434. The surplus for the year is equivalent to $4.52 per cent. on the $30,000,000 common stock. In the year under review the company had manufactured 73,540 cars, of which all but 753 were freight cars; of the freight cars more than half were steel, and 219 of the passenger cars. 944,951 car wheels were also turned out, and there were orders on hand for the current year for 71,369 cars against 44,000 at the same date last year.

Following the example of Toledo, Ohio, in the matter of the ice supply, the Philadelphia District Attorney issued 13 warrants against as many ice dealers on June 28, for having formed a trust under the title of the Ice Exchange, and raised the wholesale price from $2.50 to $4, and $5.00, while householders were charged at the rate of $20 a ton. After the warrants had been issued the members of the trust inserted advertisements in the afternoon papers saying that prices would go no higher, and that they had joined the Ice Exchange for social reasons. They further declared that they had been compelled to raise the price of ice because of its scarcity. St. Louis, in Missouri, is also taking steps against the Ice Trust there which has raised the price from 25 cents to 40 cents a hundred pounds, though there has been no increase in the cost of production. In Pennsylvania there is no Statute law on which to base a prosecution, but the common law forbids the banding together of any set of men to raise the price of a commodity. The penalty is $500 fine and imprisonment not exceeding two years. In Missouri the statute penalty is a fine of $100 for each offence.

It is reported from Philadelphia that the examination of the books of the Pennsylvania Railroad Company, in the search for evidence to be used in the coming rebate trials, has disclosed abuses far beyond anything revealed at the recent inquiry by the Inter-state Commerce Commission. The results of further examination are said to be awaited with intense interest as the companies discriminated against expect to recover heavy damages.

The first session of the fifty-ninth Congress of the United States adjourned on June 30, after passing a number of Bills that bring a considerable extension of of power to the Federal Government which the founders of the Constitution endeavoured to restrict, and after having voted sums of money which, with the appropriations that will have to be authorised at the short session next winter, will run into more than $1,500,000,000 for the financial year. The American "pork barrel," as it is elegantly described, is deep and wide enough to carry something for every interest created by the indifference of the American people to what is going on in the country, and to satisfy the claims of the thousands of loafers who are not ashamed to be parasites on the public purse, besides gratifying the passion of the President for extravagant expenditure on the army and navy, more especially on the navy. Before even the type of canal to be made at Panama was decided on, millions that must make the mouths of the old Panama gang in France water have been expended, and a sum of $42,500,000 was appropriated for continuing work, of which $16,500,000 was to cover unauthorised expenditure and $26,000,000 for the current fiscal year. In addition to this, steps are being taken to issue the Canal bonds authorised by Congress to the extent of $130,000,000. No wonder the last hours of Congress were passed in merriment, singing songs, cracking jokes, and buffoonery! Among the measures left over to the winter session were the Philippine Tariff Bill, the Eight Hour Labour and the Anti-injunction Bills, the Ship Subsidy Bill, and the one prohibiting campaign contributions from corporations. A matter of international interest also, the Algeciras Conference Treaty, was left by the Senate to be voted on in December.

From the commercial point of view, the most important measure that was literally jammed through at the last moment was the Meat Inspection Bill. Under it the Government pays the cost of inspection, estimated at $3,000,000, and the packers have escaped the liability to put the date of canning on the labels of cans containing meat products. This, after all, is not a matter of much consequence to the foreign consumer, as foreign Governments always have it in their power to exclude such unstamped or uncertified packages from their markets. A few refusals to admit unstamped meat packages by foreign Governments would soon force American packers to do what Congress has failed to enact. If the American people are too careless to protect themselves, that is their affair. Along with the Meat Inspection Bill, there was passed a so-called pure food law, which will give the Federal law officials, through the Secretary of Agriculture, in whose hands the carrying out of the law is placed, great opportunities for making cases; but it contains no guarantee against the poisoning of the American people by adulteration of foods and drugs not already afforded by the existing State laws throughout the country. It was not more laws that were needed, or existing laws that are at fault; it is merely a question of having them honestly executed, and that, it appears, is almost impossible at present in the United States. Not long ago the State Analyst of New York was reported as having declared that 86 per cent. of drugs and articles of food and drink examined by his department were adulterated, a large proportion of them with ingredients noxious to health; yet, so far, there does not seem to have been a single instance of enforcement of the law. It is a case of business must not be interfered with.

The sixth annual report of the investigating committee of the Mutual Life Insurance Company discloses new instances of mismanagement and dishonesty. In connection with the real estate department it declares: "In the administration of this branch of the company's operations great extravagance is glaringly apparent on every hand, coupled with entire absence of business methods and care." One specific charge is that the entire real estate investment holdings of the company showed a nett loss on cost price of $5,723,633 on December 1, 1905, and earned less than 2½ per cent. on the capital invested in 1904 and 1905. A comparison of the general books of the company with those of the bond and mortgage department showed three "temporary" loans aggregating $410,000 of which the law department has no knowledge or record of title. Of this sum $300,000 is still missing. In the examinations of witnesses the three trustees who refused to answer questions put them were Mr. Richard A. McCurdy, lately president of the company; his son, Robert H. McCurdy; and Mr. Elihu Root, now Secretary of State in President Roosevelt's cabinet. To all questions regarding syndicate operations, ownership of stock in subsidiary companies, financial transactions with the company, money received from the Mutual outside of his regular fees, and the transactions of relatives, Mr. Root opposed the most resolute silence. The report itself is so drawn up that while those who are now out of the company are specifically named and handled without gloves, those still connected with it, and who were mixed up in the scandals, are let off with vague and incomplete references. With regard to the $300,000 loan, the name of the borrower is not revealed, and the schedule D containing the facts, like all the other schedules attached to the report, has been suppressed, and the chairman of the investigating committee, Mr. Truesdale, said they probably never would be made public. The colossal sum of $7,412,103 was

paid between January 1, 1900, and December 31, 1905, to various firms for improvements, embellishments, and enlargements of various buildings. One firm received $1,362,428 for marble work, of which $174,634 was paid for marble, $10,179 for other materials, and the rest, $1,177,615, for "labour." In connection with this and the other payments, the committee recommends a searching examination of the contracts, bills, vouchers, and accounts connected with the payment of the $7,412,103, there being apparently some idea that there may have been more bill "padding" going on than has been already discovered.

An interesting fact in connection with the Mutual's loans on real estate is that sums aggregating nearly $35,000,000 were lent in violation of the 60 per cent. restriction on the value of the property mortgaged, and in 131 cases the loans made exceeded 100 per cent. of the appraised value of the property. These particular loans are stated to be on church properties. Mr. McCurdy's cab bill amounted to $4,260, and was paid by the company. A firm of lawyers, one of whose members was a Mutual trustee, leases offices in the Mutual building, of which the annual rental appears as $15,000. During several recent years the same firm has been paid semi-annually the sum of $15,000 per year for legal services, but no bills appear in the accounts, showing details of any services rendered. Out of all the trustees connected with the Mutual only six had any knowledge that President McCurdy's salary had been raised to $150,000 before the fact was brought out by the Armstrong investigating committee, and seven only knew of the contributions to campaign funds. In connection with this last matter the fact that neither the President nor Congress showed any desire to press the bill against the contribution of money by corporations for political campaign purposes is of particular significance.

There is a circumstance connected with the Panama Canal matter which it may be well to bear in mind, as, in case of a change in the administration at Washington, questions may come up requiring to be probed in order to discover things that are very obscure just now in relation to the change of route of the canal from Nicaragua to Panama, and the insistance of certain parties on the construction of a sea level canal. Mr. William Nelson Cromwell, who is the attorney in New York for the old French Canal company; for the revolutionary Government of Panama, that was so promptly recognised by President Roosevelt; for the Panama Ice and Electric Company; for the Panama Railway Company, and, in fact, the presiding genius in everything concerning Panama, was examined during the course of the Session of Congress just adjourned by a committee of the Senate on matters connected with the canal, and refused to answer questions of an important character asked by Senator Morgan, of Alabama. In this refusal he was supported by the President, by the Secretary of War, Mr. Elihu Root, and by the administration generally, with the approval of that portion of the Press which is under the influence of Mr. Bundu-Varilla, the somewhat mysterious person who engineered the sale of the old Panama interests, and seems to have "touched" the fibres of some of the American papers with considerable skill and success.

The provisions of the new law governing the nomination and election of insurance company trustees or other officials have created great interest in New York in connection with the coming elections in December of trustees of the New York Life and the Mutual. The essential provisions are as follows:—

At least five months prior to every such election, every such corporation shall file with the superintendent of insurance two full and correct lists of the names and last known post-office addresses of all policy-holders whose insurance was in force twelve months prior to the date fixed for such election, and all other policyholders entitled to vote by virtue of contracts made prior to the enactment of this section. The names of said policyholders shall be arranged on said lists alphabetically, and shall be classified by States, Territories, and possessions of the United States and by foreign countries. Such corporation shall also maintain two similar lists at its home office; and at its general agencies in every State, Territory, and possession of the United States, and in foreign countries, unless prohibited by law, it shall maintain two similar lists of such policyholders residing in such jurisdiction. All said lists shall be subject to inspection and copy at any time during business hours by any policyholder in said corporation or by his authorised representative. . . .

Any one hundred or more qualified voters of such corporati may make other nominations for one or more vacancies to be fill at any such election by filing with the superintendent of insuran at least three months before the election and at the home office the corporation a certificate signed and acknowledged, giving t names and addresses of the candidates nominated, the names a addresses of three persons jointly or severally designated receive proxies to be voted for said nominees, and an appropri name or title designated by the superintendent of insurance to d tinguish the ticket from the administration ticket and other nom nations.

The international policy-holders' committee, organise in the last week of June, was busy arranging a independent canvass in New York for the proxies to be used in the forthcoming elections, and another had been begun in different States and Territories, so that by th time the nominations are filed, a month from then th machinery will be in operation to give policy-holders the power to protect themselves if they choose to ava themselves of it. The results cannot fail to be of grea interest in view of the past supineness of the American policy-holders, and the ever-increasing revelations o mismanagement and worse in the affairs of the thre great companies now before the public eye.

Passing Events.

We are sorry that the good old Orient Company has lost the Australian mail contract, but so it is. Sir James Laing and Sons, of Sunderland, have been the successful tenderers, and have got the new contract, which lasts for ten years from February, 1908, because their tender was the lowest of five received. Apparently the Commonwealth Government has made a good bargain, since among the stipulations are the shortening of the time by 60 hours. That is to say, the time of transit from Brindisi to Adelaide will be 636 hours instead of 696 hours as under the present contract. A fortnightly service is to be established on this basis for a subsidy of £125,000 per annum, with an increase for acceleration of speed on the basis of actual increased expenditure. The steamers are to call at Port Said, Colombo, and Fremantle, and will reach Adelaide on Saturdays, leaving that port on their homeward journeys on Fridays. The minimum tonnage of the steamers is to be 11,000 tons and the speed 15 knots. The Commonwealth flag will be flown by the new contractors, and the ships will be all manned by white labour.

Railway building in Canada seems to be approaching fever-point, judging by two important measures which have just been passed by the Dominion Parliament at Ottawa. One of these authorises the construction of 22 branch railways subsidiary to the Grand Trunk Pacific main line, whose total length will be 5,000 miles. The other contract relates to the telegraph and telephone facilities which the Grand Trunk Pacific Company is to be allowed to establish, but surely 5,000 miles in the Canadian wastes is a very big order indeed, even in the present prosperous condition of the North-West.

Interesting evidence is being offered before the committee inquiring into the defects of life insurance legislation in this country, but here also we do not know that the recommendations made by the various actuaries who have appeared to give evidence go quite far enough. In the matter of foreign companies, for instance, Mr. Gunn, the manager and actuary of the great Scottish Widows' Fund Society, gave it as his opinion that the amount of the deposit was unimportant. All that he recommended further was that every foreign company should be compelled to keep a permanent deposit in London, but if that deposit is only £20,000 it is little use to anybody. Mr. T. G. Ackland, the actuarial adviser of the Board of Trade, went even further, going against the view that foreign companies doing business here should be compelled to

keep the assets of British policyholders within reach. This might bear hardly, he thought, upon the policyholder in America, but we really do not see why that should be so. He was right, however, in recommending that foreign companies should be compelled to make separate returns of their business in this country, but why not also to keep the assets of the British policy-holder, the trust funds created by and belonging to him, in the hands of British trustees?

A subscriber writes:—"I very much rejoice at your enlightened *peace* views as expressed in the Review."

Could anything be more beautiful than Mr. Bottomley's methods of share conjuring and debenture exchanging, company making, mending, ending and resuscitating, transforming, transmogrifying, pruning, expanding, mortgaging, and unmortgaging, cutting down and patching up, buying without a real purchaser, vending without substantial wares to dispose of? We do not know, but after reading Mr. Official Receiver Brougham's description of the "Selected Mines, Limited," and its relations to the "Joint Stock and Finance Corporation," and to the public, together with all about the debentures created, acquired, sold, exchanged, mortgaged, transformed, "trusteed," and sometimes apparently never existing outside the promoter's brave fancy, we felt as stupid as never was and look in dazed wonder. We do seem to grasp something though, when we read at the end of a long story of how a "trust's" assets were disposed of, and how the account with Mr. Bottomley was "adjusted" by the auditor, that "this left him a creditor of the trust on December 12, 1904, for £1,502," and that "further amounts have since been entered to his credit," raising the book debt owing to him to £5,766. It is all financial clown and pantaloon business of the merriest, and nobody seems to mind paying for the fun, and Mr. Bottomley is not greedy, not at all.

Preferentialists with everything to get and nothing to give had a field day at the meeting of the "Chambers of Commerce of the Empire," if not several field days, this week, but it does not seem to us that they advanced their cause very much. A good deal of nonsense was talked, such as when Mr. Stiebel, of Nottingham, declared that "this confounded cheapness was a curse to the country," and described the people of Great Britain as a "pack of ninnies," who put duties on goods which they could not produce and none on goods which they could produce. The Canadians seem to be most fervent advocates of what they call a "preferential tariff," to be set up for their benefit by the old, free motherland, and we can understand their attitude, because they themselves are cursed by a tariff which one of these days will put the prosperity of their country in no small peril. Happily some people kept their heads, and the representatives of British Chambers of Commerce did not usually lend themselves to the frothy agitation of the Colonials. We are not surprised that a roar of laughter greeted the announcement that the Birmingham Chamber was neutral, but its example was followed by many other large Chambers in England and Wales. We hope these Chambers will all pluck up courage to be positive and stick by Free Trade.

South Australia has a deficit, which is sad, but it is barely £120,000, so there is good hope yet. Its revenue for the year ended June 30 last amounted to £3,559,000, and the expenditure to £3,632,000, leaving out the odd hundreds. This seems a very fair income indeed, if it is all genuine revenue, and by a little economy, with the help of a little rain, this settlement may next year show a surplus. Let us hope so.

Rather better news has been coming from India about the famine there. It does not seem to be spreading. Rain has been falling liberally in some parts of the country, notably in the United Provinces, and sowing is vigorously proceeding there. Fodder, however, is scarce still, and loans for seed and cattle continue to be granted as well as free doles from the Indian Famine Trust. The number on the relief works has fallen off 40 per cent. Much the same story comes from the Punjab, Rajputana, Central India, and Bombay, so that altogether the number on relief works has fallen to 417,000, still an unpleasant aggregate, but considerably less than it was some weeks ago. The heaviest contributions to this total come from the United Provinces with 123,000, Ajmer and Rajputana with 93,000, Central India with 84,000 and Bombay with 98,000.

Events seem to be moving less rapidly in Russia. The unrest of the population does not diminish, but the crisis between the bureaucrats and the representative assembly has not yet reached a stage which forebodes a general upheaval of the people. Rumours were current early in the week that the factions surrounding the Tsar at Peterhoff had decided to allow a Ministry to be drawn from the members of the Duma, but this statement was contradicted or qualified, and no such step has yet been announced. It will have to come to this, however, if the empire is to survive in any form. Unless the Tsar can reconcile himself to the position of a constitutional monarch he runs the greatest possible danger of being swept away by the rising tide along with the bureaucracy and the military faction which have been his support, or in whose hands he has been a helpless tool. Several papers in Petersburg declared that a preliminary condition to the appointment of a constitutional democratic ministry will be the endorsement by them of a loan of £400,000,000, half of which will be devoted to the purchase of private lands, and the other half placed at the disposal of the war and navy departments. If this statement is in any degree in accordance with the truth then the constitutional ministry is still a long way off.

We hoped to learn a lot from the meeting of Spiers and Pond, held on Monday, but were sadly disappointed. The investigating committee has not yet had time to carry out a proper investigation, having been appointed as recently as May last, and Dr. White, one of the directors elected a year ago, did nothing more than complain of the hard work involved in administering the company without throwing any light on the true position of affairs. Mr. C. A. Dingwall, chairman of the committee, seemed inclined to make excuses for the board, and asked for 12 months in which to draw up a report. Such a long delay, however, naturally met with disfavour, and the committee of inquiry was reappointed on the understanding that it should convene a meeting to report to the shareholders not later than January 10 next. The retiring directors were reappointed, but the question of their contracts remains in the hands of the committee for future decision.

The Great Western Railway Company has made an offer for what is virtually the acquisition of the Rhondda and Swansea Bay Railway. Rumours to this effect have been current throughout the week, and the shares have had a substantial rise. If the agreement is concluded they will probably improve further. The Great Western Railway undertakes to provide sufficient revenue to meet the land rent charges, interest at 4 per cent. per annum on the debenture stock, 5 per cent. on the preference shares, and the following dividends for the ordinary shares:—3 per cent. for 1906, 4 per cent. for 1907, and 5 per cent. for 1908, and all subsequent years that the agreement is in force. It can only be determined by mutual consent. Rhondda ordinary shareholders will also be entitled to half the nett revenue beyond the sum necessary to provide these dividends, and, on the whole, the compact looks a very reasonable one.

It is useful to take note of a letter written by Mr. C. Levarez, Consul-General in London of the Ecuadorian Government, on the question of the Guayaquil and Quito Railway. Referring to certain rumours which have been widely circulated to the effect that the relations between the Government of Ecuador and the railway company are in an unsatisfactory state, Mr. Levarez is authorised to emphatically and unequivocally deny the assertions. He is further directed to say that

the country is in a position to fulfil all the obligations it has assumed in relation to the railway bonds, and moreover that, whatever happens, the Government of Ecuador will carry out all engagements it has entered into with the railway company. It seems to be clear from this that the Government is animated with the best intentions, and the price of the railway bonds recovered sharply on the statement.

Opposition to the Allsopp proposals is opening up from various quarters. A circular has been issued on behalf of the "A" Bell issue of Salt and Co.'s stock requesting all holders of this security to suspend judgment and withhold their proxies at the forthcoming debenture holders' meeting. It is said that a more favourable proposal has been put forward which provides for the acquisition of the properties comprised in the Bell Trust deed. No further information than this is given and the nature of the offer is not mentioned, but no harm can result from following the advice given. However, action in any direction is quite unnecessary, and for the present proxies had better be kept in hand.

At a meeting of the company held in May last the chairman of the improving Argentine Land and Investment Company promised to elaborate a scheme for the reorganisation of the company's capital with the principal object of funding the arrears on the preference shares. The directors' proposals have just made their appearance, and contain some of the most astounding recommendations we have ever encountered. The facts are these. At present the capital consists of 108,960 5 per cent. cumulative preference shares of £4 each, fully paid, on which there are arrears of dividend amounting to £133,476, or 24s. 6d. per share, and 104,469 ordinary shares of £1 each, 10s. paid, making the amount paid up £488,074. The idea now is to increase and rearrange the capital so that it will consist of £542,555 entirely in £1 shares, and it is in the distribution of these shares that the extraordinary nature of the proposals comes in. It is intended to give to the preference shareholders four £1 shares for each present £4 share, which is all right, but for the dividend arrears, amounting to £133,476, and the extinction of preferential rights, which is also part of the plan. They are asked to accept a further £54,480 in shares, meaning that they actually give up nearly £79,000, and are to take the balance in paper. The ordinary shares, of course, get the benefit of this one-sided and iniquitous arrangement, as they are to have one share of £1 fully paid for every two £1 shares now held having 10s. paid, and rank equally with the preference. The liability of 10s. per share now existing will be extinguished both for dividends and in respect of capital in case of winding up. These ordinary shares have never had a dividend of any sort, and now that the company is earning pretty good profits, enough indeed to pay the preference dividend in full and make steady progress towards the cancellation of the arrears, the directors come along and try to foist this palpably unfair scheme upon the preference holders Fortunately the opposition was so strong that the directors promptly withdrew their scheme at the meeting called to consider it. Shareholders made many uncomplimentary remarks, but fhe board deserved them all.

Early this year, in March last in fact, a curious juggle took place with the capital of the well-known soap business of Lever Bros., and one for which we could not express very great admiration. But the conjuring was not done without motive you may be sure, and shareholders have just authorised an increase in the capital of the enormous sum of £2,000,000, making it £6,000,000. The issue will take the form of second or "B" preference shares, and therefore should improve the position of the existing preference shares now held by the public, the ordinary being still in the hands of vendors. Preference shareholders will have 50,000 of the new shares offered to them in the proportion of one for every four held, and we gather that they can have more if the ordinary shareholders do not want them. On the face of things, the new shares ought to be good enough, but there was a singular absence of information regarding the use for the money at the meeting called to consider the proposal on Friday last.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and July 7, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to July 7, 1906.	Total Receipts into the Exchequer from April 1, 1905, to July 8, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369

Total			45,593,185	48,072,566

Treasury, July 10, 1906.

LONDON AND GREENWICH RAILWAY.

In addition to the rent of £22,500 paid by the South-Eastern Railway for the six months ended June 30 this company received £79 from interest, transfer fees, &c., of which general charges took £388, leaving a balance of £22,191 to be dealt with against £22,172 a year ago. The balance brought in, however, was £35 smaller at £109, so that, after meeting debenture interest and preference dividend and making the usual distribution of £1 8s. 3d. per cent. on the ordinary stock the amount carried forward was further reduced to £151 compared with £168 and £210 at the corresponding dates of 1905 and 1904.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended July 7, $2,884, decrease $6,673.

Argentine North Eastern.—Traffic receipts for week ended June 8, $20,498, increase $1,801; aggregate from January 1, $429,621, increase $18,204.

Assam Bengal.—Traffic receipts for week ended June 9, Rs. 70,474, increase Rs. 19,893; aggregate from January 1, Rs. 15,99,467, increase Rs. 2,55,489.

Canadian Northern Railway.—Traffic receipts for 9 days ending June 30, $194,200, increase $62,400; total from July 1, $5,563,100, increase $1,691,300.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 9, Rs. 27,310, increase Rs. 1,224.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 1st week of July, $19,775, increase $3,906; aggregate from January 1, $444,906, increase $64,633.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 9, Rs. 20,124, increase Rs. 8,293.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 30 amounted to $71,354.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending July 7, £1,054, decrease £284; aggregate from July 1, £1,054, decrease £284.

Cockermouth and Keswick Railway.—Receipts for week ending July 7, £1,012, decrease £138; aggregate from July 1, £1,012, decrease £138.

East London Railway.—Traffic receipts for March, £4,206, decrease £188.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending July 7, £271, increase £3; aggregate from July 1, £271, increase £3.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Birmingham and Midland.—Traffic receipts for week ending June 29, £1,440, increase £62; aggregate from January 1, £36,587, increase £4,436.

Blessington and Poulaphouca. — Traffic receipts for 4 days ending July 4, £12, decrease £1; aggregate from July 1, £12, decrease £1.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 6, £5,612, increase £61; aggregate from July 1, £5,612, increase £61.

British Electric Traction.—Receipts of all the Associated Companies for the week ending June 29, £31,068, increase £1,815; aggregate from January 1, 1906, £750,338, increase £103,526; 431½ miles, against 423¾.

Burnley Corporation.—Traffic receipts for week ending July 7, £1,326, increase £172; aggregate from July 1, £1,326, increase £172.

Dublin and Blessington.— Traffic receipts for 4 days ending July 4, £89, decrease £31; aggregate from July 1, £89, decrease £31.

Dublin and Lucan.—Traffic receipts for week ending July 6, £98, decrease £34; aggregate from July 1, £98, decrease £34.

Dublin United.—Traffic receipts for 6 days ending July 6, £4,344, decrease £215; aggregate from July 1, £4,344, decrease £215.

Edinburgh and District. — Traffic receipts for week ending July 7, £5,673, increase £183; aggregate from January 1, 1906, £130,661, increase £3,059.

Harrow Road and Paddington.—Traffic receipts for week ending July 5, £114, decrease £154.

Hastings and District. — Traffic receipts for week ending July 5, £776.

Isle of Thanet.— Traffic receipts for week ending July 7, £1,100, decrease £65; aggregate from October 1, £14,870, decrease £950.

London County Council.—Traffic receipts for week ending June 30, £26,247, increase £10,062; aggregate from April 1, £345,839, increase £154,082. Miles 96½ against 51¾.

London General Omnibus.—Traffic receipts for week ending July 7, £26,842, decrease £1,512; aggregate from July 1, £26,842, decrease £1,512.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending July 7, £3,913, increase £3,035.

London Road Car.—Traffic receipts for week ending July 7, £9,509, decrease £94; aggregate from July 1, £9,509, increase £94.

Rossendale Valley. — Traffic receipts for week ending July 6, £205, increase £8.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending July 8, £885, decrease £6; aggregate from January 1, £21,270.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending July 8, £14,818, increase £1,902; aggregate from January 1, £400,424, increase £41,806.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for May, $33,489, increase $5,297. Nett earnings from July 1 to May 31, $453,631, increase $120,539.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 8, £3,649, decrease £8; aggregate from January 1, £95,908, increase £5,515.

Buenos Ayres Electric. — Traffic receipts for week ending June 9, £1,247, increase £134; aggregate from January 1, £32,082, increase £6,316.

Buenos Ayres Grand National.—Traffic receipts for month of June, $271,500.

Calcutta. — Traffic receipts for week ending July 7, Rs. 45,024, increase Rs. 2,498; aggregate from July 1, Rs. 45,024, increase Rs. 2,498.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,623, increase £2,238. Total from January 1, £27,466, increase £10,928.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of April, $415,413, increase $60,200; aggregate from January 1, $1,621,914, increase $232,398. Nett traffic receipts, $218,256, increase $33,852; aggregate from January 1, $832,339, increase $131,992.

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

This morning the discount houses met and decided to lower their allowances on deposits by ¼ per cent. to 2 per cent. for call, and 2¼ per cent. for notice money. The actual circumstances of the market justify them taking this step, but it does not follow that money is going to remain easy for any length of time. Often it is cheaper in the middle of July than later. In fact, both mid-January and mid-July frequently bring us short spells of low rates for floating credits, which disappear as soon as the dividend money has been absorbed, and it is not unlikely to do so this year. An export demand for our gold has only to spring up again to make the whole position of the market change and bring stiffer money rates in prospect. We do not know that gold is going to be taken from the Bank to New York in any quantity, but there is unquestionably prospect of competition for the metal coming into the open market, and if the Bank of England does not continue to add to its stock holiday demands will tend to reduce the existing reserve, and when autumn comes we may see gold disappearing abroad in many directions to an inconvenient extent, just because the reserve has not been adequately strengthened.

This week began with money at 2 per cent. on seven day advances, and with call loans at 1½ to 2 per cent., but yesterday bankers had no difficulty in getting 2¼ per cent. for seven day money, and call loans occasionally rose to 2½ per cent. The Stock Exchange settlement payments no doubt caused this change, but the market is not even now possessed of any superabundance of banking credit to come and go upon. To-day, however, the seven day loan rate slipped back to 2 per cent., and the market was able to pay for the £2,000,000 of Treasury bills, a renewal of an issue paid off last April, without the slightest apparent inconvenience. Day-to-day money, however, was in fairly good request at 1½ to 2 per cent.

All week the discount houses have been endeavouring to keep their rate on three months' bank bills something above 3 per cent., and they have been wonderfully successful all things considered. Rates, in other words, have been sustained by the doubts as to the future course of the Money market. Had the outlook been clear we should have seen discount below 3 per cent. As it was the joint-stock banks have been buying short paper from the brokers at 2⅞, and sometimes even 2¾ per cent., and altogether the half-year has begun well for the discount houses. We hope also that rates on bills will not come down much, just because we cannot see a continuance of cheap money for any length of time.

There were some nasty rumours afloat to-day about financial difficulties in important quarters, and these helped to cause discount houses to quote firmer for paper of all descriptions. Even now, however, 3⅛ per cent. is about the best of it for three months remitted paper, and 3 per cent. is the working rate for short bills of this class. Four and six months' bills are respectively quoted at 3¼ and 3⅜ per cent., and these rates seem likely to be maintained because the New York inquiry for gold is so strenuous that the Bank may have to part with eagles next week as well as to forgo buying the supply of raw metal, amounting to about £500,000 to be dealt with on Monday. To-day's ease in money, it may be added, is partly accounted for by the heavy lending of the Japanese Government agents, who have not only bought up the Treasury bills, but lent a large amount at 2¾ for a month.

This week's Bank return indicated little beyond the heavy repayments of credits borrowed in the end of the month to enable the market to fulfil its engagements at the end of the half-year, and the joint-stock banks to make their usual comforting balance-sheet exhibits of cash in hand and at the Bank of England. Other securities ran off to the amount of £7,139,000, and as the market had repaid a portion of its end of the month borrowings last week we cannot be far wrong in estimating that the Bank had to help it to the extent of altogether about £10,000,000. This credit was cancelled at the Bank without impoverishing the market, partly because about £5,000,000 were disbursed by the Treasury, and also because the banking reserve increased by £778,000. The whole of the Treasury disbursements did not go to the market because £1,000,000 of temporary borrowings at the Bank was paid off, that being the amount of the decrease in Government securities, but altogether upwards of £4,700,000 came to the help of the market, so that other deposits have fallen off by only £2,467,000. Their aggregate, however, was still on Wednesday night £5,000,000 above what we call "poverty line."

Calls due next week are insignificant, amounting to barely £100,000 on Monday, less than £19,000 on Wednesday, and about £144,000 next Friday, the principal items being Royal Mail Steamship shares

£75,000 and Antofagasta Railway debenture stock £125,000. There are also calls upon the new issues of German and Prussian 3½ per cents., but these are not likely to have any direct effect upon the supply of floating credit in our market.

SILVER.

A fairly good inquiry for bars has been experienced this week chiefly on account of the bazaars, although the Indian Government was also believed to be a buyer. In addition, some special orders came into the market, with the result that the demand was greater than the supply, and prices advanced to 30⅛d. per oz. for cash and 30d. per oz. for future shipments, closing firm. Applications for the Rs. 40,00,000 Council drafts on India reached a total of Rs. 2,93,00,000 in bills and Rs. 60,00,000 in telegraphic transfers. Of these Rs. 33,11,000 were allotted in bills and Rs. 6,89,000 in transfers, tenders at 1s. 4d. and 1s. 4 1-32d. per rupee receiving about 11 per cent. Next week the amount to be offered is raised to Rs. 60,00,000.

Stock Market Notes and Comments.

Is business going to revive on the Stock Exchange? Some say yes, and we have seen evidence this week that the small public is undoubtedly peddling more than it did, especially in the mining market, not buying recklessly and in large volume as formerly was the case, but picking up tiny parcels of shares—fives, and tens, and twenties. There is great temptation to do this so far as the South African group shares is concerned, because the average mind does not penetrate beneath the surface. The usual reasoning runs thus:—"At such and such a date prices were so high; now they are down at a low figure compared with that former elevation; therefore it ought to be a good speculation to buy on the chance of a rise." We are sure one of these days to have an outbreak more or less violent of buying, based upon this wholly fallacious method of reasoning, the only method, however, that the multitude comprehends. What is really wanted to restore genuine business to the South African or any other market is confidence in the future, and so far as the South African market itself goes confidence in the management of the mining industry has gone, and deservedly gone. The usual attitude of mere Stock Exchange members interested in this particular market is one of raving against the present Government. All the depreciation is laid to its door, to its tinkering with Chinese labour, to its want of resolution, and so on. This is an entirely perverse view, without foundation in fact. What the Witwatersrand mining industries suffer from is the lack of intelligent and vigilant management in the interests of shareholders. Out there the controlling houses and their highly paid staffs of engineers do as they please, and they have been persistently blocking the way to the introduction of the most scientific and economical methods of extracting ore. When they get the ore to the surface they probably take the gold out of it to the utmost pennyweight, but they do not give the shareholders their fair proportion of this gold. It is wasted or absorbed by the said controlling houses, it is frittered away in profitless expenditure on which these houses receive heavy commissions; or it is paid out in excessive salaries to superfluous employees, and spent in disastrous experiments like this of Chinese forced labour. We shall have no lasting revival of business in the Kaffir Circus until this is changed, until the power of the shareholders here is applied to effecting reforms, and until an intelligent and more upright class of people takes the industry in hand.

But are other markets going to develop more business? In some directions we think they must. All depends upon the Money market. Should that remain in a comparatively comfortable position, with no great rise for two or three months in the current price of banking credits, then we ought to see a considerable expansion of business in the Home Railway market,

and perhaps in some portions of the Miscellaneous markets. It is not unreasonable either to expect that the public will begin to look at Insurance shares again now that they have been knocked down so far, and if business begins in any conspicuous or important market, it is almost certain to spread. On the other hand should the Money market become threatening, as it may do towards the autumn, all this will be once more checked, and we must never forget that the Stock Exchange and the City generally are fearfully tied up by unplaced issues. The "underwriting" of new issues business, for instance, has been the reverse of profitable for years past in many directions, and consequently many people who used to be able to play on the market with effect and profit are now crippled and dare not venture. Who amongst all those who deal in stocks and shares is not at the present time nursing depreciated securities on which more or less severe losses are shown? The only people who have made money for some time back are the "bears," the people who have sold securities that they did not possess, or which possessing, they considered it well to run a "bear" of. But that class of operator is not much good in creating a solid revival in markets. Spurts may be produced by the closing of "bear" accounts, but when they are over markets fall into a state of greater weakness than before. Only one thing will give strength and solidity to any upward movement on the Stock Exchange, and that is the inflow of money drawn from the pockets of investors, and squarely put into the securities bought. The beginnings of this inflow, as we say, are now noticeable, but we cannot yet be certain that the volume of money business is going to expand, and to assume such proportions as might before the autumn lift the Stock Exchange out of the morass of hidden insolvency in which it has weltered so long.

The Week's Stock Markets.

Considering that the air has been full of rumours of impending disasters, the stock markets this week kept wonderfully steady. Where all the trouble which is known to exist is hidden it is almost impossible to say, but a good many lame ducks had to be helped over the settlement. No actual failures were announced on pay-day, but a dealer in the West African market declared himself as early as Monday last, and the market does not consider itself out of the wood yet, even so far as the fortnightly adjustment just completed is concerned. Nor is the talk confined to one or two individuals, but is applied to all kinds of firms and certain of the big Kaffir controlling houses. They say that a peer's son has got badly out of his depth, and the speculations of the solicitor who died recently are bound to be a source of weakness for some time to come. We have been told as usual that the rotten accounts are in stronger hands now, but the history of the markets during the past few years goes to prove that bolstering up positions which are unsound to the core does far more harm than good. If former losses had been squarely faced instead of hidden up, we should have had a clearer atmosphere, and the slow exhaustion which is eating the very vitals of the Stock Exchange need never have occurred. But the players chose otherwise, and are paying the penalty. Money for settlement purposes was plentiful enough now that the half-year has turned, and money dealers were supplied by the joint stock banks at 3½ per cent. Outside the rate was 3⅞-4 per cent., which is quite high enough bearing in mind that most operators for the rise had differences to meet as well. Consols were a fairly good market, and after showing early dulness rose steadily, finishing well up on the week. Other British Funds, however, were rather irregular, and Home County and Corporation issues were put lower in a number of instances. Attempts to sell some of the other 3½ per cent. issues in order to exchange into Bristol stock immediately resulted in a sharp marking down of prices. Colonial stocks were pretty steady, but they could not be sold in any quantity.

Nothing of particular interest happened in the Foreign bond market. After improving from 4 to 3⅝ discount the new Russian loan weakened again, and the old issues, which had also shown signs of recovery, fell away once more. Other Continental issues were steady, with a firm tendency during the early days of the week, and Spanish, Turkish, Portuguese, and Greeks all showed fractional rises. Best prices, however, were not always maintained, and there were hints of trouble in this department. South Americans were pretty good, including Brazilians, Argentines, and Uruguays, and Cuban 5 per cent. had a small rise. On the other hand, Peruvians were dull, and Cedulas, after keeping steady, eased off. Chinese bonds are still strong, and Japanese were also hard, although slight weakness was visible near the close. Costa Rica alone showed dulness in the Central American group. Carry-over rates in this department were rather lighter, the South American group being continued at 3-5 per cent. and Central Americans at 5-6 per cent. On several Japanese the charge was also 3-5 per cent., but the 5 per cent. 1902 were done at 2-4 per cent., and the 4 per cent. sterling at 1-3 per cent. Peruvians were carried over at 4-6 per cent., together with Uruguays. Russians were done at 1-3 per cent., Spanish at 2½-3½ per cent., and Turkish even. The making-up list showed a large number of substantial declines, but in nearly every case the drop was due to the deduction of the dividend on July 1. On the other hand, Brazil Western of Minas was up 1⅛, and the 5 per cent. of 1903 1¼, while Chinese silver rose ⅝, the 5 per cent. 1896 1, the Imperial Railway Loan 1¼, and the Shanghai Nanking line 1½.

The usual forecasts of dividends for the past half-year are now occupying the attention of dealers in the Home Railway market, and, as might have been expected from the weekly figures issued by the companies, an increased distribution is looked for in nearly every instance. Amongst the "heavies," North-Western is expected to pay from ¾ to 1 per cent. more than for the corresponding half of last year, and North-Eastern from ½ to ¾ per cent. more, but it is not considered likely that the Midland will pay more than an extra ¼ per cent., while a similar increase is the most that is expected from the Great Western. In the case of the others the improvements are expected to be ¼ to ½ by the Great Northern and Great Eastern, ½ to ¾ by the Lancashire and Yorkshire, and ¼ per cent. by the South-Eastern and the Chatham, the dividend in the last-named being, of course, on the First Prefs. The Great Central is expected to pay at the rate of 4 per cent. on its 1889 preference stock, compared with 3⅛ per cent. for the year 1905; but neither the Brighton nor the South-Western companies are considered likely to add anything to last year's rates. So far these estimates have not been accompanied by any revival of business, but dealers are much more hopeful of a revival of activity in the near future, particularly as the settlement this week showed that the account had been considerably reduced. Prices, therefore, when they moved at all, were higher as a rule, and in the case of the North-Western the advance reached 2, while improvements of 1 were fairly numerous. Amongst Underground issues, Metropolitan was dull, the traffic return having again proved disappointing, but District rose a fraction. Central London Ordinary was also harder, and City and South London gained no less than 4. In less well-known things Rhondda and Swansea Bay Ordinary was lifted 2 on a report that the Great Western had offered to lease the line. The reduction which has taken place in the open account made it difficult for lenders to find employment for their funds, and carrying over charges ranged from 5 to 5½ per cent., and occasionally 6 per cent., with the exception of Chatham Ordinary, on which 7 to 9 per cent. was sometimes paid. As the result of the very moderate flow of investment orders which has come into the market during the past fortnight making-up prices show improvements of 3½ in North Western, 1½ in Great Western, 1¼ in North-Eastern, and 1 in Midland Deferred. North Staffordshire rose 3, Brighton Preferred 1, Great Northern Deferred ¾, and South Eastern

Preferred and Deferred ⅛ each. South-Western Preferred also put on ¾, but the Deferred was 2¼ lower, owing to the accident at Salisbury. District dropped 1¼, Metropolitan ¾, and the debenture stocks of the Charing Cross, Euston, and Hampstead, and Great Northern, Piccadilly, and Brompton undertakings were marked down 2 and 4 respectively. Of Scotch lines, Caledonian stocks were ⅜ to 1 higher, and North British issues put on ¼ and ⅛.

Dealers in our Yankee market are still content to leave the game almost entirely to Wall Street, and have confined their activities to pegging prices a fraction or two up each morning. A bad Bank return on Saturday caused a renewal of the selling in New York, but it was ignored on this side when business was resumed on Monday, and quotations were marked over parity as usual. The story each day has been practically the same, prices higher and nominally firm throughout the morning, without any business of a kind likely to influence them one way or the other, and falling away immediately after New York opened. On Tuesday even Wall Street was idle, the total business only amounting to 300,000 shares, but the characteristics were identical. A good Government crop report, instead of leading to an improvement of business, was followed by "bear" selling, and rumours of trouble amongst some of the bull pools caused a good deal of nervousness, which was increased by the announcement of a small failure. Quotations, consequently, were mostly down on the week, but the declines were less severe than might have been expected, and Milwaukee were exceptionally firm, with a gain of several dollars on the repeated denials by the company's officials of the report that it was trying to follow the example of the Pennsylvania and borrow money in Europe. Erie, New York Central, and Norfolk also showed moderately good advances, while Great Northern and Northern Pacific were marked up 12½ and 3 respectively. On the fortnight New York Central were 4 down, Atchison lost 3½, Denver Preferred and Reading 3¼, and Milwaukee, Southern Pacific Preferred, and Wabash Income Debentures 3 each. Denver Common and Southern Pacific Common declined 2 each, Union Pacific were 2¼ down, and Baltimore Ordinary, Chesapeake, Erie Common, Norfolk Common, Pennsylvania, and Southern Common dropped from 1¼ to 1½. Contangos on Tuesday occasionally touched 5½ per cent., but the rate was more often 4½-5 per cent., and towards the end it eased off to 4-4½ per cent.

Only a very moderate interest has been shown in Canadian Pacific shares, and for several days in succession the price was round about 164½, but on Wednesday evening they spurted in the "street" to 164¾. Part of the improvement was lost almost immediately, as business dwindled once more to insignificant proportions. The Grand Trunk Company has begun the new half-year well with an increase of £11,500 in its traffic return for the first seven days of July, against a decrease of £3,400 in the corresponding period of 1905. A good effect was produced by the figures, and all the stocks of the company, except the guaranteed, finished with fair gains, the improvement being most pronounced in the 3rd preference. On the account Canadian Pacific shares were $1 lower, but Grand Trunk 3rd preference rose 1⅜, and the Ordinary and Guaranteed stocks both gained ½.

The huge account to which we referred last week as being in course of liquidation seems to have been mainly in the Foreign Railway and Mining sections, and it was to that the depression which has been so pronounced in Guayaquil and Quito Railway bonds was due. To all appearances the realisations had been completed by Saturday, and under the influence of a further reassuring statement by the Ecuadorian Government the price of these bonds recovered rapidly, until by Wednesday it was up to 73. At this level the "bear" attack was resumed, and the selling was fierce enough to knock the price back to 68½. In other directions the market has been decidedly brighter, Antofagasta and United Railways of the Havana rallying sharply on buying back before the settlement, and one or two Argentine issues showing a disposition to improve. Great Western Ordinary and Buenos Ayres and Pacific Ordinary and Entre Rios Preferences, however, were all down on the week, and the scrip of the Cordoba Central Buenos Ayres Extension Debentures was likewise lower. Mexican Railway stocks were inclined to be flat, but Nitrate Ordinary and Preferred shares hardened a fraction or two. In the making-up prices the largest movement was naturally the fall in Guayaquil and Quito bonds which amounted to 13¾. Argentine things were all heavy with losses of 3 in North-Eastern Preferred and Cordoba and Rosario First Preference, and declines ranging from 1½ to 2½ in Great Western Ordinary and Debenture, Buenos Ayres and Pacific Ordinary, Buenos Ayres and Rosario Ordinary and Deferred, Buenos Ayres Great Southern Debentures, Entre Rios, and sundry Cordoba Central issues, while the only improvement worth noting in this group was a rise of 1 in Buenos Ayres and Rosario First Preference. San Paulo Ordinary and Debenture stocks declined 1½ each, but San Paulo Ordinary gained 1, United Railways of the Havana Ordinary and Debenture stocks were 1½ and 2 down, Antofagasta Ordinary dropped 3, and Uruguay Northern Debenture stock 3. Mexican Railway first Preference was ¾ up, while the Seconds relapsed that fraction.

Little of a striking character happened in the Miscellaneous market, where business is still oppressively meagre. Probably the principal incident was the fall in London motor-omnibus shares on the terrible disaster at Crawley. Even at the reduced prices shares were very difficult to dispose of, and although there is talk of the company escaping liability because the vehicle was privately hired, we doubt if this contention would hold good. The market in the shares will be a difficult one for some time to come. Other Traction shares were also easier, although B.E.T. ordinary did not lose all the dividend taken off on Thursday. Daimler motors were rather better. A sharp fall after the recent big rise took place in Eastman Kodak common shares. Iron and Steel shares were inclined to be flat, and Nitrates eased off near the end, but Salt Unions improved on the statement that an agreement has been arrived at for regulating prices and output. Catering shares were still rather heavy, but Sweetmeats firmed up on the revenue statement for June. Textiles opened easier in a few instances, but rallied later. Spiers and Pond preference lost ½ on the meeting. Breweries still went down, and Meat shares were quiet and uninteresting. Anglo "A" was knocked back to 22 at one time, but pulled up sharply to 23. National Telephone issues derived benefit from the report, except the first preference, which went back 1 to 12. Hudson's Bays were firm and higher, but Pekin Syndicates and other Land shares were dull. P. and O. deferred lost 1, but Docks were steady and unaltered. Cassell and Co.'s shares lost ½. Quite a good demand sprang up for Gramophone shares, but Apollinaris shares ended easier. Rates at the settlement showed little alteration, and the making-up prices, as usual, were irregular, although mostly downward. Anglo-Malay Rubber lost ½, B.E.T. preference ⅜, California Oilfields ⅜, Daimler Motor ordinary ⅜, and the preference ⅜, U. Darracq ordinary ⅜, Eastman Preference ⅜, Lautaro Nitrate ½, and Schibaieff Petroleum preference ½. Allsopps were down 2 to 5, Bieckerts ordinary 12 and the preference 7, Watney Combe preferred 1½, Argentine Southern Land ⅜, Ebbw Vale Steel ¾, Pekin Syndicate deferred 10, Anglo "A" 2½, Eastern Telegraph 1½, Standard Bank of South Africa 1½ and Commercial Union Assurance 2½. Improvements were not very numerous, but B.E.T. ordinary were up ⅜, Charing Cross Electric ½, Fraser and Chalmers ½ and Metropolitan and Westminster Electric each ½. London Motor-Omnibus showed a rise of 9-32.

Stock markets continue depressed, and although no further failures have been announced in connection with the settlement, a meeting of the creditors of one rather important firm is being held this evening. Gossip, however has gone outside markets and begun to fasten upon

various important mercantile and banking houses without any solid foundation that we can find out. None the less is the position a ticklish one, because when rumour gets busy about the credit of any house or institution it threatens danger to the market. The particular house, or houses, attacked may be sound enough, but the talk goes on until some weak spot is lighted upon and trouble ensues. Prices were accordingly heavy, from Consols outwards, and the market closed sick enough. At least three South African finance houses are talked about, and the mischief is likely to spread. We cannot see, indeed, how markets are to get out of the depression in existing circumstances.

THE WEEK'S PRICE MOVEMENTS.

British Funds, &c.—*Rise:* 2¼ p.c. Annuities ¼, to 86½-87. *Fall:* Transvaal 3 p.c. Account ½, to 97-98, Bank of England 1, to 280-4.

Corporation Stocks—*Rise:* Bristol 3½ p.c. Deb. 1, to 104-106. *Fall:* Metrop. Water Board Account ¼, to 92⅛-93½, Birmingham 2½ p.c. 1, to 76-78, Hertfordshire 3 p.c. 1, to 89-91, Huddersfield 3 p.c. 1, to 87-89, Mersey ½, to 96-97, Swansea 3½ p.c. 2½, to 100-103, Metrop. Water Board "A" 2, to 90-92.

Colonial Government Stocks—*Rise:* Canada 1938 ½, to 98½-99½, Tasmania 4 p.c. Deb. 1, to 100-102, Canada 3 p.c. ½, to 98½-99½, Cape of Good Hope 4 p.c. ½, to 101¼-102½, South Australian 3½ p.c. ½, to 101-102, Victoria 1881 ½, to 100-101, ditto 1882 1, to 101-103.

Foreign Government Securities—*Rise:* Brazilian 1888 ½, to 93½-94½, ditto West of Minas Rly. 1, to 100½-101½, ditto 1895 1, to 100½-101⅛, ditto 1903 1, to 100½-101½, ditto Scrip ⅛, to 52⅞-53⅛, Chilian 1889 1, 94-96, Chinese 1895 ½, to 103-104, ditto 1898 ½, to 99⅜-100¼, ditto Imp. Rly. ½, to 103½-104½, ditto 1905 ¼, to 101⅜-102¼, Egyptian Pref. ½, to 101½-102½, Greek 1887 ¼, to 52⅜-53⅛, Mexican 1904 ½, to 95-96, Norwegian 1886 2, to 88-90, ditto 1888 2, 88-90, San Paulo (Brazil) 1, to 99-101, Swedish 1888 1, 86-88, ditto 1894 1, to 91-93, Uruguay 5 p.c. Bds. ⅜, to 72⅜-73¼. *Fall:* Argentine 1887-8 ½, to 100-100½, Colombian ½, to 42¼-42¾, Costa Rica "A" ½, to 49-50, ditto "B" ½, to 39-40, Cuba ½, to 106-107, Greek 1881 ½, to 52-52½, ditto 1884 ½, to 51½-52, ditto 1890 ¼, to 50½-51, Honduras (Issues) ½, to 9½ 9⅞, Russian Ser. I. ½, to 76-77, ditto II ½, to 76-77, ditto III 1, to 73-77, Turkish Unified ¼, to 95-95¼, Venezuela 3 p.c. ½, to 49⅛-49⅜.

Railways, Ordinary—*Rise:* Barry Defd. 1, to 101-104, Caledonian Pref. 1, to 77½-78, do Defd. No. 1 ⅛, to 1⅜-1⅝, Great Northern "A" ½, to 41½-42½, Great Southern and Western (Ireland) 5, to 86-88, South-Western Pref. 1, to 105-107, Brighton Pref. 3, to 154-156, North Staffs 1, to 103-105, Rhondda and Swansea Bay 2, to 11-12, Taff Vale ½, to 80-81. *Fall:* Glasgow and South-Western Defd. ½, to 39-40, Great Northern (Ireland) 2½, 152-154, Brighton Contingent Rights ½, to 8½ 9½, Metropolitan Surplus Lands 1, to 70-72. Debentures—*Rise:* Rhondda and Swansea Bay 3, 111-113. *Fall:* Charing Cross, Euston, and Hampstead 2½, to 88-91, Great Northern, Piccadilly, and Brompton 1½, to 87-90, Neath and Brecon 4 p.c. "B" 2, to 43-48. Guaranteed—*Rise:* North British Consolidated Lien 1, to 89 91. Preference—*Rise:* Alexandra (N. and S.-W.) Docks and Rails 4½ p.c. "A" 1, to 104-106, Great Western 1, to 147-149, Hull and Barnsley 1, to 91-93. *Fall:* Chatham 2nd 4½ p.c. 1, to 56-58.

Indian and Colonial Railways—*Rise:* Bengal Dooars Ord. 1, to 89-92, Bengal-Nagpur 1, to 104-107, Eastern Bengal Annuities ½, to 21-22, Southern Punjab Ord. 1, to 119-122, Canadian Pacific Pref. Stk ½, to 104½-105½, ditto 4 p.c. Deb. Stk. 1½, to 110-113, Grand Trunk 1st Pref ½, to 119-120, ditto 2nd ditto ½, to 109-110, ditto 2nd Equipment Mort. Bonds 1, to 117-120, Quebec Central New Income Bonds ½, to 115-118, Grand Trunk (Western) 1st Mort. Dollar Bonds 1, to 102-104. *Fall:* Beira 4½ p.c. Debs. 1, to 53-57, Mashonaland 1st Mort. Debs. 1, to 87-89, ditto Guaranteed Debs. 1, to 88-90, Quebec and Lake St. John Inc. Bonds 3, to 30-33, Rhodesia 5 p.c. 1st Mort. Debs. 1⅛, to 88½-90½, ditto 4 p.c. 1st Mort. Debs. 1½, to 77-79, Temiscouata Bondholders Committee Certs. 1, to 37-40, ditto St. Francis Branch 1, to 37-40.

American Railways.—*Rise:* Erie 1st Pref. ½, to 80-81, Gt. Northern (U.S.A.) Prefd. 12½, to 300-303, Mexican Central Com. ½, to 20½-21½, National of Mexico Pref. 1½, to 39-41, Northern Pacific 3, to 204-207. *Fall:* Chicago Gt. Western Common. ½, to 17¼-17⅜, Erie 2nd Pref. 1, to 69-70, National of Mexico 2nd Prefd. ½, to 20-21, Southern Pacific ¾, to 66⅝d-66⅞, Wabash Prefd. ½, to 45-46, do. "B" Deb. 1, to 82-84.

Gold Bonds.—*Rise:* Erie Prior Lien 1, to 102-104, Illinois 4 p.c. bonds 1953 1, to 107-109, Mexican Central 1st Cons. Inc. 1, to 18-20, Southern Pac. Central Pac. Stk. Collat. 1, to 95-97. *Fall:* Erie Gen. Lien 1, to 92-94, Mexican Central Con. Mort. ⅜, to 78-79, St. Louis and San Francisco. Refunding Mort. 1, to 86-88.

Canals and Docks.—*Fall:* London and India Def. 1, to 50-52.

Commercial, Industrial, &c.—*Rise:* American Thread 4 p.c. Bds. 1, to 94-97, Apollinaris and Johannes Pref. ¼, to 8-8¼, Borax Consolidated Pref. ¼, to 11⅜-11⅝, Bovril Deb. 1, to 104-106, British Aluminium 1st Deb. 1, to 101-105, City Offices ¼, to 5¾-6¼, Daimler Motor ⅛, to 3⅜-3⅝, Eastmans ¼, to 8⅝-8¾, English Sewing Cotton Deb. 2½, to 95-98, Goldsmiths Pref. ¼, to 5¼-5½, Gramophone 1/16, to 1⅞-2, Hoffnung Pref. ¼, to 4⅜-5¼, Lyons 1/16, to 5 5/16-5 7/16, ditto Pref. 1/16, 1 1/16-1⅛, Moir Pref. ½, to 6¼-7½, Pan de Azucar Nitrate ¼, to 8¾-9¼, Salt Union 1/16, to ⅜-7/16, ditto Pref. ⅜, to 3½-3¾, Sweatmeat Automatic 1/16, to ⅜-7/16 Whiteley Deb. 1, to 99-102. *Fall:* Anglo-Chilian Nitrate Pref. ¼, to 13½-13⅝, Assam Railways 4½ p.c. Deb. 1, to 104-106, Berguk Def. 1, to 19-21, British Insulated Cables ¼, to 6¼-6⅜, Bucknall Pref. ¼, to 4-4½, California Oilfields, ¼, to 5¼-5⅜, Cassell ½, to 3½-4½, Clay Bock Pref. ½, to 10-12, Cleghorn and Harris Deb. 2, to 83-8, Coats ¼, to 5 1/16-5 5/16, Darracq 1/16, to 2⅜-2⅝, Eastman Kodak 25, to 240-250, Egyptian Salt 1/16, to 1-1⅛, Home and Colonial ⅛, to 2¼-2½, Lagunas Syndicate ⅛, to 2⅜-3⅛, Lautaro Nitrate ⅛, to 10⅜-11⅛, Lever Pref. ¼, to 11¾-12, Liebig's 1, to 27-29, Ditto Pref. ¼, to 6-6¼, Linotype Pref. 1/16, to 7/16-9/16, London Nitrate ¼, to 6¾-7¼, Maple 1/16, to 2 7/16-2 11/16, Mazawattee 1-31, to 11-32-13-32

Critical Index To New Investments.

Atlantic, Quebec, and Western Railway Company.

This company is to build a line from Gaspé to Amqui on the Inter-colonial railway, and thence to a point near Edmundston, where connection can be made with the Canadian Pacific and the proposed Grand Trunk Pacific Railway, and another line from Gaspé to Paspebiac on the Atlantic and Lake Superior Railway. The total length of the two sections is 362 miles, and it is claimed that the junction with the Inter-colonial Railway will enable the company to provide the shortest all-Canadian through route from the Great Lakes to the seaboard. What the capital of the company is the prospectus does not reveal, but it is apparently regarded as so much water, and the actual cost of the system is to be met by the issue of debentures, of which £1,860,000 in 5 per cent. first mortgage bonds have been authorised. Of these £80,400 have been issued, and a further £750,000 were offered for subscription at 95 per cent. to provide funds against engineers' certificates under the construction contract. The security for the bonds consists of the railways, rolling stock, &c., and the land subsidies of 4,000 acres per mile for 150 miles granted by the Province of Quebec, while interest during the construction of the line and for three years after completion is to be met by the payment to the trustees of the surplus revenues, by a first charge on sundry cash subsidies from the Dominion Government, and lastly by a guarantee from the contractors to make good any deficiency in the receipts from the first-named sources. Of course, the line will be one of great importance—all new lines are in the eyes of their promoters—but it does not follow that the bonds are therefore to be recommended, and we fear these are at best a speculative venture with none too good a security behind them.

Crystal Palace Company.

During the past few years strenuous efforts have been made to rehabilitate this undertaking, and to bring its attractions more into line with newer competitors, and a good deal of money has been spent. In 1898 the freehold land and buildings were valued at £555,384, since when over £130,000 has been laid out, and the capital account at the date of the last balance-sheet was overdrawn by £26,387, while over £6,000 more has been spent in the current year in connection with the football club and grounds. In order to replace this overdraft and to place the company in a more satisfactory financial position, 50,000 7 per cent. cumulative preference shares of £1 each were offered at par. Average nett profits for the last four years are said to have been more than double those of the 10 previous years, and in excess of any for 20 years except 1891. This average was £18,148, but in 1905 the profits, owing to shortness of working capital and the consequent difficulty of arranging special attractions, were only £12,384, subject to directors' fees, and as debenture and other interest and the dividend on the new shares will require £18,125 per annum, the issue is not likely to prove attractive.

London and South Coast Motor Service, Limited.

In November last this company made its appearance with a share capital of £100,000 in £5 shares, of which 6,666 went to the vendors with £15,000 in cash and 13,334 were offered for subscription. The public response does not seem to have been very hearty, as only 5,604 shares were taken up, and now the British Industries Development Corporation, Limited, is anxious to get rid of 2,000 shares of its holding at par. At least we suppose they are the corporation's property, and not a fresh attempt to raise capital by the company itself, seeing that the Development Corporation endeavours to increase the attractiveness by a guarantee of a minimum dividend of 10 per cent. from date of payment to December 31, 1907, secured upon its own assets whatever they may be worth. No real information is given as to the progress made by the company since its inception, but it is evidently not getting on very fast. In addition to the Folkestone-Hythe service with which it started, a Folkestone and Canterbury coach is running, and the Brighton, Hastings, Margate, and other routes are to be opened with five new vehicles which are to be delivered during the current month. These are all, yet the prospectus is accompanied by a "map of routes" which shows services spread over the south-east corner of England like a spider's web.

De Mello Brazilian Rubber Co., Limited.

Two estates of about 700,000 acres on the River Acre in Brazil are acquired by this company, which has a capital of £495,000, divided into 225,000 participating cumulative preference shares and 270,000 ordinary shares of £1 each. The properties were bought from the original owner, Senor Sebastiao F. De Mello for

£200,000 in ordinary shares and £40,000 in cash by the United Investment Corporation, Limited, and are re-sold for an additional £70,000 in ordinary shares and £7,500 in cash. Of the remainder of the capital 175,000 shares entitled to a cumulative preferential dividend of 7 per cent. and ranking *pro rata* in the distribution of surplus profits after the ordinary shares have received 7 per cent., were offered for subscription, out of which £100,000, less sundry expenses, will be set aside for working capital, £47,500 will go to the vendors, and the balance will be used for the expenses of the issue and the payment of the underwriting commission of 10 per cent. No trees on the estates have been tapped until they reached the age of 10 years or more, but there are upwards of 360,000 trees now being tapped, and during the past five years the rubber collected and sold has risen from 196 tons to 383 tons, while it is anticipated that the output for the current year will amount to about 538 tons. Profits for the five years ended February 28, taking £70 to the conto, were £35,840, £27,020, £20,230, £59,290, and £37,030, the heavy drop in 1903 and 1904 being ascribed to commercial difficulties created principally by a dispute between Brazil and Bolivia as to the ownership of the Acre territory, which has now been settled in favour of Brazil. The other wide fluctuations shown in nett profits are said to be due to the late proprietor having had to obtain financial assistance under onerous conditions, and as the working capital now provided will do away with the necessity of such borrowing, Senor De Mello estimates that the nett profits for 1906-7 should reach £98,000.

The Berne-Simplon Railway.

The Compagnie du Chemin de Fer des Alpes Bernoises is making an issue of its preference shares, and the news may be of some interest to investors in this country. There are altogether 48,000 of these shares of 500fr. each, entitled to a preferential 4½ per cent. dividend, and the security ought to be good, for the entire capital of the company is £5,360,000, of which £3,560,000 takes the form of 4 and 4½ per cent. first and second mortgage bonds. The only thing to be said in deprecation of the security now offered is that the ordinary capital is only 21,000,000fr., or £840,000, but the company has the support of the State of Berne, to whom this ordinary capital mostly belongs, and these ordinary shares are only entitled to 4 per cent. dividend, profits beyond that being divisible amongst all the shares *pro rata*. Probably the emission will be taken up in Switzerland, but it is good enough for many people here.

Lovell and Christmas, Limited.

Ever since it commenced business as a limited company this firm of wholesale provision dealers has done well. It began in 1896 with an authorised capital of £350,000, and this has gradually been raised until it is now £1,000,000, half in 6 per cent. cumulative preference and half in ordinary shares of £5 each, besides which there is £200,000 in 4 per cent. debenture stock. The public has practically nothing to do with the ordinary shares, which are almost entirely held by the vendors, but it holds most of the debenture stock and £150,000 in preference shares. The preference share issue in the hands of the public is now to be augmented by another £150,000, 30,000 new shares being offered for subscription at £5 10s. per share. This will make the entire preference share issue £400,000, including £100,000 taken by the shareholders of George Wall and Co., Limited, in part payment of the purchase price of £190,000, of which £40,000 is in ordinary shares and £50,000 in debenture stock, that important Liverpool business having been taken over by Lovell and Christmas. The profits of both Lovell and Christmas and George Wall and Co., as separate undertakings, have been sufficient to enable 10 per cent. to be paid on their ordinary share capital, and both businesses, according to the accountants, have recently shown considerably increased earning capacity. Their nett profits taken together for the year 1905-6 amounted to £78,388, and only £32,000 is required to meet the interest on the debenture stock and the dividends upon the whole of the preference shares including this new issue.

Issues by Tender, Etc.

Liverpool Corporation Bills.—It is announced that tenders will be received at the Bank of England on the 20th inst. for £500,000 of six months bills issued by this Corporation in respect of authorised expenditure.

MINING NEWS AND NOTES.

****Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Driven almost to desperation by the continued accumulation of losses which the persistent fall in prices implies, punters in the Kaffir Circus seemed to make a concerted effort this week to put a little better complexion on things. The carry-over on Monday disclosed a real or fictitious shortage of shares in one or two directions, and an effort to drive in the "bears" was the natural result. A certain amount of covering by the short interest did ensue, and although they hardly tumbled over each other in their endeavour to straighten looks a little, knowing the inherent rottenness of the market, a comparatively small amount of buying sent quotations forward in a mild way. Modderfontein shares appeared to be decidedly scarce, and here and there an unfortunate "bear" was mulcted in a small "back." The price consequently enjoyed a quite sensational rise for these days, and the rest of the list seemed inclined to follow the lead. The first crushing return of the Cason Company of 13,130 ozs. from 27,800 tons was also very good and cheered dealers up, especially in view of the fact that one-third of the ore crushed was dump rock. Cason shares jumped several shillings, and with all the Farrar group following the lead Tuesday was the best day the Kaffir Circus has enjoyed for many a week. Geduld were another strong spot, also due to a scarcity of shares, probably manipulated, and if only the public had shown the least desire to come in quite a little blaze up might have resulted. But the penniless outsider is as wary as ever, having been bled almost dry already, and just when the prospect seemed bright for a nice sustained rise prices began to crumble once more. This, curiously enough, followed the publication of a really good-looking monthly output statement. The June figures showed an improvement of 14,773 ozs. compared with May, and although the Cason contributed 13,130 ozs. to this, the shorter month must be taken into account. But by the middle of the week the "bear" covering had come to an end, and there being no other support speculators began to take their profits. Anything of the sort is so rarely seen nowadays that quite a scramble took place to secure anything visible lest another downward rush should remove the prize before it could be seized. Prices, therefore, closed a bit under the best, but there is a gain on balance, and that is something to be thankful for. How long prices will stay up we should not like to say, but the air is full of ugly rumours of trouble in this quarter and in that, of bolstering here and propping there, weak accounts taken over and so on until one begins to wish that the inevitable upheaval would take place at once to root out the rottenness and clear the atmosphere.

Rhodesians tried their hardest to follow Kaffirs in their temporary upward course, and if the entire market devoted itself to reviving one particular share a gain of ⅛ was sometimes, not often, the result. No one believes there is such a thing as a decent Rhodesian mine, the whole ghastly delusion having been exposed long ago, and if by any chance the country did produce a really good mine we do not believe the public would ever look at it. Diamond shares have been tolerably steady, and Premiers enjoyed a further moderate rise.

The West African market was startled on Monday by the announcement that the leading jobber, who had been connected with the market from its inception, had declared himself a defaulter. The usual arrangements have been made for passing the account on to "strong" people, and there is already talk of a dividend of 18s. in the £, or even payment in full. Egyptians were firmish with a rise of ⅛ in Egyptian options, while the movements amongst West Australians were generally small and irregular.

In the Miscellaneous division Broken Hill shares were bought in a small way from the colony, Indians were dullish, and among American shares Esperanza closed slightly firmer, together with Alaska, Mexican and Tomboys. A nasty break in the price of tin affected tin mining shares, and copper shares were generally easier, Tintos, however, keeping steady.

Although the carry-over was said to have disclosed a bear position in Kaffir shares, continuation rates were generally higher than on the previous occasion. It was only after most of the business had been concluded that shares were said to be scarce, which gives the impression that the shortage is somewhat manipulated. The general carry-over rate was 6-7 per cent., and this applied to shares that last time were done on lower terms. East Rand, Modders and Rand Mines were all continued at 5-6 per cent., but Randfonteins could be carried on at 3-4 per cent. In the Diamond group De Beers and Jagersfontein were arranged at 4-5 per cent. and Premiers at 3-5 per cent. The general Rhodesian rate was the same as for Kaffir shares,

6-7 per cent. Chartered being continued at ⅜d.-1d. On West Africans and Egyptians the charge was 6-8 per cent. and amongst West Australians Horseshoes and Oroyas could be borrowed on at 5-7 per cent., Fingalls at 4-6 per cent. and Sons of Gwalia at 2-4 per cent. The general rate was 6-8 per cent. and most Miscellaneous things were continued at the same rate. The Kaffir make-up revealed a distressing list of falls, and it is no wonder that all kinds of disasters are predicted. For example, Gold Fields and H. F. Co. were each ¾ lower, East Rands dropped 1/16 in the fortnight, Rand Mines 5/16, Apex 3/16, Angelos, Geduldes, Modders, Montrose Diamonds, Rose Deep and Witwatersrand Township all ½. Driefonteins showed a loss of 7/16, De Beers deferred, Jubilee, Nourse Mines and Robinson Deep were 3/16 lower, and the rest gave way 1/16 to 1/16, hardly anything escaping. In the West African assortment, Amalgamated fell 11-32, Tarquahs 1/16 and Abossos 1/16, and several Egyptians were 1/16 to ¼ lower. West Australians showed a rise of 3/16 in Ivanhoes and a drop of 1/16 in Oroyas, and in the Barrier group Broken Hill Block 10 was down 1/16. Amongst American shares Dolores dropped 11-32, and in the Copper division Spasskys were ½ lower, Copiapos fell 11-32 and Mount Lyells 6s. Of the Tin shares Redhills were 1/16 higher and Pusing Lamas rose 4s. 3d., but Dolcoaths made up 2s. 3d. lower. Indians were irregular, and amongst New Zealands Waihi Grand Junctions dropped 5/16.

Transvaal Gold Output.—The output from the Witwatersrand steadily improves, and the June figures were again the best ever attained, despite the fact that the month contained a working day less than May. The fact that the Cason Company contributed its first return of 13,130 ozs. was a material help and the total of 475,975 ozs., which included 19,961 ozs. from the outside districts, showed an increase over the previous month of 14,773 ozs. Value of the yield was £2,021,813 or £62,751 more, and this is the first occasion on which the 2 million mark has been turned. For the year to date the production has reached 2,656,449 ozs. valued at £11,283,878, and yet the Kaffir Circus is sick nigh unto death. The native labour returns, however, are not so good, the "boys" distributed being only 6,047 against 7,172 lost by time expiration and other wastage. This means a nett shrinkage for the month of 1,125, reducing the total employed to 77,557.

Consolidated Langlaagte.—The amalgamation of the New Crœsus and the Langlaagte Star has not been attended with any very startling results so far, but it is perhaps early days to form a definite opinion on its capabilities. Repairs and additions to the plant were not completed until towards the end of March, so that the full 120 stamps were only running for about nine months during which time 137,090 tons were crushed, of an assay value of 8.32 dwts. An average yield of 6.619 dwts was obtained or 28.142s. per ton milled, which was 79.56 per cent. of the total gold contents, and this the engineer considers as good a result as could reasonably have been expected seeing that the company has no slime plant and that the ore is low-grade. The total recovery was 45,375 ozs. valued at £192,959, of which working expenses absorbed £156,691 or 22.860s. per ton, leaving a profit of £36,268, to which was added £2,715 from sundry revenue. Of this, debenture interest required £15,000 and other interest took £1,996, leaving a balance of £21,987 to be carried forward subject to the payment of the profits tax amounting to £2,684. Exclusive of 33,059 tons assaying less than 6 dwts. the ore developed in 1905 was 184,587 tons against 141,872 tons mined, so that the reserves show a moderate increase at 322,645 tons, but the value of the payable ore is only estimated at 9.96 dwts. against 10.66 dwts. a year ago. Development, therefore, has not been carried on so rapidly as it should have been, owing, it is said, to the shortage of labour, but in spite of that fact a further 20 stamps from the Langlaagte Star equipment have been erected. The cost of importing Chinese coolies carried in the balance-sheet as a suspense account to be written off in future years has risen by £1,228 to £15,293, owing apparently to the company having now secured its total allotted complement of 1,847, while on the other hand £2,733 has been accumulated towards their repatriation.

Burma Ruby Mines, Limited.—During the year ended February 28 the number of trucks of ruby earth washed fell off by 124,495 to 1,773,129, and the cost rose from 7d. to 8.4d. per truck, owing to the gradual working out of the Choungzone Mine. The ruby trading account balance was therefore £2,457 down at £87,666, and as royalties from native miners showed a further heavy drop at £12,596 compared with £14,691 and £23,460 in the two preceding years, while interest and miscellaneous receipts were also lower at £642, the total income amounted to £4,663 less at £100,904. Expenses, including £6,826 for depreciation of machinery, buildings, &c., were £816 up at £88,837, leaving a nett revenue of £12,067 against £17,546, but the Government's percentage took £3,877 or £1,599 less, and with a larger balance of £8,515 brought forward the amount available was only £3,022 lower at £16,705. In October last, however, a final call of 2s. per share was made, and with the larger capital ranking for dividend the directors have cut down the distribution from 7½ per cent., or say 9d. per share, to 6d. per share, leaving £9,230 or £715 more to be carried to the new account. It is stated that work will commence at the new Myntadá Mine as soon as Choungzone is finished, and that as these two places are close together there will be very little preliminary expense, and the washing machinery will not have to be moved from its present position. This crumb of information is not of a kind to throw any light on the prospects of the company, and the directors might have taken the shareholders more into their confidence without any harm being done. Expenditure to February 28 on the Mogok Valley drainage tunnel amounts to £17,680, and the work is said to be making fair progress. Stocks of rubies on that date were valued at £19,825, in addition to which the company had £28,350 in cash and £9,823 in Exchequer bonds, and as liabilities were small the financial position is sound enough, although we should like to see a beginning made with the writing down of the concession account, standing at £50,000.

De Lamar Company.—Although this company's statement to March 31 last covers the statutory 12 months, the mine has been producing for only four and a-half months, the remaining period having been occupied in dismantling the old and erecting the new mill and in vigorous development work underground. The amount of ore treated was therefore restricted to 13,895 tons, of the value of $11.33 per ton, and the mine revenue came to £28,946 only against charges of £44,022, including expenses of every kind at the mine, meaning a deficiency on the year of £15,878. There was, however, a balance of £25,028 brought forward, so that after providing a dividend amounting to £12,000 there is a debit to be carried forward of £2,850. Cost to date of the new mill and plant is £11,701, which has been charged to capital account. The work done in the prospecting and development department, which has been much in excess of previous years, has proved most successful, we are told, in opening up new and reopening old sources of ore supply of a most encouraging nature. With regard to the new plant just referred to, it appears that the experimental tests gave all the results wished for. With one exception, that of the settlement of the slimes, everything has worked most satisfactorily in actual practice, but it has been found that to secure the best results with a normal treatment of 120-150 tons per day it will be necessary to add one or more filter presses to the equipment, and this question is now being carefully considered. On the whole, the manager takes a moderately optimistic view of the prospects of the mine, and in speaking of the ore reserves says that while the veins in the Somercamp section are as a rule small their value is generally high. Therefore if the development now in progress should prove that they live to a reasonable depth they will provide the richer ore necessary to make profitable a large tonnage of ore of lower grade in the old mine by working to full capacity, and so distributing the standing charges over a larger tonnage. The company has an important amount of unspent capital in hand, and the financial position seems good enough.

West Australian Gold Returns.—The Agent-General for Western Australia has received intelligence that during June 39,893 ozs. of gold were entered for export and 103,367 ozs. received at the Perth branch of the Royal Mint for coinage, giving a total of 143,260 fine ounces. For the corresponding month in 1905 the aggregate export and Mint returns amounted to 155,150 fine ounces.

Victorian Gold Output.—The Agent-General for Victoria has received a cablegram from the Government of the State to the effect that the gold yield of Victoria for the last six months was 412,242 ozs. of the value of £1,648,968, being an increase of 47,523 ozs. valued at £190,092 as compared with the corresponding period of last year.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Antofagasta (Chili) and Bolivia Railway Co., Limited.

When speaking of South American railway progress one is apt to think of Argentina only, because of the wonderful strides made by the numerous lines serving that flourishing Republic. But railways in neighbouring Republics have gone ahead as well, and if it came to a question of comparison the Antofagasta and Bolivia Company would be able to hold its own pretty easily. It has, of course, earned much larger profits since the working arrangement with the Huanchaca Company came to an end, and although Stock Exchange speculators were a little disappointed with the dividend just announced, thinking that high distributions should come before financial stability, the display made by the company for the year 1905 is really excellent. Total revenue of the railway was £780,593 or £156,120 more than in the previous year, passenger traffic improving by £14,239, goods by the large sum of £126,602, sundries by £1,871, and mole receipts by £9,822. There was, however, the big increase of £116,330 to £429,679 in the working expenditure, and the directors no doubt took advantage of the flourishing traffics to spend lavishly on the line. On permanent way and works maintenance an additional £34,574 was spent, wagon stock maintenance cost £21,322 more, locomotive running expenses rose by £4,389, traffic expenses by £19,506, general charges by £13,343 and mole outlay by £26,653. Total receipts of the mole were less than the expenditure by some £20,000, but its value must be judged more by its usefulness to the railway than on an ordinary question of income and outgo. Other movements on the expenses side were of less magnitude, and there was a decline under coaching stock maintenance of £2,585 at £2,472. In addition to the railway the company owns a waterworks undertaking, which earned a total revenue of £25,227 or £6,226 more, but as the expenses went up £6,819 to £10,086 the nett revenue is smaller at £15,141. This is added to the railway nett balance of £350,914 making £366,055 in all, so that with £15,319 brought

forward, interest, &c., the total nett income is £387,974. From this the directors have made special appropriations of £80,000 odd as follows:—Transfer to working capital account £35,000, transfer to bridge renewal account £10,000, addition to general reserve £8,844, further amount written off difference between £850,000 4 per cent. perpetual debenture stock issued and £660,000 5 per cent. bonds redeemed £10,000, further amount set against purchase price of the Huanchaca Company's rights £10,000, and additional sum written off debenture issue expenses £7,000. All these are very excellent appropriations, and as the directors can still pay 10 per cent. on the ordinary stock with the corresponding dividends on the 5 per cent. preferred and the deferred ordinary stock, after providing £62,500 for debenture interest and £4,240 for income-tax, there is not much room for disappointment. The credit carried forward is £20,390. Good progress is reported with various branches under construction and negotiations are on foot for the extension of the company's system, particularly in Bolivia. Capital expenditure in this direction during the year was £181,056 and £22,628 was spent on the waterworks, the latter being a very important business because the company supplies the nitrate concerns with water, and they in turn bring large traffics to the railway. As soon as a supply of water is available a large number of new oficinas will either commence work or be put in hand, the industry having received a great stimulus from the renewal of the restriction agreement. During the year 1905 the company carried 54,052 metric tons of nitrate, while in the first four months of the current year the total was only 10,000 tons less. No wonder that up to date the gross earnings have improved by £100,000 and that the directors look forward to making "a substantial distribution in respect of the current year." Some necessary formalities must be carried out in connection with the conversion of stocks, which has already received the Royal assent, and when these have been concluded it is intended to pay interim dividends on the new stocks. Working capital and reserve accounts each amount to £50,000 and the bridge renewal account to £30,000. The sum still to be written off in connection with the purchase of rights from the Huanchaca Company is £45,000 and debenture issue expenses and discount now amount to £18,926.

Costa Rica Railway Co., Limited.

A year ago this undertaking passed into the hands of the Northern Railway Company of Costa Rica, which pays as rent a sum substantially larger than the nett income earned by the line when working on its own account. This rent for the twelve months ended June 30 was fixed at £131,100, and as interest on investments yielded £2,983 and transfer and registration fees gave £125 the amount available for distribution was £134,208 against £118,842. Fixed charges, however, including £5,000 for redemption of prior mortgage debentures and £4,932 for administration expenses required an extra £8,175 at £102,958 leaving a surplus of £31,250 or £7,191 more. Nothing, of course, has had to be provided for damage to the line on this occasion compared with £21,000 set aside a year ago, so that the directors are able to give stockholders a dividend of 1 per cent. and still have £13,250 to add to reserve, bringing that fund up to £51,506. Under the new conditions the balance-sheet calls for little comment, but it may be mentioned that to meet liabilities of £44,920 mainly consisting of accrued interest on debentures the company has £35,756 to come in from sundry debtors and £33,860 in cash, while the reserve is practically represented by £50,000 owing by the Northern Railway for stocks in Costa Rica taken over, and the balance of £80,912 on capital account is covered by investments valued at £8,105.

London, City and Midland Bank, Limited.

This powerful bank earned a nett profit of £329,631 during the six months ended June 30, or £35,062 more than in the corresponding period, which bears out the general view that the period was a good one for banking business. The sum brought in was likewise substantially larger, being £119,002 against £109,718, so that altogether the revenue balance reaches £448,633 compared with £404,287. The paid-up capital, however, is now £3,142,850 against the round three millions, so that the maintenance of the dividend at 18 per cent. per annum requires an extra £12,856 at £282,856. Bank premises redemption fund next receives £20,000, and after adding £5,000, the same as before, to the officers' pension fund the balance carried forward is raised from £109,287 to £140,777. The reserve fund has been increased to the same extent as the capital, and also amounts to £3,142,850. A very important increase of £3,397,838 to £50,320,316 has taken place in the current, deposit and other accounts, and the acceptances are moderately higher at £3,084,861. Cash in hand and at the Bank of England is likewise higher by £489,123 at £8,478,214, while the money at call and short notice has been reduced a little to £6,937,258. Investments in high-class securities stand at the fine figure of £6,799,645, being an advance of £30,580, and bills of exchange have been increased by £449,472 to £4,620,054. Advances on current accounts, loans on security, &c., appear at £28,834,818, and as this item shows an increase of £2,792,149, it accounts for most of the increase in deposits. Bank premises are substantially higher at £1,359,659, and it may be recalled that in the last report the announcement was made that the Nottingham Joint-Stock Bank had been taken over as from December 31, 1904. The total of the balance-sheet is £60,114,510 against £56,191,247; wonderfully instructive figures.

London and Provincial Bank, Limited.

This excellent bank continues to flourish, and in the half-year to June 30, 1906, earned a gross profit of £305,767, or £22,400 more than in the corresponding period of last year. There was also an increase of about £3,000 to £41,387 in the balance brought forward, so that after providing a rather larger sum of £121,940 for expenses and an extra £15,571 at £85,242 for interest the disposable credit is £139,972 against £133,302, the usual dividend at 18 per cent. per annum having been provided, nearly twice as much at £10,331 is carried to reserve, £10,000 goes in reduction of premises account, £5,000 to the officers' pension and gratuity fund, and £42,641 is carried forward. Reserve is now £1,415,000 against the capital of £800,000. Current deposit and other accounts are larger by £579,863 at £13,898,184, and the cash in hand, &c., has been raised by £56,887 to £1,740,071. Money at call and short notice has gone up by £350,000 to £1,350,000, investments stand at £4,126,632 against £4,032,309, and the loans, advances, bills discounted, &c., show a rise of £88,380 to £8,806,979.

Manchester and Liverpool District Banking Co., Limited.

The usual excellent report and balance-sheet are issued by this well-conducted bank. Profits again show very little variation, and for the six months ended June 30 the gross revenue was £228,698 or £249 less than in the corresponding half of 1905. General expenses, however, were down by £210 to £81,725, and income-tax took £5,000 as before, so that after adding the slightly increased amount of £37,095 brought forward the sum for appropriation is £179,068. The distribution will therefore be on previous lines, the dividend being 21s., with £10,000 to reserve and £37,818 carried forward. An increase of £274,558 to £15,313,512 is seen in the current, deposit and other accounts, and the acceptances with their per contra entry have gone up from £564,260 to £826,888. Movements on the assets side are decidedly satisfactory. There is an increase in the cash in hand and at the Bank of England of £285,897 to £,930,314, while money with London brokers and others, at call and short notice is less by £876,925 at £1,238,355. It has evidently been necessary to draw in this money in order to increase the advances in current accounts, &c., by £494,960 to £9,324,408, a sure indication, we should think, of the flourishing condition of trade in the north. Bills of exchange show the satisfactory rise of £374,699 to £2,707,008 and the investments are just a little larger at £3,317,974. The holding of £1,111,113 Consols is taken at 85, and therefore stands in the balance-sheet at £944,446. Bank property is still entered at £300,000, and as the number of branches is very large this figure is no doubt exceedingly moderate. Reserve fund will now reach £1,835,000 against the paid-up capital of £1,500,000 and the balance-sheet aggregates £19,644,947 against £19,086,322.

Bank of Liverpool, Limited.

In their report for the year ended June 30 the directors of this bank say that the absorption of the Craven Bank has been successfully accomplished. With few exceptions the shareholders of the Craven elected to take Bank of Liverpool shares in exchange for their own shares. The remainder of the new Bank of Liverpool shares were offered to the shareholders of the combined bank at £35 per share, and were largely over-applied for. After meeting the expenses of the fusion and the payments provided for in the amalgamation agreement the balance of premiums received upon the new shares has been added to the bank's contingent fund, raising it to £805,000. Capital now paid up is £1,309,665 with a few hundreds still to come in on account of calls in arrear. Curent, deposit and other accounts including acceptances of £636,665 amount to £15,431,136, or an increase of £2,770,479, due, of course, to the amalgamation. Notwithstanding this the cash in hand and at Bank of England is less by £201,270 at £619,101, and it is to be noted that at the end of the half-year the bank had bills under discount with the Bank of England to the amount of £297,928. Money at call or short notice is very little higher at £1,395,285 and loans for short terms on stocks and other negotiable securities are somewhat less at £858,877. Investments £3,037,108 are up by £1,245,856, a movement we are glad to see, bills of exchange stand at £2,132,547 or £10,945 less, and the loans and advances reach £9,215,460 against £7,120,751. Bank premises are also substantially higher at £423,287. Gross profits in the 12 months, including six months from the Craven Bank, were £345,161, or £62,947 more, against which the expenses were up £17,509 to £136,335. Balance brought forward by the Craven Bank was £6,357, making £208,826 for disposal, from which £10,000 is reserved for income-tax. Two dividends of 5 per cent. each and a bonus of 4 per cent. are then provided, £21,974 goes to reserve and £24,161 is carried forward.

Crompton and Evans' Union Bank, Limited.

Profits for the past year ended June 30 were a little higher at £51,602, and as the balance brought in was £332 better the divisible profit was £52,648 against £49,921. The directors are, therefore, able to maintain the dividend of 18¾ per cent. for the year, of which 7½ per cent. was paid six months ago, and to write £3,000 off the cost of railway privileged stocks and Corporation stocks, besides which £1,000 is set aside to bank premises and furniture sinking fund and £1,000 to the provident reserve fund. A balance of £773 will then remain to be carried forward against £1,046 brought down. The balance-sheet indicates that deposits, &c., have risen by about £88,000 to £4,675,795 and cash in hand, at London agents and at short notice is up £108,000 to £1,017,728. Investments stand at £1,010,687 or about £27,000 less, bills receivable are £18,000 higher at £53,058 and loans and overdrafts have shrunk a mere £10,000 to £3,023,713.

Manchester and County Bank.

The half-yearly report of this bank, which was the first to make its appearance, shows a gross revenue in the six months to June 30 of £144,922 or an increase of £4,168 compared with the corresponding period. Against this improvement the expenditure rose by £1,340 to £57,134, so that the nett balance is almost £3,000 up to £87,788. Credit from previous account was slightly less at £13,645 making £101,433 against £98,823, and the directors provide the usual dividend of £1 5s. 6d. per share and add another £10,000 to the reserve fund. The superannuation fund, however, which last year received £1,500, is this time passed over and the balance carried forward is raised from £13,147 to £17,411. Reserve fund now amounts to a round million against the paid-up capital of £928,234. Public liabilities on current, deposit and other accounts have increased a little to £8,854,972, but the cash in hand, at call and short notice shows a decline of £278,376 at £2,279,712. Bills of exchange, advances on current accounts and loans on securities, all given in one item, have gone up by £325,411 to £6,926,285, and the investments are larger by £128,150 at £1,511,950. Consols and annuities are held at 85, Irish Loan at 88 and Local Loans, Transvaal Loan and National War Loan at 90. Bank property remains at £175,000 and the balance-sheet adds up to £11,001,917 against £10,885,969.

Glyn, Mills, Currie, and Co.

The balance-sheet of this semi-private clearing bank, made up to June 30, exhibits some rather important movements when compared with the corresponding period of 1905. Paid-up capital and reserve, £1,000,000 and £500,000 respectively, remain the same, but current accounts are larger by £320,496 at £10,519,234, and deposit accounts have increased by £683,992 to £4,351,074. There is a new entry, called reduction of premises account, £10,150. Cash in hand and at Bank of England £2,145,219 is up by £167,520, but money at call and short notice shows the considerable reduction of £549,029 to £4,404,379. Investments are very little changed, but are lower at £2,705,349, while bills discounted, loans, and securities have risen by the considerable sum of £1,413,612 to £6,755,602.

Union Discount Company of London, Limited.

Although the half-year just closed could not, under any circumstances, be considered a favourable one for discounting operations, this flourishing and carefully-conducted house maintained its position in a highly satisfactory manner. The actual gross profit was some £2,872 lower at £181,026, but there was an improvement of £3,525 at £53,770 in the balance brought forward, so that the total revenue credit is £234,796 against £234,143, a slight improvement. Not only that, but current expenses were smaller by £523 at £18,957, and as the rebate on bills discounted not due required £112,583 only against £115,382, the actual nett profit was a trifle larger, quite apart from the increase in the balance brought forward. Therefore not only does no difficulty arise in maintaining the dividend at the rate of 11 per cent. per annum, but £10,000 is placed to reserve, against £5,000 put to the provident reserve a year ago, and the rather smaller sum of £52,006 is carried forward. This addition will make the reserve fund £440,000, against the paid-up capital of £750,000, and the provident reserve now amounts to £42,388. Including provision for contingencies, the loans and deposits appear on the debit side of the balance-sheet at £15,769,447, or £810,144 more than on June 30, 1905, and the bills rediscounted have increased by £384,779 to £3,714,277. On the other side, the total of bills discounted current is £15,151,537 against £14,176,036, and loans granted on securities at call and short dates, together with other accounts, show an advance of £455,193 at £2,485,924. Cash at bankers is a little less at £480,080, and Consols, Exchequer bonds, Indian Government, and other securities have been reduced by £194,162 to £2,693,172. Freehold and leasehold premises are rather smaller at £107,148, and the aggregate of the balance-sheet is £20,921,951 against £19,709,124.

National Discount Co., Limited.

This well-known discount company has just celebrated its jubilee, it having been founded in the year 1856. Its business has made rapid strides since then, and it has long been one of the leading institutions of the kind in the country. During the half year, June 30, the gross profit was £118,479 compared with £102,564 in the corresponding period, a big increase at first sight, but we have to take into account the rebate on bills not due which requires £17,047 more at £64,257. Current expenses, including directors' and auditors' remuneration, required £12,764, so that with £11,775 brought in the sum for disposal is £53,232. Compared with the opening half of 1905 the results are slightly less favourable, but the directors maintain the dividend as usual at 10 per cent. per annum and carry forward £10,899. An increase of rather more than one million to £11,028,988 is shown in the deposits and sundry balances, and the bills discounted current at the end of the half-year were larger by £1,257,241 at £11,660,917. Of these £3,081,797 have been rediscounted. Loans at call, short and fixed dates, are somewhat less at £1,986,375, and the investments have been reduced by £235,489 to £2,071,590, but the cash at banks has increased from £139,410 to £204,966. The reserve fund remains at £400,000, and the paid-up capital is £846,665.

National Telephone Co., Limited.

During the six months ended June 30 the gross income of this great monopolist company, whose private existence is gradually nearing an end, amounted to £1,195,086, being an increase of £109,305 compared with the opening half of 1905. Working expenses came to £696,193 or £68,878 more, and the nett result for the period, after deducting Post Office royalties amounting to £113,305, is a profit balance of £386,127 as compared with £358,477 being an improvement of £27,650. Rentals carried forward for unexpired terms of running contracts reach the immense sum of £1,106,639 against £1,018,882, and when the Government assumes control in five years it will have a vast business to manage. After bringing forward the balance of £9,859 from previous account, together with sundry other revenue items, and deducting interest on debenture stock and reserve fund, the sum for disposal is £293,484. This provides the dividends on the three preference stocks, 6 per cent. per annum on the preferred stock, and 5 per cent. per annum on the deferred stock, with £120,000 or £10,000 more to reserve and £10,859 carried forward. The sum of £608,408 was spent on account of capital during the half-year in the erection of 24,210 additional exchange and private stations and in the construction of underground works. This brings the total outlay to date to the heavy amount of £12,485,211, against actual money raised of £9,704,093. This means a debit to capital of £2,781,118 and we suppose this is an account that can never be closed. But for the reserve fund of £2,000,000 odd and the £1,000,000 in hand against subscriptions and rentals in advance it would not be possible to continue with this heavy adverse balance, because the company also has sundry creditors of £906,652. On the credit side the principal assets are stock £346,864, debtors £486,765, special replacement account £189,473, loans on securities £175,000, and cash £68,673. The reserve fund may be taken to represent the profit which the company hopes to make when the Government purchase takes place, and in a measure accounts for the substantial premiums at which the company's securities stand in the market in face of the fact that redemption time is very near.

William Hancock and Co., Limited.

This South Wales beer business manages to keep itself going all right amidst the general brewery wreckage, and we can only conclude that Cardiff is a very thirsty spot. Profits went up a little in the year to May 31, but not appreciably, the nett income shown by the balance-sheet—there is no profit and loss account—being £45,066 compared with £44,442 in the preceding 12 months. This is arrived at after making full provision for the expiration of the leasehold properties, bad and doubtful debts, depreciation of plant, &c. Adding £2,253 brought in, the total balance comes to £47,319, from which debenture interest and preference dividend absorb £8,000 and £8,700 respectively. The preferred ordinary dividend of 6 per cent. next takes £12,000, and after again providing 8 per cent. for the deferred portion of the capital, the sum carried forward drops sharply to £620. Before paying this dividend, however, the directors place £2,000 to reserve against no such contribution a year ago, raising the fund to £17,000, which largely makes good the water added to the capital when the original ordinary shares were converted into preferred and deferred. Mortgages exist for £25,900, besides which £5,000 or £4,000 less is due to bankers and £40,747 is owing to sundry creditors, including £7,156 left on deposit. On the other side, debtors, loans, and sums owing for rent, after providing £12,890 for discount and doubtful debts, stand at £37,560, and stocks are £37,726 but the cash balance is no more than £1,238, notwithstanding the borrowing from bankers. Brewery buildings and goodwill have been reduced a trifle to £233,927, and the licensed houses are entered at £457,074 against £465,181. The value placed on plant, utensils, drays, horses, casks, &c., is £41,491, and the balance-sheet adds up to £940,267, including the nominal addition of £131,250 made to the capital account on conversion.

Lovell and Christmas, Limited.

The annual report of this successful provision business makes no mention of the recent acquisition of the kindred firm of Wall and Co. Results in the year to June 30 were exceedingly good, a large increase in turnover being reported in spite of the severest competition. Total revenue reached the sum of £57,024 or £5,723 more than in the previous year, and after providing debenture interest and preference dividend requiring £14,250, income-tax £1,400 and directors' remuneration £8,000, the balance remaining is £33,374. Add to that the sum of £14,489 brought forward, and the total for disposal is £47,863, so that the 10 per cent. dividend on the ordinary shares is maintained with the greatest ease. A sum of £300 is then placed to the benevolent fund and the carry forward is raised to £22,213. This is a very good display, and although nothing is placed to reserve we must not forget the big increase in the free balance or the fact that the accumulations already aggregate £114,000. The greater part of this is separately invested. Sum due to creditors is £65,848, but debtors alone reach £267,057, cash amounts to £35,447 and stock-in-trade is valued at £18,416. Freehold and leasehold premises and goodwill figure for £341,608, quite a moderate total considering the profits earned, £4,418 has been spent on the new cold air stores and £15,069 on new buildings, plant and machinery.

BOOKS RECEIVED.

A Century of Copper. By Nicol Brown and Charles Corbett Turnbull. (London: Effingham Wilson. Price 2 . 6d.)

MINING RETURNS.

Abbontiakoon Block I.—Treated 6,000 tons, 3,240 ozs., leaving 2 dwts. 7 grs. per ton in residues.

Abosso.—Crushed 4,034 tons, 2,138 ozs.; cyanide 2,938 tons, tailings 730 ozs.; total, 2,868 ozs.

Akrokerri (Ashanti).—Crushed 1,590 tons, 1,808 ozs.; 960 tons sands by cyanide, 173 ozs.; total output, 1,981 ozs.

Alaska Treadwell.—Crushed 91,087 tons ore, value $98,000; saved 1,490 tons sulphurets, value $79,245.

Alaska Mexican.—Crushed 20,849 tons ore, valne $36,535; saved 429 tons sulphurets, value $36,504.

Alaska United.—Mill crushed 21,050 tons ore, value $22,630; saved 424 tons sulphurets, value $15,442.

Angelo.—Milled 20,998 tons, 6,692 ozs.; sands 10,567 tons, 2,630 ozs.; slimes 9,759 tons, 1,501 ozs.; total, 10,823 ozs.

Ankobra.—No. 1 dredger recovered 150 ozs.; No. 2 dredger recovered 31 ozs.

Antenior (Matabele).—Crushed 1,168 tons, 602 ozs.; cyanide 703 tons, 123 ozs.

Ashanti Goldfields.—Recovered 231 ozs.

Associated of Western Australia.—Milled 9,006 tons, treated 4,200 tons of slimes; yield, £19,504.

Ayrshire Gold.—Crushed 7,840 tons, 1,710 ozs.; cyanide 6,992 tons, 496 ozs.

Bibiani.—Crushed 3,092 tons, 1,808 ozs.; tailings by cyanide, 2,910 tons, £2,471.

Brilliant and St. George.—Treated 2,134 tons, 1,736 ozs.; residues, £4,554.

Brilliant Block.—Crushed 685 tons, 263 ozs.; residues (tailings and concentrates), value £1,700.

Briseis Tin.—Black tin cleaned up, 80 tons in addition to 35 tons 1 cwt. from New Brothers Home No. 1.

Broken Hill Proprietary.—Output: refinery products, fine silver, 272,394 ozs.; soft lead, 3,818 tons; antimonial lead, 26 tons.

Buffelsdoorn Estate and Gold.—Slimes, 4,570 tons, 748 ozs.

Burbank's Birthday.—Crushed 547 tons, 480 ozs.; cost per ton milling, £1 1s. 8d.

Burbank's Main Lode (1904).—Crushed 710 tons, 513 ozs.; cyanide, 700 tons, 111 ozs.

Burma Ruby.—Washed 128,000 loads, producing rubies value Rs.87,000; royalties, Rs 21,000.

Cape Copper.—Ookiep, 915 tons, 17 per cent., equal to 155 tons fine copper. Nababeep, 4,056 tons, 4 per cent., equal to 162 tons fine copper.

Cason Gold.—Milled 27,886 tons, 9,188 ozs.; sands 15,031 tons, 2,178 ozs.; slimes 11,999 tons, 1,764 ozs.; total 13,130 ozs.

Cecil Syndicate.—Treated 375 tons tailings £220; crushed 395 tons, 255 ozs.

Chillagoe.—Total 3,734 tons copper ore, producing 317 tons copper matte, containing 192 tons copper and 22,067 ozs. silver in the following proportions: 168 tons copper and 15,667 ozs. silver.

Chinese Engineering.—Output of coal, 10,000 tons; sales, 13,000 tons; consumption, 675 tons.

City and Suburban.—Crushed 24,400 tons, 9,587 ozs.

Clitters United.—Ore treated, 1,764 tons.

Consolidated Langlaagte.—18,112 tons, 5,738 ozs.

Consolidated Main Reef.—17,855 tons crushed, 3,689 ozs.; 17,855 tons sands and concentrates by cyanide, 2,485 ozs.; total yield, 6,174 ozs.

Copiapo.—Dulcinea: Output 600 tons copper ores, averaging 10 per cent.

Crown Deep.—27,459 tons crushed, 8,199 ozs.; 17,200 tons sands and concentrates by cyanide 1,897 ozs.; 9,936 tons of slimes, 689 ozs.; total, 10,785 ozs.

Crown Reef.—Crushed 20,414 tons; from mill, 6,159 ozs.; from sands and concentrates, 3,023 ozs.; from slimes (current and accumulated), 1,371 ozs.; total, 10,553 ozs.

De Lamar.—Crushed 354 tons, yielding $4,350.

Driefontein Consolidated.—18,169 tons milled, 3,680 ozs.; 14,898 tons sands, 1,939 ozs.; 5 247 tons slimes, 592 ozs.; total, 6,211 ozs.

Duft Development.—Recovered 163 ozs. gold.

Durham Prospect Gold.—Crushed 1,151 tons, 716 ozs.

Durban-Roodepoort.—10,685 tons, 3,334 ozs.; tailings, 7,105 tons, 823 ozs.; slimes, 3,255 tons, 205 ozs., total, 4,362 ozs.

Durban-Roodepoort Deep.—Crushed 10,490 tons, 2,866 ozs.; 6,516 tons of sands and concentrates by cyanide, 657 ozs.; 3,324 tons of slimes, 218 ozs., total, 3,741 ozs.

Eaglehawk.—Crushed 960 tons, 328 ozs.; cyanide, 132 ozs.; copper plates, 189 ozs.

East Gwanda.—East Gwanda—Crushed 5,735 tons, 2,888 ozs.; 214 tons concentrates, 819 ozs. Geelong.—3,900 tons cyanide, 261 ozs., total, 3,969 ozs.

Etruscan.—Ore 2,725 tons at 2·45 per cent. copper; and the ore smelted amounted to 2,271 tons at 2·44 per cent. copper.

Ferreira.—Crushed 20,125 tons, 9,786 ozs.; sand 14,000 tons, 2,314 ozs.; slime 7,076 tons, 794 ozs.; total, 12,891 ozs.

Ferreira Deep.—Crushed 20,487 tons, 8,310 ozs.; sands and concentrates by cyanide 13,800 tons, 3,379 ozs.; slimes 7,195 tons, 697 ozs.; total yield, 12,386 ozs.

French Rand.—Crushed 18,000 tons, 4,102 ozs.; tailings and slimes 18,968 tons, 2,308 ozs.; total, 6,410 ozs.

Forbes Rhodesia.—Veracity: Crushed 593 tons, 311 ozs. Dumbleton Broken Luck: Crushed 88 tons, 56 ozs.

Gaika.—June returns: Mill crushed 1,256 tons, 668 ozs.

Geldenhuis Deep.—Crushed 24,010 tons, 5,860 ozs.; sands and concentrates by cyanide, 15,840 tons, 2,786 ozs.; slimes 8,160 tons, 578 ozs.; total, 9,224 ozs.

Geldenhuis Estate.—Crushed 16,823 tons; from mill, 4,416 ozs.; from tailings by cyanide, 2,058 ozs.; from slimes, 629 ozs.; total, 7,108 ozs.

Ginsberg Gold.—Profit, £1,225; 60 stamps, 27 days; value of yield, £9,326; 7,582 tons, 2,196 ozs.

Glen Deep.—Crushed 17,800 tons, 4,129 ozs.; sands and concentrates by cyanide, 11,160 tons, 2,223 ozs.; slimes, 6,423 tons, 478 ozs.; total, 6,830 ozs.

Glencairn Main Reef.—15,100 tons, 4,095 ozs.

Glencoe Natal Collieries.—Output for June, 5,963 tons.

Globe and Phœnix.—Crushed 6,402 tons of ore, 2,971 ozs.; cyanide, 4,200 tons, 586 ozs.

Glynn's Lydenburg.—Crushed 2,244 tons, 648 ozs.; cyanide, 1,567 tons, 597 ozs.; slimes, 677 tons, 323 ozs.; total, 1,568 ozs.

Golden Horseshoe.—Ore treated, 21,044 tons, 13,275 ozs.

Great Boulder Perseverance.—Treated 13,859 tons, 5,823 fine ozs. gold and 1,210 fine ozs. silver.

Great Boulder Proprietary.—Treated at sulphide mill, 12,766 tons, 12,177 ozs.; tailings (old), 1,960 tons, 325 ozs.; total, 12,502 ozs.

Great Fingall.—20,785 tons ore, 6,354 ozs.; tailings, by cyanide, 22,332 tons, 2,697 ozs.; concentrates, 325 tons, 1,555 ozs.; total, 10,606 ozs.

Hainault Gold.—Crushed 4,662 tons, 1,602 ozs.

Hannan's Reward and Mount Charlotte.—Crushed 1,625 tons, 432 ozs.; royalties from tributors, £264.

Ida H. Gold.—Crushed 1,500 tons, 961 ozs.

Ivanhoe.—Crushed 17,080 tons, 2,100 ozs.; sands 7,900 tons, 1,968 ozs.; 7,660 tons slimes, 3,265 ozs.; 1,470 tons concentrates, 2,692 ozs.; total, 10,025 ozs.

Jubilee.—Crushed 5,493 tons, 1,344 ozs.; cyanide 4,072 tons, 611 ozs.

Jumbo Gold.—Crushed 1,700 tons, 1,004 ozs.; 900 tons by cyanide, 377 ozs.

Jumpers.—Crushed 12,500 tons, 3,419 ozs.; tailings by cyanide 1,548 ozs.; total, 4,967 ozs.

Jumpers Deep.—Crushed 17,080 tons, 4,625 ozs.; sands and concentrates by cyanide 9,930 tons, 1,152 ozs.; slimes 6,507 tons, 370 ozs.; total, 6,147 ozs.

Kamfersdam.—Diamonds recovered 1,250 carats; 19,187 loads of blue ground deposited on floors.

Kelantan (No. 1).—Recovered 162 ozs. gold.

Knight's Deep.—27,087 tons, 8,933 ozs.

Lake View Consols.—Ore treated 11,004 tons, 3,274 ozs.; old tailings 3,380 tons, 380 ozs.; total, 3,654 ozs.

Langlaagte Estate.—Crushed 28,265 tons, 5,513 ozs.; concentrates (cyanide) 570 tons, 873 ozs.; tailings (cyanide) 16,200 tons, 1,642 ozs.; slimes 13,584 tons, 1,193 ozs.; total, 9,221 ozs.

Lancaster.—Crushed 14,670 tons, 2,718 ozs.; cyanide 9,958 tons, 1,442 ozs.; by-products 46 ozs.; total output, 4,160 ozs.

Langlaagte Deep.—Crushed 20,572 tons, 5,053 ozs.; tons of sands and concentrates by cyanide 13,728, 2,119 ozs.; tons of slimes 6,225, 272 ozs.; total, 7,444 ozs.

Lancaster West.—Crushed 6,500 tons, 1,355 ozs.; cyanide 5,206 tons, 729 ozs.; total 2,084 ozs.

Le Roi.—Shipments 12,215 tons, containing 4,868 ozs. gold, 6,282 ozs. silver, 259,100 lbs. copper.

Le Roi No. 2.—Shipped 2,186 tons. The net receipts are $31,134, being payment for 2,270 tons shipped, and $2,385, being payment for 99 tons concentrates shipped—in all $33,519.

Luipaards Vlei.—Tons 11,581, 3,839 ozs.

Matabele Reefs.—Blanket: Crushed 2,243 tons, 869 ozs. Alice: crushed 641 tons, 277 ozs.

May Consolidated.—Crushed 13,910 tons, 3,667 ozs.; cyanide 10,095 tons, 909 ozs.; slimes 4,107 tons, 322 ozs.; total 5,898 ozs.

Meyer and Charlton.—Crushed 11,900 tons, 2,201 ozs.; cyanide 3,025 ozs.; total, 5,226 ozs,

Mitterburg Copper.—Output 62·67 tons.

Montana.—Drumlummon: Treated 2,800 tons tailings and fines, 360 ozs. gold and 3,450 ozs. silver. Lucky Girl Group: Crushed 1,700 tons, 710 ozs. gold and 660 ozs. silver.

Morven (Rhodesia).—Crushed 1,763 tons, 444 ozs.; tailings by cyanide, 1,512 tons, 137 ozs.

Mount Boppy.—6,060 tons, 1,325 ozs.; cyanide 3,996 tons, 1,027 ozs.; slimes, 2,052 tons, 851 ozs.; concentrates, 29 tons, 125 ozs.; total, 3,328 ozs.

Mount Morgan.—Chlorinated, 19,863 tons, 7,713 ozs.

Mount Zeehan (Tasmania) Silver-Lead).—Output 410 tons silver-lead ore, containing 250 tons lead and 32,000 ozs. silver.

Mungana (Chillagoe).—1,385 tons crude ore, containing 128 tons copper, 27,209 ozs. silver, and 141 tons lead, despatched to Chillagoe Smelting Works.

New Comet.—Milled 18,000 tons, 3,285 ozs.; sands 11,733 tons, 2,869 ozs.; slimes 5,301 tons, 731 ozs.; total, 6,885 ozs.

New Goch.—2,914 ozs. from 19,513 tons crushed; 4,207 ozs. from cyanide; total, 7,148 ozs.

New Hillgrove Proprietary.—Crushed 220 tons, yielding 326 ozs., and 2·9 tons concentrates, value 8·7 ozs.; cyanide 189 tons, 28·9 ozs.

New Kleinfontein.—Milled 31,046 tons, 7,662 ozs.; sands 21,696 tons, 2,987 ozs.; slimes 8,476 tons, 527 ozs; total, 11,176 ozs.

New Modderfontein.—Crushed 11,625 tons, 3,322 ozs.; tailings 7,626 tons, 770 ozs.; total, 4,092 ozs.

New Primrose.—17,117 tons, 7,256 ozs.

New Rietfontein Estate.—10,500 tons, 6,520 ozs.

New Queen.—873 tons, 342 ozs.; £625 from 1,000 tons by cyanide; concentrates, £330.

North Randfontein.—Ore crushed 14,435 tons, 3,581 ozs.; concentrates—cyanide 1,645 tons, 536 ozs.; tailings—cyanide 8,225 tons, 1,406 ozs.; slimes 4,237 tons, 477 ozs.; total, 6,000 ozs.

New Ravenswood.—Crushed 1,072 tons, value £4,100; 133 tons concentrates, value £990; tailings treatment plant, 93 tons concentrates, value £1,080.

New Unified Main Reef.—7,805 tons, 2,255 ozs.
New Zealand Crown.—Crushed 1,630 tons, value £2,874.
Nigel.—Crushed 7,725 tons, 4,123 ozs.
Nigel Deep.—3,169 tons, 1,778 ozs.
North White Feather.—Mill crushed 1,760 tons, 950 ozs.; cyanide 1,288 tons, 110 ozs.; total output, 1,060 ozs.
Northern Blocks Syndicate.—Great Leviathan Lease, Southern Cross: 1,000 tons; yield, £1,345.
Nourse.—Crushed 28,100 tons, 7,690 ozs.; sands and concentrates by cyanide 17,807 tons, 3,264 ozs.; slimes 10,059 tons, 911 ozs.; total yield, 11,865 ozs.
Oroya Brownhill.—Crushed 10,600 tons, 12,592 ozs.
Peña Copper.—12,803 tons; shipments 17,318 tons.
Penhalonga Proprietary.—6,100 tons, 965 ozs.; concentrates 100 tons, 473 ozs.; total, 1,438 ozs.
Porges Randfontein.—Crushed, 14,003 tons, 4,185 ozs.; concentrates (cyanide) 1,321 tons, 462 ozs.; tailings (cyanide) 8,616 tons, 1,048 ozs.; slimes 4,236 tons, 332 ozs.; total, 6,027 ozs.
Princess Estate.—Crushed 7,036 tons, 2,294 ozs.; cyanide 5,100 tons, 827 ozs.; total, 3,121 ozs.
Rezende.—Crushed 2,700 tons, 551 ozs.; sands 1,800 tons, 170 ozs.; concentrates 20 tons, 94 ozs.; total, 815 ozs.
Rhodesia.—Crushed 507 tons, 168 ozs.; cyanide 163 tons, 104 ozs.; concentrates 10 tons, £360; slimes 50 per cent., valued at 11dwts. per ton.
Rhodesia Consolidated.—Nelly: Crushed 1,750 tons, 1,067 ozs.; cyanide 1,110 tons, 877 ozs.; total, 1,444 ozs. Sabi: Crushed 707 ons, 82 ozs.; cyanide 460 tons, 88 ozs.; total, 170 ozs.
Rhodesia Goldfields.—Crushed 1,240 tons, 288 ozs.; cyanide o tons, 293 ozs.
Rhodesia-Matabeleland Development. — Crushed 130 tons ·20 ozs.
Rice Hamilton.—Sabiwa: Crushed 5,035 tons, 632 ozs.; cyanide ,8 oo tons, 824 ozs.
Robinson Central Deep.—Crushed 16,701 tons, 8,138 ozs.; sands d concentrates by cyanide, 10,800 tons, 2,245 ozs.; slimes 5,401 ns, 531 ozs.; total, 10,914 ozs.
Robinson Deep.—29,121 tons, 15,586 ozs.
Robinson Gold.—Crushed 30,051 tons, 13,717 ozs.; tailings, by yanide, 4,974 ozs.; slimes, 1,621 ozs.; total, 20,312 ozs.
Robinson Randfontein.—Crushed 15,057 tons, 3,440 ozs.; concentrates, by cyanide, 1,360 tons, 370 ozs.; tailings, by cyanide, 8,190 tons, 1,449 ozs.; slimes, 5,263 tons, 446 ozs.; total, 5,705 ozs.
Roodepoort Central Deep.—Crushed 7,550 tons, 2,250 ozs. cyanide, 4,956 tons, 897 ozs.; total, 3,147 ozs.
Roodepoort United.—Crushed 10,025 tons, 3,172 ozs.; cyanide, ,3 11 ozs.; total, 4,483 ozs.
Rose Deep.—Crushed 26,300 tons, 6,713 ozs.; sands and con- en trates by cyanide 16,400 tons, 2,185 ozs.; slimes 10,107 tons, o5 ozs.; total, 9,504 ozs.
Selukwe.—Crushed 6,328 tons, 1,186 ozs.; cyanide 4,698 tons, 51) ozs.; total, 1,705 ozs.
Simmer and Jack East.—25,680 tons, 7,900 ozs.
Simmer and Jack Proprietary.—52,000 tons, 20,013 ozs.
Sons of Gwalia.—Ore crushed 10,815 tons, 2,720 ozs.; tailings y cyanide 6,120 tons, 984 ozs.; concentrates 231 tons, 598 ozs.; lags 80 ozs.; totals, 4,382 ozs.
South Kalgurli.—Crushed 8,191 short tons, 3,820 ozs.
South Randfontein.—Ore crushed 13,828 tons, 3,654 ozs.; concentrates—cyanide 1,470 tons, 457 ozs.; tailings—cyanide 7,970 ons, 1,363 ozs.; slimes 4,439 tons, 449 ozs.; total, 5,928 ozs.
Sudan Exploration.—Hemnes Copper, Norway.—Production, 85 tons of 6 per cent. ore.
Surprise Gold.—2,974 tons, 1,014 ozs.; cyanide 490 ozs., from 3,109 tons.
Talisman.—Ore 4,265 tons, value £11,292.
Tanganyika Concessions.—Ruwe: Output 260 ozs.
Tasmanian Copper.—Treated 4,487 tons of ores, fluxes, &c., producing 323 tons matte, assaying 63 per cent. copper.
Tasmanian Smelting.—Silver-lead bullion shipped contained 750 tons lead, 117,000 ozs. silver, 274 ozs. gold.
Theta Gold.—Crushed 1,325 tons, 876 ozs.; cyanide 470 tons, 73 ozs.; total, 949 ozs.
Tomboy Gold.—Mill crushed 7,500 tons, value $45,000; concentrates shipped, 375 tons, $32,000.
Tyee Copper.—Smelted:—Tyee ore, 2,123 tons; Customs ore, 810 tons, total 2,933 tons; matte produced from same, 280 tons; value of contents (copper, silver, and gold) $36,630.
Treasury.—Crushed 8,640 tons, 1,742 ozs.; sands and concentrates by cyanide, 8,535 tons, 1,088 ozs.; total, 2,830 ozs.
Van Ryn.—Milled 22,630 tons, 5,532 ozs.; cyanide 22,601 tons, 3,860 ozs.; total, 9,392 ozs.
Vereeniging Estates.—Total coal sales 20,438 tons.
Village Deep.—Crushed 23,651 tons, 4,843 ozs.; sands and concentrates by cyanide, 16,650 tons, 2,369 ozs.; slimes, 5,818 tons, 483 ozs.; total 7,695 ozs.
Village Main Reef.—Crushed 34,300 tons, 9,823 ozs.; cyanide 21,766 tons of sands and concentrates, 3,621 ozs.; slimes 11,567 tons, 723 ozs.; total 14,172 ozs.
Vivien.—Crushed 2,950 tons, 638 ozs.; 1,900 tons tailings, 243 ozs.
Wanderer (Selukwe).—Cyanide 15,996 tons, 2,172 ozs.
West Rand Central.—Crushed 2,400 tons, 572 ozs.; cyanide 1,940 tons, 503 ozs.
Willoughby's Consolidated. — Crushed 1,481 tons; gained 877 ozs.
Windsor.—Crushed 5,010 tons, 760 ozs.; cyanide 3,915 tons, 651 ozs.; total, 1,411 ozs.
Witwatersrand Deep.—Crushed 28,150 tons, 7,558 ozs.; sands and concentrates by cyanide, 27,717 tons, 3,379 ozs.; total, 10,37 ozs.
Witwatersrand Gold.—29,540 tons, 9,626 ozs.
Wolhuter.—Crushed 18,700 mill tons, sands and slimes, 18,700 tons; from mill, 3,633 ozs., from sands, 2,627 ozs.; total, 6,260 ozs.
Worcester Exploration. 1,196 ozs.
Zeehan-Montana.—Silver-lead ore, 351 tons, containing 210 tons lead, and 28,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barsi Light.—Interim at the rate of 2½ per cent. for year to June 30.
Great Northern (U.S.A.).—Quarterly of 1¾ per cent. on the preferred capital stock, payable Aug. 1.
North and South-Western Junction.—At the rate of 7 per cent. per annum for half-year to June 30, carrying £141 forward.

BANKS.

Birmingham District and Counties.—Interim for half-year ended June 30 at the rate of 15 per cent. per annum.
Bradford.—Usual interim of 3s. 6d. per share.
Bradford District.—At the rate of 12½ per cent. per annum.
Crompton and Evans Union. Final of 6s. per share, and a bonus of 3s. per share, making 18¾ per cent. for past year.
Halifax Joint-Stock.—Usual interim at the rate of 10 per cent. per annum.
Hong Kong and Shanghai.—£1 15s. per share for half-year to June 30, placing $750,000 to reserve, and carrying forward 1,700,000.
London and County.—10 per cent. for half-year ended June 30, p lacing £50,000 to reserve, and carrying £97,365 forward.
National Provincial of England.—Interim of 8 per cent.
Provincial of Ireland.—At the rate of 12 per cent. per annum for half-year ended June 30.
Wilts and Dorset.—20s. per share.

BREWERIES.

Bristol, Georges and Co.—Interim at the rate of 15 per cent. per annum for half-year ended June 30, on the ordinary shares.
Bristol United.—Interim on the ordinary shares for past half-year of 15s. per share, being at the rate of 15 per cent. per annum.
Denver United.—Interim on the preference shares of 8s. per share.

MINES.

Brilliant and St. George United.—6d. per share, payable 27th inst.
Brilliant Extended.—No. 5 of 1s., payable Aug. 6.
Giant of Rhodesia.—1s. 6d. per share for year ended June 30.
Ooregum Gold of India.—1s. per share on the preference shares, and an interim of 1½d. per share on both preference and ordinary shares, payable July 31.
Victorian Cornish.—Interim of 1s. per share, payable Aug. 1.

MISCELLANEOUS.

American English and General Trust.—At the rate of 6 per cent. per annum for half-year ended July 2, making 5 per cent. for year, carrying forward £1,447.
Atlantic First Leased Lines Rental Trust.—Interim of 2½ per cent. for half year to the 31st inst., payable Aug. 1.
Baxter's Leather.—Interim at the rate of 6 per cent. per annum for half-year ended June 30.
Briton Ferry Chemical and Manure.—Interim of 3d. per share.
Daniel Crawford and Son.—Interim of 10s. each on the ordinary shares.
Direct United States Cable.—Final of 4s. per share, bonus of 2s. 6d. per share, payable July 31, making 4½ per cent. for year ended June 30, carrying forward £6,316
Eastern Telegraph.—Final of £1 5s. per cent. and a bonus of £2 per cent., making 7 per cent. on the ordinary stock for year ended March 31.
Foreign and Colonial Investment Trust.—Interim for half-year ended July 10 at the rate of 5 per cent. per annum on both preferred and deferred stocks, payable July 31.
Foster, Porter.—Interim of 6s. per share, payable 24th inst.
International Sponge Importers.—Interim at the rate of 6 per cent. per annum on ordinary shares for six months ended June 30.
Mortgage of the River Plate.—Interim at the rate of 10 per cent. per annum for half-year ended June 30 last on the amount paid up on the ordinary shares.
New York, Pennsylvania, and Ohio First Mortgage Trust.—Interim of 1¼ per cent. on the ordinary stock for half-year to 3rd inst., payable 31st inst.
Northern Corp.—Interim at the rate of 8 per cent. per annum on the ordinary shares for half-year ended June 30.
Northern Steamship of Auckland.—For six months ended March 31 at the rate of 7 per cent. per annum.
Peel River Land and Mineral.—Interim of 3½ per cent., payable 24th inst.
Rex Motor Manufacturing.—Interim of 50 per cent. on the ordinary shares.
Railway Debenture and General Trust.—Interim at the rate of 4 per cent. per annum for half-year to the 15th inst.
Railway Share Trust and Agency.—Interim at the rate of 4 per cent. per annum on the "A" shares for half-year to the 15th inst.
River Plate and General Investment Trust.—Interim at the rate of 4½ per cent. per annum on the preferred and 4½ per cent. per annum on the deferred stock for the half-year ended June 30.
Rosario Nitrate.—Interim of 3 per cent. on account of the year ending Sept. 30, payable 16th inst.
St. James's and Pall Mall Electric Light.—Interim for half-year ended June 30 at the rate of 10 per cent. per annum on the ordinary shares.
Vickers, Sons, and Maxim.—Interim for half-year ended June 30 at the rate of 1s. per share on the ordinary shares.
Welford and Sons.—Interim of 8 per cent. per annum for half-year ended June 30.

TRADE AND PRODUCE.

WHEAT.—Very little business has been passing in the markets this week. Inquiry for spot parcels has been small, and speculative positions as a rule neglected the Northern markets, moving a little under outside influences, but without any evident fluctuations. English wheat continues scarce, and perhaps for that reason has been steady, prices for red at Mark Lane being 34s., white 34s. 6d., and foreign has ruled from 3d. to 6d. lower than last week's rates. Farmers' deliveries amounted to 9,625 qrs., averaging 30s. 2d., against 7,854 qrs., averaging 32s. 1d., last year. Imports last week were 714,513 qrs. against 551,903 in the corresponding week of last year, and the estimated total of wheat and flour on passage is 2,945,000 qrs. against 3,260,000 last week. American markets opened weak under a favourable Government crop report, but grew firmer later under foreign buying, unfavourable news from Russia, and reports of black rust spreading in the North-West. Bradstreet estimates the quantities of wheat in sight East of the Rockies at 32,531,000 bushels.

WOOL.—As was expected, the commencement of the London sales showed a marked decline in prices compared with the last series. For greasy crossbreds of fine and medium quality values were well maintained, even going a little higher than last sales closing rates, but clipped and scoured crossbreds fell from 5 to 7½ per cent. lower, and merinos generally show a decline of 5 per cent. Bradford market shows a better tone, and the steadiness of crossbreds has put a stop to the selling of forties tops at 1d. below the recent highest rates, while the fall in merinos has already been discounted there. But there is not much buying yet, either here or at Leicester. There is not much desire shown to speculate largely. Home wools are steady, the decline in the imported produce not yet having affected them.

LINEN.—Holidays in Ireland this week have interfered with business, but, apart from that, there is very little to say about the market there. It is quiet and steady, prices at the top showing no wavering. Yarns are as scarce as ever, except in line and tow wefts, in line warps particularly so. Bleached and finished linens have shown a little more activity this week. Home account and prospects of trade with outside branches has never been brighter. With regard to the flax crop latest reports are, on the whole, favourable. The home acreage this year will reach about 53,000 acres, about 15 per cent. over last season, and the crops look well. On the Continent they are in a very flourishing condition, while from Russia, except as regards the Eastern Government which suffered from drought, advices are fairly cheerful.

COTTON (from our Manchester correspondent).—No fresh feature of importance has shown itself in our market during the past week. The tone has continued quiet, and few transactions of importance have been arranged for any market, and at the moment no large amount of business seems to be in sight. Raw American cotton in Liverpool has kept very steady. The usual fluctuations have taken place, but there is very little change on the week. Private telegrams lately received from the States report that the crop is going on very well, and all round the prospects are for a large yield, but, of course, the weather during the next few months will have considerable effect on the ultimate growth. In cloth for export buyers for all markets have not operated at all freely in any kind of goods. The demand for India continues of retail dimensions. Bombay appears to be the most active outlet, but the total sales are not at all important. Producers of fine goods such as mull-dhooties have again complained of the lack of demand, and some firms are turning their looms on to other makes of cloth, such as shirtings. China buyers have looked on, the reports from Shanghai not leading shippers here to anticipate future requirements. For the Levant and Egypt a fair number of offers have been reported, but few large lines have been put through. In several cases the question of delivery has stopped business. The outlets of South America continue quiet. Nearly all kinds of goods are deeply sold and difficult to get hold of for early delivery. T-cloths and Mexicans, specially the commoner makes, are well engaged, and stiffly held. Burnley goods have been steady, in view of the holidays in that town next week. Home trade American yarns have not moved quickly, but spinners who can deliver within anything like reasonable time can obtain full prices for good cop twist. The finer numbers of weft are also healthy. Coarse weft shows very little alteration and continues to drag, and the margin is poor. The consumption of the looms continues to be greater than the production of the spindles. In export kinds a fair China business has been done in doubled 32's, but the other markets have been quiet. Bolton spinnings move slowly. The commoner qualities are not at all healthy now, and spinners in this section are a little anxious as to the trade to be met with during the next few months.

COAL.—Steam coals in the Yorkshire districts still continue very much in demand, and trade with Hull shows a large increase for the first six months of the year. Exports, in fact, have established a record, the weight sent to foreign lands amounting to over a million tons, and of the countries concerned Sweden appears as the best customer with 174,544 tons against 142,136 tons in the first half of 1905, North Russia next with 160,481 tons against 91,551, France with 115,168 tons against 18,579, but such an increase is probably due to a great extent to the recent strike movement, and of the other countries Egypt, Belgium, and Italy show the most substantial additions. North of England trade for the moment is chiefly in gas coals, but it is active in almost all directions, and though collieries are busy there is difficulty in keeping supply equal to demand. Prices remain the same, but coke quotations are a little weaker for medium, the price being 17s. per ton, foundry 18s., f.o.b. Lancashire trade is dull and prices tending downwards, and in Wales also the week has been very quiet.

COPPER.—Leading dealers do not speak very hopefully of the immediate outlook, but admit that although production seems rather excessive the stock is small enough to be easily manipulated. In the absence of any special support the market opened dull, the demand not being sufficient to maintain quotations. A slight rally followed, notwithstanding the receipt of easier American cables, and in an absence of selling pressure prices steadied somewhat. They went lower again before the end owing to the very slack demand and ended about £79 5s cash and £78 15s for three months forward.

TIN.—This market has again become decidedly weak. Supplies are rather excessive, America is not a buyer and consumption all round is very slack. Moreover the market is adversely influenced by a big "bull" account. Advices from the East were weak, and prices opened badly under "bear" attacks and an entire absence of support. The initial weakness was followed by an improvement, but selling has again been freely indulged in and the recovery was lost. Prices continued to fall away for a time, only to pull up once more, final figures, however, showing a severe loss on the week at £164 17s. 6d. cash and £163 15s. for future delivery.

IRON AND STEEL.—A fair amount of business has been transacted during the week considering the slackness of the season, and exports, in particular, are better than was expected. Pig-iron from the Cleveland district shipped this month to the 11th has been 46,686 tons against 29,429 tons in the same number of days in July last year. Hematites show a yielding in quotations this week. Mixed Bessemer numbers at Barrow are still quoted at 67s. per ton nett, f.o.b., but actual business is done at 65s. to 66s., and in the North 65s. has been taken in lieu of 65s. 9d. last week. The steel trade is quiet, but generally steady. Glasgow settlement prices on Thursday night were:—Scotch, 56s. 3d.; Cleveland, 50s.; and hematite, 63s. 6d. In London: Cleveland, 50s., and standard, 49s. 9d.

SUGAR.—Although the rumour of beet sales to New Orleans proved to be well founded, prices in New York declined from 3·75 cents to 3.66 cents, and our market here, after a slight improvement, relapsed to the figures ruling a week ago. Granulated was specially affected, owing to a smaller demand, as refiners had to raise quotations on the advance in raw, and found the inquiry for their products restricted in consequence. Mr. Czarnickow in his weekly report states that the June figures were, on the whole, as foreshadowed last week; Germany exported 120,000 tons, and United Kingdom imported 10,000 tons more cane and 32,000 tons more beet, our consumption being 147,000 against 125,000 tons, the German and Austrian consumption being about the same as last month's, and if the other countries turn out similar, then the European June consumption should show an increase of about 50,000 tons, exports 40,000 tons, and American consumption 40,000 tons. Compared to such figures it may be that, with a normal Indian crop, the demand from that quarter next season will be disappointing. The Java shipments were 14,000 against 85,000 tons to the West, and 48,000 against 24,000 tons to the East. The present month's Western shipments may show a falling off of 100,000 tons, to be added to the June deficit, and if the July meltings in the United States continue at the rate of 46,000 tons per week (there was one holiday last week), with such small Cuban receipts, our figures of June 14 will have to be altered by at least 50,000 tons, and necessitate further beet imports, unless Java offers become more plentiful. We can, of course, spare a fair quantity, but under the circumstances our range of prices should be approximately safe. Much depends on the growing crops, which promise very fairly in many districts, but are rather irregular in others. The weather generally seems good. It is significant that crop 1907-8 was already offered at a fraction over 9s., without finding general buyers. The American beet sowings are now estimated by Willett and Grey at 399,562 against 341,075 acres, viz., 162,000 against 138,000 hectares, which have yielded 284,000 tons sugar = 2.10 tons per hectare, against 4.10 tons in Austria and France, 5.18 tons in Germany. Yet the beet industry is proud of producing more sugar than Louisiana this year, regardless of cost. In New York business fell off to its old level, and refiners appear to think that by holding back they may be able to secure supplies at easier rates. This idea is probably due to the reports from the Continent, but at the same time it is not at all unlikely that with only small quantities of preferential sugars available during the next few months large supplies of non-preferential sugars will have to be imported. Landings for the week were only 15,000 tons, and meltings amounted to 40,000 tons, bringing stocks down to 318,000 tons.

TEA.—Indian auctions only amounted to 10,462 packages, and of these all but the new season's, amounting to 4,373 packages, were neglected. Darjeelings were in fair supply, and about up to the average in quality, few Assams were catalogued; but these were for the most part good, the old season's, on the other hand, being chiefly of an indifferent quality, and difficult to dispose of except at very low rates. The week's average for tea sold on garden account from Northern and Southern India, season 1906-7, 4,447 packages, amounted to 8.18d.; 1905-6, 1,700 packages, average 8.56d. Ceylon teas, says Messrs. W. J. and H. Thompson's circular, are at length beginning to feel the strain of heavy offerings of indifferent quality, and the tone this week has been easier all round; 32,344 packages were offered, and the fall was most noticeable in good and fine teas. Broken Pekoes in some cases being withdrawn at prices ½d. to 1d. below the rates lately ruling. The average for the week was 6.55d. against 6.83d. last week and 6.75d. in 1905. Java sales followed the line of Ceylons, and the 2,920 packages put up sold at easier prices.

COMPANY MEETINGS.

PENN-WYOMING COPPER.

A meeting of shareholders in the Penn-Wyoming Copper Company was held on July 10, at the London offices, Winchester House, E.C., for the purpose of hearing statements by the president and general manager regarding the position of the company.

The President (Mr. E. M. Cobb), in the course of his address, stated as follows:—The registered capital is $10,000,000, which is equal to, roughly, in your money, £2,000,000 sterling. Of this capital, $6,000,000 has been issued in our country; it has mostly been taken up amongst the directors and their immediate relatives and friends. Our confidence in the future of our company is so great that we have no hesitation in recommending our nearest friends to become shareholders.

We have regularly paid for the past 15 months dividends at the rate of 6 per cent. per annum. The last dividend was declared June 15, and will be paid to all shareholders on our register at that date on the 16th inst. Our next dividend will be declared on September 15 next, and paid to all shareholders on our register before that date on October 15 next. I hope in the meantime our smelter enlargements and other improvements will have been completed, because as soon as we are running our smelter with its increased capacity our quarterly dividends should equal not less than 12 per cent. per annum. Our reserve of capital is 4,000,000 shares, which is equal to £800,000, and some few months back the board decided, as a matter of policy, that the development of our own properties and the district justified, and, in fact, necessitated, the enlargement of our smelting works. We also decided that it was necessary to connect up with our aërial tramways, by means of short branch connections, other producing mines in the district. For this and other purposes of improvement of the company's properties we decided that the company should place 2,000,000 of its reserve shares, the proceeds of which will be used for the purposes I have indicated. We were in touch at that time with European friends, who pointed out to us the importance of internationalising our stock. With such a large district behind us as we have there was no telling to what extent our company might increase, and that, with a European market open to us, as well as our own market, a greater facility will always be afforded to us for placing new stock. I am referring to the time, say, three or four years hence, when our anticipations as to largely-increased production have been carried out. We shall then have in reserve a further 2,000,000 shares, and with our share capital standing, as I believe it will, at a considerable premium, the resulting benefit to your company in placing the balance of their stock should be a very important one, producing for us much more than its par value. This position appealed to me and my colleagues, and we decided to act upon it, and this is what has brought our company to Europe and gives me the pleasure to meet you here to-day.

The General Manager (Mr. E. A. Norton), then gave a long and interesting description of the property, explaining the present operations, and the possibilities.

After some questions from shareholders had been replied to by Mr. Norton, the Chairman remarked that at present the copper produced by the company was sent to New York, where the best refineries in the world were situated. They refined the copper after it had reached the stage of being 99 per cent. pure. They had great facilities there for refining, and handled the copper there in a way which was to the best advantage of the sellers. Last year he believed a considerable portion of the output was sent to Salt Lake City for shipment to the East. There were thousands of gold and silver mines, but throughout the whole world the mines producing copper were only 248 in number, and the Penn-Wyoming, in point of production, stands 27th on the list.

He also pointed out that the basis on which the company had formed its calculations respecting dividend payments had not been the present ruling price of copper, namely, about £80 per ton, but the price of £65 per ton, which was the average price for the past 25 years, and, indeed, from the surrounding circumstances and the history of copper one could not conceive that the price was likely to be less than it had been on an average during the past 25 years; therefore, the 12 per cent. dividend which was foreshadowed for the future was certainly not an unreasonable one, nor should it be unattainable for a company with these possibilities behind it.

A vote of thanks to the Chairman for presiding closed the proceedings.

Answers to Correspondents.

A. E. H. R.—Neither *a* nor *b* is a cheap office by any means; good of the class, no doubt, but the class is an extravagant one. Therefore, we do not think you would do so well with either as with good home offices.

Timothy.—No. It is the custom to quote these stocks ex-dividend at the account preceding the actual interest date, and the April interest had, therefore, been allowed for when you bought.

H. H. M.—It is a heavy loss to face, and one which you should not be in too great a hurry to accept. All this class of stock is depreciated at present, and although recovery may be slow, there is the chance that by waiting you may be able to sell out on rather better terms.

E. H. W.—The manager of the undertaking will make it pay eventually if anyone can, but like you we have no great faith in its success. You can get a fair price for your stock, and we certainly think you could find a better security.

Mithra.—(1) People who should know give pretty good accounts of this property, and, as you are prepared to wait, a small speculation might turn out profitably. (2 and 3) The chances look pretty equal, but we are inclined to think that No. 3 will get a look in first. We do not, however, necessarily mean that the stock is worth buying. Both securities seem rather dear. No. 3 is entitled to 4 per cent. non-cumulative. (4) A fairly good risk for a small amount.

J. D. S.—(1) These should be quite good enough to hold. (2) A very poor specimen of its kind which should be left alone. (3) On the whole, we are disposed to say sell these, or, at any rate, the ordinary shares. The company is so overweighted with capital that it has a hard struggle, and we can see nothing in its affairs to justify any hope of its ever being really successful.

H. D. R.—The people who control the market are so far away that we have no means of judging with sufficient accuracy, and, although we believe prices must come down, we could not think of advising anyone to sell a "bear." We therefore booked the fee enclosed at your disposal as requested.

Letters to the Editors.

SIRS,—The land running to the Hudson's Bay Company is one twentieth of the fertile belt, or, say, seven million acres when surveyed! (see Burdett). Deduct from this one and a-half million acres sold, and say one and a-half million acres for water, rock, and scrub, then there should remain four million acres saleable. The company must by its charter retain the last one and a-half million acres remaining unsold, but this may be met by the rock and scrub allowance above, so that four million acres may yet be sold.

You are quite right to remind the shareholders of the coming bad harvests, seemingly overdue, but you forget to comfort them by stating that about one million sterling is due to the company, and payable by instalments on the land already sold—a splendid asset outstanding at 7 per cent. interest.

Again, it is not likely that any settlement can take place in the far North, where the furs are gathered—not in our time, anyway—but competition is growing there!

SHAREHOLDER.

SIRS,—I observe that in your report of the annual general meeting of this corporation, held on the 4th inst., the chairman is stated to have said "the board did not cease to oppose the appointment of a public trustee," whereas what he actually said was, "The board were not seeking to oppose the appointment of a public trustee." As the difference is material, I shall be obliged if you will kindly publish this correction.

Yours faithfully,
GILBERT TAYLOR.
Joint Secretary.

The Trustees Executors and Securities Insurance Corporation, Limited,
Winchester House, Old Broad Street, London, E.C.,
July 10, 1906.

NEXT WEEK'S MEETINGS.

MONDAY, JULY 16.

Antofagasta Railway.—Winchester House, noon.
Bank of Liverpool.—Liverpool, 12.30 p.m.
Darien Gold Mining.—Charing Cross Hotel, noon.
Estate, Finance and Mines Corporation.—Winchester House, noon.

TUESDAY, JULY 17.

Duff Development.—Winchester House, noon.
European Gas.—Finsbury House, 2.30 p.m.
Gold Mines Investment.—Cannon Street Hotel, 12.30 p.m.
London, Chatham, and Dover Railway.—Cannon Street Hotel 11 a.m.
South-Eastern Railway.—Charing Cross Hotel, 12.30 p.m.

WEDNESDAY, JULY 18.

Assam Oil.—Winchester House, noon.
Bank of Roumania.—Winchester House, 12.45 p.m.
Empire of India and Ceylon Tea.—Winchester House, 2 p.m.
International Tea Stores.—Winchester House, 2 p.m.
Mines and General Trust.—Cannon Street Hotel, 3 p.m.
National Discount.—Cannon Street Hotel, noon.
Transvaal Gold Mining Estates.—Salisbury House, noon.

THURSDAY, JULY 19.

Costa Rica Railway.—Winchester House, 2.30 p.m.
Distillers.—Edinburgh, 1 p.m.
Electric Construction.—Winchester House, 12.30 p.m.
Egyptian Land and General Trust.—Winchester House, 2 p.m.
Egyptian Delta Land and Investment.—Winchester House, 2 p.m.
London Joint Stock Bank.—5, Princes Street, noon
London Central Motor Omnibus.—Cannon Street Hotel, 2.30 p.m.
New Tamarugal Nitrate.—Winchester House, 12.30 p.m.
National Telephone.—Hamilton House, noon.
Niger Company.—Surrey House, noon.
Newport Abercarn Black Vein Steam Coal.—Winchester House 11 a.m.
Union Discount of London.—39, Cornhill, 12.30 p.m.

FRIDAY, JULY 20.

C. Arthur Pearson.—Winchester House, 2.30 p.m.
Manchester and County Bank.—Manchester, noon.

NOTICES.

SOUTH AUSTRALIAN GOVERNMENT.

FOUR PER CENT. BONDS for £1,000,000 maturing 1st January, 1907.

The Government of South Australia have instructed the Bank of Adelaide to give holders the option to SURRENDER these BONDS on and after July 2nd for cash payment, with accrued interest to date of surrender (principal and interest payable three days after lodgment of Bonds with the Bank of Adelaide), or of CONVERTING the BONDS, to the extent of £500,000 into Three and a-Half per Cent. Inscribed Stock, on the following terms:

For every £100 of these Bonds, with coupon attached, due 1st January, 1907, surrendered to the Bank the South Australian Government will issue £100 Three and a-Half per Cent. Inscribed Stock 1926-36, and also pay £1 in cash. The Inscribed Stock will be dated July 1st, 1906, and a half-year's interest will be payable on January 1st, 1907.

The offer for conversion into Three and a-Half per Cent. Inscribed Stock to remain open until the 30th September, but as the sum to be converted is limited to £500,000, applications will be registered in the order in which they are received, and the list will be closed on the 30th September, or as soon as the allotted sum is applied for. The balance of the £1,000,000 not surrendered under these terms will be paid off at par on maturity.

Copies of the Act under which this Stock will be issued can be seen at the Office of the Agent-General for South Australia, 28, Bishopsgate Street Within, E.C.; or at the Bank of Adelaide, 11, Leadenhall Street, E.C. Full particulars and forms of application can be obtained from the Bank of Adelaide or from Messrs. R. Nivison and Co., 76, Cornhill, E.C.

J. G. JENKINS, Agent-General for South Australia.

London, 2nd July, 1906.

EAST SURREY WATER COMPANY.

Sale of Ordinary Shares by Tender.

NOTICE IS HEREBY GIVEN, that it is the intention of the said Company to Sell by Tender Seven Hundred Ordinary Shares of £16 each of and in the East Surrey Water Company. The last day for the reception of Tenders will be Friday, the 27th day of July next, at 12 o'clock at noon. Forms of Tender, with particulars of sale and conditions of Tender attached, can be had upon application at the Company's Office, Redhill, Surrey.

By Order,
A. E. CORNEWALL-WALKER.
Secretary.

Redhill, Surrey,
22nd June, 1906.

NATIONAL DISCOUNT COMPANY, LIMITED.

Subscribed Capital	£4,233,325
Paid Up	846,665
Reserve Fund	400,000

NOTICE IS HEREBY GIVEN that the RATES OF INTEREST allowed for money on Deposit are REDUCED as follows:—To TWO per Cent. per annum at call; to TWO AND A QUARTER per Cent. at 7 and 14 days' notice.

PHILIP HAROLD WADE, Manager.
WATKIN W. WILLIAMS, Sub-Manager.

Approved mercantile bills discounted. Loans granted upon negotiable securities. Money received on deposit at call and short notice at the current market rates, and for longer periods upon specially agreed terms.

No. 35, Cornhill, E.C.,
13th July, 1906.

THE UNION DISCOUNT COMPANY OF LONDON, LIMITED.

39, Cornhill, 13th July, 1906.

Capital Subscribed	£1,500,000
Paid up	750,000
Reserve Fund	440,000

NOTICE IS HEREBY GIVEN that the Rates of Interest allowed on money on deposit are this day Reduced as follows:—At Call to Two per Cent.; at Seven and 14 Days' or longer Notice to Two-and-a-Quarter per Cent. The Company discounts approved bank and mercantile acceptances, receives money on deposit at rates advertised from time to time in the London daily papers, and grants loans on approved negotiable securities.

CHRISTOPHER R. NUGENT,
Manager.

NEW ISSUE.

INDIA 3½ PER CENT. LOAN FOR 450 LAKHS OF RUPEES.

The Secretary of State for India in Council hereby gives notice that the Government of India has issued a notification inviting Tenders for a Loan of four hundred and fifty lakhs of Rupees (Rs. 4,50,00,000), bearing interest at the rate of Three and a Half per cent. per annum, and not liable to be discharged before the 31st of December, 1920.

Tenders will be received by the Comptroller-General at Calcutta until noon standard time on the 31st instant, and by the Accountants-General at Madras, Bombay, Allahabad, and Lahore, on the 30th instant and until the local time corresponding to noon standard time, of the 31st instant.

The minimum rate at which tenders will be accepted will not be declared beforehand. It will be recorded by the Controller-General before the tenders are opened, but will not be announced unless any are rejected as being below the minimum.

The instalments will be payable on the 15th August, 5th of September, and 8th of October, 1906.

Copies of the Notification published by the Government of India can be obtained on application to the Financial Secretary, India Office, Whitehall, S.W.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 446. SATURDAY, JULY 21, 1906. (Registered as a Newspaper.) Price 6d.

New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Indian Railways.

Government purchases continue to provide the most interesting aspect of Indian Railway affairs. Until the acquisition of the Bombay Baroda system at the end of 1905 no really important line had been taken over since the Great Indian Peninsula absorption in the year 1900. For the moment practically all the discussion centres upon the Bombay Baroda, not only because of the magnitude of the undertaking, but also because the terms of purchase constitute a departure from the principles hitherto laid down for carrying through these acquisitions. All previous purchases of a material kind have been carried out by means of annuities, not an ideal system we admit, but undoubtedly the best from India's standpoint owing to the fact that when the capital sums are eventually redeemed by the sinking funds formed for that purpose the finances of the country are freed from further burden. But with an unwearying persistence that can only be admired the directors of the Bombay Baroda Co. got on the "right side" of Mr. Broderick, when Guildford's rejected was acting as Secretary of State for India, and induced him to abandon the annuity plan in favour of purchase by sterling stock, thus throwing a permanent load on the income of the people. Every phase of the question has been duly discussed and criticised in these columns as it has arisen, and we need now only refer to the terms of the new contract between the company and the Secretary of State, Mr. John Morley, a statesman of enlightened views who should be able to handle the affairs of the Dependency with an intelligence and prudence that have hitherto been conspicuously lacking. The Bombay Baroda Railway will continue to be worked by the present company under its fresh guise, and a portion of the purchase money, to the amount of £2,000,000, will be used as capital with which to constitute the new undertaking. This capital will bear 3 per cent. interest, and will be repayable at par on the expiration of the contract. To begin with, the working of the present broad gauge line together with the contracts of the subsidiary broad gauge lines now operated will be taken over together with the Rajputana, Malwa, and other metre-gauge lines. These last, however, may have to be given up when the Nagda-Baran-Muttra line is open, or at any subsequent time that the Secretary of State may determine. Under certain conditions, fully set forth in a recent issue, the company may receive interest additional to the fixed 3 per cent., and it is actually guaranteed that for the three years concluding with 1908 the excess shall not be less than ½ per cent. Shortly put, the Secretary will be responsible for all further capital expenditure, and when the Nagda-Baran-Muttra and Sind Bombay lines are built the company may be entrusted with their working, special arrangements being made to this end. The contract is to run for 25 years, to be afterwards terminable at intervals of five years on 12 months' notice on either side, and proprietors are to be heartily congratulated on the very generous terms obtained by their directors.

We may now turn to the affairs of the Southern Mahratta Co. In this case there was no question of deferred payment spread over a long term, and if the Secretary decided to buy on June 30, 1907, as he was entitled to do, the company's capital stock of

£3,500,000 had to be repaid at par, the Indian Government assuming direct responsibility for the debentures and other liabilities. Formal notice that the Secretary would exercise his right was given on June 21 last, and it is to be noted that in the report recently issued the board expressed the hope that the company would be given the opportunity of continuing the administration of the system of railways by means of a new contract. Under the old agreement the last dividend will be payable in July, 1907, and the proprietors will be subsequently asked to authorise a distribution from the reserve fund at present standing at £90,022. At the end of March last the shareholders of the South Behar Railway agreed to lease the line to the Government for the remainder of the contract at the rental of £30,000 per annum, the conditions of the new agreement to come into force as from January 1 of the present year, so that in future the Secretary of State will pay over to the company £15,000 on June 30 and December 31 of each year. The present dividend of 4 per cent. per annum should, therefore, be maintained with the greatest ease. Then as to the Bengal Dooars Railway. The directorial letter to the India Office, proposing terms for handing over the working of the line to the agency of the Eastern Bengal State Railway, has been duly replied to, and the board hopes that this matter may soon be satisfactorily arranged. The main condition of the proposed compact is that the Eastern Bengal Co. should retain 40 per cent. of the gross earnings to meet working expenses. Seeing that the present percentage of expenditure to income is about 50 per cent., an agreement in these terms should prove a very good thing for the stockholders. So much for those undertakings whose purchase or leasing is actually being carried through, and we may now turn to those which may be similarly treated in the proximate future. There is the Madras Railway, whose valuation period has now entered upon its third and final year, and whose directors are never tired of pointing out what a magnificent undertaking the system has grown to be, and exhorting the proprietors not to prejudice their own position by indulging in unreasoning and hasty sales of the company's stocks, which must have the effect of depressing quotations and thus adversely influencing the purchase price. This will be based on the mean market quotation for the three years of the valuation period ending on April 30, 1907. Taking the company's 5 per cent. stock as an example, the average market price on April 1, 1904, when the valuation term commenced to run, was £125 10s., but the mean during the two years which have since elapsed has been £127 11s. 1d., so that the directorial warning has clearly been taken to heart. With the Bombay Baroda precedent on which to base their claim the directors will, of course, press for expropriation by means of sterling stock instead of annuities, and although Mr. Morley was not responsible for the change we fear the company's case will, under the circumstances, be irresistible. The South Indian Co. can be bought out in 1911, the Government paying back the capital in sterling at par, and in view of the marked success which has attended the company's operations there is no doubt that the present contract will be determined. That is why the company's stock is valued so low in the market in face of the big dividends paid. No other line, with the exception of the Indian Midland, which can be taken over in 1911, is capable of absorption within the next five years, but immediately after that more than one existing agreement can be terminated.

On the whole, business in the six months to December 31, the period covered by the batch of reports recently issued, turned out very satisfactorily. Gross revenue was better in nearly every instance, and in more than one direction the gain was quite substantial. The Bengal Nagpur showed striking increases in practically all items, and in a smaller way the Bengal Dooars also did well. An exception was found in the case of the Bengal and North-Western, which, unfortunately, suffered in several ways. In the corresponding period the company had the Tibet "peace" mission traffic to handle, and the absence of this alone meant over four lakhs of rupees off the receipts. Failure of the wheat and seed crops also affected the revenue, and although there was an improvement in the ordinary passenger traffic and extra income came in from the carriage of cheap food grains for Rajputana and some of the Western districts where scarcity had arisen owing to the failure of the monsoon crops the decreases in other directions could not be made good. The experience of the Bombay Baroda was extremely satisfactory, the company's own lines and the State lines worked making a very encouraging display. Gross and nett revenue were a good deal larger, and although the working charges went up as well, the proportion between expenditure and income was lower. No reference to famine conditions was made in the report, and as food grains, wheat, and wheat-flour all produced less traffic it is to be assumed that the gain was not due to the carriage of the bare necessaries of life to stricken districts within the Bombay Presidency, despite the lamentable accounts of famine which still come from India. We hardly like to find the directors of the Madras Railway practically complaining that the strict plague regulations adversely influence their third-class traffic. Possibly it may do so in a modified way, but surely the fact that the enforcement of plague examination, passporting, and restrictions on travel are stricter in Madras than in other provinces must be beneficial in the long run. The more the Presidency can be saved from this terrible scourge the better must it eventually be for business and therefore for the railway. A serious accident on this company's North-West line may affect the accounts of the current half-year.

Goods traffic on the Southern Mahratta Railway showed two striking movements—an increase of nearly 345,000 tons in grains other than wheat and a decline of 114,000 tons in oils and oil seeds. The passenger traffic was very good, and the company continues its phenomenal run of steadily expanding receipts. Some very sharp fluctuations in the merchandise business of the Great Indian Peninsula left a nett increase of over 8 lakhs of rupees, and the best commentary that can be made on the half-year's operations is that the earnings for the opening portion of the financial year produced a surplus nett revenue in excess of that for the corresponding period by almost 9 lakhs. Once again the South Indian company announces a revenue higher than anything ever reached, a decrease under coaching being easily made good by an improvement in the merchandise traffic, and proprietors no doubt consider they have cause for complaint that the stock of such a flourishing company should be repayable at par. There was an exceptionally large increase in the Southern Punjab company's revenue, chiefly in the goods traffic, but passengers contributed a very fair share. In fact, the improvement in the passenger business was one of the most noticeable incidents of the half-year, and we hope it indicates, as some say, an improvement in the condition of the frightfully poor, yet heavily taxed native. The East Indian gathered the largest passenger traffic ever handled, but there was a very severe drop in merchandise, so that, on the whole, this great system did not perform so well as usual. The disparity between the period under review and the corresponding six months was emphasised by a considerable growth in the working expenses, but no one will be sorry to see this expenditure ratio go up, because it is a little difficult to believe that a railway that works nearer 30 than 40 per cent. of the total revenue affords all the facilities it might to the country and to its customers.

General Mining and Finance Corporation.

THE ALBU GROUP.

Shareholders in the General Mining and Finance Corporation—the parent concern of the Albu group of companies—deserve commiseration for the heavy losses

they, in common with the multitude of investors in Rand companies, have suffered during the exceeding gloomy year of 1905. It is scarcely soothing to feel that this company's financial management is better than that of most, a prodigious credit balance being dissipated not in dividends, but in meeting the severe depreciation in the share and other assets. We have dealt analytically with each member of the group as the separate reports have been issued, and it is now necessary only to criticise the report of the controlling company itself. It may be premised in a general way that the losses are attributed mainly to the dearth of native labour, a cause which has been alleged to beget many terrible effects, yet, despite this, there is the fact that the output of gold is increasing monthly. As the losses are principally in the way of depreciation, because the public will not support the Kaffir market, it is not logical to argue that outsiders keep away because of the lack of blacks, for, including the coolies, there are now a far greater number of human machines at work than at any time in the past. The cause of the utter lack of confidence in the bosses lies considerably deeper than this, for the depression existed during the tenure of a sympathetic Conservative Government. Glancing briefly at one or two of the subsidiaries of this particular group, the Meyer and Charlton ran an average of 66.6 stamps out of a battery of 80; the Roodepoort United paid one dividend only, of 10 per cent.; at the New Goch crushing was suspended for some months; whilst at the beginning of the present year it was announced that the Aurora West Mine had been closed down, though all was in readiness to commence milling with an enlarged plant. Is all this the product of a Radical Government's interference with unlimited licence to import and sweat the coolie?

In the 12 months ending December 31 last there was a considerable drop in the income. This, as usual, is not detailed in the profit and loss account, the receipts from dividends, interest, transfer fees, commissions, rents, &c., amounting in the lump to £117,929, against £76,360, but the profit made on share realisations was a paltry £9,751, compared with £365,716. Thus the aggregate fell from £442,076 to £127,681, and the net profit from £352,784 to £78,809. Still, the large balance of £241,466 was brought in, making a substantial surplus of £320,275, quite sufficient to pay a respectable dividend had it not been necessary to provide for the losses aforesaid. Thus no less than £230,164 is utilised in writing down some stocks and shares to the making-up prices at the end of the year, or lower, whilst £75,000 has been reserved against possible loss in respect of contango loans and sundry debtors, making it look as if the directors anticipate formidable bad debts. Have some of their market customers got among the "lame ducks"? This leaves only £15,110 to carry forward. Of course, the directors express their regret that, "owing to the general and unprecedented depression, it has not been possible to make a distribution to shareholders in respect of the past year's operations." In 1904 10 per cent. was paid, making a total to date of 40 per cent. on the ordinary shares, equivalent to a sum of £449,600. It is certainly not an achievement for such a company to boast of, but, then, only three companies in the group—the Meyer and Charlton, the Roodepoort United, and the Van Ryn—are dividend-payers.

During the 12 months the Corporation increased its holdings in the companies under its control. The investments in the subsidiaries now total £1,456,616, against £958,707, an increase of £497,909. A sum of £77,780 is invested in the shares of other companies, in comparison with £49,458 in 1904, whilst mining properties, claim holdings, real estate, house property, are £2,400 higher at £259,700. Holdings in debentures, Government and municipal securities stand at £165,102, the total investments showing an increase of £529,013, after providing for the depreciation already mentioned. Here is evidence of the efforts made by the directors to support the market for their own things by purchasing the shares sold by holders. This action may be laudable or otherwise, according to one's individual point of view, but the directors put it in this interested but not cogent way:—"By the acquisition of further interests in the companies under the control of this Corporation, your directors have given practical expression to their unwavering faith in the future of these fields. It only remains to ask and hope that the Transvaal shall be allowed to administer its affairs, and develop its resources unfettered by vexatious conditions imposed by those who do not appear to appreciate the immense importance of the Rand mining industry to South Africa generally, and the disastrous consequences that would ensue by reason of its retrogression." It would be easy enough to reply to this sentimental special pleading, but readers of this Review and the great public need not to be taught that the "retrogression" is due to the unscrupulous schemes of self aggrandisement and enrichment conceived and carried out by the bosses themselves. Had they not, for instance, made the supply of black labour artificially scarce and worked out the richest parts of the reefs in the past, likewise watered their capitals excessively, the gloom to-day would probably not be so deep as it is. But the magnates and those who believed in them are merely reaping the fruits of their diligent sowings. "If the retention of the coolie is definitely decided upon, there can be no doubt that the industry will receive an impetus, which will be rapidly followed by a restoration of confidence in the mines as a medium for the profitable investment of capital." This is an ideal conception, quite opposed to facts and experience. Will you, readers, invest in Kaffirs if more and more coolies are to be employed? You will lose your money if you do.

We have enumerated the values of the various paper assets of this Corporation. It remains to be added that the advances against security, after allowing for the reserve of £75,000, are now £728,372, sundry debtors owe £929,061, and cash totals £323,681. But liabilities are also heavy. There are deposits aggregating £929,146, bills payable to the tune of £430,632, and a sum of £468,799 owing to sundry creditors; grand total, £1,828,577. The reserve of £437,500 is, of course, the same as in the previous balance-sheet, and consists wholly of premium money. As the depreciation since the beginning of the present year has continued, the immediate outlook for this company is dismal enough, so it seems practically certain that no dividend will be possible out of the earnings of the current 12 months.

Economic and Financial Notes and Correspondence.

The Gold Reserve.

Quite an interesting discussion has been raised by Lord Goschen's speech on this subject at the jubilee dinner of the National Discount Company. Mr. Holden, managing director of the London City and Midland Bank, has also been endeavouring to call attention to this important matter, and the first of a series of letters from his pen appeared in last week's *Statist*. We are thus promised a considerable agitation over the gold reserve and its inadequacy, and shall follow it with no small interest. Meanwhile, and pending the further development of Mr. Holden's argument, we do not care to say very much. Some of the views put forward in his first letter were advocated by the present writer many years ago, but we have always been dead against the issue of £1 notes on any terms, and we are not now quite certain that it was wise to agitate, as we did, for the repayment in gold of the old Government debt of £11,000,000 due to the Bank of England. On another point also we are not disposed to follow the line of argument which seems to be favoured by Mr. Holden and others in that we cannot see it to be the business of the State to help bankers in this country to take adequate precautions to safeguard their own interests. This is one reason why we are now by no means hot about the repayment

of that £11,000,000 in gold. Supposing it were to take place, and that instead of buying Consols or redeeming Treasury bills or Exchequer bonds, the Treasury were to enter the bullion market and compete for the gold arriving there against foreigners, and gradually to wipe out this £11,000,000 debt by piling in gold to the requisite amount, would the banks in general, the great joint-stock banks in whose hands the bulk of the country's business now is, be any stronger? Indirectly they might, perhaps, be so, but directly not to the extent of a silver shilling. All that would happen were the £11,000,000 of debt converted into £11,000,000 of gold by the action of the Treasury would be that the note circulation of the Bank of England would have more gold behind it. The stability of banking credit in this country, however, does not now hang by the note circulation of the Bank of England, and as long as its notes are legal tender, guaranteed therefore by the whole wealth of the Empire, it does not seem to matter very much whether the gold in stock is equal to the amount of the notes in circulation or not. If the day came when the Bank of England was directly run upon to get gold for its notes we fear there would not be much of an Empire left to protect. In any case, the £11,000,000 of gold would be the Bank of England's property, not that of the money market as a whole.

The truth is that banking credit in this country is not dependent upon gold any further than the money in use in daily commerce consists of bank notes. The true security for banking credit in England is to be found in the accumulated wealth of all kinds which the alchemy of the banker can convert into money, and in the masses of commodities which banking credit moves, and upon which so much banking wealth rests. And our circulating medium is the cheque infinitely more than the bank note. As long as banks and their customers do not overstrain their credit, do not commit themselves to an irretrievable extent in any one direction, the danger to their stability arising from a small gold reserve is seldom likely to be acute. A customer may launch out, get beyond his depth—a certain proportion of bank customers are always doing this—but the credit of the bank is not necessarily injured when a percentage of its customers fails. Only when a great credit convulsion takes place does danger arise, and it is to try and safeguard banks from any sudden emergency in this way brought about that we keep insisting upon the advisability of larger gold reserves; but it is the duty of each bank to create its own insurance fund of this kind, not the duty of the State nor yet the duty of the Bank of England. "Ah!" but the alarmists and reformers of all kinds say, "what about the drain of gold to foreign countries? Ours is the only open gold market in the world, and all the stock in the Bank of England might be swept away by foreign customers before we knew where we were." It cannot be so. The nations of the world exchange commodities and securities with each other, and no country could drain the Bank of England of its gold except by our own fault or folly. The gold bought has to be paid for. This aspect of the subject, however, is one that demands full discussion, and we cannot go further with it this week.

The Late Alfred Beit.

Some people talk to us as if we were capable of dancing a war-dance over this lonely dead millionaire's body. We are surprised that anyone should have an idea of that kind. It is true that ever since his name emerged before the public as a financier and political schemer or participant in schemes we have attacked the policy of the late multi-millionaire, and had he lived we should have continued to attack it; but now he is dead, and what more is there to be said? We have not and never did have the slightest personal feeling towards the man. He was a phantom to us, nothing more, and he has gone first to the tomb. Essentially a life like that of the great monopolist in diamonds and dynamite is a failure, because it was a self-centred, a selfish life. The whole energies of the man were devoted to piling up fortune after fortune, to playing upon markets, and upon political passions, all for his own enrichment, and in the middle of labours of this description anything like the larger horizon of human interests was necessarily obscured. There were no generous ideals to shape the course of such a man. The whole public life of Alfred Beit, like that of his former associate, Cecil Rhodes, of the whole band of adventurers who fastened upon the mineral wealth of South Africa for their own gains, primarily, and throughout, has, therefore, been marked with failure. What institution calculated to benefit his fellowmen has been created and nurtured by the man now dead? Not the Kimberley compounds or the Chinese compounds on the Witwatersrand; not the finance companies brought into existence to further the marketing of those 70 odd companies with which the name of Wernher, Beit, and Co. has been associated; not the great projects for building railways away to the north into the heart of Africa so as to tap new sources of black labour; not the South African war with its attempt to destroy civil liberty in the Transvaal and Orangia, to bring all living things in Africa beneath the heel of the monopolist; not the De Beers monopoly, the dynamite monopoly, the determined efforts to bring the food, the drink, the clothing, everything that humanity required in South Africa, within the all-sweeping grasp of the over-mastering De Beers. These things do not redound to the glory of the dead man, and his very success in creating monopolies, in capturing a Press, in bringing politicians of many shades of opinion to heel like sheep dogs, only emphasises the essential failure of such a life.

It has become the fashion, sanctioned by a Press of every political hue, to speak of the dead millionaire as the richest man in the Empire, if not in the world. We have our doubts upon this point, and have long had them. That the late Alfred Beit did amass enormous sums of money there is no doubt at all, and at one time he must have been much richer than his "pal" Cecil Rhodes, but of late years there have been drawbacks, and all along the expenditure involved in keeping up the dominance of De Beers in South Africa and in preventing the truth about what went on there from reaching the public in the United Kingdom has been galling in its magnitude. What did it cost the Wernher Beit firm to control Reuter's South African agency and most of the newspapers in Cape Colony, the conquered Republics, and in Natal? For years back the late Alfred Beit is reputed to have been the principal owner of one of the leading financial weeklies in London, and doubtless that was a very profitable investment, but it could not be so with many of his other Press ventures; and the number of politicians, of hangers-on, of Government officials of every hue, of society leeches and lackeys that have had to be suborned, subsidised and maintained by this man and his associates must have been stupendous. Nor is this all. Mr. Beit entered into very heavy building speculations in the City, speculations which must have involved the lock up of many hundreds of thousands of capital on which there is now no adequate return or likely to be. In many directions also the long-drawn-out agony of the Kaffir market must have told upon the gross, the bloated mass of this man's fortune. He made it out of the market more than in any other way by plundering his dupes, by skilfully trading off at excessive prices shares created by himself and his partners, by multiplying companies and causing fancy markets to be started in their shares; but for the last three years it has not been possible to play this fine old money-making game with success. On the contrary, it has been necessary again and again to "support" the market, as it is called, to buy back shares formerly sold and pawned by the purchasers so that at the present time we should think the firm, and, probably enough, the late millionaire as an individual, have much less liquid wealth or wealth of any available kind to boast about or to utilise than they had before the war with the Boers. A few years longer and Mr. Beit might again have become a poor man, at least by comparison with the wealth he could gloat over in the

hour of his highest prosperity. There is the diamond trade, for instance. How much capital is locked up there? Is it always a source of profit this high-priced and close market for diamonds? Has the selling been as good and free of late years as formerly, or are there enormous and increasing stocks of the stones carried by means of banking credit on the Continent and here? We do not know, but Mr. Beit's firm was at the head of the diamond buying syndicate which stood behind De Beers and the monopoly which De Beers represents. It would not surprise us to find that the business has not lately been such a very paying one, but it may go on long before the weakness comes to light, because the diamond trade is a good deal like the brewers' tied house trade, the caretakers are ruined first. Well, whatever the fate of diamonds and diamond hoarding, Alfred Beit has now no more interest in De Beers or in Chinese serfs or in the bankruptcy of the Chartered Company than the pebble at one's feet. His end was premature in one sense, for he was only 53, but he has gone as they will all go, these upstarts of South Africa, these war promoters for the basest of ends.

Edmundsons' Electricity Corporation, Limited.

This company issued still another £105,000 in debenture stock during the year ended March 31, but the steady growth of the capital account thus indicated has not been accompanied by an increase in the earning power. Indeed, the reverse has happened, as with the completion of the power stations in which it is interested installation work has been reduced, with the result that the nett trading profits show a decrease of no less than £10,908, at £27,710, and it looks as if the decline is likely to continue for some time to come. The income from investments grows but slowly, and yielded only £2,077 more at £32,182, and with £103 from transfer fees the nett revenue was £8,828 smaller at £59,995. To this was added £15,007 brought forward, making a total of £75,002, compared with £82,746, and after providing for debenture and other interest and for preference dividend, the distribution on the ordinary shares is cut down by 3 per cent. to 4 per cent., and £3,962 or £2,673 less is transferred to reserve, leaving a slightly larger sum of £15,212 to be carried to the new account. Shares in subsidiary companies have been increased by £259,552 to £624,455, and the debentures held remain at £98,300, but £106,396 of the advances made have been paid off, leaving £526,277 outstanding. Investments in the Guernsey and other undertakings are £7,158 up at £164,070, bringing the total securities up to £1,234,358, of which £398,474 has not yet reached a dividend-earning stage, and against these £178,743 is held as reserve. In addition the reserve fund proper now stands at £95,000, or £5,000 more, of which £1,038 came from premiums on new issues. Sundry creditors have dropped by £12,509 to £43,186, while sundry debtors owe £61,323 less at £66,475, and cash is £13,119 lower at £35,005. It will be instructive to observe how all this works out.

The National Telephone Company's Capital.

It seems to be in a pretty muddle, judging by the article in this week's "Financial and Commercial Supplement" of the *Times*. We do not mean that there is anything wrong about the company, or that the various classes of capital created by it are not good investments. The muddle arises when winding up comes in view, and presumably the company will be wound up when the whole of its plant, property, and assets are transferred to the Postmaster-General at the beginning of 1912. In that event how will the purchase-money be distributed? Will the 3½ per cent. debenture stock be entitled to receive a premium of 3 per cent. on redemption, or only par? Mr. Ralph Neville, K.C., now Mr. Justice Neville, and Mr. Francis B. Palmer, the counsel whose opinion the directors of the company have taken, say that the 3 per cent. additional does not necessarily become payable in spite of the statement in the trust deed. If the stock is merely "paid off," then it is paid off at par, and if redeemed, then it must be redeemed at 3 per cent. premium. There seems to be less ambiguity about the position of the 4 per cent. debenture stock, which is entitled to 5 per cent. premium on redemption, yet the eminent counsel consulted seem to think that unless an effective resolution is passed for the winding-up of the company for the purpose of reconstruction or amalgamation, in which case a premium of 5 per cent. will be payable, the holders of the 4 per cent. debenture stock may have to take par likewise, in spite of the apparently distinct pledge given in the prospectus to the effect that at any time after December 31, 1904, this 4 per cent. debenture stock could be redeemed at the price of 105 for every £100 stock on six months' notice given. There is a subtle distinction drawn between "redeemed" and "paid off."

More curious still is the position of the first and second preference shareholders as compared with that of the third preference shareholders. The two earlier preferences are said to be expressly excluded from any participation in surplus assets, whereas the third preference shareholders stand in with holders of the ordinary capital. Whether this was intended or not, it is difficult to say, but the resolution creating the preferential rights attached to the third preference shares said nothing whatever about stopping short, in the event of winding-up, at the mere refunding of capital invested, and counsel therefore infer that the third preference shareholders are in better position than the first and second in the matter of excess assets. They stand in fact much in the same position as the holders of the deferred stock, who are entitled to share in the surplus assets after the preferred stock has been paid off at 5 per cent. premium, but only after the rights of the third preference shares have been provided for. Altogether the muddle seems to be a bad one, and there is appositeness in the suggestion that an attempt ought to be made by the board of directors to unify with a view to simplification, the capital issues of the National Telephone Company while there is yet time. Its stocks might be consolidated into one debenture, one preference, and one ordinary stock, with the rights well defined, but there might be trouble in getting those who think they have a "pull" on their fellows to consent to any arrangement of this description. Whatever happens, we trust there need be no resort to litigation.

London Motor Omnibus Company.

Since we made a passing reference to this enterprise about a couple of weeks ago, when dealing with motor 'bus promotions generally, the company has become almost notoriously conspicuous in a remarkable, if not altogether unexpected fashion. We do not mean that anyone seriously anticipated quite such a lamentable affair as the disaster at Handcross proved to be, but we fancy a good many people were hardly surprised to hear that one of these monsters of the street had been responsible for a deplorable accident. Let it not be supposed that we are pointing particularly to the Vanguard 'buses owned by the London Motor Omnibus Company. Indeed, it is generally understood that this concern possesses the most reliable vehicle at present on the streets. Our reference is to motor 'buses generally, and it is high time that the authorities were awakened to the necessity of exercising a proper control over mechanical traction in the thoroughfares of London and its suburbs. For a time the public was motor mad. When only a few vehicles were plying for traffic their faults and failings were hardly noticed, and, attracted by the novelty, travellers were quite willing to run the risk of being drawn up against the kerb for half-an-hour or so while the driver disappeared into the internals in an effort to remedy some defect in the machinery. Or if passengers could not wait there was always the more reliable if slower and less roomy horse-drawn vehicle ready and willing to get back a little of its lost patronage. But every day sees some additions to the numbers of motor vehicles on the streets, and where 50 were hardly noticed, the 500 which it is estimated are

at work at the present moment partake very much of the nature of a nuisance. The motor 'bus question indeed has become one of the topics of the hour, and every day questions are addressed in the House of Commons to the officials of the public departments on the subject. Some go a little too far in their condemnation of the 'buses, and we should like to emphasise the fact that any restrictions or regulations which it may be necessary to impose should be made to apply to all mechanically propelled vehicles. Motor 'buses often run at a dangerous speed, leaving behind them a long trail of almost asphyxiating blue smoke, due to unscientific lubricating, they break down on the slightest provocation, are often not understood by their drivers, create excessive noise, smell horribly, and have undoubtedly been the cause of more than a due proportion of accidents. But all these things can be remedied, and if motor 'buses are at present a nuisance, the ordinary motor-car in the hands of a "road hog" is more so. Kensington is crying out loudly against the motor 'bus, declaring that it depreciates tax-paying property, but Kensington has nothing to say against the motor-car. It is only when the vehicle is for the use of the lowly public that it is to be condemned. But we think our present public departments can be trusted to see that justice is done all round. Even the Harmsworth journals have got the insolence to join this agitation against the motor 'buses in face of the fact that the driver of a Harmsworth motor-car recently underwent a considerable term of imprisonment for killing a child. It is not to be expected that a perfect vehicle can be placed on the streets at once, and in due course we shall no doubt have a machine which will fulfil all reasonable requirements. In fact the commercial side of the motor 'bus question is not a whit more unsatisfactory than the financial aspect. If a large number of motor 'buses have to disappear from the streets, bad and often unscrupulous financing will be the primary cause. We have not yet completed our examinaion of the companies which have been placed before the public this year, and have no wish to condemn in a wholesale fashion, but up to the present the only one we have encountered which seems to conform to the ordinary rules of prudent finance is the London Motor Omnibus Company, owners of the Vanguard service. Even of this concern we do not know very much at present, but its capital has been properly subscribed, and at the present moment it has about 110 motor 'buses running. Subjoined is a list of the shareholdings on April 26 last:—

Ordinary £1 Shares.

John Cary Lovell	500	David D. Coath	300
Gilbert McMicking	500	Philip Henry Fox	300
Mrs. Ada Duncan	2,000	Mrs. Angella Ortelle ..	500
George Little.....	500	Arthur John Cave	600
Joseph Welch	500	Hugh Middleton Noel..	1,000
Wm. Edward Nicol....	500	Frances Bere Follett ..	300
Wm. Francis Jennett ..	500	George Nicohlls Bryett	400
Mrs. Margaret Bashall	700	Wm. Joel Kemp	500
Frederick Forrest.....	500	G. A. L. Whitelaw	500
Lawrence Golding Fenner	400	Joseph Lamming	1,000
Admiral Bowden Smith	300	John Jordan	1,000
Ernest George Moore ..	500	Wm. Roberts.....	500
Mary Elizabeth Butler	600	Clarence Freeland	500
Bernard J. H. Ward ..	400	A. T. Salisbury Jones ..	500
		Mrs. Annie H. Graham	400

Deferred £1 Shares.

John White, Junior	2,000	Arthur T. Salisbury Jones	5,000
John Jordan	2,000	Frederick King	5,850
E. A. Olivieri	250	Henry Frank Highton..	5,250
B. Hammill	250	Joseph Lamming	5,000
Mary Roberts	5,000	John Lamb Symon	4,600
Humphrey Roberts	200	A. T. Richardson	500
F. W. Lloyd	500		
William Roberts	22,100		

Preference £5 Shares.

Sir Thos. Isaac Birkin..	1,400	John A. Longley	800
James H. Brown	200	Lady Diana Longley ..	350
Ernest Davies and Co...	1,000	Henry John Robbins ..	350
Geo. Wm. Edmonds....	200	Mrs. Katherine White..	450
Thos. Faulkner	200	Mrs. A. T. Salisbury Jones	1,000
Col. James N. Murray	250		
T. J. Matheson.....	360		

The company was formed in January, 1905, and has a capital of £303,000, divided into £200,000 £5 preference shares, offered last November, £100,000 £1 ordinary shares, and £3,000 1s. deferred shares, the last taking half the profits after the ordinary shares have received 10 per cent. Up to the present 60,007 only of the ordinary shares have been issued, so that the interim dividend of 5 per cent. paid in November last would require £3,000 only. We ought to have the first complete balance-sheet very shortly, and the document should prove interesting. Meanwhile it is interesting to note that the London Central Motor Omnibus Company, whose affairs we overhauled recently and gave the result in our issue of July 7, refused admission to the Press at the statutory meeting held on Thursday.

Manchester Brewery Company.

The committee of shareholders appointed at the annual meeting of this company to formulate a plan for the reduction of capital, admitted to be necessary, have concluded their labours without unreasonable delay. All classes of shareholders were represented, the ordinary and 5 and 7 per cent. preference, and although, as usual with all these schemes, the outcome of the deliberations is a plan rather too favourable to the ordinary shareholders, it is probably as good a one as could be devised. Altogether a reduction of capital to the amount of £191,928 is provided for, of which the ordinary shares are to contribute £105,000 by the writing off of £7 per £10 share. The balance comes from a reduction of £4 per share on the £10 5 per cent. preference shares, the 7 per cent. preference shares being untouched as far as capital is concerned. Both preference classes, however, are asked to waive all arrears of dividend from September 1, 1904, to May 1 last, and from the latter date the 7 per cents. must accept, if this scheme is to be carried through, a cumulative dividend of 5¼ per cent. per annum, with a contingent non-cumulative dividend of 1¼ per cent. per annum, payable in each year that 6 per cent. is payable on the reduced ordinary capital, provided profits allow. In other words, these shares will lose nothing so long as profits are large enough to pay 6 per cent. on the ordinary and the additional contingent dividend of 1¼ per cent. But in any circumstances the 5 per cent. preference shares are called upon to make a slight permanent immolation. The £10 shares are to be cut down by £4 per share to £6, but the dividend is to be raised to 6 per cent., with a further 1¼ per cent. under the same conditions that are to apply to the 7 per cent. issue. That is to say, that when the 7 per cent. preference shares, or, rather, the new 5¼ per cent., get 1¼ per cent. extra, the 5 per cent., which will then be 6 per cent., are also to receive a similar additional distribution, the new 5¼ per cent. apparently having first claim. On a winding up the second or present 5 per cent. shares will rank for a return of capital at the rate of £9 per share, so that on the present basis they lose permanently ¼ per cent. in dividend and £1 per share of capital. Take it altogether the scheme is not at all a bad one, especially when compared with some proposals lately put forward by other companies, and the only thing we can suggest is that the ordinary dividend should not be allowed to go beyond 6 per cent. until a very substantial reserve has been built up, and then only on the condition that the sacrifices now made by the preference shareholders are in some form made good. Shareholders are reminded that it will be impossible for some years to resume the payment of dividends on any class of shares unless the recommendations of the committee are approved by the shareholders. It is a good sign that the committee holds about £100,000 of the capital between them, and we think proprietors will be wise to accept the scheme.

The Allsopp Amalgamation.

If the absorption of the businesses of Thos. Salt and Co., Limited, and the Burton Brewery Co., Limited, will strengthen the finances of Samuel Allsopp and Sons, Limited, then there is not a word to be said against it. It is a point, however, upon which the company's shareholders and creditors may well express doubts, however ingenious the plan hit upon to affect the fusion may be. There is to be no amalgamation

in the ordinary sense nor apparently any further re-arrangement of the Allsopp Company's capital. A trust company is to be formed which will take over the assets of the Salt and Burton companies and hold them in the interests of Thos. Allsopp and Sons, Limited, in consideration of certain payments made by that company and to be immediately specified. These assets are valued at £1,726,422, that is to say they presumably cost this or appear for such an aggregate amount in the books of the two companies, but the new trust company to be formed is to take them over at the price of £1,432,049, which means that £294,373 has been written off the capital account of the Salt and Burton companies, a quite insignificant sum we should say, compared with the real depreciation. And even this is not apparently quite wiped out since the trust company is to issue about £200,000 in ordinary shares. And what is its reward going to be? First of all the Allsopp Company is bound to pay to it an annuity of £70,000 per annum, plus a further sum during the first two years of £50,000, realisable out of the loose assets acquired, and thereafter an annuity of £7,500 per annum by way of instalment of the principal of the trust capital or assets taken over by the trust. The question therefore which the Allsopp shareholders have got to settle with themselves is this:—Will the savings effected by the amalgamation be such as to warrant the assignment of £77,500 per annum, leaving aside the £50,000 of odd moneys to be paid back out of the company's nett revenues? Economies are hinted at because it is said that the whole of the additional barrelage represented by the output of the Salt and Burton companies can be brewed at the premises of Samuel Allsopp and Sons. There will consequently be two breweries at least to close down, and the saving will doubtless be very considerable, the directors of Allsopps estimating it at not less than £100,000 per annum, besides which further items of revenue will accrue to the company from rentals, &c., to the amount of £23,000 per annum. In this way against a total estimated profit of not less than £123,000 the utmost the Allsopp company is bound to pay—again excluding the £50,000 of odd moneys—is £77,500 per annum. If this be so, why are the Salt and Burton businesses to be got so cheaply? Perhaps their businesses have been badly managed. No one can say, because very little of the truth about them is allowed to come to light, but assuming these estimates to be near the mark, it does not look as if the share and debenture holders in Samuel Allsopp and Sons are likely to lose by the transaction. As for the shareholders of Thos. Salt and Co. and of the Burton Brewery Company—do they count?

American Business Notes.

A vigorous effort to lift prices has begun again on the Wall Street Stock Exchange, and gives a certain promise of meeting with success. The credit position has improved so far as New York Associated Banks are concerned. Cash came back to them last week, and the liquidation which went on at the end of the half-year enabled them to reduce their liabilities on deposits simultaneously with the aggregate of their advances, with the result that the surplus reserve was nearly doubled during the week, being raised from £1,295,000 to £2,566,000. A year ago, however, the surplus reserve was £3,900,000, so that the position is not remarkable for its strength. New York, though, has again begun to import gold, and took all the available supply in our market last Monday. Should this absorbing power be maintained, the campaign for the rise on the Wall Street Stock Exchange begun so vigorously in the beginning of the week may continue, especially as there seems to be an extensive account for the fall open.

The National City, better known as the Standard Oil, Bank of New York, and the Treasury department at Washington have had a falling out. It seems that on June 30 the Treasury official in charge of the sub-Treasury in New York made a demand on the bank for a return of Government moneys deposited with the bank to cover gold which the bank had purchased abroad, and the bank, after appealing to the Secretary of the Treasury, obtained an extension of five days beyond the time fixed by the Assistant Treasurer in New York for the return of the deposit. The transaction dates back to May 31, when the bank asked the Treasury department to deposit with the bank $1,500,000 under the gold importation order of the previous month, which permitted banks to get United States deposits upon notifying their intention to import an amount of gold equal to the amount of the deposit. The Standard Oil Bank represented that it had purchased $1,500,000 of gold in Australia, and asked for a Government deposit of that amount to remain until the gold reached the United States. Prior to this request the gold import order had been revoked, but the Treasury officials say that no notice of it was given to the banks. It is now stated that in neglecting to notify the banks the Treasury people admit they were in error. One in an important position said that the City National Bank, when making its request, was told that the order had been revoked, and that its representative had expressed himself as greatly surprised, as the bank had bought the gold in good faith, believing the order was still in force, and would lose the benefit of the money during the period the gold was in transit from Australia unless the Treasury made the deposit. About the same time on the same day the Chase National Bank of New York inquired if the Treasury would make a deposit equal to an amount of gold it contemplated importing. In the absence of the Secretary of the Treasury in the west, the Assistant Secretary decided, in view of the circumstances described in connection with the City National Bank, that the other bank's request should be granted. On his return to Washington, the Secretary approved the action of his assistant. Then came the question as to the date when the indulgence allowed the City National should cease. The Treasury estimated that as the gold should arrive on July 2 at San Francisco the deposit should be withdrawn on that day, but the bank protested that it should remain until July 7, the gold having been shipped to Vancouver, where it could not arrive before that date. After a good deal of telegraphing between New York and Washington the bank carried the day. The result is much mystification all round, some holding that the Treasury is unduly favouring the City National, and others that the City National is in for bad times as, despite its representations against the method of issue of the $30,000,000 Panama Canal bonds, unless the Treasury aided the banks in bringing gold from abroad, the issue has been announced. "Rebuff to the City Bank," is the heading of a report in a paper under the influence of a well-known financier.

The warm weather that has been prevailing in the United States is probably responsible for the revolt against the local ice trusts, and for the severity of the action of the Courts against them. The 13 ice dealers in Philadelphia upon whom warrants charging them with conspiracy to raise the price of ice were served waived a hearing on July 2, and were held in $1,500 each to answer in Court. The three lawyers in Toledo, Ohio, who defended the icemen recently sentenced in that city for conspiracy filed a motion charging the judge who presided at the trial with misconduct. They were brought up before the same judge for contempt of Court on July 2 and sentenced, two to 10 days each in the county gaol and the other to a fine of $250. The sentences were suspended to give them an opportunity to show the Circuit Court that their charges were true. They are among the most prominent lawyers at the Toledo bar.

The total immigration into the United States for the year ending June 30 last was 1,027,421, of which the port of New York received 850,000. Of the total, more than 25 per cent. was furnished by Austria-Hungary, principally Hungary; Italy came next with a little under 25 per cent., and Russia third with about

17 per cent., mostly Jews. About one-third of the immigration from the United Kingdom was Irish, and the Scandinavian countries gave among them 60,625.

A full convention of the New York State Bankers' Association opened at Bluff Point, New York, on July 5. The president, Mr. Alfred H. Curtis, in his annual address, said that it was apparent to every banker that the American currency laws needed revision, and that the reform of the currency was to-day the all-absorbing topic of nearly every bankers' convention. He expressed the hope that before another year had elapsed some definite action might be taken by the National Association or by the State Associations acting in unison, for no country could be considered civilised financially where a rate of 125 per cent. for loans at any time was possible. He recommended that all banks of discount and deposit, by whatever name they might be called, should be placed under the same law. This was with reference to a new law known as the Trust Company Reserve Act, which went into effect April 27 last, which, however, he said, was imperfect, but was expected to be improved at the next session of the State legislature.

Mr. Frank A. Vanderlip, vice-president of the City National, or Standard Oil, Bank, who was one of the principal speakers, spoke on "The Currency." He declared that the currency problem in the United States was far from settled, and that it was the duty of the New York Association to take the lead in a consistent movement for the betterment of conditions. There were few enactments, he said, in relation to money that have not been the outgrowth of some financial calamity, and traced the greenback and national bank-note back to the civil war. Financial legislation in America had been merely opportunist, and when misfortune pressed legislation had been characterised by more haste than wisdom. Comparing the pulse-beats of a patient in fever to the state of the money market, he said that the alternating periods of 100 per cent. and 2 per cent. in Wall Street were just as certain indications of a deranged financial system as the register of 103 in a clinical thermometer was of physical disorder. But the trouble, he said, was not in Wall Street, but is fundamental and inherently related to the unscientific currency laws. "The fundamental causes which lead at one time to manifestations of high rate, at another to abnormally low rates, that bring periods of stringency followed almost in a day by periods in which funds accumulate more rapidly than they can be wisely employed—the fundamental causes of such changes are," he regarded, "dangerous to permanent prosperity." Repeating his demand for scientific legislation, he reiterated his warning of disaster unless something was done to render the currency elastic, and the recognition of the fact that there is no essential difference between a bank credit in the form of a deposit and a bank credit in the form of currency. He did not propose any particular plan at present, but urged discussion of the subject, and pointed out the responsibility laid especially on the bankers of New York to lead in the reforms so urgently needed if disaster is to be averted. He favoured an asset currency with adequate redemption facilities, and believed a plan could be devised which would safely permit every national bank to issue a certain amount of notes not secured by Government bonds. Along that line, he thought, legislation was most likely to be obtained, though it might not be exactly the ideal solution. The difficulty, however, in the financial as in all other subjects requiring ideal solutions in America appears to be to find ideal men to send to Congress and State legislatures to pass the ideal laws; and then to find the ideal men to put them into execution, backed up by ideal borrowers and automatic lenders.

A prosecution against the Standard Oil Company and Mr. John D. Rockefeller was entered by the Prosecutor of Hancock County in the State of Ohio in the Probate Court on July 5. The charge is one of conspiracy against trade and a violation of the anti-Trust law. The Standard's lawyers, in reply, filed a motion to the effect that the Probate Court had no jurisdiction, but the probate judge ruled that he had, and the case will go on.

On July 5 the New York Life Insurance Company's management named the ticket which it will present to the policy-holders at the election next December. With the exception of the president, Mr. Orr, none of the officers of the company who are now members of the board of trustees is on the list. It is expected that the Mutual Life management will name its candidates in a few days, and the international policy-holders' committee will have met later to name its opposition tickets in each company. From the fact that there are so many new men on the list of the New York Life, 11 new men out of 24, it was conjectured in insurance circles that the management was thoroughly alarmed over the movements of the policy-holders. As regards foreign business, the Mutual has decided to withdraw from France, and the Equitable is considering the matter, while the New York Life has referred the matter to the finance and office committees for definite action.

Honolulu advices of June 25 state that the sugar crop of the Hawaiian islands now being marketed will be in the neighbourhood of 400,000 tons. After next month it is probable that no more Hawaiian sugar will be sent to market by the Cape Horn route. The last of the round the Horn sailing vessels and the steamers taking the Straits of Magellan will have been despatched by the end of August, and all of next year's crop destined for the Atlantic coast of the United States will cross Southern Mexico by the Tehuantepec route. For the last fifty years sugar has been sent from Hawaii round the Horn in ever-increasing quantities, and up to about seven years ago all of it was shipped in sailing vessels. At that time the American-Hawaiian Steamship Company put on a line of steamships and began carrying it through the Straits of Magellan to Philadelphia and New York.

It will come as a surprise to many to learn that the United States should be importing railway sleepers from Japan, but such is the case. Mr. E. H. Harriman, who has a concession from the Mexican Government for the building of a railway some 700 miles in length in the States of Sonora and Sinaloa, to connect with the Southern Pacific on the southern border of Arizona, has contracted for a large supply of sleepers in Japan. One contract is for 1,500,000 at 56 cents each in gold, to be delivered at the port of Guaymas on the Mexican coast in the Gulf of California. The wood is very hard, and is said to be well adapted to the climatic conditions in that part of Mexico.

In connection with the troubles at the mining camp of Cananea in the Mexican State of Sonora, near the American border, a few weeks ago, the Mexican Government has decided to put a stop to further filibustering attempts by establishing a permanent garrison of 1,000 rural guards there. Private letters state that the reports published in the Eastern United States papers describing the trouble as being caused by labour agitators were devoid of foundation, and that it was purely a plan to get United States troops into the locality with the object of seizing the territory.

The members of the international committee for the New York and Mutual Life Insurance Companies' policyholders met at the Waldorf-Astoria Hotel in New York on July 9 for the first time. All but four of those who had consented to act on the committee were present, and included several governors of States, Supreme Court judges and members of the State Legislature. It is to be noted that Cardinal Gibbons of Baltimore, who was among those named on the committee at the start, withdrew on the plea that he had no time to attend and was not acquainted with insurance matters. Some of the members are taking so much interest in the objects of the committee that they have procured copies of all the reports on the scandals that began with the exposures of doings in the Equitable a year ago. The attempts to obtain

complete lists of the policyholders of the Mutual on the part of the Policyholders' Association have been unsuccessful, Mr. Peabody, the president of the company, refusing for legal reasons, as also on the score of inexpediency.

The meeting was held with closed doors, and lasted four hours. After preliminaries, Mr. Richard Olney, who will be known in England as Mr. Cleveland's Secretary of State at the time of the Venezuela trouble between the American and British Governments, was nominated to the chairmanship. Mr. Olney having alluded to the enormity of the disclosures made in the Armstrong inquiry, said that the time for reform had come, and that great responsibility would rest on those undertaking to carry it out. Suggestions were made by some of the others present, after which it was decided to form an executive committee to take charge of the campaign. The following gentlemen were selected:—Ex-Judge Parker, Democratic candidate for the Presidency in 1904; Governor Johnson, of Minnesota; Chas. Emory Smith, formerly Postmaster-General; H. N. Higginbotham, of Chicago; Governor Pennypacker, of Pennsylvania; Governor Roberts, of Connecticut, and Colonel A. M. Shook, of Tennessee. It was decided that the executive committee should have no power to take initial action, and that all its acts must be approved by the full committee, which can be called together on ten days' notice. Lord St. Oswald and Mr. Harmood Banner, M.P., were added to the committee on behalf of the British policyholders. The meeting then went into a full discussion of the situation, which resulted in an address which had been drawn up by a committee reciting the various abuses which had sprung up in the past in regard to proxies being issued to the policyholders. The most salient passage in connection with that subject was the one pointing out that the self-appointed directors are still in control, and will remain so, or indirectly through their nominees, unless the policyholders in their own interest decide otherwise. The nominations for new directors will in due course be submitted to the policyholders. The executive officers of the committee are:—Mr. Olney, president; Mr. Samuel Untermyer, general counsel; Mr. Seymour Eaton, secretary; and Mr. G. R. Scrugham, organising manager.

The City National, Standard Oil, Bank and the United States Treasury have been again at odds owing to the failure of the former to restore the $1,500,000 deposited by the Treasury against an import of gold from Australia, which reached Vancouver on July 7, to which day an extension of time had been granted from July 2. The dispute, the details of which are given at some length in several of the New York papers, appears to have been confused by issues showing neglect or an indisposition to enforce the regulations against a powerful corporation. One paper bluntly asserts that it was only on the intervention of Mr. Roosevelt that the Standard Oil Bank was ultimately made to conform to the terms it was obviously trying to evade after having got the full benefit of the Treasury's indulgence.

On June 9 the Secretary of the Treasury, Mr. Shaw, issued an appeal to the national banks to assist the Government in supplying the pressing demand of the public for notes of small denominations by issuing as much of their circulation as possible in five-dollar bills. In his letter he points out that while their aggregate outstanding circulation is a little over $500,000,000, of which one-third might be in five-dollar notes, actually only about $76,000,000 of bills of that denomination are out. He also shows that there is a greater profit in keeping bills of a low denomination out, and urges that national banks should only pay out national bank notes over their counters, which should be kept in circulation until no longer fit for use, when they may be sent in for redemption. "National bank notes," he says, "are intended for use, not for holding. They are not available for reserve, and are valuable only when in actual use. Please use them, and do not send them in for redemption until unfit for use. They are just as secure, just as safe, just as convenient, and just as acceptable to the people, and their use leaves other forms of money available for reserve."

Passing Events.

The contention of the Trustees, Executors, and Securities Insurance Corporation board, with reference to the Lord Chancellor's Bill to appoint a public trustee, seems to us reasonable. Probably there can be no objection to the creation of this new Government department, with its staff of officials, but at the same time nothing ought to be done to hurt those independent joint-stock companies which, of their own initiative and at considerable expenditure, as well as amid no small discouragement, have already endeavoured to provide an efficient system of trusteeship for the public. The directors of the Trustees, Executors Co. do not wish to oppose the Government Bill, but they plead that their company and others who have entered into the business of public trustee ought not to be handicapped against the State official. Therefore, they suggest that several of the disabilities under which the joint-stock companies acting as trustees now labour should be removed. A company, the board suggests, should be free to obtain probate in its own name, to be appointed joint executor with an individual, to be appointed as trustee under existing trusts, to be at liberty to act as trustee under the Bankruptcy Acts, &c., and to make charges for its services. These demands seem to us reasonable enough.

The tyranny of the white man is doubtless abominable enough in the Congo Free State belonging to the King of the Belgians, but it hardly seems graceful or appropriate for us to denounce the atrocities of his administrators, while tales of massacre like that told by the soldier in a letter published by the *Tribune* can be instanced to our shame and dishonour. If these butcheries are only one-tenth part true, the whites of Natal ought to be deprived of self-government.

A correspondent sends us a circular issued by Lever Brothers, Limited, which, as he suggests, may explain why the capital of the company has been increased recently to such an extent. The circular briefly intimates that the business of Messrs. Hodgson and Simpson, soap makers, of Wakefield, will, in accordance with the arrangements entered into, be carried on in future conjointly with the business of Lever Brothers proper. There is to be no immediate change in the management of the respective businesses, but presumably this is the first step towards amalgamation. Was the new capital required in part to effect this fusion of interests? Not necessarily since the businesses are not yet fused.

This week's *Truth* has a very wholesome article upon the management of the railway bookstalls on the London and North Western and Great Western lines taken over at the new year from Messrs. W. H. Smith and Sons by Messrs. Wyman and Sons, Limited. In a small way we have had a sort of grievance against the new newsvending firm in that it has apparently completely boycotted The Investors' Review. This would be quite intelligible if it were true that the capital, or a considerable part of the capital, invested in the undertaking had been found by the Harmsworth brethren, but our fate is a matter of quite minor importance. What *Truth* complains of is that again and in another way the Harmsworth interests are being furthered at the expense of newspaper owners in general. Some months ago the *Daily Chronicle* unearthed a circular issued by Wyman and Sons, Limited, to their employees asking them to make every effort to push the sale of four London daily newspapers, including two Harmsworth papers. This circular was withdrawn, and in a manner apologised for, but in its place came the boys attached to the bookstalls with the name of the *Daily Mirror* embroidered on the sleeves of their jackets, and when *Truth* drew attention to this curious outcrop of advertising energy, the excuse was made that it seemed to the new bookstall-keepers quite legitimate to give a customer a little lift in this fashion. All

this would seem to indicate that Wyman and Sons, Limited, know nothing whatever about fair play in dealing with the newspapers, and that they really are to some extent a branch of the great Carmelite newspaper owning and starting and stopping brotherhood. Is it not about time for the boards of the two railway companies interested to look into the management of those bookstalls and to see whether the terms of the contract entered into by them with Messrs. Wyman and Sons are being fulfilled? It cannot possibly be a good thing for the revenues of the railway companies from their bookstalls that this method of doing business should be allowed to prevail.

We rejoice to see the new Reform Club pegging away at our peace waste on preparation for phantom wars that never come and never could come now under modern conditions, and between the giant Powers of Europe. A public meeting was held by the club at the Westminster Palace Hotel on Thursday evening, presided over by Mr. Shaw Lefevre, at which speeches were delivered by Mr. T. M. Robertson, M.P., Mr. Hirst and others, and resolutions carried urging the Government on in the direction taken by Mr. Haldane. He has made a beginning, but only a beginning, and we wait with lively interest to see what the Department presided over by Lord Tweedmouth is prepared to do. Will the Ministry have courage, and so redraft the building programme as to bring the country back to the "two-power standard"? Or will it allow things to drift at home as Lord Elgin is letting them drift in South Africa, placidly waiting for the deluge of insolvency which is bound to come at the end and sweep all away?

Well done, John Burns! Will those City gentlemen who have been bemoaning and blaspheming, blaming the Government for all the woes bred of their own wild finance ever since the present Government was formed, please say what there was of the revolutionist in his speech about the unemployed on Thursday evening? They should moderate their language, lest some of them may have to go and ask him for a job.

According to the *Financial News*, which appears to have got the information at second-hand, Dr. E. Jorissen, consulting engineer to the Farrar combination, is now exhaustively investigating what is called a new pyritic footwall band, which has been found in several outcrop mines in the Central Rand. No doubt, the expert will find it an interesting occupation, but the results of his self-imposed labour will, we fear, benefit in no wise the ruined holders of Kaffir shares. In the past two or three years several new discoveries of reefs have been reported, notably the Coronation Reef, but these have only multiplied the losses suffered by shareholders and others. The most beneficial discovery would be that of honesty and fair dealing on the part of the mine bosses, but there is little likelihood of a new source of profit being discovered here. If the bosses think new finds, pyritic or otherwise, will stimulate public demand for Kaffir shares, they will again be disappointed. Wittingly or unwittingly, they will not see the true cause of the lack of confidence in themselves, of the universal and ever-widening disgust with them and their unscrupulous methods. The public know well enough that fresh discoveries, be they the richest reefs ever found, will neither change their characters nor their self-enrichment schemes, nor even improve the value of the ore in the poorer reefs now being worked.

On Tuesday afternoon last shareholders in the Gold Mines Investment—the Consolidated Gold Fields Trust—had to listen to a lugubrious speech from the chairman, Mr. J. Prinsep. As we pointed out last week in our analysis of the accounts, the directors had to write down investments, which cost £941,357, by £414,661. "A heavy loss, gentlemen, but there was no alternative," was the stoical admission. These so-called "investments" are distributed to the extent of 91 per cent. in the Transvaal, only 3 per cent. in the wilderness of Rhodesia, and 6 per cent. in other parts of the world, and, of course, the major portion of the holdings were in members of the Gold Fields group. But what we were most anxious to hear was a wiseacre's explanation of the cause of the prolonged Kaffir depression. "Mistrust and want of confidence" was Mr. Prinsep's opinion. We agree. But when he proceeded to say it was mistrust in the present Government he is retailing a terminological inexactitude. For the depression commenced a year or two before the present Government came into power, and this company's losses were synchronous with the existence of a Conservative Government. But the bosses, deep in their hearts, know differently—know they are no longer regarded as the friends of any but themselves. This throwing of dust in the eyes of the public blinds no one. Facts are too stupendous to be so easily hidden.

New South Wales is diligently feeding us up with pleasant statistics of the country's progress, and its Government is quite right. A recent Reuter's telegram, dated Sydney, July 13, tells us that the total value of the production and industries of the colony in the past year was £46,692,000, or £31 11s. 6d. per head of the population, and an increase of £7,300,000 upon the total for 1904. The pastoral industry yielded £17,113,000; other primary industries, including wool, £12,103,000, the largest value ever returned for any year, although the quantities were exceeded in eight previous years. Mining and agriculture gave upwards of £6,500,000 each; dairying, £3,123,000; forestry, £1,190,000; and other industries £1,228,000. These figures are very pat and nice, but we should like to know how they are arrived at. Do they include the private consumption, what the farmer and the squatter with their hands and dependants make or sell, or only the goods that come into the general market? The information is also added that the wages paid last year were about £180,000 more than in 1904 at £5,191,350, the value of the work done being £30,028,150 against £27,159,230, which is also very neatly rounded off.

There cannot be any crisis in Russia worth speaking about if the figures put forth by the bureaucracy about the revenue are to be relied upon. According to a statement recently issued the income for the four months ended with April in this year was £68,860,000, as against only £62,580,000 in the same period of 1905, and the revenue derived from the Amur territory, Sakhalin, and from foreign bankers is not included in this sum. Every month shows some increase compared with that of the previous year, and we wish we could believe this statement to be true, but until the Duma gets control of the finances, and can audit the accounts of revenue and expenditure, we must continue to have doubts.

Thousands of people in this country who have never seen General Picquart, and are never likely to see him, will join heartily in the congratulations offered to him on his restoration to his rank in the army and promotion to the command of one of the divisions in Paris. To some extent he won our sympathy more fully even than Captain Dreyfus, whom we never believed to be guilty. Captain Dreyfus has also been vindicated, the iniquitous sentences passed upon him quashed, and his name restored to the army, with an advance in rank, but nothing can ever compensate him for the abominable cruelties to which he was subjected at the hands of a fanatical and unscrupulous military faction. It is a happy augury for the future of the French Republic that the vindication of these men should have been so complete and so calmly accepted.

Critical Index To New Investments.

Havana Telephone Company.

This is a New Jersey company, with a capital of $5,000,000 in stock and a similar sum in 5 per cent. first mortgage debentures, which owns or controls 20-year exclusive concessions in the city of Havana and its neighbourhood. At present only $1,200,000, or £246,250, of this stock has been issued, and an equal amount of debenture stock having been guaranteed by Messrs. F. J. Benson and Co., is offered by them for

subscription at £19 18s. 1d. per $100, or 97 per cent. Of the proceeds, $500,000 will be used to redeem outstanding 6 per cent. bonds, and the balance is required to meet outlays on the installation of a new plant, to take the place of the antiquated system now in use in Havana. In 1903 the nett profits, before providing debenture interest and sinking fund, were £10,217, by 1905 they had risen to £21,219, and for the current year it is estimated that they will reach £25,651, while in 1907 a nett revenue of £51,302 is expected to accrue as the result of the present expenditure. A sinking fund is to be established as from January 1, 1909, by the payment to the trustees in England of an annual sum of £9,530, to be applied in redemption of the bonds, by drawings at par, or by purchase in the market at or below par.

Chilian Transandine Railway Co., Limited.

Tenders were invited by the Chilian Government in 1903 for the construction of a one metre gauge railway from the city of Los Andes to the summit of the Cordillera, where it was to unite with the line from Mendoza, in Argentina. The Transandine Construction Company obtained the concession, and this company has been formed, with a capital of £1,500,000, divided into 5,000 ordinary and 70,000 6 per cent. cumulative preferred shares of £20 each, to acquire the undertaking. Of these, the ordinary shares were issued as the price of the original concession, and 44,988 preferred shares, together with the £1,500,000 of debentures authorised, are paid over for the construction and equipment of the line. The first section of the line has been completed, and £678,100 5 per cent. Series "A" debentures, constituting the first of three series for a total amount not exceeding £1,500,000, were offered for subscription at 90 per cent. by the London Bank of Mexico and South America. Interest on these bonds is unconditionally guaranteed by the Chilian Government for 20 years, and the bonds are secured by a specific first mortgage on the constructed section, as well as by a charge on the whole undertaking of the property.

Temiscouata Railway Company.

The Bank of Montreal is authorised to receive subscriptions at par for £50,000 5 per cent. prior lien bonds of this company, which are issued to provide funds for improving the condition of the line and the rolling stock. In December, 1900, the control of the railway was secured on behalf of the original bondholders by the Temiscouata Railway Bondholders' Committee, Limited, and since then its working order and condition have been greatly improved. The president, Mr. Frank Grundy, of the Quebec Central Railway, states that the gross earnings for the year ended June 30, 1905, were $145,351, and the nett $23,108, while for the nine months to March 31 they were $114,184 and $18,201 respectively. Working expenses during these periods were swollen by the necessity of meeting expenditure on the line and rolling stock out of revenue, through lack of funds, and in 1905 some $17,000 was spent in this way, which in ordinary circumstances would have been charged to capital. Mr. Grundy is very hopeful for the future, and mentions that a good freight traffic may be expected from the new sawmills now being erected at points on the line and from the new industry of shipping pulpwood to the United States. Even now, however, the line seems to be earning enough to ensure the payment of the interest on these bonds.

The Cornish Tin Properties, Limited.

The nominal capital of this new Cornish company is only £20,000 in £1 shares, 15,000 of which are offered for subscription, 3,000 are held in reserve, and 2,000 are issued as fully paid. It has been formed to acquire in a general way leases and options to purchase tin mines in Cornwall, also shares in other companies. Already it has secured, on favourable terms, so the prospectus says, the option to acquire mining rights over a property known as Trebell. Some development work has recently been done here, and the directors are advised that active operations can be commenced almost immediately, without having to spend a large amount of capital in pumping and drainage. Later on a subsidiary company will be formed to provide the requisite capital for the erection of machinery, &c. Other options are likewise under consideration, and the company may possibly make a success of it in the future. In order to get the earliest possible knowledge of new discoveries and operations, as well as practical advice, the directors have formed an advisory committee of experienced engineers, and perhaps good may come of it.

The Pahang Consolidated Company, Limited.

This company, as intimated a few weeks ago, has been formed to work on a more extended scale than hitherto the mining rights and properties of the Pahang Corporation, a concern that has been a lamentable failure. The authorised capital is £250,000, divided into 100,000 preference shares of £1 each and 600,000 ordinary shares of 5s. each. The preference are preferred as to capital, and will be entitled to a dividend of 7 per cent. per annum, to be cumulative from July 1, 1908. After 10 per cent. has been paid on the ordinary shares in any year, the preference will rank *pari passu* with these up to 15 per cent., but it is extremely doubtful, judging from the past, if such distributions will ever be possible. Of the ordinary shares, 414,000 are offered for subscription at par, but no preference shares are issued, the purchase consideration to be satisfied by 54,500 fully-paid preference shares and £9,000 in ordinary shares. It cannot be said the shares look very attractive.

The Middleburg Steam Coal and Coke Co., Limited.

With a capital of £175,000, in 65,000 5 per cent. cumulative preference shares of £1 each and 110,000 ordinary £1 shares, this company has been formed to take over the Middleburg Steam Coal and Coke Co., situated about one and a-half miles from the Witbank station, in the Transvaal. It is intended with the new capital to enlarge the plant at the colliery capable of raising the output to 40,000 tons per month. At the same time, it is hoped to decrease the working costs. The purchase price has been fixed at £147,650, payable as to £130,000 in equal proportions of fully-paid preference and ordinary shares and £17,650 in cash, this being the amount necessary to redeem the outstanding debentures, with premiums and interest, of the vendor company. Competition amongst the ever-increasing number of coal companies in all parts of South Africa is now so keen, whilst the demand is so sluggish, owing to the prevailing depression, that it is a great risk to invest in the shares of such.

Kingsdyke (Peterborough) Brick Company, Limited.

In an unlucky hour some general remarks on the Peterborough brick-making in the *Daily Chronicle* came under the eyes of the promoters of small companies, who have endeavoured to utilise them for pushing their wares. Last February, the East Peterborough Brick Company, Limited, was flaunting an extract from that article in its prospectus, and is now repeating the same tactics in connection with a little subsidiary it is endeavouring to float. This new concern has a nominal share capital of £10,000 in £1 shares, but only 3,000 are to be issued to the vendors, with £6,000 in cash or debentures for the brickfield handed over. What other capital is needed is to be raised by an issue of £10,000 in 1st mortgage debentures bearing interest at 10 per cent. per annum, and redeemable at £11 10s. per £10 debenture by 14 half-yearly drawings, subscribers to which will be given a bonus of one share for each debenture by the vendors. The prospectus is in many respects a duplicate of the East Peterborough Company's document, and even the statements regarding profits are reproduced, although the East Peter-

borough Company has surely learnt from its own experiences some of the secrets of the trade which are so "jealousy guarded."

Friswell (1906), Limited.

Originally established in 1896 to deal in cycles and accessories, the old company eventually turned its attention to motor cars, and is now selling its business to a new company. As a first step, 20,000 ordinary and 19,900 preference shares of £1 each, out of a total capital of £40,000, were sold to Mr. Ernest Schenk for £75,000 cash, although the reason for this deal is not apparent, as the old company figures as vendor in the sale to this company for £107,500, payable as to £82,500 in cash, and as to £25,000 in ordinary shares, of which £72,500 represents goodwill. The capital of the new undertaking is £150,000, divided into 60,000 6 per cent. cumulative preference and 90,000 ordinary shares, and 50,000 of each class having been underwritten for £7,500 in cash are offered for subscription. Profits for the 15 months to December 31, 1903, this period including the establishment of the auction department and the concentration of the business at Albany Street, N.W., were approximately £20,600, and for the two years to December 31, 1905, £17,176 and £17,567 respectively. No valuation is given of any property handed over, while on the profits shown the price put upon the goodwill of the business seems outrageously high, and this, with the large proportion of the purchase consideration asked for in cash, should be sufficient to cause investors to leave the offer alone.

Rosario Electric Co., Limited.

An issue of 15,000 6 per cent. cumulative second preference shares of £5 each being part of 20,000 shares authorised is offered for subscription at par by this company, which has been in existence since April, 1902. The company has the right of supplying current for private lighting in the City of Rosario, Argentina, for 50 years from 1902, as well as a provisional contract for the public lighting, and at present the power station has a plant with a capacity of 1,160 kilowatts, which is now being increased to 1,660 kilowatts, by the erection of additional machinery. During the period from June 30, 1903, to April 30, 1906, the number of consumers increased from 544 to 1,857, and the number of 8 c.-p. lamps installed from 19,253 to 88,395, while the nett revenue rose from £3,638 in the year ended June 30, 1903, to £11,292 for the 12 months to June 30, 1905, and for the 10 months to April 30 last it is estimated at £17,595, these figures being subject to any allowance made for depreciation. Holders of these second preference shares will have the right at any time prior to January 1, 1917, to convert them into ordinary shares on giving the company one calendar month's notice. When the directors issued 8,000 first preference shares last year they were able to get them underwritten for a commission of 5 per cent., whereas on this occasion they have had to pay 5½ per cent., but then the new shares are only a second rate security with none too large a margin behind them.

Cleveland and Durham Electric Power, Limited.

This company proposes to develop the supply of electric power in Cleveland and the County of Durham and in certain districts in Northumberland on lines similar to those adopted by the Newcastle-upon-Tyne Electric Supply Co. and the County of Durham Electric Power Supply Co. on Tyneside. With this object over 99 per cent. of the shares in the Cleveland and Durham County Electric Power Co., and the majority of the shares in the Northern Counties Electricity Supply Co. have been acquired. The total capital of the new undertaking is £1,000,000 divided into 70,000 5 per cent. cumulative preference, 70,000 6 per cent. participating ordinary, and 60,000 deferred shares, all of £5 each, and the first two classes are offered for subscription. Out of the proceeds £190,100 will be paid in cash or shares to the Northern Counties Co.'s shareholders, £110,000 will be used for temporary loans and other liabilities of that company, and £32,000 for liabilities incurred by the Cleveland and Durham County Co., leaving £367,900 for further development, expenses of the issue and working capital. The share capital of the last-named company is £1,000,000, of which £216,580 has been issued, together with debentures for £70,853, and holders of over 99 per cent. of the shares have agreed to accept deferred shares of the same total nominal amount. In addition, claims of creditors amounting to £105,733 have been purchased for 16,220 deferred shares and £27,228 in cash, making a total of 59,408 deferred shares to be issued. By thus buying up concerns which have already reached a certain stage of development the company expects to escape the usual difficulty of having to do a small business at a relatively high cost, and it is estimated that during the years 1907-9 the profits should increase from £24,360 to £52,800, which the directors claim should enable them to earn sufficient from the commencement to pay the full preference dividend with a gradually increasing dividend on the ordinary. The area to be served is both large and important, with plenty of opportunities for doing a good business among power-users of all kinds, and, so far as we can see, there is little reason to doubt that the company will do well if wisely managed.

Sun Gas Co., Limited.

Out of a share capital of £235,000, divided into 170,000 ordinary and 65,000 5½ per cent. cumulative preference shares of £1 each, 100,000 ordinary shares were issued in November last, and the remaining 70,000 ordinary and all the preference shares are now offered for subscription. The money is required for the extension of the business by the installation of an additional factory for the production of carbide of calcium at Hardanger Fjord, and to secure 39,000 shares out of a total capital of £120,000 in the North-Western Cyanamide Company. That company is to manufacture a new fertilising agent, and will enter into a contract with the Sun Company to purchase during a period of 15 years all the carlide of calcium required for the manufacture of cyanamide with a minimum quantity of 10,000 tons per annum. It is estimated that the profits accruing to the Sun Gas Company from this source will amount to £13,300, while the Norwegian factory is expected to produce £80,000, and the company's interest in the Ally Carbide Factory another £19,380, making a total revenue of £112,680. All this, however, is in the air, and it would have been much more satisfactory if the directors had said something about results achieved with the present plant. Instead of doing anything of the kind they have paid an underwriting commission of 5 per cent. and an over-riding commission of 2½ per cent. on the shares offered.

Woolley, Sanders and Co., Limited.

A further considerable decline took place in the profits of this company for the year ended June 30 last. Nett revenue on the trading account was only £9,071 compared with £10,219 in the previous twelve months, making the third successive year that the income has shown a shrinkage. There was, however, an increase of over £2,000 to £6,860 in the balance brought forward making £15,931, so that after providing £663 for directors' and auditors' fees and income-tax the directors provide £2,500 for the preference dividend, again pay 10 per cent. on the ordinary shares, and further advance the carry forward to £7,768. This means a distribution of profits somewhat less than the nett earnings, but the position hardly justifies such a high rate of ordinary dividend. Not at least so long as the reserve is continually ignored as the only accumulations possessed are a special fund of £5,000 as security for the preference dividend and an indivisible account of £341, apart from the leasehold sinking fund of £841. Most of these reserves are separately invested. Property and goodwill have again increased a little to £70,966, and it would be well if the actual additions and deductions for depreciation, if any, were clearly shown. Otherwise the balance-sheet is fair as only £10,178 is due to creditors against which debtors amount to £33,657, bills are held to the value of £2,577, and the cash balance of £8,351 is more than sufficient to provide the dividends.

Letters to the Editors.

SIRS,—I have not pestered you with my sign manual of late. The article entitled "Conscription" in the last number of THE INVESTORS' REVIEW has given me a fit of the *cacoëthes scribendi*.

You call conscription and the provisions connected with it "an intolerable form of tyranny." Have you duly considered that these are deliberately sanctioned by the laws of the land in a country which has a far wider extension of the suffrage than Great Britain? To assume that Englishmen would not put up with such law is futile, or, better still, beside the question, as the conditions of national existence in England and Germany are widely different. If England were equally exposed to attack from all points of the compass as Germany is, surely Englishmen would not hesitate to submit to similar restrictions. But there are still a few items which Englishmen put up with which Germans would not tolerate. Among these are the following:—

Germans would not put up with the English licensing laws, under which a man is turned out of a restaurant at three o'clock on Sunday afternoon, and not allowed any refreshment until past five o'clock, an enactment worthy of a population on the sociological level of negroes. Germans would not tolerate our lax administration of our inadequate adulteration laws, which allow of the "poisoning of the proletariate." Germans would not submit to the English land laws which have gradually brought it about that the vast majority of Englishmen are little better than landless helots.

Even with regard to Army matters there are a few items which are tolerated in England but which are not allowable in Germany. One of these is that in England men are enlisted without any testimony as regards character, a state of things not allowed even in the land of license, the United States. The consequence is that gaol-birds are accepted as soldiers in the British Army, whereas in Germany a penal offence, which carries with it loss of civic rights, debars a man permanently from the *privilege* of serving his country in the capacity of a soldier. The consequence is that throughout Germany it is considered a honour to be or to have been a soldier—a social distinction—whereas in England soldiers are, and always have been, social pariahs, who are not allowed to enter restaurants or go to theatre places, &c., in uniform! The scum of the earth, Wellington called them, whereas even in Blucher's time the Prussian soldiers who helped to win Waterloo were the *pick* of the nation, mentally, morally, and physically. *Voici la difference!* Beside such a fact it is scarcely worth while recording that, whereas the percentage of syphites in the German Army is about 2 per cent. (I write from memory), in the British Army it ranges between 30 and 40 per cent!

The mistake we make in England is to confound the moral essence, let me say the moral basis, of the German National Army with the offensive excrescences of militarism typified in the person of that Imperial shouter, the German Emperor.

Yours sincerely,
S. W.

London, W., July 16, 1906.

BEIRA RAILWAYS.
DEBENTURE HOLDERS' COMMITTEE.

SIRS,—May I appeal through the columns of your widely circulated journal to all debenture holders who have not already done so to register their names and addresses with my committee?

I am constantly finding bonds lodged with my committee's bankers by debenture holders of whose existence I was not previously aware, and I am afraid there are still many more whose names are not on my register, and with whom consequently my committee cannot communicate.

May I also appeal to all supporters of my committee to lodge their bonds without delay.

I will gladly supply the requisite printed forms to any debenture holder who will send me a postcard.

Although the number of bonds now deposited far exceeds any that have been deposited at any time previously, I am constantly hearing of old supporters who have sold their debentures, and as they are all bearer bonds I cannot trace the present holders.

Under these circumstances it is most important that all supporters who can do so should lodge their bonds in ample time for the forthcoming meeting, the date of which will be fixed by the trustees almost immediately.

Your obedient servant,
J. H. DUNCAN,
Chairman of Committee.

39, Coleman Street, London, E.C.,
July 19, 1906.

Answers to Correspondents.

OLIVE.—(1) We think you are alarming yourself needlessly, but even should such a calamity happen the institution you name would probably be safer than most of its kind. (2) Under the suppositious circumstances put forward you would be better here than across the Channel, and probably safest of all on the other side of the Atlantic.

S. B. W.—No. 1 is a very fair security, but as to the probability of an appreciable increase in value within the next three months, we should not like to predict a rise in anything while present market conditions prevail. No. 2 seems to us to have had quite as large an improvement as its prospects warrant. In any case, it is not the most likely of the company's issues to advance.

TIMOTHY.—You might see it through now. The line is not yet working, and may do well enough while the reputation of the firm behind the guarantee for fair dealing with the public stands very high.

T. C. W.—If you mean to buy the stock outright there is a chance that you would see a profit on your purchase within the next 12 months.

J. R. T.—You have evidently not studied our rules, or you would not be so unreasonable as to expect us to compare the merits of 11 different securities and select the "soundest and most desirable investment" for 1s. The task is too great, and we must decline to undertake it.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and July 14, 1906:—

REVENUE AND OTHER RECEIPTS.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended July 14, $3,332, increase $58.

Argentine North Eastern.—Traffic receipts for week ended June 15, $24,720, increase $10,609; aggregate from January 1, $454,341, increase $28,814.

Assam Bengal.—Traffic receipts for week ended June 16, Rs. 79,947, increase Rs. 23,802; aggregate from January 1, Rs. 16,83,471, increase Rs. 2,83,348.

Canadian Northern Railway.—Traffic receipts for 9 days ending July 14, $135,700, increase $43,900; total from July 1, $273,900, increase $98,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended June 16, Rs 25,989, increase Rs. 1,982.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 1st week of July, $19,775, increase $3,906; aggregate from January 1, $444,906, increase $64,633.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended June 16, Rs. 18,437, increase Rs. 6,372.

White Pass and Yukon Railway.—Traffic receipts for the week ended June 30 amounted to $71,354.

English.

Cleator and Workington Junction.—Receipts for week ending July 14, £1,136, decrease £50; aggregate from July 1, £2,190, decrease £334.

Cockermouth and Keswick Railway.—Receipts for week ending July 14, £969, increase £80; aggregate from July 1, £1,981, decrease £58.

East London Railway.—Traffic receipts for March, £4,206, decrease £188.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending July 14, £318, increase £65; aggregate from July 1, £589, increase £68.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Birmingham and Midland.—Traffic receipts for week ending June 29, £1,440, increase £62; aggregate from January 1, £36,587, increase £4,436.

Blessington and Poulaphouca. — Traffic receipts for week ending July 11, £28, increase £8; aggregate from July 1, £39, increase £7.

Bristol Tramways and Carriage.—Traffic receipts for week ending July 13, £5,801, increase £435; aggregate from July 1, £11,413, increase £496.

British Electric Traction.—Receipts of all the Associated Companies for the week ending July 13, £32,229, increase £1,950; aggregate from January 1, 1906, £813,840, increase £107,603; 428 miles, against 420¾.

Burnley Corporation.—Traffic receipts for week ending July 14. £1,392, increase £106; aggregate from July 1, £2,718, increase £278.

Dublin and Blessington. — Traffic receipts for week ending July 11, £173, increase £10; aggregate from July 1, £262, decrease £20.

Dublin and Lucan.—Traffic receipts for week ending July 13, £133, decrease £10; aggregate from July 1, £230, decrease £43.

Dublin United. — Traffic receipts for week ending July 13, £5,587, decrease £294; aggregate from July 1, £9,931, decrease £649.

Edinburgh and District. — Traffic receipts for week ending July 14, £5,787, decrease £11; aggregate from January 1, 1906, £136,448, increase £3,048.

Harrow Road and Paddington.—Traffic receipts for week ending July 6, £114, decrease £154.

Hastings and District. — Traffic receipts for week ending July 12, £874.

Isle of Thanet.— Traffic receipts for week ending July 14, £1,124, decrease £159; aggregate from October 1, £15,994, decrease £1,109.

London County Council.—Traffic receipts for week ending July 7, £27,227, increase £10,518; aggregate from April 1, £373,066, increase £164,006. Miles 96½ against 51¾.

London General Omnibus.—Traffic receipts for week ending July 14, £25,875, decrease £1,596; aggregate from July 1, £52,716, decrease £3,108.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending July 14, £4,129, increas £3,247.

London Road Car.—Traffic receipts for week ending July 14, £8,995, decrease £273; aggregate from July 1, £18,595, decrease £508.

Rossendale Valley. — Traffic receipts for week ending July 13, £207, decrease £19; aggregate from July 1 £412, decrease £10.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending July 15, £792, decrease £68; aggregate from January 1, £22,639.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending July 15, £14,427, increase £1,960; aggregate from January 1, £414,851, increase £43,766.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for May, $33,480, increase $5,297. Nett earnings from July 1 to May 31, $453,631, increase $120,539.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 8, £3,649, decrease £8; aggregate from January 1, £95,908, increase £5,515.

Buenos Ayres Electric. — Traffic receipts for week ending June 9, £1,247, increase £134; aggregate from January 1, £32,082, increase £6,316.

Buenos Ayres Grand National.—Traffic receipts for month of June, $271,500.

Calcutta. — Traffic receipts for week ending July 14, Rs. 44,295, increase Rs. 375; aggregate from July 1, Rs. 49,319, increase Rs. 2,909.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of June, £4,623, increase £2,238. Total from January 1, £27,466, increase £10,928.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144

Twin City Rapid.—Traffic receipts for the month of April, $415,413, increase $60,200; aggregate from January 1, $1,621,914, increase $232,398. Nett traffic receipts, $218,250, increase $33,852; aggregate from January 1, $832,339, increase $131,992.

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

Short loans in the Money Market have been easy all this week, but the discount rate has kept firm; that is to say, borrowers have got their loans whether for the day or the week, usually at 2 per cent., but sometimes they have paid 2¼ per cent. Money into August seldom costs more than 2½ per cent., but the India Council has secured 2¾ per cent. on money for three weeks, and at the same rate the Japanese Government agents have been lending for a month. Discount rates, on the other hand, have never been much below 3 1/16 per cent. for three months' remitted bills, and there has been a struggle on the part of the more responsible bill brokers to get the rate up first to 3⅛ per cent. and then to-day to 3¼ per cent. The causes of this divergence between short loan and discount rates are partly to be found in the usual glut of floating balances after the Government dividends have been dispersed, but more in the evidently critical state of credit, not only in our market but everywhere. Symptoms multiply that there is a possibility at least of a sharp strain upon banking credit, through Stock Exchange failures if nothing worse. Bill brokers are, therefore, well advised in keeping their rates up, that indeed being the only course open to them.

Another of the causes which have conduced to keep discounts firm is the demand for gold on American account. That was so sharp on Monday that the price of bars was driven up to 77s. 10⅝d. per oz., New York getting all the available supply in the open market. On this point, however, an interesting circular, issued by the National City Bank of New York, was quoted in Thursday's *Times*. Its point is that the Washington Government will probably within the next 12 months provide $125,000,000 of 2 per cent. bonds to be utilised for the purpose of further inflating the paper currency of the Union. There is first the $30,000,000 of Panama 2 per cent. bonds just issued, and next comes $95,000,000 of 4 per cent. bonds, which may be paid off next June or refunded into 2 per cent. bonds suitable for creating bank notes upon. Altogether the Government may not only perform this conversion, but pay off a certain amount of maturing 4 per cents. out of its cash balances, so that in two ways the United States speculators and people should be well supplied with currency, and, to the extent they are so, there should be less anxiety to draw on Europe for gold.

Above all other influences, however, stands the anxiety about this and the other firm or credit generating institution about which tongues have again wagged freely this week. Emphasis has been given to rumour by the fall in prices on the Stock Exchange, but it is a complete mystery, and we are not going to attempt to indicate the directions in which sinister fingers keep pointing. The effect to-day was to cause discount houses to quote 3¼ per cent. as an alternative for three months' remitted paper. They did not do much business at this figure, but nobody quoted less than 3⅛ per cent. at any time, and the joint-stock banks were not at all inclined to take paper from the brokers much below the rates the brokers themselves were working at, if at all. From the point of view of the strain put upon the market by apprehensions of this kind the gold demand is only a symptom of trouble, not the cause of it. Whether the market is going to escape a complete breakdown or not is more than we can say, but if it does escape the agony of liquidation is certain to be prolonged.

SILVER.

A strong demand for spot silver sprang up on account of the bazaars, and the quotation was carried to 30 7/16d. per oz., but the inquiry was mainly for shipment by this week's boat, and when once the opportunity for this was past the price relapsed to 30 3/16d. per oz. Forward metal at the same time was wanted for China, and rose to 30 3/16d. per oz., but it also fell back sharply, and in spite of some recovery towards the end closed a shade below the best at 30⅛d. per oz. Tenders for the Rs. 60,00,000 Council drafts in India on Wednesday amounted to Rs. 6,38,30,000 in bills, and Rs. 40,00,000 in telegraphic transfers. Of these Rs. 58,81,000 were accepted in bills and Rs. 3,19,000 in transfers, applications at 1s. 4d. and 1s. 4 1-32d. receiving about 31 per cent. Next week the amount to be offered is further increased to Rs. 70,00,000.

The £500,000 of Liverpool Corporation six months' bills were sold to-day, tenders at £98 3s. 3d. getting about 70 per cent. of the amount applied for. This is equal to a discount of 3⅝ per cent. Only £810,000 in all was applied for and the average rate of discount was £3 11s. 4.36d. per cent.

Stock Market Notes and Comments.

Markets are still "liquidating," and really we do not know why they should ever do anything else in present circumstances. It is not that the Stock Exchange itself is held to be in any desperate plight. So far as we can make out, although the suffering is great amongst a large number of members, there is no great individual insolvency within it. The trouble lies scattered, and is, we fear, much greater than anybody beyond a limited circle knows or suspects. All the wild rumours current in the end of last week which died away and were pronounced to be false, in the beginning of the week have begun to circulate again, and the wildest of rumours generated during a time of financial strain always represent some truth. They never originate without cause. Although the particular companies or firms pointed at and spoken about may not be in difficulties, difficulties of a grave kind must exist somewhere, and the whole struggle now visible on the Stock Exchange represents the effort to hide the trouble away out of sight, to stave off what may be the inevitable. Such being the position, we fear unsatisfactory markets must remain with us for a long time to come, and the best we can hope for is that anything like a wide rent in credit, whether here, on the Continent or in New York, will be averted by the slow, painful liquidation now going on. If gradually prices of securities are brought down to a satisfactory level without involving the failure of any large finance house or bank, then we can hope to see the deadweight of unmarketed securities now pressing down all Stock Exchanges and clogging enterprise in many directions gradually cleared away. That is the best we can look for, but the time is certain to be an anxious one, and, as we have often said, the year 1906 is destined to be a year of stress, and it may be storm, so far as money and stock markets are concerned. It must be so because of the extent to which joint-stock and private resources have been shorn away by the decline that has already taken place in the prices of all classes of public securities, and still more from the fact that hundreds of millions of new securities in the aggregate have not yet found lodgment in the boxes of the ultimate investor. What is the position of the underwriter? Not so long ago the Consol market struck against the underwriting of new loans and then repented of its virtue. Is the weakness now so pronounced in this part of the Stock Exchange a result of the overloaded position of the underwriters? Why are gilt-edged securities often more difficult of sale than mere counters? Was the weakness in India stocks and in London County stocks all due to selling by Scotch banks and the fire insurance companies? We fear not; but really it is useless to grope in the dark while facts are withheld. We can only wait and watch the symptoms, which all point to a very grave state of affairs indeed.

The Week's Stock Markets.

It is impossible to quite make out what is wrong with the Stock Exchange. Dealers are clearly suffering from Russian fright, and it seems reasonably certain that until the condition of that distressed Empire has become more settled we cannot hope for good markets in the leading financial centres of the world. Curiously enough, London is far more disturbed than Paris over the deplorable outlook in Russia, which seems to lend colour to the view that something in addition to fears of the continuance of anarchy and revolution in the Czar's dominions is at the bottom of the present trouble. The sensation mongers were at work again towards the end of the past week, and it is perhaps not surprising that the persistent weakness should give rise to alarmist reports, however devoid of foundation they may be. For a day or two markets seemed rather happier, and dealers began to hope that the Czar would be guided by wise counsels and agree to the appointment of a constitutional Government. Prices accordingly showed a slight improvement, and there was a small amount of professional bidding on the hope that the public would be induced to come in at the prevailing low level of prices. But the latest news from Russia instead of bearing out the sanguine anticipations indulged in indicates that the worst forces of reaction are at work again, and reports come through that an attempt will be made to restore order through repression and bloodshed. A violent break in Russian securities was the inevitable result, and the area of depression steadily widened until every section was embraced in the gloom. Even the small flow of investment orders which had been in evidence at first completely died out, and the whole House seems demoralised, wondering what will happen next. After a small improvement Consols again reacted, and although not closing quite at the worst are substantially lower on the week. All other British Funds went down as well, and in some cases the loss was quite substantial. The special settlement in the Irish loan took place yesterday, Wednesday being contango day when the carry-over rate was 3-3 1/4 per cent. The stock made up at 1/4 discount. In the Home County and Corporation list L.C.C. issues had a good rise on the announcement that the Council's immediate financial needs will be met by an issue of bills and resort to temporary loans, a new stock issue being deemed inadvisable at the present moment. Colonial issues were comparatively steady.

The Foreign bond market opened quietly, and a recovery took place in Russian bonds, both the fours of 1889 and the new 5 per cent. gaining 3/8. The improvement, however, was short-lived, as this gain was almost immediately lost, and before the week closed the discount on the new loan fell to 7 1/2. It did not close quite so bad as that, but a discouraging feature was that selling by the public was joined to the professional realisation. We do not suppose that any large amounts are held by outsiders, but the fact that stock is thrown over at such an enormous loss shows that some people are becoming greatly alarmed. All other Russian issues naturally sympathised, and with this pronounced weakness it was quite impossible to sustain prices in other directions. Nothing gave way to a serious extent, but Peruvians were somewhat heavy along with Argentines and one or two Brazils. Spanish eased off a fraction, but other Continental issues kept very steady, all things considered, and Japanese and Chinese actually showed signs of im-

provement. Buenos Ayres Cedulas dropped back, and in the Central American group Honduras, Venezuelan, and Colombians were weak, the latter particularly so. The fighting between Salvador and Guatemala did not affect the bonds of those countries.

The half-yearly dividend announcements in the Home Railway market commenced on Tuesday with the declarations of the Metropolitan and City and South London, and these were followed on Wednesday by the Great Eastern and Brighton, and on Thursday by the Central London and Tilbury. The Metropolitan makes a distribution at the rate of 1½ per cent. on its common stock, and carries forward £4,000 against a 2½ per cent. rate, with a balance of £6,000 for the corresponding period of 1905, when £9,000 was withdrawn from reserve. While this dividend is as much as had been expected out of revenue there were some who had thought the company might again have recourse to the reserve fund in order to bring the dividend up to 2 per cent., and the fact that nothing of the kind was done gave rise to a theory that the directors were not hopeful of any immediate improvement in the company's position. Another theory put forward was that no help of this kind was sought because there are some £17,000 of new fixed charges to come upon revenue before long, and the directors prefer to keep their reserve for contingencies in connection with them. The ordinary stock had fallen before the dividend was known, and was not further affected thereby, but the company's surplus land stock rose 1, partly on the advance of ¼ per cent. to 2¾ per cent. per annum in the dividend, and partly on talk of improved revenues to be derived from the holdings of land. A much better result was shown by the City and South London Co., which not only pays ¼ per cent. more at 2¼ per cent. per annum, but is able to put £1,500 to renewal fund and carry forward £1,870 against £1,012 forward a year ago; but the announcement had been anticipated, and was followed by profit-taking, which left the price 2 down. The Great Eastern dividend was better than anticipated, as most people would have been satisfied with a repetition of last year's rate, whereas the directors pay ¼ per cent. per annum more at 1¾ per cent., and increase the carry forward by £6,000 to £26,000, but here also the quotation gave way on the announcement, and closed only a trifle better on the week after being as high as 84. In the case of the Brighton, the traffic returns and the knowledge of increased fixed charges had caused dealers to anticipate a reduction of ¼ per cent., so that they were agreeably surprised to find the company repeating last year's rate of 3¼ per cent., and the Central London was also considered satisfactory, but the stocks of both companies failed to respond. On the other hand, the Tilbury distribution was not at all liked, as only 3½ per cent. per annum is paid with £4,159 forward compared with 4 per cent. and a balance of £1,135, but the market apparently had overlooked the reduction of £7,087 in the amount brought forward, and the fact that nothing was this time taken from the special reserve against £5,000 withdrawn a year ago, and the price was marked down 3. Very little attention has been given to stocks other than those affected by the announcements, but the market has been dull and under the cloud which seems to hang over all sections, and the majority of the movements on the week are adverse. Midland deferred has been offered with some persistence, and is now down to 68, and North-Western, South-Western ordinary and deferred, and Great Western have all suffered from selling pressure.

When the news came out that New York had secured practically the whole of the gold available in the open market, amounting to £500,000 or so, a determined effort was made to give Yankee Railroad shares a firm appearance. Dealers talked of a rising market with buying from the provinces and the Continent as well as from Wall Street, and for a short time the market seemed quite buoyant. Business, however, remained entirely in the hands of the professionals, and as soon as the "bears" had finished their covering operations the enthusiasm died down, and prices quickly relapsed. Wall Street was said to be even more alarmed than London at the news from Russia, and the talk of difficulties being expected over the payment of the next instalment of the recently-issued loan, and another cause for depression was found in the reports of the Government's intentions with regard to the prosecution of the Standard Oil interests. Even in New York the daily transactions dwindled to insignificant proportions, while business here was down almost to vanishing point, and prices are mostly lower on the week. The declines in the most active things were not as a rule important, and such favourites as Erie ordinary, Reading, New York Central, and Union Pacific were actually higher on the week, but Illinois Central dropped $1 as the declaration of a dividend of 3½ per cent. for the half-year was considered disappointing, and Ontario and Norfolk common both showed substantial declines.

The Grand Trunk traffic was decidedly satisfactory, with an increase of nearly £22,000, or about double what the market had looked for, but its effect on prices was very fleeting. Quotations for the ordinary and third preference stocks were lifted a fraction or two just after the figures came out, but relapsed again almost immediately, and remained dull to the end. Canadian Pacific shares, as usual, followed the fortunes of Yankees, and finished with a nett loss of $1½. Qu'Appelle bonds, however, were lifted to 101½ on the report that the line had been taken over by the Canadian Northern, although the terms of the transfer are not yet known. Amongst other colonial issues Mashonaland debentures and Rhodesia Railways 4 per cent. debentures receded ½ to 1.

Very little interest has been taken in Argentine Railway stocks, and they have simply followed the course of other markets in a sluggish fashion. Most of the principal issues were either unchanged at the close or fractionally lower, but the only really important movement in the whole list was a decline of 1 in Buenos Ayres and Pacific ordinary. Brazilian things were steady as a rule with a substantial improvement recorded in San Paulo ordinary, and Antofagasta deferred also showed a fine looking advance, but Guayaquil and Quito second bonds were again down, and United Railways of the Havana ordinary stock fell back sharply. Mexican stocks were likewise easier, the ordinary and second preference of the old company losing ½ to ¾, and the first preference 1¼, while Mexican Southern ordinary fell 1. Interoceanic second and "B" debenture stocks, however, improved 1 to 2.

Business has shrunk almost to vanishing point in the Miscellaneous markets, and scarcely anything of real interest happened throughout the week. Bank shares were inclined to lose ground, and Allsopps, Watney, Combe, and one or two others went down in the Brewery section. London Docks were somewhat better. Cement issues became decidedly weak, and the motor-'bus agitation has not done any good to the motor share market. Nitrates have gone down in a small way, Textiles were steady, and Meat shares neglected. Catering issues were inclined to go back. Eastman Kodak common shares recovered sharply, and in the Entertainment group Moss Empires and London Pavilions hardened up. Russian Oil shares were very flat. Electric Lighting shares are still out of favour, to the benefit of Gas securities, Gas Lights showing a big rise on the week. There is no doubt that a large number of people are reverting to the use of gas after giving electricity a good trial, having come to the conclusion that with the aid of the incandescent mantle gas is better and cheaper. Moreover, it is said that the companies are improving their methods and thus cheapening production. Hudson's Bays and Pekin Syndicates were flat, especially near the close, and Trusts went down in a few instances; but Insurance shares were a steadier market. Iron and Steels were steady to firm. Anglo "A" gave way, while Eastern Telegraph and National Telephones kept good. London Motor Omnibus shares were rather steadier, and London United Tramways preference improved to 8¼.

The weakest stocks on the markets to-day have been Consols and Russian scrip, and yet we cannot discover that there was any extensive selling in either. Some people talk of millions sold, but that is nonsense—the market would not take millions of Consols within several pounds of the lowest actual price, if at all, and as for Russian scrip, which went down to 7⅜ discount, and after bounding up again finished about 7¼ discount, the probability is that political troubles in Russia have caused the "stags" of the new loan to take fright, and as there can be no investment buyers in the present state of Russian affairs and mood of the public mind towards Russian credit a very little selling goes a long way in knocking the bottom out of the market. We cannot find that any maligned firm or institution has been giving signs of requiring help, and that being so it looks probable that the trouble after all centres in the Stock Exchange, where the rottenness, however widespread, must be incalculably great in the mass. By comparison with the Consol market the Kaffir market was firm to-day, and apart from a little weakness in De Beers shares presented an unruffled surface to the onlooker. The Yankee Railroad market was also a strong one by comparison with the others, and it is only good classes of home stocks that are suffering.

Railway dividends are continuing to appear, and to on the whole fulfil expectations. We have to-night only got the revenue statement of the Chatham and South-Eastern companies for the past half-year, and it shows an increase of nearly £33,000 in the nett available balance divisible between the two companies, which is £666,843. The board of the Great Central Company announces a distribution at the rate of 2 per cent. per annum on the 4 per cent. preference stock of 1889, carrying forward about £8,000. The company's accounts include for the first time its proportion of the nett receipts and charges in respect of the Great Western and Great Central and Metropolitan and Great Central joint lines as from April 2 last. Last year the distribution was at the rate of 3 per cent. on the 5 per cent. preference stock of 1881, carrying forward £7,000.

THE WEEK'S PRICE MOVEMENTS.

British Funds, &c.—*Rise:* Bank of Ireland 2, to 234-239. *Fall:* 2½ p.c. Annuities ½, to 86-86½, ditto Account ½, to 86-86⅝, Irish Land ½, to 88¼-88¾, Exchequer Bonds 2¾ p.c. ¼, to 97¾-98¼, Bank of England 2, to 278-282, India 3 p.c. Account ½, to 92½-93½, ditto (Scrip) ½, to 43-44.

Sterling—Allegheny Valley 1, to 111-116, Illinois Central 3 p.c. 1, to 87-91, Phil. and Erie 2, to 122-127.

Foreign Railways—*Rise*: Argentine Gt. Western 1st Deb. 1, to 102-104, ditto 2nd Deb. 1, to 99 101, Barranquilla 2, to 106-108, B. A. and Pacific 1st Deb. 1, to 104-106, ditto 2nd Deb. 1, to 104-106, B. A. and Rosario 7 p.c. Pref. 1, to 166-168, ditto 4 p.c. Deb. 1, to 105-107, Central Uruguay 2nd Deb. 1, to 102-104, Cordoba Central 1st Pref. 1, to 139-141, ditto 5 p.c. Deb. 1, to 119-121, ditto N.-W. Argentine Deb. 2, to 89-91, Costa Rica 1, to 27-29, Interoceanic "B" Deb. 1, to 114-116, Italian 3 p.c. 2, to 70-72, Paraguay Central 1, to 59-61, Rio Claro Deb. 1, to 123-125, Villa Maria 1, to 86-88. *Fall:* Antofagasta 5 p.c. Pref. 1, to 114-116, Guayaquil and Quito (Railway Bonds) 1½, to 66-68, Salvador Mort. Debs. 3, to 89-91, United of Havana (Scrip) ⅛, to 8⅛-9⅛.

Banks—*Rise*: Bank of Tarapaca ⅛, to 7⅞-8, British of S. America ½, to 16⅛-17⅛, Delhi and London ⅛, to 14-15, Internal Ottoman ⅛, to 15⅜-16, Natl. of Egypt ¼, to 25¼-25½. *Fall*: Anglo-Californian 1, to 15-16, Anglo-Egyptian ¼, to 12¼-13¼, London and County ½, to 96-97, London and River Plate ¼, to 53½-54½, London and Westminster ½, to 52-53, Natl. of S. Africa ⅛, to 14-15, Parrs ⅛, to 87½-88⅛, Union of Australia ¼, to 49½-50½.

Breweries, &c.—*Rise*: Distillers ¼, to 15½-15⅞. *Fall*: Allsopp 4½ p.c. Deb. 1⅛, to 90-93, do. 3½ p.c. Deb. 2, to 58-62, Ashby's Deb. 1, to 88-90, Bass B Deb. 1, to 81-83, Boardmans 1, to 75-77, Brickwood 1, to 87-89, Cameron Pref. ¼, to 8¼-9¼, Charrington Deb. 2, to 85-87, Colchester 4½ p.c. Deb. 1, to 79-81, Denver United Deb. 1, to 91-95, Ind Coope 4½ p.c. Deb. 2, to 52-55, Indianapolis Deb. 1, to 90-95, Ohlsson's Pref. ¼, to 6¼-6⅝, St. Louis Pref. ¼, to 6¼-7, Tamplin "A" Deb. 1, to 92-94, Threlfalls Deb. 1, to 94-97.

Canals and Docks—*Rise*: Birmingham 1, to 113-115, London and India Pref. 1, to 95-97. *Fall*: Regents 1, to 56-58.

Commercial, Industrial, &c.—*Rise*: Australian Pastoral ¼, to 4¼-4⅜, British Insulated Cables ⅛, to 6⅜-6⅝, British Westinghouse Pref. ⅜, to 1⅝-2, Coats Deb. 1, to 107-109, Eastman Kodak 10, to 250-260, English Sewing Cotton Deb. 1, to 96-99, Gordon Hotels Pref. ½, to 8-9, Hotel Cecil Pref. ¼, to 3¼-3⅜, Lever Pref. ⅛, to 11⅞-12⅛, London Nitrate ¼, to 7-7½, Lyons 1/16, to 5¼-5⅜, Maple 1/16, to 2⅛-2⅜, Pawsons and Leafs ¼, to 5-5⅛, Pryce, Jones Pref. ⅛, to 5⅞-6¼, Salt Union Deb. 2, to 86-89. *Fall*: Anglo-Chilian Nitrate Pref. ¼, to 13 13½, Associated Cement ¼, to 1⅛-1⅜, ditto Pref ¼, to 6⅞-7⅛, Borax Consolidated 4½ p.c. Deb. 1, to 108-110, Bovril Deb. 1, to 103-105, Cassell ⅛, to 3-4, Cons. London Property Pref. ¼, to 4½-5, Crystal Palace 2nd Deb. 4, to 54-59, Darracq Prefd. 1/16, to 1 1/16-1 2/16, Fore Street Warehouse ¼, to 3⅜-4, Holborn and Frascati ⅛, to 1⅛-1⅜, Maple Pref. 1/16, to 1 5/16-1 7/16, Paquin Pref. ¼, to 5-5½, Paterson, Laing, and Bruce Pref. ¼, to 3⅞-4¼, Salt Union 1/16, to 11/16-12/16, ditto Pref. ⅛, to 3⅜-3⅝, San Donato Nitrate, ⅛, to 5⅜-6¼.

Lighting—*Fall*: Calcutta ⅛, to 8-8⅛, Edmundsons ⅛, to 3-4, Indian Elect. 1, to 110-113, Metropolitan Elect. ¼, to 8-9, Urban Elect. Pref. ¼, to 4¼-4⅜.

Financial, Land, &c.—*Fall*: Australian Estates "A" Deb. 3½, to 77-81, Deb. Corp. Pref. 1, to 101-103, Pekin Syndicate ⅛, to 11-12, ditto Shansi 1-32, to 21-32—23-32, Peruvian Corp. 1⅛, to 14-14¼, ditto Pref. 2⅜, to 47⅜-47⅞, ditto Debs. ⅛, to 104⅜-105¼.

Financial Trusts—*Rise*: British Steamship Deb. 1, to 110-113, Industrial and General Pref. 1, to 105-108, Invest. Trust Corp. Def. 1, to 163-168, ditto Deb. 1, to 101-104, Mercantile Pref. 1, to 118-121, Railway Investment Pref. 1, to 98-100. *Fall*. African Properties Deb. 2, to 99-101, Alliance Invest. Def. 2, to 59-62, American Invest. Def. 3, to 121-125, Banker's Def. 3, to 82-84, British Steamship Def 2, to 82-84, Indian and General Pref. 1, to 99-102, ditto Deb. 1, to 103 106, Mexican Central Rly. "B" 2½, to 66-68, U.S. and S. American Pref. 1, to 106-108.

Gas—*Rise*: Commercial 4 p.c. 1, to 114-116, ditto 3½ p.c. 1, to 111-113, Gas Light and Coke 2½, to 100-102, Imperial Continental 1, to 178-180, Oriental 3, to 150-153, S. Metropolitan 3, to 132-134, South Suburban 2, to 124-127.

Insurance—*Rise*: Commercial Union 1½, to 75-77, Gresham Life ½, to 1½-1⅝, London and Lanc. 1, to 23½-24½, North British and Mercantile ½, to 38-39, Phœnix 1½, to 32½-33½, Royal ½, to 48-49. *Fall*: Guardian ¼, to 10¼-10½, London Guar. 1, to 19½-20½, Union Ass. 1, to 16-18.

Iron, Coal, and Steel—*Rise*: Consett ⅛, to 35-36, Stephenson "A" Deb. 1, to 81-84, United States ½, to 35⅛-35⅝, ditto Pref. 1, to 104½-105. *Fall*: Armstrong 1/16, to 2 1/16-2 2/16, Barrow Hematite ¼, to 4-4½, Measures 1/16, to ⅛-⅞, North's ⅛, to 6¼-6⅝, Thames Deb. 1, to 76-79, Vickers 1/16, to 2⅜-2½.

Shipping—*Rise*: Commercial ¼, to 1⅞-2¼. *Fall*: P. and O. Def. 3, to 224-227.

Tea and Coffee—*Rise*: Jokai ¼, to 10¼-11. *Fall*: British Indian ¼, to 1⅞-2½, Cachar and Dooar's Pref. ⅛, to 7½-8⅛, Darjeeling ⅛, to 12¼-13¼, East India ¼, to 2¼-3.

Telegraphs—*Rise*: Direct United States ¼, to 15⅞-16¼. National Telephone Def. ⅛, to 109½-111½, Eastern Extension Deb. ⅛, to 106-108, Eastern ⅛, to 141-144½. *Fall*: Anglo-American Def. ⅛, to 22⅜-22⅝, Great Northern ⅛, to 39-41, Marconi's 1/16, to 1/16-1 1/16.

Tramway—*Rise*: Anglo-Argentine 1/16, to 6 13/16-7 1/16, British Columbia Def. 1, to 116-119, City of Birmingham ⅛, to 5-5½, London General 1, to 86-91, London United ¼, to 8-8½. *Fall*: Bath Deb. ⅛, to 100-104, British Electric Traction Pref. ¼, to 8⅜-9¼, B. A. and Belgrano 1/16, to 3¼-3½, London Motor Omnibus 1/16, to 1 1/16-1 7/16.

Tenders for the issue of 700 ordinary shares of £10 each of the East Surrey Water Company must be sent to the company at Redhill not later than 12 o'clock on Friday next, July 27.

MINING NEWS AND NOTES.

****Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The death of Herr Beit has had no effect upon the Kaffir Circus either for good or ill. At the moment of the announcement of his decease dealers were inclined to fear that it would enforce further selling on the part of holders and deepen the existing depression, but they quickly saw that such fears were baseless. As a matter of fact, Mr. Beit's death, though seemingly sudden, was not unexpected, hence due preparations had been made for it, and the event had been discounted. His interests in his multitude of companies will apparently not be immediately realised, for the mine bosses have had enough of depression, and nothing would be gained by knocking the bottom completely out of the market. Indeed, the Kaffir Circus has actually looked a trifle brighter this week than in recent times, but the appearance is deceptive enough and is subject to the usual sudden changes. That is to say, momentary rallies have been more in number than usual, but these have not been the effect, at any time, of increased business. The public still stands aside, eager to sell on any opportunity. At the opening of the week the betterment was merely the reflection of the relief felt that the settlement had passed off without the disclosure of serious difficulty. In fact, the recovery in some of the leading speculative counters was quite substantial, due almost entirely to "bear" covering. This was partly in sympathy with the all-round improvement in stock markets, and prices subsequently went off with the set-back elsewhere. Gamblers are now awaiting the report of the West Ridgeway commission, in the hope, of course, that it will be favourable to their aims, but the report cannot put an end to public distrust in the magnates. Paris has in the past few days been a source of weakness, as Frenchmen are again agitated by the trend of events in Russia, where reform in the Government looks less promising than last Monday's rumours made it out to be. The next account will last nineteen days, and the dearth of business is so great that members are going on their holidays earlier than usual and are looking for a Saturday holiday preceding the August Bank holiday.

The following interim dividends have been declared since we last went to press: –

	Div.	Issued Capitals.	Amount.	Approx Yield.*
	%	£	£	
Nourse Mines	12½	675,000	84.375	11·00
Glen Deep	7½	600,000	45,000	7·05
Glynn's Lydenburg.	15	167,400	25,100	14·11
			£154.275	

* Calculated on the dividend per annum.

Diamond shares have been irregular. De Beers have been alternately bought and sold by Paris, closing dullish, whilst Premiers, after many fluctuations, are a little higher on the week. Rhodesians improved at first with Kaffirs, but soon fell away, and the market is now flat. Mr. Beit's death has not had much influence upon Chartereds.

Stagnation has also characterised other sections of the Mining market, with the exception of the copper. Amongst Australasians, Mount Boppys have been the most conspicuous. They have exhibited considerable weakness, and though they have rallied somewhat towards the end of the week, they have lost on balance. The tendency of the West Australian group has been towards lower quotations, but on the whole the changes have been sporadic and trifling. Broken Hill shares have firmed up on buying from the colony and on the advance in the price of lead.

Changes in the Copper section have been almost invariably in favour of holders, the result mainly of the strength displayed in the metal market, the rise here being general. The price of tin, on the other hand, has receded, but this has not adversely affected the market for tin shares, two or three of which have actually improved. Indians have been steadier and firmer in one or two instances, but the market is still inclined to be unsteady.

Crown Reef Gold Mining Company.—In the financial year ending March 31 the quantity of ore sent to the mill was 233,005 tons, and the gold won therefrom by the various treatment processes was 122,848 fine ozs., increased to 141,336 ozs. from the accumulated slimes and the dump ore. The total value of the gold was £593,638, equal to £2 11s. per ton, a decrease of 3s. 7d. per ton compared with the preceding year, owing to a falling off of 1.44 dwts. in the grade of the ore. Expenses, including the sums written off for additions to plant, totalled £293,569, averaging £1 5s. 3d. per ton, a decrease of a little over 5s. per ton. This left a working profit of £300,069, equivalent to nearly £1 5s. 10d. per ton, an increase of 1s. 5d. per ton. Sundry revenue added £3,780 and a balance of £69,690 was brought from last year, making an aggregate available credit of £373,549. Dividends totalled 220 per cent., against 190 per cent. requiring £264,000, and after allowing for the profits tax and other small debits a surplus of £79,945 is left to carry forward. This is one of the few Rand companies that did better last year than in the year before, though it is to be noted that even the quality of its ore is declining. On the other hand, the management deserves some credit for cutting down costs, despite the fact

that 25s. 3d. per ton is still a very high figure. No addition was made to the reserve fund, which stands at £156,839, invested mainly in Consols. In cash itself, though, the company is wealthy.

South Kalgurli Gold Mines.—In submitting their half-yearly report, made up to March 31, the general managers of this company, Messrs. Bewick, Moreing, and Co., say that the most satisfactory result of the development operations during the half-year has been the further opening up of the Leader lode on No. 7 and No. 9 levels. On the No. 7 level the payable ore is 131 ft. in length, and averages 11 dwts. per ton in value for a width of 11 ft., and on the No. 9 level the ore body has a length of 88 ft., averaging 9 dwts. per ton for a width of 9 ft. The No. 2 east cross-cut on the 1,200 ft. level failed to disclose any payable ore. Recent development work on the New Associated Perseverance boundary lode indicates that this lode is striking considerably more to the westward than was originally supposed, and the No. 4 west cross-cut is being put out, in the hope of locating the continuation of this lode. The main shaft has now reached a depth of 1,284 ft., and the sinking is being pushed on with all possible speed. Tonnage opened up by development during the half-year amounted to 38,570 tons, while the mill treated 44,090 tons, so that the ore reserves at March 31 were estimated at 117,680 tons, of an average value of 8.5 dwts. per ton, including 1,750 tons lying in the stopes broken and ready for raising. The treatment plant continues to give satisfactory results, and the yield from the tonnage treated was 19,689 ozs., valued at £83,534, being an average of 8.93 dwts. per ton. Total expenditure was £44,163, or 20s. 0.40d. per ton, which is reduced to £43,695 by rebate on supplies. A further sum of £5,129 was spent on mine development and £1,094 for construction and equipment, so that the actual nett balance was £33,721.

Duff Development Company.—The directors of this forlorn mining and development company make their report for the year to December 31 last a very brief one. The only thing they talk about is money, and record the fact that in accordance with the decision announced at the general meeting held on November 10, 1905, £50,000 debenture stock was offered for subscription. Unfortunately, or fortunately, according to the point of view, shareholders were not on the feed, and only £26,653 was taken up, a sum said to be insufficient to carry out the programme submitted to and approved by the proprietors. The future policy of the company will, therefore, be submitted to the meeting on Tuesday, and meanwhile the shareholders have two lengthy reports from the general manager to study, the first covering the year 1905 and the second the period from January 1 to May 15 of the current year—quite remarkable promptitude. These will hardly make them delirious with joy. One thing, however, the company seems to possess, and that is a fairly plentiful supply of labour, although the cost of procuring and transporting it is somewhat expensive. Some railway surveying seems to have been done by officials from the Federated Malay States, but there is a wide gap between surveying and building, and we fear the company will have to wait some time for the completion of this highly important aid to progress. Not much attention has been paid to planting up to the present, but rubber trees seem to flourish, and the directors think the company's land offers exceptional inducements to planters because of the excellent steamship service. Brickmaking has been suspended, because it did not pay, and the sawmill and the machine shop had to be left unfinished because of the lack of funds. The development of mines in the Sokor district, however, has resulted in the exposure of 107,681 tons of ore worth per ton, 7.12 dwts. gold, 8.30 ozs. silver, 3.10 per cent. lead, and 0.406 per cent. copper. We must not hold the directors down too closely to these figures, because the deposits are most irregular in shape, and the values fluctuate considerably. Further work done this year has exposed more ore bodies, but the stuff is low grade, and the operations so far are not sufficient to give an actual estimate of tonnage and value. A diamond drill is due immediately, and it is then hoped that an extension of the large ore bodies exposed will be found. The prospecting dredge on the Pergau River was reconstructed and set to work again, but operations were recommenced at a bad time, and only indifferent results were obtained. Borings carried out in sundry river beds likewise gave a poor return, but the manager is optimistic, and hopes for the best. Fortunately, the company still has three or four thousand pounds in hand, so that the directors' fees and managing director's salary, which last year required £1,552, are safe for a bit longer, even if no more debentures should be subscribed. Up to date the debit on working expenditure account is £34,022, and about the only good thing we can say for the company is that its properties are in the Straits and not in South Africa.

Goldfields of Mysore and General Exploration Company.—In the financial year to March 31 the revenue, inclusive of £2,946 dividends on shares held, amounted to £4,426, whilst expenditure and depreciation took £5,089, so there was a deficit of £662. As the company has discontinued operations on the Kolar goldfields, the outlay appearing in the balance-sheet under the heading of "expenditure in India and England," applying almost exclusively to that work, has now been charged to the profit and loss account. Inclusive of last year's loss, income-tax, £3,468, and the above expenditure, £30,653, the debit was raised to £34,784, but reduced to nett £18,606 after allowing for the balance of £678 brought in, plus a sum of £15,500 written off to the sinking fund out of the profits to March 31, 1904. At the end of March last the cash resources were:—At bank and in office, £7,795; in hands of superintendent, £698; sundry debtors, £3,200; calls in arrear, £1,107, against liabilities of £1,313. In addition, there are shares valued at £52,976, an interest being still retained in the Mysore Company. Recently the directors entered into negotiations with the Goldfields of Dharwar, with the object of securing an option over three blocks situated almost immediately to the north of those now being developed by the Dharwar Reefs Company. In the event of the option being exercised, a company is to be formed to take over the property, and the Goldfields of Dharwar will receive on its assignment 20 per cent. of the nominal capital. Operations upon the blocks are to be commenced at an early date.

Clitters United Mines.—At the recent general meeting of this Cornish tin mining company the directors intimated their intention not to declare a dividend before the close of the current financial year. On that occasion, however, the chairman announced that considerable profits had been made during the present year, and as, so says a circular, representations have been made to them by several large shareholders that an interim dividend should be paid, this matter has been duly considered. From the full information available as to the current year's working, and in order to mark in a practical manner the improved and prosperous position of the company, it has been resolved to commence the payment of dividends with an interim distribution of 6d. per share. The directors believe that, in view of the excellent developments recorded by the mine manager, this will be a preliminary to further substantial payments. Arrangements for the flotation of the Gunnislake mines are stated to be complete, but though the issue could be made at any moment, it has been decided to postpone it until after the holidays.

Brilliant Gold Mining Company.—We fear the designation of this company is rather a misnomer. The report for the half-year ended April 11, just arrived from Australia, is not by any means lustrous, although the directors seem to think the outlook is somewhat brighter. It is the development of the Stockholm mine which leads their minds in this direction. A good deal of work seems to have been accomplished during the six months, the main shaft having been sunk a further 375 ft. making the present depth 638 ft. The Stockholm lode was cut at 525 ft., and 63 tons raised and crushed gave a return of £154 or £2 8s. 10d. per ton. Cost of carting four miles to the mill was 4s. 6d., and crushing, &c., was 10s. per ton, leaving £1 14s. 4d. for raising, which should not cost half that amount, the directors say, when the mine is in working order. The stone raised while sinking was naturally considerably mixed with formation rock, and it is thought reasonable to expect that when kept cleaner in stoping it should be worth 5s. to 10s. per ton more. If the lode maintains anything like the value where passed through in the shaft a profit of 40 to 50 per cent. on working cost is hinted at. Every effort will be made to develop the Stockholm lode as speedily as possible, and should the mine open out as well as anticipated the question of erecting a mill on the ground will have to be considered, or of connecting by a branch line with the Government railway which runs within about 1½ miles of the mine with an easy downhill grade. Expenditure to date on the Stockholm mine has been £7,644, and a further few thousands will be required to open up, duplicate the air compressor, and erect a more powerful winding engine. A credit balance of £4,819 possessed should be ample for these purposes. Operations at the Brilliant mine were not very brisk. A considerable number of tributors have continued at work, and at present there are 21 parties with a total of 63 men. During the half-year they raised and treated 1,696 tons for 2,029 ozs., realising £8,079, out of which the company received £1,489 percentage and £211 for haulage, &c. Nett profit over mine expenses for the half-year was £1,453.

Cape Asbestos Company.—At last the directors of this company, which was formed in 1893, are able to report an improvement in the financial results, the company doing better in 1905 than in previous years. Details of the business done are lacking, but the profit and loss account shows that the gross profit amounted to £14,529, which compares with £9,011 in 1904. The German business bought by the company resulted in the loss of £1,381 on the first year's trading, and after allowing for this together with £1,426 for depreciation of machinery, plant, buildings, &c., the nett profit works out at £1,828, against a loss of some £1,300, and this is applied in reduction of the heavy debit from £19,399 to £17,571. Prices of raw asbestos have recently experienced a considerable rise and the company has duly benefited from this. Accordingly, the directors hold out the hope of further improvement during the present year. The financial position is still exceedingly bad, and under the most favourable circumstances the first dividend cannot be possible for years to come. Liabilities include loans amounting to £16,312, bills payable £4,419 and creditors £7,847, against which cash is only £778, there are bills receivable for £670 and debtors are down for £10,848. Perhaps the best things the directors could do would be to face the position and reconstruct. In any case, the distant future looks far from rosy.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Union of London and Smiths Bank.

Steady progress continues to be made by this bank whose nett profits for the year ended June 30 last at £258,039 were up by £49,231 compared with the first half of 1905. No addition, how-

ever, is made to the dividend which remains at 15s. 6d. per share or 10 per cent. per annum with a bonus of 1s. 6d., equal to about a further 1 per cent. added in. What the directors do is to pile up the balance forward, which is now raised to £184,558 or £63,000 more than the balance brought in and more than twice the amount of the balance taken into the profit and loss account a year ago. The balance-sheet shows expansion as well as the profits, the liability on deposit and current accounts having increased by £2,123,000 to £36,642,000 comparing the past half-year with a year ago. Acceptances and guarantees have also risen by £1,593,000 to £4,093,096. Changes in the assets are not of great magnitude, but interesting enough. Thus cash in hand is down nearly £169,000 to £3,039,520 and cash in the Bank of England is less by £658,000 at £3,078,018. A year ago, however, the cash in the Bank of England was larger by £780,000, so that there is nothing surprising in this change. A slight increase of about £53,000 has taken place in the aggregate of the investments, those in Corporation, Railway debentures, Water Works and other stocks being up about £186,000 against a decrease of £139,000 in the amount held in Government securities and some other slight changes. Bills discounted figure for £5,447,234 or an increase of £1,025,000 upon the corresponding half-year's total, and advances are £1,104,000 greater at £15,753,157. Money at call and short notice amounts to £7,108,214, an increase of no less than £844,000. Bank premises are entered for about £46,000 more at £1,279,328, the aggregate of the balance-sheet being £46,331,453. Interest to customers, it may be noted, in the past half-year absorbed £246,252 and the working expenses of the business came to £204,214, gross profits being £737,349.

Barclay and Co., Limited.

The year ended June 30 last was one of notable prosperity for this bank, which now ranks amongst the greatest in the kingdom. Comparison with the previous year's figures is marred to some extent by the fact that the business of Messrs. Bolitho and Co., Limited, proprietors of the Consolidated Bank of Cornwall, was absorbed at the beginning of the year, an acquisition which has obviously added no small degree of strength to the already powerful bank of Barclay and Co. Gross profits for the past year, for instance, amounted to £1,098,892, or £107,531 more than for the preceding year. Of this increase £52,992 was added to the nett income, which rose to £536,554, exclusive of £84,791 brought forward. Altogether, therefore, the nett available balance was £621,245, or £66,963 more, because the balance brought forward was £13,971 up compared with the figure brought in at the beginning of the year 1904-5. This additional profit has been to the extent of about £45,000 absorbed in paying the usual dividend of 15 per cent., tax free, upon the company's capital, which was enlarged last year. The dividend is paid in two halves, 12s. in February and 12s. in August, and for the past year it will absorb nearly £465,000. A large balance is, therefore, still left, and the directors have added £20,000 to the amount set aside in redemption of bank purchase account, making it £50,000 for the past year, against £30,000 for the year before. Also an additional £5,000 at £25,000 is devoted to the reduction of premises and payment for buildings account. It thus results that the balance to be carried forward is at £81,754 slightly less than the balance brought in. The balance-sheet is thoroughly satisfactory, and we are glad to note that the board has separated bills discounted from advances to customers, &c. Here again comparison is in one sense of little value, and yet it is well to contrast the figures for the sake of the progress they indicate. Deposit and current account liabilities, for instance, have risen by about £7,115,000 to £44,407,970. There is also an increase of £403,392 in the paid-up capital, which now amounts to £3,200,000, viz., £8 per share paid up on 400,000 £20 shares. The reserve fund is also larger by £250,000 at £1,500,000, so that altogether the total of the balance-sheet amounts to £49,269,294. And how is this wealth distributed? The bank had on June 30 last £562,000 more in the shape of cash in hand, at the Bank of England, and with other banks, the total being £5,674,180. Money at call and short notice, however, was less by £266,000 at £5,014,000, but a year ago there was an increase of no less than £1,940,000 in this entry. Bills discounted amount to £4,689,229, a very respectable item. Investments have increased by £2,140,000 to £10,801,582, the whole of the reserve fund being in Consols, Local Loans stock, and debenture guaranteed stock, Consols taken at 85 and the other two at 97 each. Advances to customers, &c., stood at £21,458,316 at the date of the balance-sheet, and if we add this item and bills discounted together in order to get a basis for comparison with the figures of the previous balance-sheet, which were not separated, we find that the two show an increase of £5,182,000. The balance of the bank purchase account is now down to £92,000, but bank premises and adjoining property stand in the balance-sheet for £1,378,661.

Parr's Bank

Including £100,954 brought forward the nett profits of this bank for the half-year ended June 30 last came to £307,093, which is £36,805 more than the profits of the corresponding half of 1905. The directors are accordingly easily able to pay the usual half-yearly dividend at the rate of 19 per cent. per annum, tax free, and to put aside the same amount as before, viz., £15,000, in reduction of bank premises capital account. Then £10,000 instead of £5,000 a year ago is transferred to the officers' pension and provident fund, and all this done £119,785 is left to be carried to the new half-year or nearly £19,000 more than was brought in six months back and fully £44,000 more than the balance brought in a year ago. The balance-sheet indicates on the whole steady progress. Deposits have risen by £889,000 to a total of £28,635,424, but there is a slight decrease in the drafts current which at £318,327 are down about £39,000. Acceptances, on the other hand, have risen by about £54,000 to £2,034,552. Amongst the assets cash on hand and at the Bank of England is greater by £92,000 at £4,920,399, money at call and short notice being £5,526,745 in addition. Investments, including £1,000,000 of Consols taken at 85, have risen by about £350,000 to £3,532,981, the total of cash, money at call and short notice and investments being £13,980,125. Bills discounted are £444,000 up at £2,696,112, but loans and advances to customers were reduced by about £323,000 to £15,175,010. Bank premises have also been reduced by about £5,000 to £834,970. It is noticeable that the rebate on bills discounted is taken at 5 per cent. and amounts to £8,786. Current expenses, it might be added, came to £172,746, a total which does not appear to be at all excessive looking at the wide ramifications of the business which is not only metropolitan but extends all over Lancashire and even reaches to the Isle of Man. Notes in circulation there, by the way, have fallen off about £1,626 compared with a year ago and only amounted to £8,374 at the date of the balance-sheet, which foots up to £34,776,585 in the aggregate.

London Joint Stock Bank, Limited.

Including the slightly increased balance of £21,901 brought forward the gross profit of this bank for the half-year ended June 30 was £272,357, an increase against the corresponding period of £15,500. Current expenses were very little heavier at £114,942 and rebate on bills increased from £2,602 to £20,666. The directors then allocate £5,000 each to premises, superannuation, and guarantee funds against only one similar appropriation a year ago, maintain the dividend at 11 per cent. per annum and carry forward £22,749. The guarantee or reserve fund will now be £1,145,000 and the paid-up capital £1,800,000. Public liabilities show the very important decline of over three million pounds to £21,057,284, but we have to take into account the still larger increase of 4¼ millions shown in the balance-sheet a year ago. We wonder what the cause is of these heavy movements. Acceptances £1,059,924 are a little less. Notwithstanding the big drop in the deposits there is no great change in the investments, but cash in hand and at the Bank of England shows a decline of £517,277 to £2,675,223. Money at call and short notice is 1½ millions lower at £5,101,079, and bills discounted, loans, and other securities are down by £849,200 at £9,288,318. Freehold and leasehold premises have been substantially reduced to £444,119 and the balance-sheet totals £22,150,081 aginst £25,207,253.

London and South-Western Bank, Limited.

The figures of this bank's balance-sheet at June 30 last show moderate expansion when compared with the corresponding date in 1905. Current and deposit accounts have increased by £577,526 to £13,895,568 and other liabilities are a trifle larger at £416,361. Reserve and paid-up capital each stand at £1,000,000 as before. On the credit side the cash in hand and at Bank of England has been increased by £280,493 to £2,095,149, and the money at call and short notice is up by £107,740 to £1,144,520. Investments £3,920,913 are down by £168,848, but there is an advance in the bills discounted of £126,755 to £882,443, and the loans and advances are larger by £254,266 at £7,580,127. Premises account shows a considerable increase to £557,880. The bank's resources were turned over at higher rates of interest than in the corresponding period as we know, and in consequence the gross profit has increased by £40,591 to £293,690. Interest paid to customers, however, was larger by £26,842 at £53,651, the current expenses rose from £129,481 to £137,213, and rebate required £1,840 more at £7,616. This still leaves the nett profit somewhat better, and as the balance brought in was £40,030 against £29,396 the disposable sum is £135,241 compared with £120,428. Contribution to the staff provident fund is therefore raised from £2,500 to £3,000, and after maintaining the dividend at 16 per cent. per annum £10,000 is written off bank premises account and £42,241 is carried forward.

Bank of Ireland.

The profits of this bank for the half-year ended June 30 increased about £1,000 to £248,261 compared with the corresponding period of 1905. There was also a small increase to £13,599 in the balance brought forward making £261,859, and after providing £87,635 for general expenses the directors again propose a dividend of 5¾ per cent. for the half-year, being at the rate of 11½ per cent. per annum, with an increase in the carry forward of £1,798 to £14,994. Notes and post bills in circulation are somewhat larger at £2,380,676, Government and other public accounts show a decline of £127,996 to £2,903,994, while the deposits, current and other accounts have increased by £176,270 to £9,888,325. Changes on the other side of the account are almost equally small, the largest movement being in bills discounted, advances to customers, &c., up by about £400,000 to £8,916,370. Government securities are less by £55,200 at £4,251,485, and other securities have been reduced by £133,988 to £3,874,598. Cash in hand and at Bank of England appears at £1,103,474 against £1,154,258, and the money at call and short notice is about £100,000 less at £808,838. Bank premises are lower at £105,684, their original cost having been £494,133.

The National Bank.

In its half-year ended June 30 last this Anglo-Irish bank ran wonderfully level in profits with the corresponding half of 1905. Including £24,060 brought forward, the nett available balance was £119,660 against £118,603 a year ago, or an increase of

£1,057. The directors are accordingly well able to pay the usual dividend at the rate of 10 per cent. per annum, with bonuses at the rate of 1 per cent. or 11s. per share for the half-year, tax free, for after this has been done £37,160 will remain out of which £5,000 has been set aside to bank premises account and £10,000 to the rest or undivided profits, raising the total reserve to £535,000, Consols being taken at 87½. All this done £22,160 will be left to carry forward. The balance-sheet shows an increase of about £178,000 in the deposit and current account liabilities at a total of £11,331,909. There is also a slight increase of £5,000 in the Irish note circulation which amounted on June 30 last to £1,077,513. Against this the cash in hand and at the Bank of England was up about £11,000 to £1,432,270, but money at call and short notice was down £245,000 at £1,608,316. Investments were also down £85,000 to £1,478,303, and there was a decrease of £53,000 in the bills discounted, which totalled £3,731,101. Advances on securities and current account, however, show an increase of £220,000 at £6,012,317. The aggregate of the balance-sheet is £14,776,366. For a bank of the size of this one the amount sunk in premises is small at £303,407.

Munster and Leinster Bank, Limited.

Profits for the six months ended June 30 fell off by £421 to £19,753, but with £6,237 or £237 more brought forward the disposable balance was only £184 smaller at £25,990. The dividend, therefore, is maintained at the customary rate of 12 per cent., and although £500 less at £2,000 is written off premises account the amount put to reserve is increased by that figure to £6,000 leaving £5,990 to be carried forward. Deposit, current and other accounts, including rebate on bills, are £103,977 up at £4,352,625 against which cash in hand and with bankers has risen by £48,239 to £374,981, bills receivable are £26,289 higher at £969,018, and advances show an increase of £98,042 at £1,956,162, but money at call and short notice has been reduced by £64,094 to £299,873. Investments held are valued at £1,173,969 or a mere trifle of £7,087 more.

Great Eastern Railway Company.

Gross revenue for the six months ended June 30 £2,732,827, increase £47,392, working expenses £1,781,162, increase £26,763, ratio between expenditure and income 65.17 per cent. against 65.3 per cent. Increased business was well spread over all classes of traffic and we find improvements of £3,922 in season tickets, £3,407 in parcels, horses, carriages, &c., £20,061 in merchandise, and £23,608 in coal. On the other hand, there was a drop of £2,489 in passenger receipts and £2,886 in cattle. Like all others, we have no doubt this company is suffering from increasing tramway and motor 'bus competition, and the new motor service running to Walthamstow from the City must have diverted a certain amount of traffic. Rivalry of this kind falls particularly hard on a line such as the Great Eastern, which depends so largely on the passenger traffic which it created by the systematic development of the Eastern suburbs. There was an improvement in the Continental traffic receipts of £3,197 at the cost of an expenditure heavier by £803, but, directly, this service still yields a profit of exceedingly small amount when compared with the capital outlay. Rents of arches and other properties showed a drop of £2,141, and it should be noted that the decline in passengers was in first and second class, thirds showing a moderate increase. Ordinary working expenditure items do not show large movements, but more was spent on maintenance, locomotive power, and carriage and wagon repairs. General and law charges and Parliamentary expenses also cost more and rates and taxes showed the inevitable advance of over £4,000. The largest increase, however, was in compensation. That in respect of damage and loss of goods was actually £100 smaller, but for personal injuries to passengers the company had to pay no less than £14,252, an advance against the corresponding period of £13,112, due, of course, to the bad accident at Witham Junction. But for this the half-year would have turned out very well. A substantial decline under carriage and wagon hire is a good sign, and the cost of the Lowestoft Harbour was less. Balance of nett revenue comes to £951,665 or £19,629 more, and there was an advance of £6,477 at £84,746 in the sum brought in, making with dividends on shares held £1,043,532 against £1,017,636. Fixed charges were only £1,000 higher at £496,160, and after providing the preference dividends the directors can increase the ordinary stock dividend by ¼ per cent. to 1¾ per cent. per annum, and the carry forward from £20,429 to £26,143. One of the best points of the report is the smallness of the capital expenditure. The total outlay was no more than £103,435, and the company does not expect to spend more than £180,000 in the current six months. We hope it will be less because the present debit to the capital account is £1,138,340, and the company is entirely dependent upon savings bank and other funds. Dividend warrants will be posted on August 14.

London, Brighton and South Coast Railway.

In the half-year ended June 30 last this company's gross receipts came to £1,571,229 and working expenses to £968,891, receipts showing an increase of £10,396 and the expenses of £1,029, the proportion of expenses to receipts being 61.68 per cent. Receipts from passenger traffic are practically stationary, the directors say, the ordinary daily traffic showing a decrease, met partly by improved season ticket receipts and by an increase in the receipts from rail motor service, which has proved to be very successful. After meeting the debenture interest and preference capital dividends, which together take £436,930, £196,207 is left including £30,799 brought forward, and out of this as already intimated the directors pay a dividend of £1 2s. 6d. for the half-year on the undivided ordinary stock, which gives 3 per cent. on the preferred ordinary. A balance of £30,080 is then left to carry forward of which £8,498 is held on account of the dividend on the deferred ordinary stock payable for the whole year. The free balance is therefore £30,582. In the past half-year the company spent £142,436 on capital account of which only £5,809 was laid out on working stock, machinery and tools. In the current half-year the expenditure is expected to be about £234,000 of which £60,000 goes into the Victoria Station enlargement and consequent widening of the lines to Battersea. No changes of importance are noticeable in the items of expenditure, reductions in one direction being balanced by increases in another. Thus locomotive power is down about £6,000, but carriage and wagon repairs cost £5,000 more. Traffic expenses, however, are down about £2,000 and general charges about £1,000, but compensation is higher by about £760 and there is an increase of £1,130 in rates and taxes. The working charges of Newhaven harbour after allowing for harbour dues, &c., was a nett loss of £6,539. No accounts whatever are given about the company's steamboats except what is found in Abstract F, which shows receipts of £42,203 and a nett profit of £829 after meeting current expenses and setting aside £8,055 to renewal and insurance account. The capital account is overdrawn about £624,000 but the various trust funds in the hands of the company amount to some £751,000, so that it is not immediately necessary to make a fresh issue of capital, although one cannot be very long delayed. Dividends are payable on and after August 9.

City and South London Railway.

Slowly but steadily this little line improves its position and its receipts for the past half-year amounted to £77,395, the working expenses being £34,781. There was thus a nett profit of £42,614, or including the balance brought forward of £45,712, and after meeting all fixed charges there was enough left to pay full dividend on the preference stocks, together with a distribution at the rate of 2¼ per cent. per annum upon the consolidated ordinary stock, leaving £1,871 to be carried forward against £1,367 brought from the previous half-year. The extension to Euston is rapidly approaching completion and also the subways connecting the line with the Baker Street and Waterloo line at the Elephant and Castle. Last half-year the capital expenditure came to £142,238, and another £154,000 will, it is expected, be spent in this way during the current half-year. We may therefore look for a further issue of capital at an early date since the capital account is already overdrawn by £107,000. But every extension creates new revenue.

Eastern Telegraph Company.

Peace between Russia and Japan has naturally caused a diminution in the income of this great cable company in the past half-year compared with the first half-year of 1905. Taking that and tariff reductions into account, the wonder is the decrease in revenue has not been greater. As it is, gross income is down nearly £48,000 to £628,320, and as at the same time working expenses have risen by a little over £12,000 to £191,468 it follows that after allowing £46,464 only for maintenance of cables, depreciation, &c., the free balance is only £429,859 including £39,471 brought forward, or £13,803 down. But this decline does not in the least affect the power of the company to pay its dividends, and the ordinary stock gets its quarterly distribution of 1¼ per cent. plus the final 2 per cent. bonus making 7 per cent. for the year just as usual. Only the general reserve fund gets £45,000 less at £150,000, the board having put its temporary excess of revenue last year away in that direction instead of augmenting the dividend, surely a wise restraint. And the reserve for the maintenance of ships again gets £10,000, but the balance to be carried forward is reduced to £2,267. Reserves of all kinds, however, are £50,000 up compared with the totals for June 30, 1905, and now aggregate £1,591,912, a sufficiently handsome total. Doubtless it is mainly the return of peace which has reduced the amounts due to the company on traffic and other accounts. These are £174,572 less at £272,593, and on the other hand the debit balances have risen by £169,103 to £429,244. Cash is up by £26,341 to £255,313, and the company's position is perfectly comfortable in spite of the increase of competition. The Indian tariff, it must not be forgotten, was reduced by 6d. to 2s. per word, and the Egyptian by 5d. to 1s. in the interval between the dates of the reports compared. The interest revenue alone last half-year was £18,188. Income-tax in England took away £14,658 and abroad £723.

Direct United States Cable Co., Limited.

Gross receipts for the six months ended June 30 were decidedly satisfactory as they show an improvement of no less than £6,794 at £56,264, this advance coming on top of a recovery of £6,349 in the corresponding half of 1905. Expenses, exclusive of cost of cable maintenance, were only £1,352 up at £23,924 so that the nett revenue came to £32,340 or £5,442 more, and with a considerably larger balance of £5,849 brought in gave a disposable total of £38,189 compared with £29,774. Quarterly interim dividends amounting to 10s. 6d. per share have already been distributed and the directors now propose to pay a final dividend of 4s. and a bonus of 2s. 6d. per share, making 4¼ per cent. for the year, which is 1 per cent. more than a year ago and the largest distribution in any year since as far back as 1883-4 when the dividend was 5 per cent. After providing for this payment the balance carried to the new account is increased by £6,316. Cost of cable maintenance, which is charged to reserve, was nearly double the outlay of 1904-5 at £7,144, but £10,627 came in from interest on invest-

ments and profit on sales of securities, and the fund now stands at £504,184 compared with £482,948 on June 30, 1905.

Gordon Hotels.

We fear we cannot subscribe to a rather laudatory statement sent out to the Press with the annual report of this great hotel-owning company. The improvement which has taken place in the affairs of the business during the year to May 31 is very slight, and we do not altogether follow the meaning of the remark that "although the suspense account no longer appears in the balance-sheet the company is in such a strong position that the directors recommend a dividend for the half-year on the preference shares at 5½ per cent. per annum and at 3 per cent. for the year on the ordinary shares." Dealing first with this suspense account we find that sundry alterations and improvements carried out in various hotels left the company last year with an unliquidated expenditure of £8,058, which has since been raised to £20,218. Some portion of this, the directors say, could be charged to capital account, while the balance might properly be written off over a series of years. But instead of doing that, £5,123 has been charged to revenue, and the balance will be written off against the reserve fund. Not a bad method of dealing with the account we admit, but it is not heroic or anything to grow excited about. Then as to the dividend. The directors are clearly gratified at being able to maintain the ordinary distribution at last year's rate of 3 per cent., but seeing that for 1903-4 the return was 6 per cent., and for the two years previous to that 8 per cent., while for many years the company never paid less than 10 per cent., here, again, there is not much reason for boasting. It is a fair complaint that business at the Northumberland Avenue establishments was interfered with by the Charing Cross roof disaster, which resulted in the total closing of the railway station for five months, and in the diversion of the Continental traffic for seven months. Notwithstanding this there was an increase in the turnover of £11,866 to £841,667, and in the revenue from all sources of £11,866 to £842,250. Wines, spirits, provisions, &c., consumed cost £286,001, and the working expenses were £330,576. Repairs, maintenance and depreciation were then allowed to the amount of £62,789 or £6,930 more, and debenture interest made away with £71,325, a very heavy sum, but then the company's debenture debt is stupendous at £1,665,000. It, however, is not in such excessive proportion to the share capital as with some hotel companies, the preference, ordinary, and deferred shares adding up to £1,931,000. Other charges included £4,767 for leasehold redemption and £3,000 for remuneration of directors' committee, whatever that is, and the actual nett balance, we are sorry to say, is two or three hundreds smaller at £82,735. Balance brought forward was about £1,000 better at £5,183, making £87,918, and after paying the preference dividend of 5½ per cent. and 3 per cent. on the ordinary shares the sum carried out is slightly improved to £5,893. Interest on reserve fund investments, £4,528, has been carried direct to reserve, so that after deducting £15,095 to set straight the suspense account, the sum to the credit of the fund is £139,861. There is also a premium account of £265,140, which must provide a melancholy reflection for some unhappy individuals when they look at the present market price for the company's securities. This amount builds up the accumulations to £405,001, or £492,510 including leasehold redemption funds, a sum which goes against the item of properties, business, and capital expenditure, £3,715,473. We could not attempt to criticise this item, for one thing because no details are supplied, and can only say that it is not justified by current earnings or the return made to the shareholders. A good point is that the ordinary reserve, together with the leasehold amortisation accounts are separately invested in well-selected though sadly depreciated securities. The loss on current market figures is something like £35,000 on a total of £350,909. Floating liabilities are fairly heavy at £92,840, against debtors £52,629, but wines, spirits, provisions, &c., are valued at £182,835, and cash is £59,420.

Niger Co., Limited.

A final dividend of 1s. 3d. per share, making 10 per cent. for the year, did not at all please recent speculators in this company's shares. They had put the price to over £3, indicating the hope of 15 per cent., and were clearly disgusted at the actual result. Yet 10 per cent. is not a bad return for a company which has already had fat compensation from the late Government for its political rights. Some people are never satisfied. After paying £106,803 in Customs dues in Nigeria and setting aside £20,000 to suspense account for contingencies, the operations for the year 1905 produced a profit of £79,737. From this directors' fees took £1,750 and income-tax £5,303, while £16,096 was allowed for depreciation, leaving £56,589. Debenture interest requires £7,000, and £8,778 was brought forward, so that the sum for disposal comes to £58,369. After providing for the dividend mentioned, the directors place £20,000 to general reserve and carry forward £3,367. The balance-sheet has a pretty good look, because while debts and liabilities run up to £125,439, debtors, Consols, and other investments alone come to £113,343, and stock of goods, stores, produce, &c., of all kinds is valued at £573,972. Moreover, there is a reserve account of £160,000 and a debenture redemption fund of £75,000, or £235,000 in all. Buildings, land, plant, &c., are valued at £161,081, including £8,397 added during the year, and after providing depreciation, while the cash and bills in hand and at bankers amount to £22,915. The company has acquired the licences to mine referred to in the last report, and the prospecting and mining operations carried on in Northern Nigeria have made good progress. Extensive deposits of tin have been shown to exist, but at a considerable distance from water carriage. When the difficulty of providing efficient land transport has been met, the chief obstalce to rapid development will be removed. Arrangements have been made with the British Cotton Growing Association, under which the company is co-operating with the Association in Nigeria, and is acting as its agents in the purchase and shipment of cotton. In order to provide regular public facilities for the transport of passengers, luggage, and cargo, the directors instituted from July 1, 1905, a fortnightly steamship service between Burutu, the company's chief maritime port, and Lokoja at a confluence of the Niger and the Benue.

Assam Railways and Trading Co., Limited.

During the twelve months ended December 31 this company received a total income of £73,800 or £581 more than in the previous twelve months. This is a very small movement, but some of the contributing items showed considerable change. The railway revenue was up by £716 only but the general trading gave £3,049 more, while the dividends from the Rivers Steam Navigation Company produced £1,224 less, and the dividend from the Assam Oil Company was no more than £2,751 against £4,146. Nothing came in from the Brahmaputra Sultanpur Railway compared with £368, the London County stock brought in more because there was a profit on its sale, which hardly belongs to the revenue account, and general interest was about £300 less. Sundry expenses rose slightly to £3,757, leaving £70,043 as the nett profit, which is raised to £71,995 by the balance brought forward. Debenture interest takes £20,250, and dividends already paid £20,300. The directors have also provided half-year's dividends on the pre-preference and new 6 per cent. shares and now propose a dividend of 10s. per share on the preferred "A" shares, making 16s. or 8 per cent. for the year with a balance of £2,745 carried forward. Regarding the Saiqua Ghat Railway extension the best terms obtainable from the Secretary of State for India were as follows: All land required for making the line and for stations, staff quarters, and sidings is given free of cost, all timber required for construction and subsequent maintenance is allowed free of royalty, and for ten years from date of opening the Government allows an annual subsidy at the rate of Rs. 600 per complete mile. In other respects the extension is to be treated as forming part and parcel of the existing railway concession and a formal agreement is now being signed in India. Capital expenditure during the year on the original line was £1,906 making £572,076, and a further sum of £3,467 was laid out on the colliery increasing the total to £362,663. No actual change has taken place in the company's holdings of shares in the Makum Assam Tea Company, but that company's capital has been reduced by one-half so that the 20,000 £1 shares now have a nominal value of 10s. each. The balance-sheet discloses a moderately good financial position although the reserve for colliery depreciation is not very lavish at £15,000, including £5,000 added this year.

Assam Oil Co., Limited.

After the severe decline in profits recently shown by the powerful Burmah Oil Company it was only to be expected that this concern would make a poor display for the year ended December 31, because both enterprises were subject to the same influences. In their report the directors say that the war of rates in the Indian oil markets—the Shell Company was contesting the right of exclusive markets for one particular company—continued until November, 1905, when a settlement was arranged between the two main competitors. The improvement in price which followed arrived too late to affect the results for the period under review, with the result that the profit fell away from £15,010 to £10,008. Actual working balance was £14,040 and transfer fees gave £14 making £14,054, but from this administration took £2,430, income-tax £163, general interest £1,415 and exchange account £38, leaving the nett balance at the figure mentioned. From it the directors have decided to write off £7,500 or £2,500 more to depreciation account, carrying forward the balance of £2,505 together with the sum brought in, £6,710 in all. Thus there is no dividend for the shareholders who last year got 8d. a share, and we gather from the wording of the auditors' certificate that even the extra allowance for depreciation is not quite sufficient. The total set aside to date is only £17,500, which is certainly small against a capital outlay of £354,367 including £34,204 spent in 1905 for development of drilling, additions to refinery, &c. Satisfactory progress was made with the work, we are told. Attention has been given to proving the oil-bearing lands, and with this end in view several experimental wells are being sunk in outlying districts. The company has also obtained from the Government a prospecting licence over a large tract of country, and a well is being sunk on what is thought to be a promising site. The production from the old wells has been maintained, the directors say, and the conditions on the main oil-field show a great improvement over previous years. Moreover, "from the beginning of the present year there has been a marked improvement all round, and the directors look forward with confidence to the next result." Reverting to the balance-sheet, we note that although the capital expenditure is £354,367 the capital is only £310,000, a state of affairs which has necessitated a loan of £26,000 and a bank overdraft of £19,881, so it will not be surprising if some further capital has presently to be raised. Creditors are not heavy at £9,664 but debtors are smaller still at £5,513 and cash is poor at £1,005. Sundry stocks, moreover, are valued at £29,886 only including stores of £20,152, so that the finances are none too strong.

New River Co., Limited.

This company's report and accounts possess some interest because they constitute the first complete statement issued since

the present company was formed subsequent to the acquisition of the water undertaking by the Metropolitan Water Board. The concern is now a kind of surplus lands company, and although the authorised capital is no more than £240,000, of which £130,000 has been issued, we notice that the directorate consists of 19 members. Their remuneration, however, is not excessive, and, being 5 per cent. on the amount distributed in dividends, came to £325 for the nine months from July 1 to March 25, the period covered by the accounts. Freehold property representing the nominal value of the shares issued was originally put down at £130,000, but property to the value of £41,017 has been sold and the proceeds invested, so that the balance-sheet value now amounts to £88,983. Altogether the company has £43,074 in gilt-edged securities, various sums owing amounting to £2,779 and cash £9,615. Sundry creditors reach £2,355 and the credit to profit and loss is £12,298. In the period under review the income from all sources was £6,976 from which administration charges absorbed £1,871, leaving £5,105. After adding transfer fees £37 and deducting auditor's fee £21 the nett balance is £5,121 and as £7,177 was brought forward the directors have £12,298 to deal with. They therefore propose a dividend of 5 per cent., absorbing £6,500, adding £2,500 to reserve and carrying forward £2,973, after providing fees of £325. There was some grumbling at the meeting held last week because the dividend was not larger, but as the sum distributed was considerably in excess of the actual earnings the complaint was surely frivolous. A reserve is wanted is order that necessary repairs may be executed, and if shareholders will exercise a little patience a larger return will no doubt presently be forthcoming.

International Tea Co.'s Stores, Limited.

This well-known company, which includes also the business of Kearley and Tonge, gathered a total revenue of £131,068 during the year to April 28. From this directors' fees required the big sum of £10,165, but that is of no account, because the ordinary shares are still vendor-held, and the heavy sum paid this way simply means that less is available for dividend. Audit fees next take £400, exactly £19,000 is allowed for depreciation, £774 is payable for interest and £26,000 goes to reserve. Dividend on the preference shares means another £36,000 and £15,000 has already been paid as interim dividend on the ordinary shares leaving £23,729. This sum added to £11,908 brought forward makes £35,637, so that after providing the final ordinary dividend of 5 per cent. bringing up the total return to 8 per cent., the credit carried forward is £10,637. With a goodwill account of £615,675 the directors recognise the necessity for substantial reserves, and up to the present have accumulated £207,384, although we should like to see a larger amount than £23,644 separately invested. During the past year the directors have purchased the freeholds of various properties in the occupation of the company and, at cost, the freeholds now amount to £194,232 and the long leaseholds to £32,159. Other leaseholds together with fixtures, fittings, plant, machinery, &c., are valued at £131,361, and stock-in-trade is entered at £277,059. Debtors, £100,313, are slightly less than creditors but the cash balance is fairly substantial at £43,837.

Hardebeck and Bornhardt, Limited.

Since the formation of this wholesale jewellery manufacturing business into a limited liability concern profits have gone down in a fashion that is not at all pleasant to contemplate. Various excuses have been advanced, but none seem altogether adequate, and it was rather amusing to find Mr. Frederick Walker apologising for the directors at the recent meeting. We wonder what the next move will be. The chief complaint on the present occasion was the high cost of gems, and while this may have had some influence we fancy one of the shareholders was on the right tack when he spoke of a dwindling concern. In the twelve months to May 13 the trading profit was only £4,062 and £238 came in from interest and transfer fees making £4,300. From this the preference dividend requires £3,600 leaving £700 only, but the directors have decided to take another £1,099 from the balance brought in in order to pay a dividend of 3 per. on the ordinary shares. The sum then carried forward is £9,123. Not only do they do this but £1,000 is withdrawn from the special reserve to provide depreciation on plant, premises and goodwill, which will then appear at £59,489 against £76,489 in the first balance-sheet of the company. The directors point this out, and the reduction is certainly fair, but unless business improves this tinkering with previous accounts in an effort to keep things going will have to cease and the position be squarely faced. After making the deduction mentioned, the special reserve for contingencies and depreciation will amount to £3,177, and as this is the only reserve possessed the position is obviously a poor one. Stock-in-trade is valued at £57,812 and against creditors of £1,072 debtors reach £3,354. Cash amounts to £4,641 and "securities and other investments at cost" stand at £11,667. Shareholders should have asked for some details of these.

Gilroy, Sons and Co., Limited.

This jute spinning and manufacturing business is doing a little better just now, and in the year to March 31 last managed to earn a trading profit of £15,676. Add £3 for transfer fees and the total revenue is £15,679, so that after providing debenture interest and wiping out the debit balance of £774 brought forward the sum for disposal is £11,031. Of this £7,500 is used in providing one year's dividend on the preference shares and £3,531 is carried forward, subject to directors' and auditors' fees. This leaves two years' preference dividend in arrear, and we are bound to take note of the fact that the Tay works account still stands at its prospectus valuation of £325,000. The directors say that the works have, as usual, been maintained in a high state of efficiency out of revenue, but that is not enough, because depreciation must have taken place in some form and the reserve is only £20,000. Sundry creditors are just £2,000, apart from accrued wages £1,284, against which sundry debtors amount to £30,626 and cash reaches £5,712. Investments held on account of reserve are valued at £10,188 and stocks in trade are entered at £62,756.

Raphael Tuck and Sons, Limited.

Another good year was experienced by this well-established business, and its accounts made up to April 30 last show a nett profit of £51,844 or £183 more than the preceding year's. Adding in £3,471 brought forward the entire available balance is £55,315, from which £3,500 is deducted for the directors. Out of the remainder the preference dividends have been paid in full, together with an interim dividend at the rate of 6 per cent. on the ordinary shares, and these shares are now to have a final distribution at the rate of 10 per cent. per annum for the half-year ended April 30 last, making 8 per cent. for the year. Then £5,000 is put to a special dividend reserve and £10,000 to the general reserve, raising the entire reserves of the company to £67,714, including £8,845 of a capital reserve. A balance of £3,065 will then remain to be carried forward. Everything appears to be clean in the balance-sheet, and the reserves are invested in first-class securities. Cash in hand and at the bank, too, amount to £45,285, and stock appears small at £65,130, the only heavy item being copyrights, patents, goodwill, &c., which still remains at £240,732. Sundry creditors stand for only £26,208 against sundry debtors owing £93,329.

Empire of India and Ceylon Tea Co., Limited.

With estates so widely scattered, it was hardly to be expected that universal good fortune would be enjoyed by this company, and the fly in the ointment during 1905 was the working of the Dooars gardens, which the directors consider very disappointing. The crop from these estates was 243,000 lbs. smaller at 1,133,531 lbs., a decrease ascribed to unfavourable weather, and finer plucking and weather conditions were also responsible for a small reduction to 485,350 lbs. in Ceylon, but, on the other hand, the output in Assam was the largest ever gathered, and amounted to 2,763,047 lbs. or an increase of no less than 859,810 lbs. In the matter of price the Assam produce yielded 7.89d., against 7.76d. a year ago, the Dooars gave 6.01d., or 0.55d. more, and the Ceylon showed a slight drop of 0.07d. at 6.33d., but satisfactory though these were, in no case did the price come up to the average returns of the respective districts which were 8.74d., 6.24d., and 6.99d. A substantial reduction from 6.84d. to 5.33d. per lb. in the cost for the Assam crop was accompanied by only slight increases at the other estates, and, taken as a whole, the year has been a much more satisfactory one. Nett profits rose by the substantial sum of £19,826 to £24,316, and with £1,043 brought forward, the directors had £25,359 or £15,556 more at their disposal, out of which they pay the balance of 1 per cent. on the preference dividend held over from 1904, together with the full dividend for 1905, and give the ordinary shareholders 5 per cent., leaving £1,644 to be carried forward. Advantage has not been taken of this return to comparative prosperity to make any provision for depreciation, although some action in this direction would appear to be very necessary as the estates, including £3,327 spent on the rebuilding of the Lebanon factory, are valued at £446,818, and the only reserve is the £14,500 set aside out of profits earned before the incorporation of the company. Advances from brokers have been reduced by £12,177 to £15,400, but bank loans are £6,546 up at £26,141, and the amount due to other creditors is £2,953 larger at £10,636, so that the nett decrease in current liabilities is only £2,678 at £52,177. Against these stocks are £10,239 higher at £49,995, and cash has risen by £1,487 to £4,747, while sundry debtors come to £1,180 less at £4,242, so that liquid assets show an excess over liabilities of about £6,800, but the company has to find over £16,000 for the dividends just declared. It is true that it also has assets consisting of £7,231 for advances at gardens and £4,150 in Tezpore Tramway shares, but the former, at any rate, are not likely to be readily realisable, and further borrowings seem inevitable.

Lankapara Tea Co., Limited.

A shrinkage of 45,045 lbs. to 1,059,966 lbs. in the output for the 12 months ended December 31 was accompanied by a recovery of 0.49d. to 6.25d. per lb. in the average price, and gross proceeds were £1,192 up at £27,623. Expenses, however, rose by £643 to £21,239, and after paying managers' commission the nett balance came to £6,383 or £852 more, to which were added £538 brought in, £231 from underestimate in 1904, and £79 from interest, making a total of £7,232 compared with £6,847. Debenture interest having been met, another £1,000 is placed to debenture redemption fund and last year's dividend of 10 per cent. is repeated, leaving £047 to be carried to the new account. With the transfer from revenue, the reserve, including the debenture redemption fund, now stands at £5,750, and as the debentures for £5,000 can be paid off on January 1 by giving six months' notice, the directors have issued notices of their intention to carry out the redemption. This will leave the reserve at a trifle of £750 against estates valued at £50,253, and we hope that the company will now give its attention to building up this fund to a respectable total. Liabilities on bills payable have dropped by £3,650 to £2,300, and the overdraft at the bank has also been considerably reduced and now stands at no more than £62. Sundry creditors, however, are £1,136 up at £4,514, while an increase of £5,861 to £19,762

in stocks is neutralised by a decrease of £5,828 to £172 in cash, and sundry debtors owe £1,022 less at £947.

Nedeem Tea Co., Limited.

The estimates for the 1905 crop again proved below the mark, as instead of there being a reduction in output the quantity gathered was 109,679 lbs. larger than in the previous season at 5,086,887 lbs. Quality, however, was not quite so good, so that for the 4,067,985 lbs. sold in London the average price was only 0.09d. up at 6.02d. and the Calcutta average on 1,018,902 lbs. 0.24 annas higher at 5.5 annas, the total coming out at 6.07d. against 5.97d. Nett profits, nevertheless, were £4,283 larger at £22,288, and with £2,156, or £1,012 more brought forward, the balance available for distribution came to £24,444 compared with £19,149, and the directors take advantage of the increase to resume their appropriations to reserve with £5,000, repeating last year's dividend of 2½ per cent. on the ordinary shares and carrying forward £2,295 subject to managers' commission. Small though the dividend is we doubt very much if the position of the company justifies even that payment. Advances against tea have risen by £22,940 to £41,810, bills payable are £16,510 up at £54,432 and other liabilities £2,009 higher at £16,763 against a decrease of £29,445 to £13,446 in loans making the total current liabilities £126,451 exclusive of dividends to be paid. To meet this heavy indebtedness the company can show liquid assets valued at no more than £79,049, consisting of £71,818 for tea in transit, £4,063 due from sundry debtors and £3,168 in cash. Expenditure on account of the current year comes to £4,250 and advances at gardens stand at £3,316, but neither of these can be classed as "liquid assets."

Jokai (Assam) Tea Co., Limited.

A smaller crop was expected for the year ended December 31, but the output fell short even of the estimates by 11,594 lbs., and was 38,438 lbs. below that of 1904 at 4,390,806 lbs. The average price, however, rose by 0.58d. to 8.40d., or allowing for freight and other charges saved on 760,493 lbs. sold in Calcutta it was 3/6d. higher at 8¾d., and as the cost of production remained the same at 6.97d. the nett profits improved by £8,498 to £22,260. Following the usual practice, the interest on investments is taken into the revenue account, and with £2,921 from that source and £1,899 brought forward the amount available is £7,931 larger at £27,080. As the directors have decided to raise the dividend by 2½ per cent. to 7 per cent. only £2,000 of this increased revenue can be spared to establish a special reserve fund, and even that means a reduction of £319 to £1,580 in the balance carried forward. Apparently this new reserve is in connection with the scheme for providing insurance against hail by crediting a reserve with the premiums that would otherwise have been paid to insurance companies, and if this is the case the amount should have been deducted before profits were shown as it is merely a diversion of expenditure. The old reserve has been neglected for several years, even the interest on investments representing it being appropriated for dividend purposes, a policy that seems very short-sighted. Liabilities are extremely heavy, bills payable being £9,500 up at £64,500 and sundry creditors £3,222 higher at £8,300, and although stocks and sundry debtors are £14,427 larger at £73,230, cash is down £1,219 at £4,861, and the margin of free assets does not seem large enough to justify the step taken in increasing the dividend.

Electric Construction Co., Limited.

This company was entrusted with the installation of the London County Council power station at Greenwich and that of the Great Western Railway at Park Royal, but notwithstanding these important contracts and the fact that the output of the Bushbury works was increased it was impossible to make ends meet. Gross profits for the year ended May 31 were slightly larger at £34,509, but dividends on shares held fell off by £1,730 to £3,951, owing to a reduction in the dividend paid by the Madras Tramways through the failure of the Monsoon in 1905 and an outbreak of plague in the city, and with £20 from transfer fees the total income was £1,191 down at £38,480. Interest on debentures again absorbed £10,250, but general and administration expenses took £447 more at £18,911, and in spite of a reduction of £455 to £1,593 in the sum spent on maintenance of plant and buildings the nett balance after putting £5,000 or the same as a year ago to depreciation account was £1,183 smaller at £2,726. To pay the preference dividend, however, required £4,395, so that the revenue fell short of this amount by no less than £1,668 and recourse has again been had to the balance brought in, leaving no more than £1,651 to be carried to the new account. The value of properties, patents and goodwill has been increased to £389,832 by the expenditure of £1,215 on additions to plant, and shares in other companies come to £917 more at £124,676 against which the reserve and depreciation funds stand at £95,000. Sundry creditors amount to £46,859 and bills payable to £3,490, while, on the other hand, sundry debtors owe £88,649, so that the surplus of these assets over current liabilities has dropped £5,052 to £38,300. The loan of £7,500 outstanding at the date of the last balance-sheet has seemingly been paid off, and although stocks and work in progress are valued at £66,917 or £3,905 less cash is up £1,450 to £18,300, and the financial position seems fairly good for a company of this class.

Electric Supply Corporation, Limited.

This company is endeavouring to work a number of small electric lighting undertakings in various parts of Great Britain, but the results so far obtained have not been encouraging. Only one concern, at Chelmsford, is fully established, and with 21,336 8 c.p. lamps connected it earned a nett revenue last year of £3,817 out of which it distributed £2,133 in dividends. The gross revenue from the installations in Dalkeith, Dollar, Jedburgh and Melrose increased from £588 to £1,533, but the nett figures are not given, while the Totnes Electricity Supply Company, in spite of a steady improvement in gross earnings, finished the year with a loss of £210. Supply of electricity was commenced at St. Andrews, Exmouth and Hitchin, and in the two first-named places the sales of current produced £527. With all this progress the parent company was even less successful during the twelve months ended December 31 than it was in 1904 and the small credit balance of £216 then shown has given place to a loss of £294. Gross income from all sources amounted to £4,214, of which £1,099 was saved as nett revenue and with £216 brought in the amount available was £1,315, but debenture interest required £1,525 and £85 was put to repairs and renewals fund leaving a debit as stated above. The guarantors, however, have paid over £3,968 in order to wipe out this loss and to pay an interim dividend at the rate of 5 per cent. per annum for the six months to June 30, 1906. Capital expenditure during the year amounted to £51,693 making the total to date £184,290, and as the company has applied for a provisional order for an electric tramway from Clydebank to Dumbarton and from Dumbarton to Balloch, further capital will be required for this and for other works in hand. The outlook is not particularly promising for the raising of these additional funds and it would have been more sensible if the directors had devoted themselves to bringing their existing undertakings into the profit-earning stage before launching out further.

General Electric Co., Limited.

All electrical companies complain of the high cost of raw materials and this one is no exception. The rise led to a further small decline in profits, despite increased sales in all departments during the year to March 31, as it was not possible to bring about a corresponding increase in selling prices. Moreover, the improvement in general trade recently noticed came too late to affect the present accounts, although it has materially helped to fill the order books for the current year. The Witton Engineering and Carbon Works have been increased during the twelve months owing to progressive results and at present are in very good condition we are told. The machinery turned out from Witton Works has gained steadily in popularity, many large contracts have been carried out and are leading to repeat orders. Nett trading profits, including income from investments, &c., were £70,149 or £3,674 less than in the previous year, not a large decline except that it comes on top of a shrinkage of £10,000 odd shown twelve months back. Debenture interest is £8,000, and £17,554 is allowed for depreciation, leaving £44,594 from which the preference dividend takes another £12,500. The directors therefore propose to repeat the 5 per cent. dividend on the ordinary shares requiring £16,561, managing directors' and employees' bonus amounts to £3,209, and the balance of £12,324 is added to reserve. Further ordinary shares to the number of 1,372 have been allotted to the directors at par, making the total issued £331,220 in addition to the preference capital of £250,000 in the hands of the public. There is also 4 per cent. debenture stock to the amount of £200,000, and the company owes £258,905 to sundry creditors against £347,050 to come in from debtors. Including goodwill and patents £92,105 the property valuation is £443,529, additions for the year being £29,801 and the reduction for depreciation £17,554. Against this there is a reserve fund of £108,577, about one-half of which is separately invested. Cash is small at £9,513 but the stock-in-trade is valued at £314,515.

Chili Telephone Co., Limited.

From the report of this progressive business for the year to March 31 we learn that the aggregate number of subscribers at all centres at the end of the year was 7,270 as compared with 6,274 at the beginning, being a gain in the 12 months of 996. The effect of this on the revenue account was very marked, the gross income in Chili from all sources being $1,090,569 or $111,823 more than in 1904. On the other hand, the increase in expenditure was $55,892 to $501,032, so that the nett profit improves by $55,930 at $589,536. The average rate of exchange, however, was 1.06 lower at 15.24d., so that in sterling the revenue was only £1,208 higher at £37,435. Liquid assets and liabilities in Chili on March 31 were valued at 15¼, the current rate of exchange on that day, as compared with 16⅛d. at which they were taken on the corresponding date last year. Including interest, discount, and transfer fees, the total credit is £38,166, from which expenses in London absorb £1,941, debenture interest £1,170, and income-tax £1,150 leaving £33,905, which is raised to £36,373 by the balance brought forward. The directors therefore maintain the dividend at the very satisfactory rate of 8 per cent., placing the rather larger sum of £16,119 to reserve, and carrying forward £2,653. Length of wires at the date of the accounts was over 12,373 miles, an increase on the year of 1,613 miles, and considering this the capital expenditure must be accounted very moderate at £4,710, raising the total to date to £303,972. Against that there is a reserve account of £95,000, so that the position is quite good. A moderate portion of this fund is invested in gilt-edged securities, and although trading accounts are a little adverse, cash and bills reach £7,782.

Electrical Power Storage Co., Limited.

Keen competition and an exceptional rise in the price of raw materials are put forward as the reasons for a continuance of the shrinkage in nett profits during the 12 months ended May 31. These were £526 lower at £8,604, but £240 more at £711 was brought in, reducing the decrease in the disposable balance to £286 at £9,315. After writing off another £2,500 for de-

preciation of patents and goodwill and again putting £1,000 to contingency fund, the usual dividend of 6 per cent. is paid, leaving £425 to be carried forward. Patents, goodwill, &c., now stand at £69,885, while the special reserve and contingent fund together amount to £19,000, of which £15,116 is invested outside the business, all but £200 being in Exchequer bonds. Liabilities to sundry creditors are down £2,807 to £9,479, against a decrease of £3,300 to £17,200 in sundry debtors, but stocks are £3,277 higher at £22,073, and cash comes to about £100 more at £12,009.

British Steamship Investment Trust.

Last year ended June 30 this company made £4,216 more than in the previous year at £48,549, the balance brought forward being only £93 up at £565. An expense of £621 was occasioned by the issue of further capital, £60,000, the balance of the £100,000 created having been allotted and paid up during the year. Fully £1,000 more at £7,074 was set aside from revenue and written off investments, &c., and of the balance of £27,081 the preferred stock dividend is paid and the deferred stock receives its usual 5 per cent. After setting aside £4,500 to provide the interim dividend on the deferred stock in January next a balance of £2,060 is left to carry forward or £245 less than was brought in, subject to managing directors' remuneration which in the previous year took £1,740. In the balance-sheet the reserve fund is brought up to £77,362 by the addition of £2,141, representing profit on investments sold, and the total of the investments on the assets side is put at £714,892 an increase of £5,101. Cash is down £6,553 to £7,119 and sundry debtors including investments in process of realisation are larger by £7,243 at £13,091. It is noticeable that while office expenses exclusive of the cost of issuing new capital, took £997, directors' fees came to £2,200 without counting the extra sum paid to the managing director. For all we can tell, the money may be well earned, but the liberality is unusual. In their report the directors state that the improvement in shipping did not last year keep pace with the increased volume of trade.

S. Hoffnung and Co., Limited.

The profits of this Australian trading business advanced sharply during the year to March 31 last, the directors remarking that the improvement in trade foreshadowed in last year's report has been substantially confirmed. A good season has prevailed generally throughout Australia, and the accounts received to date indicate its continuance. The directors are therefore encouraged to look hopefully for a further and sustained period of prosperity. That is very encouraging, especially as the hoped for good results will come on top of an increase of £12,175 shown for the period under review. Trading profit is returned at £6,039 against £48,864, to which must be added £656 for rents and £2 for transfer fees making £61,697. Various charges drew off £20,271, including head office expenses £7,690, directors' fees, £1,200, managers' remuneration £6,750 and interest on mortgage and deposits £4,287. This leaves the nett balance at £41,426 or £12,157 more, and with £1,922 brought forward the sum for disposal is £43,348. The directors can therefore raise the dividend on the participating preference shares from 5½ per cent. to 6¼ per cent., and the ordinary dividend from 4 per cent. to 9½ adding £5,000 or £2,000 more to reserve and carrying forward £2,223. The largest item on the credit side of the balance-sheet is the stock-in-trade, including shipments in transit £261,679. This involves a good deal of floating debt, some £137,942 in all, and we notice that the company has mortgaged its Sydney leaseholds for £75,000, besides having £11,919 on deposit. Debtors, however, owe £147,139, bills receivable come to £28,762 and cash is £11,507. Including £542 added during the year and after making fair allowance for depreciation, the plant, machinery, &c., is valued at £13,854, freehold and leasehold properties stand at £153,170 and goodwill is down for £150,000. Against this the reserve is not yet very substantial at £12,500, although it is growing.

Wm. Murray and Co., Limited.

Trading profits of this Edinburgh brewery for the year ended June 30 rose by £337 to £5,151, and an extra £73 at £506 was received from interest, &c., giving, with £1 from transfer fees, a total revenue of £5,658 against £5,248. Of this £279, or £39 less, was written off for depreciation, income-tax took £221 compared with £232, and after providing for administration charges the nett balance was £460 up at £4,473. The balance brought in, however, was £216 smaller at £495, so that the amount available for depreciation showed an increase of no more than £244 at £4,968, out of which the usual dividend of 4 per cent. is paid on the ordinary shares and £1,000 is put to reserve leaving £738 or £244 more to be carried to the new account. Brewery premises, plant and goodwill, &c., are valued at £48,816, on which the allowance for depreciation works out at the not very liberal figure of 0.6 per cent., while the reserve of £9,000 is all employed in the business. Trading accounts are largely in the company's favour, current liabilities being £12,842 against £14,459 due from sundry debtors and £22,766 held in cash and bills.

Colonists' Land and Loan Corporation, Limited, and Reduced.

During the year ended March 31 only two acres of land were sold for £411, and the sale of four acres was cancelled, so that the company now holds 34 acres valued at a trifle of £29. Investments in New Zealand have been reduced by £27,798 to £55,408 through the repayment of mortgages, and this money apparently is employed on the London Stock Exchange, as short loans against securities now amount to £26,000, while investments in Natal remain at £36,000 and colonial and foreign securities held in London are valued at £10,438 or £1,800 less. The gross revenue from all sources was £5,789 down at £7,954, and with slight savings in expenditure in London and New Zealand at £2,288 and £1,200 respectively, the nett profits come to £4,466 against £10,042. A larger balance of £13,649, however, was brought forward, making £18,115 or only £1,672 less available for distribution, so the dividend and bonus are maintained at 7½ per cent. and £11,977 is carried forward. Reserve is untouched at £33,334, even the interest on investments representing it being treated as ordinary revenue, but the directors are busy with the rearrangement of the capital, and when this is carried through they may be able to give some attention to the very necessary operation of augmenting this fund.

Norwich Union Life Insurance Society.

Last year this company's business showed no small elasticity, and resulted in the issue of 5.272 new policies, for £3,283,899 and yielding £149,544 in new premiums. This is the largest addition in the company's history to the business in one year, and the new premium income exceeds that of the previous year by £16,565. The entire income from old and new premiums and interest came to £1,116,163, and the working expenses took £115,000 of the nett premium income, or about 15½ per cent. Altogether the expenditure, including provision for every outstanding claim, amounted to £577,106, the difference, £539,056, constituting the increase in the funds, which at the close of the year amounted to £6,087,868. Interest, dividends, &c., amounting to about £243,000, including a profit of £4,763 on securities realised, represented a return of £4 5s. 4d. nett on the total funds possessed by the company. Last year the office bought up the Scottish Imperial business, which had an income of £87,000 a year and assets valued at £711,000.

Australian Agricultural Company.

Further substantial progress was made by this undertaking in the year ended December 31, progress to which practically all departments of the business contributed. The largest improvement was in stock which yielded £14,659 more at £46,877, mainly owing to the larger amount realised from the wool clip, as although more sheep were disposed of the average price obtained was not so good as in 1904. During the first few months the coal trade was very slack, but in spite of the strike at Hebburn from May until the end of August business was well maintained for the rest of the year, and the colliery profits came to £2,300 more at £28,946. Interest receipts were £1,238 up, while land sales produced only £44 less, and with sundry savings in expenses, the nett profits from all sources amounted to £90,228 against £71,299. Including £12,316 from the previous account the total available was £102,544, and after meeting debenture interest and income-tax, and putting £10,000 to reserve, the dividend is increased by 10s. to £3 10s. per share. Capital expenditure amounted to £6,301, of which £4,400 was on new wagons for Hebburn Colliery, £534 was paid on account of the purchase of the half share of the Aberdare Cessnock Railway owned by the Aberdare Collieries, and £1,367 was for land bought at Warrah. Against this outlay the account was credited with a further instalment of £27,654 on account of the sale of the Gloucester Estate, and £10,000 has been written off as usual for wear and tear of colliery plant, leaving an unexpended balance of £38,125, and of this £23,000 will be utilised to pay off debentures falling due on August 1, while the remainder will go towards the purchase of the railway above-mentioned, the total cost of which is put down at about £38,000. The position of the company now seems excellent, as liabilities are small, amounting to £21,304 on wool account for the 1905 clip, £4,209 on purchased sheep account, and £1,118 due to sundry creditors, while the general colonial account, consisting of book debts and cash in the colony, stands at £38,887, purchased cattle account is £18,198, bills receivable come to £19,408, and £4,217 is held in cash. In addition £70,000 has been lent on security while the reserve fund of £50,000 is represented by investments of £49,127. For the current year the prospects seem on the whole favourable. A good demand has been experienced for coal at better prices, and the pits have been kept in full work, the wool clip has realised £45,246 or an increase of £8,242, and although sales of fat stock were to some extent forced by the hot and dry weather experienced, satisfactory prices were realised for both sheep and cattle.

MINING RETURNS.

Bernheim (Mazoe).—Crushed 1,000 tons, 500 ozs.; tailings assay 3 dwts. per ton.

British Broken Hill Proprietary.—4,911 tons crude ore produced 821 tons concentrates, containing 501 tons lead and 22,167 ozs. silver.

Broken Hill Proprietary Block 10.—10,655 tons of ore, producing 1,362 tons concentrates, containing 844¼ tons lead and 43,584 ozs. silver.

Carrington's Lion.—Crushed 185 tons for £360.

Central Chili Copper.—Production of regulus 157 tons fine copper, also gold and silver, value £558.

Chinese Engineering.—Output of coal 17,500 tons, sales 15,500 tons, consumption 1 000 tons.

Consolidated of New Zealand.—Progress of N.Z.: Crushed 5,095 tons, value £8,179. Wealth of Nations: Crushed 1,070 tons, value £1,950.

Durban-Roodepoort.—Milled 10,685 tons, 3,334 ozs.; tailings 7,105 tons, 823 ozs.; slimes 3,255 tons, 205 ozs; total, 4,362 ozs.

El Oro.—Crushed 21,530 tons of ore, producing U.S.$207,387.

Esperanza.—Crushed 13,265 tons, shipped 7,152 tons, value $150,078; value of concentrates, $71,041; value of ore shipped, $507,844; total, $730,535.

Kalgoorlie Amalgamated (New).—Tributors crushed 422 ozs., value £1,600.

Kelantan Dredging.—Recovered 103 ozs.

Koffyfontein.—2,150 carats diamonds recovered.

Mills' Day Dawn United.—Treated 1,541 tons, value £7,800.

Montrose Diamond.—Treated 599 loads, yielding 139 carats.

Myalls and Peak Hill.—Crushed 2,325 tons, 413 ozs.

New Heriot.—Crushed 9,425 tons, 3,845 ozs.

No. 2 South Great Eastern.—Crushed 5,240 tons, 2,455 ozs.

Palmarejo and Mexican.—Crushed 3,425 tons, treated 3,000 tons, producing $13,740 gold, $43,390 silver.

Raub Australian Gold.—850 ozs. gold from 5,440 tons ore crushed.

Salisbury.—Crushed 5,200 tons, 1,293 ozs.

Sulphide.—5,497 tons milled, producing 1,088 tons leady concentrates; also 1,790 tons middlings and 10,375 tons tailings treated, producing respectively 610 and 3,888 tons of zinc concentrates; 2,763 tons leady concentrates, 913 tons residues, and 5,621 tons purchased ores smelted, yielding 2,764 tons lead, containing 210,064 ozs. silver, and 13,267 ozs. gold; also treated 560 tons zinc concentrates, producing 171 tons spelter.

Tanganyika Concessions.—Ruwe—Output May, 719 ozs.

Victorian Cornish.—Crushed 2,100 tons, 1,050 ozs.

Westralia Mount Morgans.—Crushed 5,000 tons, 575 ozs.; cyanided 3,225 tons, 445 ozs.; slimes 1,995 tons, 281 ozs.

Ymir.—Crushed 1,500 tons, 286 ozs.; concentrates 150 tons.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Belfast and County Down.—Half-year ended June 30 at the rate of 6 per cent. per annum, with £2,300 carried forward.

City and South London.—On the consolidated ordinary stock at the rate of 2¾ per cent. per annum, with £1,500 to renewal fund and £1,870 carried forward.

Great Central.—At the rate of 2 per cent. per annum on the 4 per cent. preference stock, 1889, carrying forward £8,000.

Great Eastern.—On the ordinary stock at the rate of 1¾ per cent. per annum, carrying forward £26,000.

Great Northern.—On the ordinary stock for half-year ended June 30 at the rate of 6¼ per cent. per annum, carrying forward £38,300.

London, Brighton, and South Coast.—For half-year of £1 12s. 6d. per cent. on the undivided ordinary stock and £3 per cent. on the preferred ordinary stock, with £30,580 carried forward.

London, Tilbury, and Southend.—On the ordinary stock for past half-year at the rate of £3 10s. per cent. per annum, carrying forward £4,159.

Metropolitan.—On the ordinary stock for past half-year at the rate of 1½ per cent. per annum, carrying forward £4,000. On the Surplus Lands stock at the rate of 2¾ per cent. per annum, carrying forward £200.

Midland Great Western of Ireland.—3 per cent. per annum on the consolidated stock for half-year ended June 30, carrying forward £4,700.

National Railroad of Mexico.—1 per cent. on the preferred capital stock, payable Aug. 10.

BANKS.

Bank of Athens.—Interim of 5 drachmæ per share for past half-year.

Bank of Victoria.—On the ordinary shares at the rate of 4½ per cent. per annum, carrying forward £9,738.

Commercial of Australia.—At the rate of 3 per cent. per annum on the preference shares, with £5,200 to special Assets Trust reserve, £28,721 to Special Assets Trust Company, £5,000 written off bank premises account, and £13,733 carried forward.

Carlisle and Cumberland.—At the rate of 18 per cent. per annum for half-year ended June 30.

Halifax Commercial.—Final of 8s. per share, making 8 per cent. for the year, with £2,000 written off for depreciation in investments, and £6,022 forward.

Manchester and Liverpool District.—21s. per share for half-year.

North-Eastern.—7s. per share for half-year ended June 30, with £2,395 carried forward.

Stamford, Spalding, and Boston.—Interim at the rate of 8 per cent. per annum for half-year ended June 30.

BREWERIES.

Lion.—Interim to June 30 at the rate of 4 per cent. per annum.

Royal, Brentford.—Final at the rate of 16 per cent. per annum for six months ended June 30, making 12 per cent. for year ended June 30.

MINES.

Alaska Mexican Gold.—30 cents per share, payable 28th inst.

Alaska Treadwell Gold.—$1 per share, payable 28th inst.

Alaska United Gold.—30 cents per share, payable 28th inst.

Broken Hill Proprietary.—For quarter ending Aug., 1906, of 1s. 6d. per share, and a bonus of 1s. per share, payable Aug. 22.

Enterprise Gold Mining and Estates.—Interim of 1s. per share.

Glen Deep.—Interim of 1s. 6d. per share for half-year ending July 31, payable Sept. 4.

Glynn's Lydenburg.—15 per cent., payable Sept. 5.

No. 2 South Great Eastern Gold.—(No. 96) of 6d. per share, payable July 24.

Nourse.—Interim of 12½ per cent. for half-year ending July 31, payable Sept. 4.

MISCELLANEOUS.

Advance Corp.—Usual at the rate of 8 per cent. per annum.

Boston (Lincolnshire) Gas Light and Coke.—8½ per cent. on the old shares and 7 per cent. on the new shares for past year.

British Investment Trust.—Interim at the rate of 8 per cent. per annum on the deferred stock for half-year ended July 1.

British Steamship Investment Trust.—Final at the rate of 6 per cent. per annum on the deferred stock, making 5 per cent. for year ended June 30.

Gas Light and Coke.—For past half-year at the rate of £4 8s. per cent. per annum, carrying forward £210,481.

Guaranty Trust of N.Y.—For half-year ended June 30 at the rate of 20 per cent. per annum, carrying forward £131,449.

H. E. Randall.—Interim on the ordinary shares at the rate of 12½ per cent.

Illustrated London News and Sketch.—Interim at the rate of 2½ per cent. per annum on the ordinary shares for half-year ended June 30.

John Oakey and Sons.—Interim on the ordinary shares for the six months ended June 30 at the rate of 10 per cent. per annum.

Lancashire Shipping.—Half-yearly interim of 2 per cent.

Lochgelly Iron and Coal.—Final of 2½ per cent. on the ordinary shares, making 5 per cent. for year ended May 31; £1,606 forward.

Madame Val Smith.—At the rate of 6 per cent. per annum on the ordinary shares for half-year ended June 30.

Manchester Bonding Warehousing.—Interim of 6d. per share.

Manchester Commercial Buildings.—Interim of 3s. 9d. per £5 share.

Mercantile Investment and General Trust.—Interim at the rate of 5 per cent. per annum on the preferred stock and at the rate of 5 per cent. per annum on the deferred stock, for half-year ending 31st inst., payable Aug. 1.

Metropolitan Trust.—Interim on the ordinary stock for six months ended July 1 at the rate of 7 per cent. per annum, payable 27th inst.

Milners' Safe.—At the rate of 10 per cent. per annum for year ended May 31.

Montreal Light, Heat, and Power.—For three months ending the 31st inst., at the rate of 5 per cent. per annum, payable Aug. 15.

Morrison and Fleet's Dairies.—Interim at the rate of 6 per cent. per annum for half-year ended June 30.

Nelson Brothers.—Interim of 3 per cent. on the ordinary shares, payable Aug. 15.

Newcastle-upon-Tyne Electric Supply.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30.

Parson's Foreign Patents.—6s. per share on the ordinary shares and of 15s. per share on the deferred shares for year ended June 30.

Pease and Partners.—Final of 11s. per share on the ordinary shares, making 8 per cent. for the year, and 8 per cent. on the deferred shares.

Pontypridd Water Works.—At the rate of 9 per cent. per annum on the original stock, and at the rate of £6 6s. per cent. on the new ordinary shares for half-year ended June 30.

Ramsbottom Paper Mill.—Interim at the rate of 10 per cent. per annum on the ordinary shares for half-year ended June 30.

Richard Lunt and Company.—Interim at the rate of 5 per cent. per annum on the preference shares and at the rate of 10 per cent. on the ordinary shares for half-year ended June 30.

Robert Campbell and Sons.—Interim of 2½ per cent. for past half-year.

Sawers.—Interim of 5 per cent.

Scottish American Investment.—Interim at the rate of 12½ per cent. per annum on the ordinary shares for half-year ended June 30.

Shanghai Water Works.—Interim of 15s. per share on the old shares and 5s. per share on the new shares.

Short's.—First interim for year ending March 31, 1907, of 5s. per share on the deferred ordinary shares.

Thomas Wallis and Co.—Usual at the rate of 8 per cent. per annum on the ordinary shares for six months ending 31st.

United States Debenture.—Interim for six months ending July 31 of 1s. per share on the ordinary shares, being at the rate of 5 per cent. per annum.

W. B. Fordham and Sons.—Interim at the rate of 5 per cent. per annum for six months ended June 30.

Waterloo Mills Cake and Warehousing.—7½ per cent., placing £2,000 to reserve, with £1,821 forward.

Wilkinson and Riddell.—Interim at the rate of 5 per cent. per annum on the preference shares and at the rate of 10 per cent. on the ordinary shares for half-year ended June 30.

TRADE AND PRODUCE.

WHEAT.—Demand has been quiet throughout the week, and though the influence of good cables, unfavourable weather reports, lighter shipments and smaller quantities on passage have kept quotations firm very little business has resulted. English wheat was again sparingly offered, farmers' deliveries for the week amounting to 8,242 qrs. averaging 30s. 5d. per qr. against 4,884 qrs. averaging 32s. 3d. last year. Imports were 543,367 qrs. against 562,357 qrs. in the corresponding week of 1905, and the quantities of wheat and flour on passage Dornbusch estimates at 2,675,000 qrs. against 2,945,000 qrs. last week. American markets commenced with a bullish tone, and after a depression caused by disappointing European advices and an increased crop movement rallied again under a large export business with Europe, the sales for shipment being estimated at half a million bushels. Again a sharp decline followed the "Prices Current" report and a generally favourable weather map. Bradstreet's estimate gives the quantities in sight east of the Rockies at 32,254,000 bushels against 32,531,000 bushels last week.

WOOL.—No change has occurred at the London sales except that a slightly better feeling has been shown for merinos and finest quality crossbreds have gone 5 per cent. above opening prices. Bradford market remains quiet, consumers there holding off in the hope of easier prices, but topmakers are not affected by their attitude and insist on sticking to their quotations. At Leicester more business has been transacted and a firmer tone also is noticeable on the market. Throughout the country generally trade is fairly good in almost all its branches and is regarded as being in a healthy condition, and prospects for the autumn are considered good. At present quietness generally is the rule. Export orders for yarns continue few, but spinners are too well employed to admit of concessions to stimulate business. Wholesale manufacturers are getting a good many repeat orders for oversea consignments, and both Continental and colonial shipping are improving.

LINEN.—In the Belfast market there is no change to note either in yarns or manufactured goods. Prices keep firm and buyers continue to have difficulty in securing deliveries. Barnsley trade has been more active of late and inquiry on home account for all classes of linens has been much better, demand for the finer linens in particular being well sustained. Argentine and South American markets continue to absorb a large quantity of drills and United States and Continental markets are improving.

COTTON (from our Manchester correspondent).—During the week under review few changes of an important character have transpired in our market. A quiet feeling has generally prevailed, and the turnover in yarns and cloth is of comparatively small extent. Piece goods buyers for India have made few practicable offers. Dealers in Bombay and Calcutta appear to be somewhat indifferent as to giving out orders. They have large supplies, and the shipments thereto this month are fairly heavy. Mull-dhooties continue depressed. Makers here are turning on to other kinds of cloth. Monsoon rains in our Dependency continue satisfactory, this meaning good crops. China is stagnant owing chiefly to large stocks held in Shanghai. A fair number of small orders have come round from South America. Buyers for Egypt are wanting to place orders for distant delivery, but the prices named seldom lead to business. The Levant is quiet. Lancashire manufacturers are variously engaged. Some makers can deliver more quickly than what was reported a little while ago. Others, it is said, are behind time and are having uncompleted orders cancelled. Weaving holidays have this week been observed in Burnley and Darwen. Home trade American yarns have remained steady. The output of the spindles keeps absorbed by the looms. There is still some scarcity in certain numbers. Ring yarn continues strong especially in beams of the finer counts. Shipping yarns have been sold again for China in doubled 32's, April-May delivery having been given for the completion of new contracts. Extra hard yarns for Roumania have been in demand. Gassed yarns are quiet. Yarns made from Egyptian cotton in Bolton and South Lancashire are doing rather badly. The consumption has recently been less, and it would appear that the output of the spindles is not being absorbed. The margin to-day between Egyptian cotton and 60's twist is narrow. Raw American cotton futures in Liverpool have fluctuated from day to day, there being few important changes on the week. Lancashire spinners are continuing to buy on spot very sparingly. The prospects of the growing crop are considered excellent. Some large estimates have been issued in America, the figures being about thirteen millions of bales. Egyptian crop prospects are also satisfactory.

In New York the cotton market opened with a steady tendency and prices firmed up on favourable weather reports, covering by shorts and some "bull" support. Irregularity followed, and when the weekly Government report was published it was found to favour the "bears," who accordingly depressed rates. Towards the close, however, the market showed a disposition to improve.

COAL.—When there is any activity at all it is in steams, which in some districts continue to be largely demanded. The weight taken to Hull and Grimsby for shipment was very heavy and the demands of the steam fishing fleet seem to increase every week. In the North business is more of an all-round character, but here too steams are the principal feature. The Welsh trade, on the other hand, is quiet everywhere and prices are down a little. Cardiff mid-week prices on 'Change were only 15s. 3d. to 15s. 9d. for best steams, 14s. 6d. to 15s. for best seconds, and Swansea quotations for anthracite were: best malting large, 18s. 6d. to 19s. 6d.; seconds 15s. to 16s.

COPPER.—Manipulation apart, immediate prospects for this metal are not considered very favourable, as production seems to have overtaken consumption. The market was fairly brisk at the start, and prices improved on more favourable American advices. A further improvement followed on speculative purchases, but then the market evidently got too high as buying dried up. No particular selling, however, resulted, and on some Continental enquiries coming forward, values improved again, prices being £80 15s. for spot and £80 2s. 6d. for future delivery. Messrs. Henry Merton and Co., Limited, give the visible supply on 16th inst. as 12,195 tons, against 12,2[illegible] tons on the 30. The total supply for the first half of July amounted to 13,413 tons, and the deliveries to 13,493 tons. Stocks in England and France are 7,020 tons, against 6,600 tons at the end of June, and the Chile charters total 800 tons.

TIN.—Prices opened buoyant on good speculative buying, and small offerings, and steadily advanced until a substantial gain had been established. Good Eastern cables carried quotations still higher, but on a withdrawal of support values went back once more. Moderate fluctuations followed, and the close was fairly steady, with prices at £167 2s. 6d. cash and £166 10s. three months forward.

IRON AND STEEL.—The condition of the iron and steel markets is about the same as it was a week ago, with more activity in some branches and in some districts than in others. For instance, in Middlesbrough trade has been inclined to slackness, but prices have, on the whole, been steady, with the exception of warrants, which have been easier. Shipments in pig-iron continue heavy, stocks of iron in the public stores still decrease and a further decline is expected. Traders here are hopeful, however, that business will improve when the autumn demand sets in. In Lancashire prices of hematite iron show steadiness, despite a falling off in consumption. Local steel makers continue to take large supplies of crude iron, business in which is improving. Smelters of iron generally are well off for orders, but those from outside are not coming in freely. In the Midlands the market is likewise tolerably steady, with orders mostly for early wants. Some consumers ask for concessions, but manufacturers are unwilling to accept any figure below quarter day rates. In Scotland pig-iron warrants are firm on the continued demand on German account, likewise in response to American advices.

SUGAR.—The market has been steady throughout the week. Prices remained stationary until Tuesday, when a slight improvement set in and has sent quotations up to 8s. 5d. for July and 8s. 5¼d. for August. The liquidation of the latter position is now in progress, and the "bull" account owing to the satisfactory demand on the part of consumers is being easily liquidated at hardening values. Refiners took a fair quantity of 88 per cent. and 75 per cent. during the week at from 8s. 5d. to 8s. 5¼d. f.o.b. and 7s. to 7s. 2¼d. f.o.b. respectively, according to analysis, these showing but little change on the previous week's values. Crop accounts on the whole are considered satisfactory, but from Germany as well as from France, as Mr. Czarnikow points out, advices are received from several sources and there is considerable variation in the appearance of the fields in different districts, due more or less to the unfavourable atmospheric influences existing during the sowing season and since. The market in New York has been subject to alternate periods of dulness and firmness, but on the whole sellers maintain their extreme limits. During the week therefore business has been but moderate. Landings have been 52,000 tons and meltings 46,000 tons, increasing stocks to 324,000 tons.

TEA.—Indian auctions amounted to 8,684 packages, and the smaller supply induced a good demand for all good liquoring teas, common sorts as usual remaining neglected and weak. Darjeeling, Amboottia and Tukdah obtained an average of 10d. per lb. and Turzum 10¼d., the week's average of new season's tea on Garden account, 1906, 2,588 packages, coming to 6.22d.; 1905, 5,311 packages, average 7.53d. The quality of Ceylon invoices continues to show a falling off, and the result is a certain depression at the auctions. At Tuesday's sales quotations for medium grades were ¼d. per lb. down, and the average for the week on the 25,435 packages offered came to 6.64d. against 6.85d. in 1905. Javas had a small sale of 1,752 packages, and all but commonest sorts were in fair demand.

COMPANY MEETINGS.

INTERNATIONAL TEA COMPANY'S STORES.

The eleventh annual general meeting of the International Tea Company's Stores, Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. G. A. Tongé, J.P., one of the governing directors, presiding.

The Secretary (Mr. W. G. Ivimey) read the notice convening the meeting and the report of the auditors.

The Chairman formally moved the adoption of the report and accounts, and said: The turnover has been in excess of that of any previous similar period, and although the profit was £1,300 less than in the previous year, I would like to remind you that in that year we made £14,000 more than we had ever made before, so that on the whole I do not think we need attach much—or, indeed, any—importance to this slight setback. It is, perhaps, worth while recalling to your recollection that in 1895, when this business was turned into a company, the average annual profits for the three years, as shown by the prospectus, amounted to £55,000, so that I think we may all feel that to have gradually and steadily progressed from £55,000 a year in 1895 to £131,000 a year in 1905 and 1906 is not by any means an indifferent record. The wholesale prices of provisions, which form one of the largest departments of the company, have been abnormally high for some months past, and although we have advanced our retail prices as far as possible, I am afraid it has not been in every case quite in proportion to the advance that we ourselves have had to pay at the source of production. There is, of course, another factor that we always have to meet, and are prepared to meet, and that is competition, but I do not consider that as long as that competition is honest it does any harm; in fact, I am not sure that I should not be right in saying that it did some good. Turning to some of the items of the balance-sheet, you will notice on the debit side the item of creditors, standing at £104,840. Although we purchase practically all our goods for cash, yet a certain time must necessarily elapse between the buying of the goods and the invoicing of the same—the receipt of the goods and the checking of the same. That necessitates our owing this amount, but I think I should be quite right if I said that within a very short time—perhaps two or three weeks—after the stock was taken the whole of that item would have disappeared. The only other item on the debit side of the balance-sheet that I think I need comment upon is the reserve account, which stands at £207,383 19s. 6d. We have added to it this year the sum of £26,000, and I hope we shall go on adding to it in the same way, or even by greater amounts, every year until the sum total of the reserve approximates very closely to the goodwill account on the other side of the sheet. Turning to that side, I think the principal item is that of freehold properties, £194,232. From the earliest days of this business it has been our custom and aim where possible to purchase the freeholds of such of the retail businesses as we occupy when we could obtain them at a really satisfactory and moderate amount, and I cannot but feel that this policy has been very advantageous indeed to the welfare of the business. It has frequently been said to me, "Why don't you invest a good many of your surplus funds outside the business in securities?" To do that may be all very well, but from our point of view—and I think our point of view is the right point of view—I say that to invest our surplus funds in these freehold properties as I tell you we are doing and have been doing is a better way of dealing with any money that we have to spare. Referring to the item of leasehold premises, £32,159, these comprise chiefly our Mitre Square warehouses and offices. They are held on very long leases, with between 60 and 70 years to run, at very moderate ground rents, so that I think we are quite justified in terming this a very solid and desirable asset. Referring to the item of debtors, £100,313, we have explained on former occasions that the bulk of our business is really absolutely cash, but that portion of it which is not strictly cash is, I may say, on extremely short terms of credit, and I think I am quite right in saying that by now the whole of that £100,000 odd has been liquidated. The proportion of our bad debts to our turnover is remarkably small. Having paid a tribute to the zeal and efficiency of the staff, the Chairman formally moved the adoption of the report and accounts.

Mr. H. Evans, a governing director, seconded it, and it was carried unanimously, without discussion.

Mr. Fox proposed the reappointment of Messrs. Deloitte, Plender, Griffiths, and Co. as auditors, which was seconded by Mr. Frogley, and carried.

EMPIRE OF INDIA AND CEYLON TEA.

The tenth annual ordinary general meeting of the Empire of India and Ceylon Tea Co., Limited, was held on Wednesday, at Winchester House, Old Broad Street, E.C., Mr. F. T. Verner (Chairman) presiding.

The secretary (Mr. H. F. Turner) having read the notice convening the meeting and the report of the auditors,

The Chairman moved the adoption of the report and accounts, and first of all feelingly alluded to the loss sustained by the company in the death of Mr. George Paton, a director. After explaining a few items in the balance-sheet, he went on to say that the net profit, after deducting commission to the staff, was £24,316, and adding the amount brought in, there was a balance of £25,359 to be dealt with. Out of this the directors recommended the payment of the balance of the preference dividend, and 5 per cent. on the ordinary shares, carrying forward £1,643. The balance-sheet showed, he said, that the company was in an absolutely sound position. Out of past profits £14,500 had been put to reserve, and since the formation of the company this fund had been further strengthened by planting out and bringing into bearing, largely out of revenue, 2,507 additional acres, at a cost of £22 per acre, reducing the average cost per acre of their tea from £55 14s. to £47. The ordinary shareholders were entitled to every consideration. They had borne the brunt of the bad times of the last few years, and when profits fairly earned permitted they had a good claim to a handsome proportion of these profits. The board would continue to strengthen the reserve when opportunity permitted. They had paid out of profits of the year £2,190 for arrears of dividend on the preference shares; otherwise this amount would probably have gone to the reserve. The board also did not lose sight of the possible advantage of a working capital in the future, but up to the present time they had had no difficulty, nor did they anticipate any, in securing the temporary accommodation required in a business such as the company's. The labour question still called for their anxious consideration, and they could but hope that the Labour Commission which had been appointed would do something towards removing the difficulties and restrictions put in the way of recruiting. The Ceylon gardens showed a reduced profit, but the season was an abnormal one and the crop was barely up to the 1904 total, while they had expected an increase of 80,000 lb. There was a direct relation between the tea duty on the one hand and the consumption on the other. As regarded British-grown tea the deadly effects of the over-taxation were much more apparent, and the direct relation between the duty on the one hand and the consumption of British-grown tea on the other was still more startling. Since the end of 1901 not only had the consumption of British-grown tea been seriously checked, but the excessive duty had brought about a temporary but great demand for the commonest teas. This had resulted in an average annual increased consumption of four million pounds of foreign-grown tea and an average annual decrease of five million pounds in the consumption of British-gown tea for the four years 1902-5, inclusive, as compared with the year 1901. The Chairman referred to other facts in proof of the great injury the company had suffered from the effects of the duty. In conclusion, he said he did not wish to pose as a prophet; experience had taught him that there was nothing so uncertain as the unforeseen. At the same time, he was not afraid to state his present convictions, that the outlook for the industry was much brighter than it had been for many a day. His chief anxiety was the question of labour, providing the Indian planter obtained the assistance of the Indian Government in removing the unnecessary difficulties of recruiting. They only required united action on the part of the industry and trade in securing a reduction in the duty and in developing new markets to ensure a period of prosperity after many years of vicissitude and disappointment.

Mr. W. K. Darley seconded the motion for the adoption of the report and accounts.

The resolution was then put to the meeting and carried unanimously and the dividends as recommended by the board agreed to.

INDIAN GOLD MINES.

Owing principally to the poorer quality of the ore in one or two of the mines in the Colar gold field the aggregate output from the Indian mines is still small, reaching only 46,633 ozs. in June, against 47,305 ozs. for May, whilst the return compares unfavourably with that for the corresponding month of last year. For the first half of the year the total output is 286,221 ozs. compared with 307,229, a decrease of 21,008 ozs.

New South Wales Mineral Exports.—The following were the mineral exports from New South Wales during the six months to the end of June:—Silver, 172,161 ozs., value £21,390; silver-lead, 225,863 tons, £1,177,704; copper, 4,919 tons, £371,840; tin, 1,274 tons, £187,529; coal, 2,141,820 tons, £880,949. Total value, £2,639,412, a nett increase of £395,536 compared with the corresponding period of 1905.

No part of this issue has been underwritten.
The LIST OF APPLICATIONS is NOW OPEN, and will be CLOSED on or before TUESDAY, the 24th day of JULY, at 3 p.m., for both Town and Country.

CLEVELAND & DURHAM ELECTRIC POWER LIMITED.

(Incorporated under the Companies Acts of 1862 to 1900).

SHARE CAPITAL - - £1,000,000,

Divided into 70,000 Five per Cent. Cumulative Preference Shares of £5 each, with priority as to Capital.
70,000 Six per Cent. Participating Ordinary Shares of £5 each, entitled to a moiety of profits after such six per cent. and with priority as to Capital over the Deferred Shares.
60,000 Deferred Shares of £5 each.

ISSUE, AT PAR, OF

70,000 Five per Cent. Cumulative Preference Shares of £5 each and 70,000 Six per Cent. Participating Ordinary Shares of £5 each.

Payable as follows:—Preference Shares: On Application 10s., on Allotment 15s., and the balance in sums of not more than £1 5s. 0d. at intervals of not less than two months. Dividends on these Shares will be payable on the 1st April and the 1st October each year for the half-years ending 31st December and 30th June respectively. Ordinary Shares: On Application 10s., on Allotment 15s., and the balance in sums of not more than £1 5s. 0d. at intervals of not less than two months.

DIRECTORS.—JOHN HOBART ARMSTRONG (Director of the Newcastle-upon-Tyne Electric Supply Co., Ltd., and Chairman of the County of Durham Electric Power Supply Company), St. Nicholas Chambers, Newcastle-upon-Tyne; MAURICE LOWTHIAN BELL (Director of Bell Bros., Ltd., and of Dorman, Long and Co., Ltd.), Rounton Grange, Northallerton, Yorkshire; CHARLES EMMOTT (Chairman of Robert Stephenson and Co., Limited), Thorpe Hall, Darlington; JAMES FALCONER (Chairman of the Promotors of the Administrative County of London and District Electric Power Bill), 52, Castle Street, Edinburgh; The Hon. ROBERT JAMES (Director of Palmer's Shipbuilding and Iron Co.), Ltd., St. Nicholas, Richmond, Yorkshire; Sir JOHN DAVISON MILBURN, Bart. (Chairman of the Newcastle and District Electric Lighting Co., Ltd., and of the Northern Counties Electricity Supply Co., Ltd.), Acklington, Northumberland.

MANAGER.—ARNOLD B. GRIDLEY (late Assistant Manager of the Newcastle-upon-Tyne Electric Supply Co., Ltd.).

BANKERS.—BARCLAY and CO., Ltd., Newcastle-upon-Tyne, Middlesbrough, and London, E.C.

SOLICITORS.—To the Company: WATSON, BURTON and CORDER, 141, Pilgrim Street, Newcastle-upon-Tyne. To the Northern Counties Electricity Supply Co., Ltd.: COOPER and GOODGER, Grey St., Newcastle-upon-Tyne. To the Cleveland and Durham County Electric Power Company: JACKSON and JACKSON, Queen's Terrace, Middlesbrough.

ENGINEERS.—CHARLES H. MERZ and WILLIAM McLELLAN, Collingwood Buildings, Newcastle-upon-Tyne, and 28, Victoria St., Westminster, S.W.

AUDITORS: WILLIAM SWAN (Monkhouse, Goddard and Co.), Newcastle-upon-Tyne, and W. B. PEAT and CO., London and Middlesbrough.

BROKERS.—WISE, SPEKE and CO., 28, Collingwood Street, and Stock Exchange, Newcastle-upon-Tyne; WOOLSTON, BEETON, BRODRICK, and WEST, 18, Austin Friars, and Stock Exchange, London, E.C.; CUTLER and LACY, 41, Waterloo Street, and Stock Exchange, Birmingham.

SECRETARY and REGISTERED OFFICE (pro tem.).—M. SHORT, Royal Exchange Buildings, Newcastle-upon-Tyne.

ABRIDGED PROSPECTUS.

Cleveland and Durham Electric Power Limited (hereinafter called the Company), is formed with a view to developing the supply of electric power in Cleveland and the County of Durham and in certain districts in Northumberland, on lines similar to those adopted by the Newcastle-upon-Tyne Electric Supply Company, Limited, and the County of Durham Electric Power Supply Company on Tyneside.

For the purpose of carrying out the Company's objects agreements have been entered into for the acquisition of shares in the following companies:—

(1) Practically all the shares (over 99 per cent.) in the Cleveland and Durham County Electric Power Company (hereinafter called the Parliamentary Company), which is working under Acts of Parliament granted in the years 1901 and 1903. These Acts enable the Company to supply for power purposes in perpetuity on the usual conditions throughout an area of 820 square miles, including the Tees district and the South and West Durham coalfields. The Parliamentary Company have, as appears from their Balance-sheet, expended over £300,000 upon their undertaking, but have not yet commenced business except at two small pioneer stations at Consett and Bishop Auckland. Their main Power Station at Grangetown, near Middlesbrough, is now nearly complete.

(2) The majority of the shares in the Northern Counties Electricity Supply Company, Limited (hereinafter called the Northern Counties Company), which is supplying for power and lighting purposes in all of the following districts, viz.:—Alnwick, Ashington, Bedlingtonshire, Blyth, Cowpen, Felling, Hartlepool, Hebburn, Malton, Morpeth, Norton, Shildon, Spennymoor, and Thirsk. The Northern Counties Company have expended about £350,000 on the development of their business. The population of the above districts is over 770,000.

The capital produced by the present issue will amount to £700,000

This capital will be applied as follows:—

(1) In payment in cash or in shares to the Northern Counties Company's shareholders	£190,100
(2) In providing for liabilities incurred by the Parliamentary Company	£32,000
(3) In providing for temporary loans and other liabilities of the Northern Counties Company	£110,000
Thus leaving for further developments in both Companies, expenses of this issue and for working capital	£367,900

As regards the prospects of the Company, the Engineers in their Report estimate the profits of the Parliamentary Company and the Northern Counties Company as follows: 1907, £24,360; 1908, £38,960; 1909, £52,800.

On the basis of these figures, and having regard to the amount of Capital Expenditure during the years 1907-8-9, the Company should from the commencement earn sufficient to pay the full dividend on the Preference, and a gradually increasing dividend on the Ordinary Shares.

Application will be made to the Committees of the Stock Exchange of London, Newcastle-upon-Tyne, and Birmingham for a settlement and quotation of the Preference and Ordinary Shares.

Applications for Shares should be sent on the forms accompanying the full Prospectus (as filed with the Registrar of Joint Stock Companies), upon the terms of which applications can alone be received, and forwarded together with the amount payable on application to the Bankers of the Company.

Prospectuses and forms of application for shares can be obtained from the bankers, solicitors, or brokers of the Company, or at the registered office of the Company.

RHODESIAN MINING RETURNS.

Wonderful Rhodesia is still advancing. That is to say, the controllers of the industry are making strenuous efforts to extract a few more ounces from poor reefs in order to have the pleasure of announcing another "record." Thus in June the return was 47,664 ozs., which exceeded the May output by 935 ozs., but this goes only a slight way to meet the enormous losses incurred by the majority of the companies. Of other minerals, the figures were:—Silver, 7,718 ozs.; lead, 47 tons; coal, 8,943 tons.

BANK OF ENGLAND. | THE UNION OF LONDON & SMITHS BANK, LIMITED.

ONE-HUNDREDTH REPORT, *submitted to the Shareholders at the Ordinary Half-Yearly General Meeting, on Wednesday, the 18th July, 1906, at Cannon Street Hotel.*

The Directors have to report that, after making provision for bad and doubtful debts, the Gross Profits of the half-year ending 30th June last, as shown by the annexed statements, amount to £118,478 15s 4d, which, with the balance of £11,775 6s 0d, brought forward from the previous account, gives a total of £130,254 1s 4d.

After providing for all charges, and reserving £64,257 5s 2d for Rebate of interest on bills not matured, there remains a net profit of £53,232 10s 3d for appropriation. It is proposed to apply £42,333 5s 0d to the payment of a Dividend at the rate of Ten per cent. per annum, free of Income Tax, leaving a balance of £10,899 5s 3d to be carried forward to next account.

The Directors beg to report to the Shareholders that the 50th Anniversary of the commencement of business by this Company occurred on the 21st May last. It was the first Institution of the kind formed under the Companies Acts.

*** The Dividend will be payable on and after the 20th July instant.

The Secretary, having read the Advertisement convening the Meeting, and the Auditors' Report, presented the Directors' Report and the Half-Yearly Accounts, which were taken as read. It was then—

Moved by THE CHAIRMAN, seconded by Mr MURRAY GUTHRIE, and resolved unanimously—

That the Report and Accounts now read be received, adopted, and entered on the Minutes.

Moved by THE CHAIRMAN, seconded by Mr MENDL, and resolved unanimously—

That a Dividend be declared on the paid-up Capital of £846,665, at the rate of Ten per cent. per annum, free of Income Tax, payable on and after the 20th July, and that the balance of £10,899 5s 3d be carried forward to next account.

Moved by Mr MILLAR WILKINSON, seconded by Mr WILLIAM GILLIES, and resolved unanimously—

That on behalf of all the Shareholders, cordial thanks be and they are hereby given to EDMUND THEODORE DOXAT, Esq., the Chairman, and to all the Directors for the eminently satisfactory position disclosed.

Moved by Mr EDMUND BARNES, seconded by Mr W. E. HOLDING, and resolved unanimously—

That the very appreciative thanks of the Shareholders be given to the Manager, Mr WADE, and to the Staff, for their able efforts during the past half-year.

(Signed) EDMUND THEODORE DOXAT, Chairman.

Extracted from the Minutes.
18th July, 1906.
CHARLES WOOLLEY, Secretary.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with. We have examined the Securities representing Investments of the Company, those held against Loans at call, short, and fixed dates, and all Bills discounted in hand. We have also proved the Cash Balances, and verified the Securities and Bills in the hands of Depositors. The foregoing accounts agree with the books, and we are of opinion that the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the Books of the Company, except that it does not state the amount of Investments and Bills placed as security against Deposits.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

VOL. XVIII.—No. 447. New Series. SATURDAY, JULY 28, 1906. (Registered as a Newspaper.) Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Mr. John Morley on India.

All the newspapers have united in praise of the essay delivered by the Secretary of State for India in the House of Commons last Friday. It was by way of being the Indian Budget speech, and as a literary exercise deserves all the praise given to it. Mr. Morley is one of the deftest literary craftsmen of the present generation, and no matter what subject he takes in hand, he manages to set it forth with lucidity, grace of diction, and occasional flashes of bookish humour. All these qualities are to be found in his first Budget speech, and yet we have read and re-read it with a growing feeling of disappointment. Not one of the problems haunting our Indian administration was squarely tackled and, stripped of its rhetoric, its grace of style, the speech was a mere replica of what Secretaries of State for India have accustomed us to, one may say ever since the government of the Peninsular was taken out of the hands of the East India Company.

Let us test Mr. Morley on one or two points, and, to begin with, what are we to make of such a statement as this:—

"The most important tributary of the stream of revenue so copiously fed from so many affluents is the State railways. I make a present of that fact to my Socialist friends below the gangway opposite."

This observation was received with Labour cheers and laughter; but what on earth has the ownerships of railways in India by the alien governing race to do with Socialism? We have tried to get at what was in Mr. Morley's mind when making this rhetorician's present, and must confess utter failure. These railways have been provided by British capital, advanced to India on handsome rates of interest, and the nett proceeds arising from their operation come home as dividends and interest paid to British investors on debt and share capital. The Indian peoples have nothing to do with the profit earned by these railways, and it is from many points of view doubtful whether the rapid extension of the lines is of permanent benefit to the great mass of them. To the masters of India these railways are doubtless a source of great profit. They enable the products of the Indian Peninsular to be hurried out of the country, so that its Government may be the better able to meet its onerous and increasing charges payable in London. Doubtless also the expenditure of £250,000,000 of capital on their construction, almost entirely drawn from this country, has resulted in the distribution of large amounts in wages to workers in India; but in the long run these iron roads, wholly in alien control and owned abroad, must exercise an impoverishing influence, because the profits arising from them are not retained in India. Every year an increasing proportion of the surplus production of the Indian people is required to meet the charges imposed by the capital sunk in these railways, and on the whole, and in the long run, they may not be worth the rent paid. Again we ask where the Socialism comes in?

Another subject upon which Mr. Morley displayed an extraordinary, though not for him unusual, timidity was the Indian Army. It is now under Lord Kitchener, and in a time of profound peace costing almost as much as the entire land revenue drawn by us from the Indian people, and all Mr. Morley has to say about it

is that he has not yet made up his mind and can give no opinion in the present stage of the correspondence he is engaged in with the Government of India. The subject is not ripe for discussion, it seems, but he takes care to put forward the usual pleas in justification of this ruinous extravagance which the Indian military faction has formulated. What is contended by way of justification—of the extravagance—is that if the scheme had not been adopted India would have continued to spend £17,000,000 a year on an army provided with second-rate guns, with too few officers, and with bad transports, with defective medical organisation, inadequate reserves and stores. "It is said that by paying this £2,000,000 extra for five years, and £1,500,000 for recurrent charges a certain number of years, you will have avoided all the mischiefs which I have described." This is the military defence. But Mr. Morley admits that behind it there lie "a large number of disputable facts, inferences, and conclusions," and he avoids every one of them.

What we want to know always is:—Why a native army of the magnitude now existing should be required in India at all. We can quite understand that after the experience of the Indian Mutiny it is deemed prudent and necessary to maintain a numerous garrison of British troops; but surely that Mutiny taught us the danger of a large native army, and we have always felt that in creating and maintaining this army we are nurturing the very danger we profess the desire to avoid. And, indeed, the only ground upon which the maintenance of a large native army in India can be justified is that of conquest, of a policy of continued annexation, or one of preparation against that threatened Russian invasion, a nightmare which haunts the sleep of every military man in the Peninsula. We do not believe there is any danger of a Russian invasion, and never did believe it. It would be impossible for Russia or any other power to conquer India if the people were contented and prosperous under British rule, if we were willing to train them in self-government, and to gradually lift them up into the position of free citizens in a free state. You cannot do that, said Mr. Morley; free institutions on the British model cannot be transplanted to India. He had much that was nice and gracious to say about the Indian Congress, and drew a quite neat and telling rhetorical distinction between discontent and disaffection, but made it as plain as anything in his speech that the Indian people are not to be allowed to have any effective voice in the management of their own affairs. So a great army is maintained against an imaginary foreign foe, an army which must every now and again find employment in border raids, wars with Afghanistan, attempts to conquer Tibet, and other wealth-wasting and demoralising enterprises of the same description. The tool is provided and must be used to keep it from rusting, to find out defects in equipment, and give pretexts for enlarging the expenditure. Why could not Mr. Morley have taken his stand upon the enlightened principles of Liberalism which he professes, and have intimated to the Viceroy and his Council that this canker of militarism must be abated? He makes a fine speech.

One other point may be touched upon. It would take a number of this *Review* to overhaul all those fallacies, misleading, adroit, or purely bureaucratic, with which this elegant essay is loaded, but we shall for the present take the currency question as a sort of index to the real state of affairs economic in our great dependency. Put it bluntly:—Can all be well with India if it is necessary for this most luminous and exalted Simla Government of ours to debase the currency? In his memorandum explanatory of the Budget, doubtless provided for him as usual by the diligent officials at the India Office, Mr. Morley tells us that on the 31st March last the gold reserve fund invested in British securities, not Indian, amounted to £12,165,032. This is part of the proceeds of the currency debasement which has been going on ever since the price of the silver rupee was forced up artificially to 1s. 4d. And the Indian Government was driven to take this desperate measure by the inability of the country to provide the means to meet the enormous home charges put upon it by the English administration. These home charges drove down the exchange far more than any depreciation in silver. The depreciation in silver would not have been felt, or have been but little felt, if India had been like England, a country rich and independent enough to be importing more than it exported, if the revenues collected in India had been spent there, if there had been no enormous amount of interest upon borrowed capital to be laid down every year in London. And what are the consequences of this debasement on the currency, this substitution of coin at a false or fancy valuation for a genuine one? The consequences are, and will increasingly be, impoverishment of the people. A recent Indian Finance Minister boasted that the artificial over-valuation of the silver rupee had not forced prices down, but on the contrary, caused them to rise. That remark surely betrayed what might be called the high water mark of economic ignorance, for if a coin is forced into circulation on a false valuation it naturally tends to sink in purchasing power to its true market relationship towards commodities. That is what the silver rupee is doing in India, and therefore prices are going up. As wages, the earnings of the people do not rise in the same proportion, if at all, it follows that the more a currency is debased the more difficult it is for the people to obtain the means of subsistence, and therefore we have always contended that in this currency experiment, over which the "sun-dried" Indian bureaucrat rejoices so much, we are doing our best to bring our empire in India to ruin and bankruptcy. The process may be slow, must be slow, as long as we are spending from £8,000,000 to £10,000,000 per annum of freshly-provided British capital on public works in India, and during the process of exhaustion many may seem to grow richer, but all history and experience warn us what the end must be. Take away the stimulant of new capital, and where would the position of the Indian Government be even now? Imagine how the exchange would hold up if a self-denying ordinance were passed by the Governor-General in Council that for five years no money would be borrowed to extend railways or to dig irrigation ditches, or to build barracks for army purposes. At the present time, in spite of this refresher of new capital, and in spite also of the expanding foreign trade of India, it is with the greatest difficulty that a favourable trade balance can be maintained strong enough to provide the excess of exports necessary to cover the drawings of the India Council in London on the treasuries in India and other obligatory remittances. The nett excess of exports in the year ended 31st March, 1904, was nearly £25,000,000, the next year it fell to little more than £20,000,000, and in the year ended 31st March it was only £22,402,000, while the Indian Government home drawings alone amount to between £18,000,000 and £19,000,000 every year. If we allow for the private remittances, the profits on Indian industries brought home outside the cognisance of the Government, the gains of British bankers in India, of tea planters, of gold miners, and so on, it is obvious that the nett excess of exports over imports does not, one year with another, suffice to balance the account. There is not much comfort in a parade of overpluses when this is so.

The sum of it all is that India is over-burdened. Expert statisticians may demonstrate that the £10,000,000 odd demanded by debt interest and capital repayment really do not imply any burden upon the Indian people at all; they may boast of the rapid expansion of the foreign trade of the Peninsula, mostly in British hands, conducted for British profit; they may talk of the "moral and material" progress of the country, and promise to give some few additional posts in the administration to its natives, but the essential fact remains that India is being drained month by month, and year by year, so that the great mass of her population is becoming increasingly poor. The poverty line is as it were creeping upwards, and one of these days, when it is too late, we shall wake up to the fact that extravagance in administration, the up-keep of an enormous and unnecessary army, the steadily growing outlay upon the

civil administration, and the exhausting effect of the superimposed public works capital, have brought our great dominion to a state of inanition and economic impotence.

Bank Half-yearly Meetings.

Several interesting speeches have been delivered at the meetings of shareholders in our joint-stock banks this week, and naturally the chairmen all had something to say about the gold reserve. Sir Felix Schuster said less upon the subject than we should have expected, but he had much of interest to tell the proprietors of the Union of London and Smiths Bank about the state of the Money market and the prospects for the current half-year. On the gold reserve question he seems to lean to the opinion that it is a Government matter more than one for the banks themselves; but perhaps his statement to the effect that the question was not a banking, but a real national question of the greatest importance, did not mean more than what was expressed both by Mr. Merriman, who presided at the meeting of the Capital and Counties Bank, and Mr. Brown, who performed the same duty for the shareholders of the London and Westminster Bank. Both these men of business intimated that it would be well if the Chancellor of the Exchequer would see to it that there was some reserve held against the enormous liabilities of the Post Office Savings Bank. As Mr. Brown said, the total of the Savings Bank liabilities amounted to over £200,000,000, for which he was good enough to add that there is ample security in Consols and other Government securities, but against which liability no visible stock of gold is held. We cannot agree with him in thinking that the security of Consols is ample; that of the nation's credit may be so, but at the present time the deficit in the Post Office Savings Bank alone must considerably exceed £12,000,000. We agree, however, with all these speakers in thinking that the Treasury ought to see to it that a gold reserve is held against the Savings Bank liabilities. If this is not done we may some day have to raise a large loan in order to fill the gap caused by the depreciation of securities and to meet the excess of withdrawals over receipts. Last year alone the turnover of the Post Office Savings Bank exceeded £45,000,000, and if the withdrawals exceeded the receipts by a few millions, as they very well might do some day, there is nothing whatever except the resources of the open Money market to which the Government can look for the means to meet the demands made upon it.

Another point dealt with was "window-dressing," monthly balance-sheet cooking, and we are glad to note that the chairman of the Capital and Counties Bank was able to say truthfully that nothing of the kind occurred in its business. "We carry out our business *de die in diem*, without any regard to the publishing of accounts," he said. Both he and Mr. Brown, of the London and Westminster Bank, expressed their willingness to publish weekly balance-sheets, provided all the other banks did the same, and this might perhaps be a remedy for the unwholesome practice, but we still think a better plan would be for the joint-stock banks to unite in authorising the Bank of England to state the amount of the bank balances in the aggregate every week as a separate entry in its return. "Other deposits," that is, should be split up into the ordinary business deposits originating with the bank's private customers and the balances kept by the joint-stock banks. In this way the market would have a rough and ready, but, on the whole, efficient, means of checking the fluctuations of bankers' balances, and an effectual check would be put to the unsatisfactory methods now fashionable, methods injurious to bankers like the Capital and Counties or some others which do not rake money in from the market at the end of every month in order to make a display of cash in hand and at the Bank of England sensibly above the average total of the rest of the month.

Turning to the estimates of the future with which the eminent business men who presided at these meetings favoured their hearers, we find less pessimism than might have been expected. There has been a cruel decline in the prices of first-class securities, a decline nothing seems able to check, and the leading Government stock has suffered quite as much as other securities. Upon the top of this has come the sharp decline in the scrip of the new Russian loan, so that several times of late rumours have been floating through the City pointing to the embarrassment of firms so important that if they really had been in difficulties our Money market would once again have been on the eve of a cataclysm. Nothing of the kind is to be looked for, these and other bank chairmen told us. This country may suffer through the collapse in Russian credit, but only indirectly. It is true that, as Sir Felix Schuster pointed out, the English portion of the Russian loan, amounting to £13,000,000, has suffered a disastrous-looking shrinkage in price, but the whole amount of the loan is not enough to break credit down on our market were it to disappear, and this country is not a large holder of the earlier issues of Russian bonds. In other directions, too, it may be hoped that the improvement in business undoubtedly experienced all over the country will before long cause a return flow of profits for investment in Stock Exchange securities which will do much to restore tone to the Money and Stock markets and to dissipate the now prevailing gloom. Mr. Merriman is not so hopeful upon this point as some of his colleagues, but rather thinks that the next twelve months will be troubled. Events may occur which would be exceedingly inconvenient within that period, he says, and we are rather disposed to agree with him. It will be a tempestuous time between now and next July on all Money markets, partly because of the turmoil in Russia, but also to no small extent by reason of the over-commitments everywhere visible. Capital is being created and "fixed" at too great speed, at a speed exceeding the hoarding capacity of nations, and unless a halt is called the end might be a very severe strain indeed. Happily, however, the very fact that the Money market has been and will continue to be difficult tends to put the brake on, to stop or minimise the further creation of new securities, to check speculation, and gradually to bring quotations back to tempting points. And our Money and Stock markets have withstood the strain put upon them during the last few years with such marvellous endurance that we must perforce trust in their ability to bear the pressure successfully to the end.

Economic and Financial Notes and Correspondence.

The Preliminaries of Revolution in Russia.

One cannot help being sorry for the Tsar. His weakness has led him to take a step which will in all probability cost him his throne, and it will be well if it does not cost him his life. From the first his *entourage*, if not he himself, has shown hostility to the new Parliament, the Duma, called into existence to try and restore Russian credit on the money markets of Western Europe; and to bring order out of the chaos into which the bureaucracy had brought the internal administration of the empire. Remembering the manner of its election, the coercion, the checks, the safeguards to autocracy by which the selection of members was hedged round, the Duma that assembled in St. Petersburg turned out to be a body of remarkable strength and capacity. If the Tsar had been a wise man and a strong man he would have attached himself to the best elements in this representative body by endeavouring to work with it and to guide it, yielding here, temporising there, and loyally accepting the final decisions when arrived at. Instead of this he and those about him from the first assumed an attitude of suspicion and often open hostility, whereby the Duma in its turn was

forced along the road towards revolution, was goaded to excitement and to make demands, which, with prudent handling, might not have been heard of for years. Thus a deadlock was produced almost wholly by the action of the Tsar and those in his confidence. They thought they had created a sham Parliament to act as screen and deceiver, and were horrified to find it alive and palpitating with energy. Refusing to give way on any point, mocking at the assembly by putting forth illusory promises of reform, while at the same time the massacres, repressions and deportations to Siberia went on unchecked, it was inevitable that the end now seen must some day come. Unwilling or unable to bow to the new constitutional authority, the Tsar has broken with it, has dissolved it, and in doing so has done his best to let loose the pent up passions of the Russian people.

What will the end of it all be? Most people instinctively turn back to the story of the French Revolution which began when the States General met in 1789, and look for a more or less prolonged period of civil conflict, of massacres, burnings and general disorder. Possibly enough these anticipations may be fulfilled, and yet we cannot help nourishing the hope that the world has made some little progress since 1789, that even in Russia there is no longer quite the same attitude of man to man or of class to class which pervaded France at the date of the Revolution. Uneducated though they may be the Russian people have displayed a wonderful perspicacity since they were able to make their wishes heard through their mouthpieces in the Duma, and the manifesto which the members of that dissolved body have issued after a hasty meeting in Viborg, just over the border in Finland, encourages the hope that the Russian Revolution will not follow step by step the bloodstained story of that of France. Passive resistance is the war cry of the people's representatives. Pay no taxes, give no sons to the army, cease work, and if the Russian people obey this mandate the autocracy will be powerless even to slay—it will not be able to keep its machinery of repression on foot for a long enough time to effect the subjection of the people. A universal strike would bring the whole machinery of government to a deadlock within a very few weeks and compel the Tsar to bring the Duma back and put himself into its hands. The danger of civil strife, however, lies in the condition of the army. That it is full of dissaffection we have every reason to believe, but no army drawn from a variety of races and nationalities will be wholly disloyal to the master who has called it into existence. There will be certain regiments or divisions always ready to kill their fellow citizens at the word of command and should the army be divided up in this way, some portions of it siding with the people, others ready to obey the orders given from above, then bloodshed will fill the land and no man can form the least idea of what the end will be. Meanwhile, whatever course is followed, we fear the effect of the Tsar's blow to nascent constitutionalism within his country is going to be disastrous to the French money market, probably to all money markets in Western Europe, but especially to that of Paris. The French investor is going to suffer for his heedlessness in providing the autocratic wielders of the Russian Government with the means whereby they have held the people in subjection and kept them victims of their tyrannous habits and instincts. Without the hundreds of millions of French money which the Russian Government has been able to draw upon, the autocracy would have broken down long since. There would have been no war with Japan, there might even have been no war with Turkey in 1877, and the mere pressure of the misery of the country upon the impotence of an impecunious Government would have forced reforms upon that Government long ago. But the money was obtained and the iniquity went on until now we fear the retribution is going to be severe. Whether the London money market can escape some of the effects of even temporary default upon the Russian debt is a point upon which we should not like at present to give any strong opinion, but it is at least true that we are not likely to be directly hit to an extent which would cause any breakdown in British credit. National prejudices and the diligently fostered hostility towards Russia, which our Indian military men and bureaucrats have fomented, have kept us out of Russian bonds. Indirectly, however, the effect is likely to be at least troublesome, and many enterprises may be temporarily crippled for want of means because of the embarrassment produced by the fall in Russian securities.

United Rhodesia Goldfields.

In an interim report to their shareholders the directors of the United Rhodesia Goldfields announce that "the previous policy of the company in bringing its subsidiaries to a payable stage has been maintained." Yet they have so poor an opinion of the intelligence of these shareholders as evidently to believe that they cannot see that this statement is contradicted throughout the report. For the directors proceed immediately to say that no active operations have been carried on on any of the properties, and how can this be consistent with an effort to bring them to a payable stage? In fact, so far from making them remunerative, making them yield dividends, the directors are actually leasing some of the properties on a royalty basis; in other words, on the tribute system. If the company itself cannot work the mines profitably, how can tributers, by their limited appliances and means, do so? Instead, therefore, of progressing to a payable stage, it very much resembles retrogression. It appears that a large portion of the company's financial resources has been devoted to bringing the Jumbo Company to the crushing stage, and the proceeds of the first gold won are being devoted to the repayment of advances made by the parent concern. Probably by the time these are paid back there will be left little gold in the mine out of which to pay dividends. Milling operations commenced as recently as May 2 last, with 20 stamps, so it is impossible to compute the future capabilities of this mine. The directors say they are advised that 1,645 tons of ore were crushed for a yield of 994 ozs. over the plates, and that 608 tons of tailings were treated for 211 ozs., making a total of 1,205 ozs. of gold. It is admitted, however, after all these weeks, that full details of the work for May have not yet been received from the mine. As regards the Inez, the report says milling has continued at this mine, the total production to June 30 last amounting to 8,880 ozs., realising £33,938. But the ominous statement is added that the consulting engineers do not advise further expenditure in attempting to discover other payable ore in this mine, so it looks as if it has come to the end of its payable resources. It is estimated that, in addition to some 8,000 tons left for milling, which will yield a profit of about £6,000, there will remain some 21,000 tons to be treated by cyanide at a profit of approximately £9,000; in all £15,000. In respect to another subsidiary, the Mayo (Rhodesia) Development Company, the consulting engineers have recently examined and sampled the Plum and Mayo "A" reefs, in order to restart work upon them. Alas! the results from the Plum turned out to be unsatisfactory, and no work is recommended upon this property, whilst smelting is to be done on the Mayo at an indefinite later date, before which money will have to be spent on surface equipment in order to open up the property below the dyke. And this is described as hastening the properties to the payable stage.

The Birmingham Small Arms Company.

A circular of much cogency has been issued to the shareholders of this company by Mr. Arthur Chamberlain, Sir Alfred Newton, Bart., and Messrs. F. Nelson and J. A. Lacy. It sounds a note of warning about the policy persisted in by the present board of directors in spite of the decision given by Mr. Justice Buckley. For some reason not disclosed and really unimaginable on any common sense supposition, the board has been attempting to obtain powers enabling them to create a private reserve, which shall be kept concealed not merely from the general body of proprietors but from the auditors. This secret reserve, they intimate, may be applied at the discretion of the directors for any

purposes of the company, including the purposes for which the ordinary reserve is available "or for any other purpose which is incidental or conducive to the attainment of any of the objects of the company." The demand is thus of an unheard of description. If it were a mere reserve accumulated for the purpose of equalising dividends we could understand it, and there would be no reason whatever for objecting to the formation of such a reserve, equally little for concealing its amount from the co-partnery. But obviously there is some purpose in view which the directors are afraid to disclose, and the dissentient shareholders above-named do well to make a strenuous effort to prevent any such resolution from being carried. It was opposed strongly at a meeting, from which the Press was excluded, when brought forward for the second time, but by the use of proxies the directors carried it in the teeth of the hostility expressed by those present. A confirmatory meeting is, however, necessary, and will be held on Tuesday next, so that the shareholders have still time to prevent this altogether retrograde step from being taken. The circular before us points out that the power of the directors to appropriate the profits secretly comes into operation, according to their proposed new clause in the articles of association, when 10 per cent. has been paid on the ordinary shares. The board will then have power to set aside the whole or any part of the remaining earnings as a private reserve, the amount of which is to be for ever withdrawn from the cognisance of the shareholders. Now it takes only £41,000 to pay the preference dividend, and 10 per cent. on the ordinary shares, but last year the available divisible profit was roughly £83,000. It follows that if this clause had been in operation the directors could have abstracted £42,000 from the profits of the past year alone, and used the money in any way they pleased. Obviously it would strike at the root of all fair play as between boards and their co-proprietors if powers of this kind were granted to the directors of the Birmingham Small Arms Company, and we trust the shareholders will send their proxies to Mr. Arthur Chamberlain and his colleagues in such volume as to defeat definitely and for ever the attempt now made. As the signatories to this circular well observe, during the lifetime of the late Mr. J. W. Goodman and under his chairmanship the company enjoyed many years of ever-increasing prosperity, and now the present occupant of the chair, who has not yet been a year in his seat, comes forward and makes this astounding demand. Should the shareholders not come forward in sufficient numbers to defeat the board at the confirmatory meeting then there will be no help for it but to take the question again into the Law Courts, but we trust that sufficient public spirit will be shown to put an end to this plot for good, and really it would not seem to be a bad thing if it also put an end to the authority and existence of the present board.

Waring and Gillow, Limited.

A favourable report for the year ended December 31 last has now been issued by the directors of this the premier decorative and other furnishing company in the world. The business of the year was larger and gave a greater profit, say the directors, and much gain has accrued to the company from its association with the Waring White Building Company and Hampton and Sons, Limited. It follows that the board is able to pay a full dividend on the 7 per cent. cumulative ordinary shares, after placing £30,000 to reserve, making it £145,000, and still has £14,784 left to carry forward. Only recently the company's splendid new premises were opened, from which a great increase in business is expected. No profit and loss account is published, but the balance-sheet shows the paid-up share capital to amount to £1,649,973, and there is a debenture debt of £1,000,000, besides oddments of liabilities amounting to £270,085. "Freehold and leasehold properties, including properties in course of erection, and investments of the company in respect thereof, but subject to mortgages or other prior charges, plant, machinery, fixtures, fittings, and goodwill," constitute a rather overloaded and formidable entry, against which the weighty sum of £1,619,020 is placed. Then come stock-in-trade, entered at £486,893, and sundry debtor balances, whose aggregate is £518,072, cash and investments, less loans secured on investments, amount to £427,783, and there is an item of almost £44,000 "less proportion written off," representing preliminary expenses in connection with the debenture and share issues made in March, 1903, and July, 1905, together with the premium paid on redemption of the "A" debenture stock. It will thus be seen that the exhibit is far from complete or clearly set forth, and that there are elements in the display as it stands suggestive of over-straining. What is the amount of the cash, of the goodwill, of the mortgages, and other prior charges? What the nature and total of the investments? The auditors, Messrs. Franklin, Wild and Co., certify the balance-sheet, "subject to the values of the investments being as stated," which is prudent on their part.

Watney, Combe, Reid and Co.

During the year ended June 30 the vendor directors of this awful example of plutocratic rapacity made a beginning with the elimination of the promoters' swag. It would be very hard to say exactly how much water was added to the beer when the bloated structure was being prepared for public consumption, but it is quite certain that the over-capitalisation has not been squarely faced even now. No one was really surprised when Mr. Cosmo Bonsor and Co. admitted last November that stupendous losses had been incurred since the incorporation of the agglomerate in 1898, and doubts only were expressed whether the £3,209,000 proposed to be written off met the company's terrible case. The annual report just issued proves pretty conclusively that it did not. It is quite true that the company has increased its nett profit by some £30,000 compared with the previous year, but only 3 per cent. can be paid on the deferred ordinary stock, which has been reduced no less than 75 per cent. in nominal value, and there is nothing with which to recommend a reserve in place of the £800,000 or so which also disappeared into the depths. No doubt the combine carries through an enormous trade, the three concerns joined up being among the most important and largest in London, but the frightful weight of capital imposed upon it left the thing helpless and floundering when trade of all kinds began to contract, and the public perforce became more sober. There was never a chance of building up a strong and solid position, because profits had to be divided to the hilt in order to give the deferred stockholders a look in of any kind, and the sums written off from reserves mainly consisted of transfers from capital, called capital reserves in the balance-sheet. When capital reduction time inevitably came along we were told that the value of the goodwill had gone down by £1,139,000, but no opportunity is afforded the mere stockholder who has lost his money of forming an impartial opinion as to the adequacy of this writing off simply because the actual amount of goodwill has never been stated. Think, too, of the admission and what it implies that on loans to customers a loss had to be faced of over £1,700,000. It means that of the vast sums of money advanced to tenants for "pub." rebuilding and renovating and other purposes no less than 1¾ millions has been irretrievably lost, thrown away by one of the rottenest systems of wasting money we have ever heard of. This loan advancing is a species of protection in one of its worst forms. Bind your tenant hand and foot by making him a debtor for huge sums of money so that he may not spend a sixpence without the consent of his masters, and what does it matter if trade goes down or does not go up sufficiently to justify the expenditure of these lavish loans, and the tenant is unable to repay the principle or meet the interest? Do what Watney, Combe have done. Write the deficits

off capital; it is only the public who suffers, and the "pub." shareholder was evidently born to be fleeced. In a sense, it is not unamusing to note that the amount written off freeholds and leaseholds was no more than £370,000.

Just note that the brewery buildings, freeholds, leaseholds, copyholds, goodwill, and utensils are now valued at £8,842,839. Now either the goodwill still stands at a scandalous proportion to the other assets or the £370,000 written off is absurdly insufficient. If we assume the goodwill at two millions, and the rest of the property at nearly seven millions, the depreciation is probably nearer a million than £370,000, taking into account the immense drop which has occurred in the company's trade or profits. And when the reconstruction proposals were first circulated there were people, and so-called financial journalists, too, who said it did not matter to the deferred stockholder whether his interest was represented by £100 nominal or £1. Oh, no, it does not matter. Soon after the company came out the £3,185,000 of deferred capital was given a market value of £3,886,300, and the similar amount of preferred stock stood at par. At the present time the deferred capital in its reduced form has a market worth of £358,000, a loss of £3,528,000, and the preferred capital is valued at £1,464,800, say a drop of £1,719,600, or £5,247,600 together. This leaves out of account the corresponding depreciation in the preference and debenture capital, but it does not matter. Loans and interest, customers' accounts, and rents owing, after providing for depreciation, discount, and cost of collection, are entered at £2,811,581 and agencies, less depreciation, appear at £19,931. High-class investments actually worth £414,236 are valued in the balance-sheet at £423,569, a sum of £157,481 is represented by trade investments, probably of uncertain value, and cash at bankers, at call, and in hand amounts to £95,829. Stocks and materials of various kinds stand at £317,448 and £42,807 has been invested on account of the insurance fund. In its reduced form the share capital now amounts to £6,321,763, consisting of £2,340,000 5 per cent. first preference stock, £3,185,410 preferred ordinary stock, and £796,353 deferred ordinary stock, the last-named having been written down by 75 per cent. The debenture debt in 3½ per cent. stock is just under £5,884,000, and the company owes £269,000 to depositors and sundry creditors. And business apparently still continues to shrink. Profit on trading account was only £612,861 or £16,217 less than in the preceding 12 months, and is actually the smallest sum ever earned. Interest on loans amounts to £126,849 or £52,258 less, an enormous drop, not in any way explained by the writing down, interest and dividends on investments yielded £28,441 or £1,707 more, and rents receivable have increased rather over £5,000 to £130,348. Adding on £207 for transfer fees and we arrive at a total revenue of £898,708 compared with £960,382 in the previous 12 months. There are, however, some important movements amongst the expenditure items. Bad debts, for example, are only £10,723 against last year's provision of £116,669, due, we suppose, to much of the defaulting capital having been written off. Repairs and depreciation amount to £134,081 against £129,166, and after providing for all other charges including compensation fund levy £15,911, and directors' fees £12,000, the balance of profit is £499,899 against £469,614. It may here be worth noting that the figure given in the prospectus was £720,000 odd. Debenture interest takes £209,039, and preference dividend £117,000, so that after providing the preferred ordinary dividend, the directors propose a distribution of 3 per cent. on the deferred stock, carrying forward £35,373 against £12,821 brought in.

Yorkshire Indigo, Scarlet, and Colour Dyers.

It is very difficult to criticise this company's report and balance-sheet for the year ended June 30 in temperate language. The thing is going or has gone hopelessly to the bad, and we fear even the preference shareholders will have to write their investment off as lost. Since the wretched affair was placed before the public during the textile promotions lunacy every conceivable excuse has been put forward to account for the utter want of success, and instead of the half-dozen or so which are usually dished up the directors are now reduced to two, presumably exhausting their stock. Even these two we believe we have heard before. Just listen: "The 'current' year's trading has been very adversely affected by the continued absence of the class of work largely carried on by the company and by exceptional losses which have taken place in connection with the closing down of three of the branches." Does not that sound familiar? It does to us, and would read a bit better if the directors did not confuse the present or current year with the past. We presume their remarks refer to the period ended June 30, although with this concern it would not be wise to be sure of anything. We are tired of talking of over-capitalisation, more or less dishonest, but we are bound to say that this undertaking provides one of the most notorious examples of wanton inflation ever encountered. The fact that the combine is a small one, with an issued share capital of £312,000 and a debenture debt of £156,000, does not in any way affect this conclusion. The ordinary shares have had no dividend since 1902, and now there is an appalling shortage in the debenture interest. Branch trading profits are returned at £12,027 or £6,687 less than in 1904-5, while bank interest and dividends on investments amounted to £1,093 or £120 more, and transfer and registration fees increased by £27 to £57. We thus get a total revenue of £13,176 against £19,717, from which the directors' fees amount to £2,245 so they are all serene. Depreciation written off accounts for £6,724, income-tax takes £847, and general charges, &c., £757, leaving the nett profit at the magnificent sum of £2,603 a drop of £5,762. Twelve months ago the directors took £4,154 from reserve in order to provide the preference dividend, but now £4,066 has to be withdrawn to meet the debenture interest only, which amounts to £6,669. Reserve is now down to £1,779, which means that unless matters vastly improve in the current year the creation of debit balances will begin. And that is only a step or two from reconstruction. Property account stands in the balance-sheet at £380,156, the reduction on the year being quite trifling, and as the issued share and debenture capital is £468,000 the company has a certain quantity of free assets. Only £7,649 is due to sundry creditors, against £32,384 due by debtors, in addition to which there are stocks £28,665, cash and bills £17,810, company's own debenture stock £3,673, and good-class investments £14,741.

Robinson Deep.

For the first time since the recommencement of milling after the war this company has been able to run continuously its full battery of 200 stamps, with the result that in the financial year to March 31 342,879 tons were crushed, yielding from all sources 179,369 fine ozs. of gold, of a value of £754,478. This was won at a cost of £375,365, leaving a working profit of £379,113, which interest, commission, rents, and transfer fees raised to £390,381. The ore was worth £2 4s. per ton, whilst expenses averaged nearly £1 1s. 11d. per ton, which compares favourably with many mines, so the profit was equal to £1 2s. 1d. per ton. Contrasted with the previous year the above figures show a saving of 2s. 7d. per ton in the costs and an increase of 3s. 3d. in the profit. A couple of dividends were paid, of 15 per cent. and 17½ per cent. respectively, for both half-years, requiring £318,500, £31,850 is put to reserve, and after providing for other outgoings, such as income-tax, &c., as much as £92,807 is carried forward, against £87,250 brought in. Profits and dividends promise to be still greater in the future, inasmuch as the battery is being enlarged to 300 stamps, on which basis the life is officially estimated at 26 years. Ore reserves are abun-

dant, and were computed at the end of March at 1,671,902 tons, of an average assay value of 10¾ dwts. This is stated to be a conservative figure. The finances look sound enough, but would be sounder still if the directors wrote off some of the heavy expenditure in the balance-sheet.

United States Extravagance.

This seems to be the only word to appropriately describe the lavish expenditure which the American Union is now indulging in, tempted by the facility with which revenue is gathered in. So great has this revenue been in the fiscal year of the Washington Government ended on June 30 last that an anticipated deficiency of nearly $24,000,000, estimated for a year ago, has been turned into a surplus of $26,187,000. One principal cause of this flourishing state of the revenue has been the heavy importations of merchandise by the American people. The volume of merchandise bought abroad and absorbed by the country has been greater than ever before seen, with the consequence that the Customs revenue alone for the year amounted to $300,657,413, or fully $38,500,000 more than the total of the preceding year. Neither in war nor peace times has the yield from the Customs tariff of the Union ever before reached $300,000,000, and as the New York *Commercial Chronicle* points out, only 12 years ago, in 1893-4, the entire receipts of the Government from all sources amounted to but $297,722,000. The internal revenue increased as well as Customs revenue, and the legislature made haste to scatter the money. In some respects the budget of expenditure for the year ended June 30 last was the biggest ever seen, and it promises to be greater still in the future, for the appropriations made by Congress to cover the outgoings of the year ending June 30, 1907, show an apparent increase of $60,000,000 over the figures of the past year, of which $42,447,000 go to the Panama Canal, $10,321,000 to the construction of new buildings, and $10,250,000 in fulfilment of the charges involved in what is called the Statehood Bill. The Panama expenditure will be recouped by bond issues, of which a $30,000,000 sample is already on the market, but apart from that the outlay is tremendous and causes even the most optimistic among the people and press to fear a reaction which may almost become a retributive punishment.

It was pointed out by Mr. Livingston that the total outlay for the coming year is expected to be only $13,000,000 less than the entire expenditure of the year of war with Spain, and this in a time of profound peace. We do not know whether the accounts are fully set forth, but it is obvious from a comparison of the figures of the year just closed with those for the year 1896-97 that extravagance is on all hands busy wasting the substance of the people. Ten years ago, for instance, the civil administration cost less than $90,500,000; in the past fiscal year it exceeded $120,000,000, although the figures for that year are $6,335,000 less than for 1904-5. In 1896-97 the War Office charges imposed by the Government of Washington cost the people less than $49,000,000. The cost was $93,659,000 last year, and $99,616,000 the year before. The cost of the Navy has risen from $34,562,000 in 1896-97 to nearly $111,000,000 in the past year, and $117,334,000 the year before. Pensions, too, keep up at the astonishing figure of $141,034,000 for 1905-6, a decrease of about $740,000 on the previous year, but a total practically identical with that for 1896-97. Thus the great bribery fund which keeps the Republicans in power so that they may devour the wealth produced by the people's industry remains intact, as vigorous for mischief as ever, and in spite of a reduction of nearly $14,000,000 in the interest of the debt, the total charges of the Government have risen within the nine years by $203,000,000. It is surely time to call a halt, but there is no trace of any improvement, any leaning towards thrift, in the attitude of Congress. On the contrary, the passion for militarism is being diligently fostered amongst the American people, just as here in order to buttress the position of the industries that fatten on the Government contracts, and find pretexts for a continuance of the present alarming outlay. A reaction must come.

Rhodesian Precious Stones Ordinance.

Last month the Rhodesian Chamber of Mines presented to the High Commissioner the text of a petition asking him to disallow the Precious Stones Ordinance of 1906. In this petition it is pointed out that the Ordinance passed its second reading by the casting vote of the President of the Council, the elected members present unanimously voting against it, and the third reading was carried by the votes of the seven nominated members of the Council against those of the six elected members present. The petitioners are particularly aggrieved at the insertion of the two following provisions:—

> (a) That under Section 1 of the Ordinance all rights granted by the British South Africa Company to prospect or mine for precious stones shall be subject not only to the provisions of the Ordinance, but also in addition to any conditions entirely apart from the Ordinance which the Chartered Company may choose to impose; and (b) that under Section 15 of the Ordinance, upon the withdrawal by the British South Africa Company of the declaration of an alluvial digging, and such withdrawal is within the absolute discretion of the company, all rights acquired by any person within such digging shall cease and determine, save such as the company may have chosen, in the permit issued by them, specially to reserve to any particular claim holder.

It is argued that Section 1 of the Ordinance renders it wholly useless, unnecessary, and inoperative, and is also objectionable in principle, inasmuch as it gives the sanction of the provisions of the Ordinance to any conditions, however arbitrary and inequitable, which the company may from time to time impose, enables it to differentiate between individuals, and generally places the whole of an important branch of the mining industry at its mercy. The petition proceeds to point out that in the year 1902 the Chartered Company granted to the De Beers Consolidated the exclusive right to work all diamondiferous ground to which the first-mentioned was then or might thereafter become entitled, both north and south of the Zambesi River. As we all know the De Beers company has never used these rights, and the petition reasonably urges that it wants no one else to open up diamond mines in Rhodesia, lest this should increase competition and weaken its monopoly. The present Ordinance was actually the result of public agitation against the monopoly, but so far from remedying the existing state of affairs, it will strengthen by legislative sanction the policy of not permitting mining for precious stones, thus retarding the influx of whites. It is further contended that such a policy constitutes a breach of the Royal Charter, and is totally at variance with the objects which it was granted to promote. But it is no secret that the Chartered Company and De Beers are working in harmony together for their mutual interests. Where, however, are the benefits gained by the Chartered shareholders?

American Business Notes.

A considerable increase in strength was shown by the New York Associated Banks last week. Their loans went up by $9,435,000, but deposits increased $20,807,000. In spite of this large increase in the liabilities there was no diminution in the surplus reserve, but, on the contrary, an increase for the additional specie and legal tenders held amounted to $11,762,000, or $6,560,000 more than was required to cover the increase in the liabilities on deposits, &c. It follows that the surplus reserve was up to $19,395,000, an amount which ought to be sufficient

to prevent credit accidents were it not that the financiers are continually making fresh demands upon the savings of the community. Not only is the Washington Government issuing $30,000,000 of 2 per cent. Panama Canal bonds to ease the subscriptions to which it has decided to deposit $12,000,000 of Government money with the Banks, but New York City has issued another loan of $12,500,000, and altogether the New York correspondent of the *Financial Times* estimates that $50,000,000 of new capital issues will have been put upon the market during July. Meanwhile the distress of European markets is compelling holders of American securities on this side of the Atlantic to sell, and within one week it was estimated that quite 150,000 shares had been dumped on New York from Europe. This selling is bound to go on, and explains the sudden recovery in the New York rate of exchange. In other words, the power of New York to draw gold from Europe is destroyed for the present, and there are still heavy unliquidated obligations contracted here by American financiers to be worked off. In spite, therefore, of the greater strength of the New York Associated Banks, and of the recurring spasms of what looks like strength in the New York Stock Exchange, we still fear that the autumn is going to be a time of considerable financial trouble or strain in the United States.

The Oceanic Steamship Company of San Francisco seems to be in rather a bad way. Every year of the last four has shown a deficit, and it has been obliged to default upon its outstanding bonded debt of $2,405,000. In addition to that debt it owes $1,997,000 to the firm of D. J. Spreckels and Brother. Various excuses are given for the bad results shown, but as these are continuous we must infer that the trade between San Francisco and Australia is not a profitable one. Hopes, however, are indulged in that the improved outlook in Australia and the International Exhibition in New Zealand may give a fillip to the business this year.

An issue of $4,000,000 of 4 per cent. gold equipment trust certificates has been made by the Norfolk and Western Railway, and the bonds are being offered on a 4¾ per cent. basis by the Commercial Trust Company of Philadelphia as trustee in four series of $1,000,000 each. This is only one of a variety of small bond issues which railway and other companies in the United States are constantly putting out, and either selling to syndicates or to firms of bankers who themselves create groups to take them up. Thus Brown Brothers are offering at 99½ and interest $400,000 of equipment trust 4½ per cent. gold certificates of the Lehigh and Hudson River Company, and the same firm is seeking to dispose of the unsold balance of $3,000,000 of divisional first lien and general mortgage 4 per cent. gold bonds emitted by the Norfolk and Western Railroad Company, of a total authorised issue of $35,000,000, of which $11,000,000 are outstanding. Then the New York Stock Exchange has added to its official list $2,000,000 of general mortgage 4 per cent. bonds of the Reading Company, making the total amount $70,330,000. This kind of thing is inevitable, but none the less burdensome for a Money market already over-engaged with all sorts of capital commitments.

The Bank of Havana, which it was announced a short time ago is to open for business in Cuba in August, has an imposing array of sponsors. Besides the National City Bank of New York (Standard Oil) and Kuhn, Loeb and Co., also of New York, the Comptoir National, Société Générale and Banque Française have aided in establishing it. The authorised capital is $5,000,000, of which half has been paid up; but it was under consideration whether, in view of the volume of business expected from the start, it might not be found advisable to call up the other half so soon as the bank is opened. In addition to the board of directors, which is composed exclusively of Spanish financiers, there will be advisory committees in Paris and New York. The Paris committee will consist of Carlos David de Geest, Jacques Kulp, and Joseph MacAndrews. Among the most important stockholders are H. O. Havemeyer, of the Sugar Trust, H. P. Booth, and Rafael Govin, of New York, the London Bank of Mexico and South America, Sir Ernest Cassel, Messrs. Ruffer, Stern Brothers, and J. W. Todd, of London, and Warburg and Co., of Hamburg. Carlos de Zaldo, President of the Bank of Havana, was formerly Secretary of State of the Republic of Cuba.

On July 10 Superintendent Kelsey, of the Insurance Department of the State of New York, made public a ruling in connection with the right of policy-holders in insurance companies to have access to the policy-holders' lists which seems to be causing some dissatisfaction to officials and others. The lists of names of policy-holders were to be filed by the mutual life insurance companies with the Insurance Department on July 18, pursuant to Section 94 of the insurance law. As it will be of importance to all concerned, the following are the terms of the ruling of the State Superintendent:—"The lists of policy-holders on file shall be subject to inspection and copy at any time during business hours by any policy-holder or by his authorised representative. The policy-holder appearing in person must present his policy and his last receipt for premiums paid. A policy-holder designating a representative to inspect or copy from any of the lists on file in the Department will be privileged to appear by only one representative at a time. The representative of a policy-holder must produce a written designation conferring authority in each instance, stating the name of the company insured in, the number of policies, and name of the appointee, and the designation must be duly signed by such policy-holder and acknowledged by him before a notary public."

Under this ruling the international policy-holders' committee, represented by Mr. Samuel Untermyer, will be compelled to have each of its copyists designated by some policy-holder as his representative for the purpose of inspecting and copying the lists of the insured. The establishment employed to do the copying for the international committee expects to employ some 150 copyists for the purpose. It is said that the real reason for the issuing of this ruling is to prevent one company from getting possession of the list of policy-holders of a rival company, as an aid to them in "twisting" policies, which practice the insurance investigating committee severely condemned. It is not, however, thought that this will prevent companies wanting lists of their rivals' policy-holders from procuring them. As an instance of the prevalent general distrust in the United States of everyone's honesty, one of the New York dailies suggests that there will probably be no difficulty in getting them from those employed to copy the lists.

The organisation of the International Policy-holders' Committee in New York served to goad President Peabody, of the Mutual, to action. He issued a circular reciting the steps taken to redeem the pledges made to carry out reforms in every branch of the affairs of the company, stating, among other things, that suits had been entered in the Courts to recover the money misappropriated; that eight new trustees of high character had been elected, and as many more would be added at an early date; that economies amounting to $1,085,000 a year would be effected, and that the funds deposited in banks or loaned on collateral had been reduced by more than $17,500,000. To this circular Mr. Untermyer at once replied. He pointed out that the men who fixed the salary of Mr. McCurdy at $150,000 a year in 1901 were still officials of the company; that Mr. Frederick Cromwell, who was treasurer of the company throughout the McCurdy régime, and acknowledged to personal syndicate profits of $26,000, has been added to the reorganised finance committee; and calls attention to the fact that Messrs. Iselin, Jarvie, and Henderson, of the old finance committee, are still in the company's service, as are all the real offenders, exploiting the company's treasury in this campaign for "vindication." "It further appears," he says, "that $34,851,194 of the loans on real estate

were in excess of the value of the property as restricted by law." The suits entered against the bill-padding firms and the others mixed up in those extraordinary transactions he regards as savouring of a death-bed repentance.

A State of New Jersey charter was obtained by the organisers of the Zanzibar Electric Light Company on July 11, with a capital of $100,000. The articles of incorporation state that the company has been formed to generate, furnish, and distribute electric current for heat, light, and power on the island of Zanzibar, East Africa. The incorporators of the company are B. S. Mantz, Thomas F. Barrett, and Felix Ingold, all of 15, Exchange Place, Jersey City, N.J., U.S.A., the registered office.

The City Treasurer of Omaha, Nebraska, has reported that duplicate coupons of the 4½ per cent. refunding bonds of 1905 have been received through the Derby Savings Bank, of Derby, Connecticut, and the Mechanics' and Farmers' Bank of Bridgeport, Connecticut. The bonds were originally purchased by a firm of bond buyers in Boston. To what extent the duplication of the coupons has gone had not developed.

Contracts for the construction of two 16,000-ton battleships, the *South Carolina* and *Michigan*, for the United States Navy, were awarded on June 12 to the well-known firm of Cramps, of Philadelphia, for the first-named, and to the New York Ship and Engine Company of Camden, N.J., for the other. A contest has arisen over the supply of the armour-plates, in which the Midvale Steel Company, of Philadelphia, the Bethlehem Steel Company, and the Carnegie Steel Company have taken part. The two last-named are reputed to form the so-called Armour Plate Trust. When the tenders were opened at the Navy Department, it was found that the Midvale Company had not only cut down its price of last year from $398 a ton, but had gone so low that it practically put them out of competition. Its tender in the aggregate was $170,000 below that of the Carnegie Company, and more than $250,000 below that of the Bethlehem Company. As soon as the tender of the Midvale Company became known, Mr. Charles Schwab and two other officials of the defeated companies appeared at Washington and pleaded to be allowed to change their tenders, as unless they got a share of the work they would have to close their armour-plate works. They further represented that these works had been specially put up under an understanding with the Government which was the only purchaser of that particular manufacture.

Referring to the subject, the New York *Evening Post* says:—"Pity the poor Armour Trust! Underbid by a rival, some of its officers with Charles M. Schwab are besieging the Navy Department, begging for at least a small part of the contracts to be awarded. Their armour plant has been created and kept alive solely by Government orders, and must lie idle unless Congress votes more battleships every year. Since it has made enormous profits out of the construction of our modern fleet, the Trust naturally feels that it has a lien on the country. Surely its officers should be pardoned if they make the mistake that the Government exists to aid them, and not they the Government. And how weighty is their argument, that if their rivals are allowed to underbid them, there will soon exist a dangerous monopoly."

The Board of Health of the State of Massachusetts has made public a report on Chicago and other meat products that does not make appetising reading. Potted tongue, for instance, from the establishment of G. H. Hammond and Co., Chicago, labelled "Coin Special," consisted of a small amount of normal muscle, considerable epidermis in large pieces, numerous bloodvessels and nerves, and salivary glands ground to paste. Libby, McNeil, and Libby, Chicago.—Abundant muscle fibre, considerable epidermis; much granular debris, some fat and cornmeal. Van Camp Packing Company, Indianapolis, Ind.—But little muscular fibre; considerable debris; small amount of salivary gland, and considerable cornmeal. Armour and Co., Chicago.—Little muscular fibre; chiefly epidermis, salivary glands, and cornmeal. Devilled ham by the same firm labelled "Veribest" contains some muscle and much cornmeal. The Cudahy Canning Company, U.S.A., "Rex" brand, "The Taste Tells," contains a small amount of muscle; large amount of connective tissue, blood vessels, and fat; large amount of cornmeal, and some kidney tissue. Schwarzschild and Sulzberger, Chicago, "Advance" brand, contains as much connective tissue as muscle; is preserved with either boric acid or borax. Chicken "loaf," from Armour and Co., Chicago, "Veribest," contains a small amount of muscular fibre and a large amount of cornmeal. G. H. Hammond and Co., of Chicago, "Coin Special Chicken Loaf," contains very little muscular fibre; much connective tissue and corn. Preserved with either boric acid or borax. The label states that the material is of superior quality, "having been carefully selected and inspected according to the law enacted by Congress, March 3, 1891, relating to the inspection of meats." Other varieties of this delicacy appear to have been, even where the meat was "fair," principally cornmeal. Ham "loaf," from Armour and Co., Chicago, "Veribest."—Some muscle; chiefly connective tissue and cornmeal. Preserved with boric acid or borax. Label states same regarding inspection as on Hammond products. Boned chicken and turkey from different establishments varied from good to a compost of small fragments of meat, skin, pin feathers, fragments of bones, feathers, and other foreign matter. Armour and Co., Chicago, turned out the worst, according to the Massachusetts report. The colossal gains of this business are to be seen in the yachts and automobiles in which their owners flaunt their ill-gotten wealth.

The Chicago and Alton Railroad Company was sentenced in the United States District Court in Kansas City on July 11 to pay a fine of $40,000 on two counts for granting illegal rebates. John Faithorn and Fred. A. Wann, former officials of the road, were also convicted and sentenced to pay a fine of $5,000 each on two counts, or a total of $10,000. The specific charge on which they were convicted was that they had given Schwarzschild and Sulzberger a rebate of $1 per car on all shipments from the Kansas City plant of the company.

It is reported from Chicago that Mr. J. J. Hill, whose railroad building has disturbed certain interests in Canada, now contemplates connecting Lake Superior with Hudson Bay *vid* Winnipeg. The route, which has been surveyed, will start from a point on Lake Superior, through the Rainy River and the Lake of the Woods to the Winnipeg river, past Winnipeg to Lake Winnipeg. From there it would be necessary only to dredge out the channel into Hudson Bay. The enterprise no doubt is feasible and interesting, but of what practical value a route that, at the best, can only be availed of for about six weeks in the year will be is very doubtful. Hitherto the appeals for money to spend on a Hudson Bay route have been made by jingo Imperialists anxious about the wheat supply of the United Kingdom in time of war. The fact a man of Mr. Hill's position should be brought to speak of it seriously is remarkable, and one New York paper suggests that he has done so in order to allay the alarm caused by his railway policy which, it is alleged, will be more beneficial to American trade than Canadian.

Honduras in Central America is said to possess large areas of pine lands which American capital is looking after. It is expected that ere long the building of railways with the object of bringing the lumber to market will begin.

On July 14 the Secretary of the United States Treasury announced the intention of his Department to create additional depositary banks in different parts of the country, placing with them something like $5,000,000 of public funds, in comparatively small amounts, about $50,000 in each. The object in so distributing the money is to aid in the movement of crops

and to counteract the effect of the contraction through the withdrawal of the $10,000,000 which was deposited some months ago to relieve the money stringency at the time. The latter deposits were based on State and municipal bonds, and a considerable part has already been returned into the treasury.

The United States Government is about to send special agents out to different countries to study their market conditions for the benefit of American exporters. Two will devote themselves solely to the cotton industries, and will visit Europe, China and Japan.

Reports from the copper mines of the Butte district, Montana, state that the production for the month of June was 32,576,700 lbs. of copper from 437,550 tons of ore. It is stated that a great combination is in course of formation, which will make Salt Lake Valley the smelting centre for all the ores, mattes and concentrates that will be produced by the mines belonging to the combination in the States of Montana, Idaho, California, Nevada and Utah.

The copying of 1,800,000 names of policyholders in the New York and Mutual Life companies began at Albany the capital of the State of New York, on July 18, under the direction of the International Policyholders' Committee. Both the companies have been employing obstructive tactics in opposition to the committee, and doing all possible to make the work as difficult and expensive as they could. The organising secretary of the committee said that if the history of the recent performances of the two companies with respect to these lists is not sufficient to arouse the policyholders, then nothing ever will.

An intended merger of the express companies operating on the J. J. Hill lines of railway, the Great Northern, the Northern Pacific and Burlington railroads, is reported from St. Paul, Minnesota. The traffic that would be handled by such a combination would be enormous, the length of the Burlington being 8,459, of the Great Northern 6,379, and that of the Northern Pacific 5,810 miles.

The latest railway project announced from America is the construction of a new transcontinental line from Los Angeles, in California, eastward to connect with the Chicago Great Western at Omaha, Nebraska. The road has been incorporated as the Omaha and Denver short line. Entrance to Denver will be gained over the Colorado and Eastern Railroad, which is controlled by W. F. Havemeyer, a relative of O. H. Havemeyer, the sugar magnate, and a branch will be built from Denver through the sugar belt of Northern Colorado. The Chicago Great Western Railroad is said to be behind the new enterprise.

As an instance of the extraordinary development of the Western and Pacific States of the union through railway construction, it may be mentioned that 10 new towns have been established on the Pacific Coast extension of the Chicago, Milwaukee, and St. Paul road west of the Missouri River, and six new towns laid out since the beginning of July.

It is officially given out that the Burlington Railway will at once undertake the construction of a line from the Black Hills eastward through Pierre, South Dakota, to Watertown in the same State, to connect with the Great Northern at that point, giving the Hill roads a short cut to the Black Hills and the cattle ranges in the State of Wyoming.

A great enterprise is being organised for the establishment of steel steamer navigation on the Missouri and Mississippi Rivers with St. Louis as the centre of operations. The project is being promoted by Mr. Joseph Clark, who controls many electric lines in Northern Missouri, and proposes to establish regular lines of passenger steamers between St. Louis and New Orleans, and St. Louis and St. Paul in Minnesota. They will be run in connection with the electric railways.

Just before leaving the United States for the Pan-American Congress, which is about to meet at Rio Janeiro, Mr. Root authorised the issue by the State Department of a Red Book for 1905, in which was given the first official information relating to the late mission of Mr. W. J. Calhoun, who was sent by President Roosevelt to report on the claims of the New York and Bermudez Asphalte Co. against the Government of Venezuela. It will be remembered that the late Mr. John Hay nearly resorted to the use of force against the Venezuelan Government, trusting to the reports of the United States Minister at Caracas, who was afterwards discovered to have been personally interested in the affairs of the Asphalte Co. Divested of the laboured phraseology in which the matter is dealt with, the statements made show that the United States Government found that it could not touch Venezuelan pitch without getting defiled, and so the filibustering American company was advised to settle its claims against Venezuela by itself without anything more than friendly assistance from Washington. An attempt was then made by the Asphalte Company, which interested some shady Paris financiers in the matter, to get the French Government to act, and a vigorous campaign was begun in several New York papers to prepare the way for combined action on the part of the American and French Governments to enforce claims of all kinds that were distinctly fraudulent. Mr. Root, however, seems to have been alive to the nature of the scheme into which the French Government had been led, and declined to join with it in coercing Venezuela. The object now, judged by the tenor of the documents published in the Red Book, is to dispel the mistrust of the United States Government prevailing in Venezuela, particularly in view of the coming Pan-American Congress, in which the United States Secretary of State means to play an important part, and at which the question of the collection of private debts by armed force will be the crucial subject for discussion. It is significant that Venezuela will not be represented at Rio Janeiro.

The American Press on the whole does not seem to anticipate much result from the assurances sent to Europe by the President and the Secretary for Agriculture regarding the future exports of American meat products. With a full knowledge of the subject several papers say that it is not new legislation, but the rigid execution of existing laws that is needed. That has been apparent all along, but seeing the class of men appointed inspectors it was not to be looked for. So long as the American public service is made the refuge for men too incompetent to succeed in private life, or a reward for service to mere politicians on the make, no good can be expected. The European consumer has it in his power to guarantee himself against being made the receptacle for diseased meat and potted offal by refusing to purchase any American meat products under present conditions. The failure to enact a clause in the food law enforcing the dating of the cans (not labels) in which they are placed should be sufficient to cause their exclusion from any country. There will be no other way to guarantee permanent reform in the administration of the American food laws, the personnel of the inspectors, or to guarantee the guarantors themselves of the purity of American meat products.

Tempted by the success of the Pennsylvania Railroad Company in placing its loan on the Paris market, the Wabash is offering $6,180,000 of 4½ per cent. equipment bonds to French investors. Should the venture turn out as hoped, there is talk of taking advantage of the circumstance, and placing whatever part of its proposed $200,000,000 of 4 per cent. consolidated mortgage bonds may be issued this year. In connection with this matter, the New York *Herald* states that a group of Wabash debenture "B" bondholders who are said to hold about $4,500,000 of them are becoming impatient over the delay in the official announcement of the plan to exchange them for the new securities. Mr. Jas. R. Keene and his associates are spoken of as being active in this group. The reason for the delay is said to be the present depression in the bond and money market.

A Chicago report of July 16 states that a writ of *supersedeas* was granted the Chicago and Alton Railroad Company, J. W. Faithorn and F. A. Wann, staying the collection of fines aggregating $60,000, recently imposed on them after conviction of having granted illegal rebates to Schwarzschild and Salzberger, meat dealers. A bond for the amount of the fine, pending an appeal to the United States Circuit Court of Appeals, was filed. This is regarded in the nature of a friendly suit in order to obtain a decision of the higher Courts on the rebate question.

Passing Events.

A right noble speech was that delivered by Sir Henry Campbell-Bannerman, our Prime Minister, to the delegates from the World's Parliaments assembled in conference last Monday. He struck the right note, appearing before them as an ardent and convinced advocate of international peace, of courts of arbitration as instruments in settling disputes between nations instead of the stupid and barbarous methods of man killing. And he was courageous also in that he cordially welcomed the Russian delegates, and held out the hand of friendship to the Duma, dissolved though that representative body for the present is. "The Duma is dead," he cried, "long live the Duma!" A speech of this kind will put heart into all those Russians who are fighting for their liberty by moral means, by every means in their power; and not the Russians alone, but the friends of peace, of concord amongst men and nations in every country, will be encouraged by what the Prime Minister said to go forward more energetically with higher hopes of success. Surely all people who have stakes in the shape of investments in any country will range themselves on his side. What a strange and fatuous idea is that of our Stock Exchange that the present Government is inimical to public securities. There can be no such fast and useful friend to the investing classes as the advocate of peace between nations, an advocate as convinced and strenuous as Sir Henry Campbell-Bannerman.

As the result of the requisition of the Beira Railway's debenture holders' committee, the trustees have convened a meeting, to be held on Monday next, and the committee makes a final appeal for support. The circular sets out what the committee has done during its existence, but points out that those who control the railway still refuse to pay the coupons, to give the debenture holders any voice in the management of the line, or even to divide the large surplus earnings now in hand. It is highly important that strong support should be given, and we hope that debenture holders will take to heart the following sentence, with which the circular concludes:—"Every individual debenture holder who fails to secure that his vote is given at next Monday's meeting will be personally responsible for the return of those evils against which the committee has so successfully contended."

The Government of Natal is in need of another £500,000 by way of temporary loan, making £1,000,000 in all raised for the purpose of meeting the expenditure incurred in massacring the blacks. We doubt whether the London market will consider nigger carcases a good security, and trust that difficulties of at least a warning description will be put in the way of the raising of this money. There is little likelihood that it will be the last demand, because the very day following that on which this fresh proposal to borrow money was made public the telegraphic agencies told us that trouble is threatened in Pondoland and amongst the tribes of Southern Natal. These have not been cowed at all, the message says, by what has happened in the north, but believe they can rise successfully against the whites. So the policy of ravaging, of slaughtering and bloodthirsty repression is not producing that peace which we were assured would follow. Indeed, the so-called rebels in the north are not yet cowed, and extra police and continued military displays will be necessary to hold them down. This is what we should naturally expect. Instead of bringing the country back to order and quietude, the ruling faction in Natal has unsettled everything, and undermined the security that State can offer to the moneylender.

An old subscriber in Melbourne sends us an extract from the *Melbourne Argus* of the 15th of last month, which gives some particulars of the running of motor 'buses between Malvern and Prahran. As he says, they are, for Australia, thickly populated suburbs of Melbourne, and yet the motor 'bus service did not pay. This is what the newspaper says, and although it is probable that various items in the costs here detailed would be less burdensome in London than in Melbourne, we agree with our correspondent in thinking that the facts thus set forth will be of interest to those interested financially in motor omnibus experiments at home.

The consumption of kerosene for each vehicle exceeded a gallon a mile, and, therefore, on the 55 miles which constituted a day's run, not less than £2 worth of kerosene would be burnt. The wages of attendants—there were two shifts—amounted to £1. Wear and tear of the tyres, which cost over £100 a set, and already have had to be renewed, though the service was only started six months ago, works out at over 10s. a day, and it will be keeping well within the mark if, for interest charges, depreciation, upkeep of machinery, and other incidentals an additional 10s. is allowed. The daily running expenses for each of these 'buses, therefore, comes to £4, or to £16 for the four out of the six which are kept in service. The total takings have fluctuated between £8 and £9 a day, so that at the end of 12 months the loss on the service would have amounted to nearly £3,000. It has to be borne in mind, however, that the 'buses were running against the horse 'buses of the Tramway Company.

A strenuous battle is being fought over the Allsopp amalgamation scheme. Mr. C. J. Stewart, the chairman of the company, found it a comparatively easy matter to persuade the junior stockholders to agree to the proposal, because under present conditions their chance of ever seeing a penny again in dividends can be regarded as absolutely hopeless, and it is conceivable that sufficient economies will be effected to give, say, the preference shareholders a look in some day. Not that the meeting was by any means unanimous, and the fact that the members of the advisory committee had "split" was not a good sign. Proprietors seemed a little doubtful whether the fusion of three derelicts would make a decent whole, but in the end the board's proposals were agreed to without the aid of the heavy proxy vote which the directors controlled. But when, later in the week, the matter came before the 4 per cent. debenture holders, the scheme was submitted to the most violent condemnation. Debenture stockholders flatly refused to have the heavy floating charge which the plan involved placed before them. The proposal was declared to create a confiscatory precedent of a very dangerous kind, and although the scheme was carried by the use of proxies, the opposition is probably not done with yet. The chairman declined to commit himself to the statement that the security of the debenture holders would not be placed in jeopardy, and some proprietors called for the appointment of a receiver rather than submit to the changes which the scheme involved. It would not be surprising if the next move is in the law courts.

Critical Index To New Investments.

British Industries Development Corporation, Limited.

In April last this company was hawking about 2,445 "priority shares" of £5 each, but very few seem to have been disposed of, and it is now hard at work again with an offer of 2,168 of these shares at par. On the previous occasion the excuse for the issue was that a share had been acquired in an important established motor undertaking, but no mention is made of that amongst the assets now set forth. Its place is taken by a provisional agreement for taking over the property and business of the Faversham Shipping

Co., Limited, together with the Brents Ship and Barge Building Wharves at Faversham. Of this we are told that the company has paid uniform dividends of 10 per cent. per annum upon the ordinary shares since its formation six years ago, but the accountants' certificate is vague and utterly useless as an indication of the value of the property. Of the shares in the company taken over the corporation has already acquired £1,570 in exchange for some of its own shares, and now proposes to purchase the remaining shares through a third party who bought them for £5,450 in cash and resells for £7,950, also in cash.

Wagon Finance Corporation, Limited.

This company proposes to finance the purchase of wagons, locomotives and rolling stock of every kind which it will let on hire on terms which will provide for the wagons becoming the property of the hirer at the expiration of an agreed period, but it will not build for itself. The capital is £1,000,000 in £10 shares, and in addition the company has power to issue first mortgage 4 per cent. perpetual debenture stock or first mortgage 4 per cent. terminable debentures, all ranking *pari passu* to an amount not exceeding four-fifths of the nominal share capital issued or the amount remaining uncalled and unpaid on the shares issued, whichever amount is the less. Not more than one-fifth of the nominal amount of the shares may be called up without the consent of a special resolution, but the directors hope that it will not be necessary to call up more than £1 per share. Subscriptions are invited for the whole of the shares, on which 10s. is payable on application and 10s. on allotment, and for £200,000 first mortgage 4 per cent. perpetual debenture stock at 94, payable 10 per cent. on application, 24 per cent. on allotment and 20 per cent. each on September 29, December 31 and March 30. All the directors are interested in iron, steel and colliery companies in South Wales, the Midlands, Yorkshire, Scotland and elsewhere, and as such undertakings are known to avail themselves largely of the facilities for obtaining rolling-stock afforded by the proposed method the new company will start with fair prospects. No promotion money or underwriting commission has been paid in connection with its formation, which is satisfactory.

City of Tokyo 5 per Cent. Loan.

This is a 30 year sterling loan for £1,500,000, and is offered for subscription at par by the Yokohama Specie Bank, Limited, Parr's Bank, Limited, and the Hongkong and Shanghai Banking Corporation, acting as agents of the Industrial Bank of Japan, Limited. It is a loan secured both as to principal and interest by a first charge of 974,500 yen or £99,480 on revenues to be specially set aside each year for this purpose and has the sanction of the Imperial Japanese Government. Instalments are payable in amounts of £25 each on September 1, October 1, and November 1 next, over and above the £5 due with applications and the £20 payable on allotment. It is stated that the proceeds of this loan will be applied to the payment of all outstanding loans, the total of which is £561,969, the balance going to provide harbour works, street improvements, &c. The first coupon representing interest at the rate of 5 per cent. per annum on the instalments will be £1 17s. 6d., payable on February 1 next. Payments of the bonds in full may be made on allotment under 2½ per cent. discount. The aggregate average income of the city for the past five years from water rates, special duty tax, rents of city properties, &c., has been £106,167, and the population is 1,969,000.

Answers to Correspondents.

Hardware.—Your better course would be to hold on a little longer, in the fair hope of being able to reduce your loss.

B. W. J.—We are sorry your question of the 12th inst. was not answered, but the slip with the reply appears to have gone astray. The bonds seem to offer a fair speculative chance. Of your queries this week No. 1 has been going back lately, and might be worth picking up at the present price, but the time has not yet come to buy No. 2, as the loan is not yet placed, and is almost certain to go lower.

B. M.—No. The shares are now too dear to leave much margin for further improvement.

W. White.—(1 and 2) There is no reason to suppose that the country will fail to meet its obligations, but its finances have been greatly strained, and when further loans come to be issued, as they will be, prices might tend to go back, as they seem pretty full just now. These circumstances taken into account, a little of the stocks mentioned might be bought. The securities have the advantage of possessing a very free market. (3) The preferred ordinary shares of this concern may be considered a fair speculative investment. (4) We think No. 3 is the best and then No. 2, but do not forget the uncalled liability.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and July 21, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to July 21, 1906.	Total Receipts into the Exchequer from April 1, 1905, to July 22, 1905.
Balances, April 1:	£	£	£

Treasury, July 24, 1906.

TRADE AND PRODUCE.

Wheat.—Small fluctuations have occurred in the markets under outside influences, but very little interest has been bestowed on them. English wheat supplies continue small in some of the country markets. More has been offered, but where obtainable prices have been firmly held, and foreign, which ruled a little easier in the early part of the week, became steadier again later on. Supplies from abroad are again rather less this week. The quantity of wheat and flour on passage to the United Kingdom is 2,595,000 qrs., against 2,675,000 last week, and imports 432,110 qrs. against 620,340 in the same week of last year, the total to this season of 47 weeks, amounting to 19,472,510 qrs., against 21,819,382 last season to date. Farmers' deliveries were 8,010 qrs., averaging 30s. 3d., against 6,558 qrs., averaging 32s. 2d. in the same week of last year. American markets were weakened by heavy receipts early in the week, and also a big increase in Bradstreet's estimates of 3,531,700 bushels in sight East of the Rockies, against 32,254,000 last week, but a large export business had a steadying effect, and unfavourable news from Manitoba of red rust also strengthened them.

Wool.—Sales of colonial wool closed in London on Friday last. During the series about 116,000 bales were catalogued, and it is estimated that 50,000 of these were purchased by the home trade, 36,000 by Continental consumers, and 4,000 by America, leaving about 20,000 bales to be carried forward, of which 6,000 were not offered. Messrs. Charles Balme and Co. report that "The fall in values has taken the trade by surprise. It was generally recognised that prices had reached a high level during May, but in view of the buoyant state of trade and the smallness of supplies for the rest of the season, a maintenance of quotations was expected. Nor is it expected now that they will again touch the highest point this season, though some look to a hardening again before the end of the year. At present markets are going through the holiday slackness, but spinners and manufacturers are fairly well employed, though the latter are handicapped by the attitude of the former, while they in their turn struggle to get prices in range with those of nods and tops.

Linen.—Extreme quietness dominates the yarn market, but prices have an upward tendency in all better-class yarns, Line warps especially, which continue scarce as ever. Many consumers who have held back in the belief that the market would fall are now having to replenish their stocks as best they can, and at the prices asked, and consequently, though quiet, there is not the complete cessation of all business that sometimes takes place during this month and next. Among manufacturers, also, it is bridged over by forward booking, and the state of things generally is looked upon as more than hopeful. For the month of June the value of linen piece goods exported to the United States showed an increase of nearly 20 per cent. compared with June, 1905.

Cotton (from our Manchester correspondent).—No new feature of importance has shown itself in our market during the past week. The demand being met with by sellers of cloth and yarn has not been at all important. The lull in operations has continued, and in no quarter have active operations been carried on. The market on the whole continues healthy, but the new business coming round is rather disappointing to sellers. Most manufacturers and spinners have plenty of work to go on with, and there is no particular pressure for new contracts. The raw cotton situation shows very little alteration. The prospects for a large yield are good, and some people here are looking forward to lower values towards the end of the year. In cloth for export a little more inquiry has been received for India, but a number of the offers have not been of a character to be entertained by manufacturers. Bombay is the most healthy outlet, but Calcutta continues dull. For China, rather more trade has transpired for distant delivery, but here again offers as a rule are too low to be accepted by makers. The smaller markets have only given occasional support in a miscellaneous class of goods. Most buyers have wanted earlier delivery than manufacturers can undertake. Certain shippers seem to have bought rather more goods than they require, and orders have been cancelled, owing to the late delivery. Burnley printers have moved rather slowly, and some irregularity in price has shown itself. T-cloths and Mexicans have not been active. Prices have been well maintained owing to the deep engagements of makers. Coloured woven goods and sateens present no particular new feature. Mull dhootie makers have not found any improvement in demand, and producers are wherever possible turning on to other makes of cloth. In home trade goods flannelette makers are receiving orders of fair weight. The outlook for the autumn trade is encouraging. In cops made from American cotton for home consumption the demand has again run on small lots for quick delivery. The pressure for completion of old contracts has not been quite so prominent, but it cannot be said that there is any abundance of yarn. The finer numbers of weft have not been so scarce. In shipping counts the demand for India has improved somewhat, but the offers have been low. Cops for the Continent moved off fairly well at the beginning of the week. In Egyptian yarns the better qualities are healthy owing to engagements, but they do not move quickly. The commoner kinds are slow and poor in point of demand.

The New York market opened with a firm tendency, prices advancing under favourable cable news, and covering by shorts. After remaining steady for some time there was a decline of from 3 to 4 points, and the market closes quiet.

Coal.—Conditions here are without change from last week; that is, most of the activity is centred in steams, with, in the North of England, a more general business being put through in all branches. Prices here have risen this week 3d. per ton for steams, coking and bunkers. Consumption at home and abroad seems to steadily increase, and miners have as much as they can do to produce enough to satisfy demands. Welsh trade is still depressed, prices showing an easier tendency. Cardiff quotations for best steams are now 15s. to 15s. 6d. Swansea anthracite, best, 18s. 6d. to 19s.

Copper.—Experts differ a little regarding the speculative position of this market, and the present relation between supply and demand. Some think that producers will have matters all their own way, especially as stocks are low, while others consider that the immediate supply is likely to exceed requirements. Business opened quietly as operators were indisposed to deal freely, in view of the uncertain political outlook abroad, but sellers were scarce, and values were inclined to harden. Speculative inquiries helped to sustain the market, and when the stock markets rallied bears thought it well to cover. The good tendency therefore, combined to the end, prices being £83 cash and £81 15s. three months forward.

Tin.—This market is still a prey to speculative fears, and a very unsettled condition will probably prevail for some time, because the liquidation of enormous August account is approaching. The immediate future of the market will largely depend upon the result. Anticipations of reduced shipments for the month caused prices to open higher, and as sellers were acting with great caution a steady improvement set in. It was claimed that stocks amounting to well over 1,000 tons had been held back in the East. Prices were also sustained by the bear covering, and after a temporary set-back, improved once more on the high price at which the Banka sales in Holland went off. A good deal of the advance, however, was subsequently lost, quotations being £169 for cash and £168 15s. for future metal.

Iron and Steel.—The iron and steel markets show but a slight change compared with a week ago, but are still firm in tendency. In the Midlands the demand is steadier, and manufacturers are anticipating a more regular business. The orders coming in are for early execution, specifications having to be distributed within a reasonable period to enable manufacturers in various branches to fulfil their orders. For furnished iron there is a satisfactory demand for shipment. In the North of England business is steady, G.M.B. being firmer at 50s. 9d. A fairly good trade is being done in foundry iron, but there is practically no improvement in East Coast hematite, business being slack for mixed numbers at 64s. 9d. For manufactured iron and steel the demand is moderate.

Sugar.—There has been a further improvement during the past week, the result of the continued satisfactory trade demand, and the report of purchases of beet by outside refiners in the States. The highest prices were reached on Tuesday, viz., 8s. 7¼d. for July and August, 8s. 7¾d. September, 8s. 8d. October-December, and 8s. 11½d. May, since when there has been a reaction. At the decline, however, as Mr. Czarnikow observes, "bears" were rather eager to cover their previous commitments, which foreshadows that the liquidation of the "bull" engagements for August, at one time considered very heavy, has already been effected; anyway, the account has been largely reduced. Mr. Czarnikow further points out that the course of the American market during the next two months or so will have an important bearing on values of sugar available between now and the new beet crop. Crop reports from the Continent are still favourable, and the American market has still slightly hardened. Landings in the three ports for the week amounted to 45,000 tons, and meltings were 47,000 tons, leaving stocks at 322,000 tons.

Tea.—The crop of 1905-6, say Messrs. Gow, Wilson, and Stanton, Limited, is now practically disposed of. The average realised of 7.38d. shows an increase of ½d. over that of season 1904-5, which was the lowest on record. At the Indian auctions this week 17,421 packages were offered, and the market was weak for all descriptions, buyers showing little inclination to operate excepting in a few parcels of new season's tea. So far the arrivals from Assam, Darjeeling, and Dooars show fair quality. This week "Goomtee" averaged 1s. 2d., Balijan Tea Company 1s. 1d., Itakhoolie 1s. 0¾d. The average of 10,450 packages sold on garden account amounted to 7.25d.; 4,032 packages of 1905 averaged 8.23d. Ceylon auctions comprised 37,717 packages. Bidding was limited, and inferior teas again difficult to dispose of, and were generally done so at prices favouring buyers, teas under 5½d. suffering most from the depression. The average for the week amounted to 6.55d., against 7.10d. in 1905. Java sales only amounted to 1,243 packages, but inquiry was better than last week, and where quality was good prices showed an improvement.

American, English and General Trust, Limited.

This company presents its first annual report made up to July 2. From all sources the revenue was £14,839, and after providing for general expenses, directors' and auditors' remuneration, and income-tax, together with £439 for interest, the balance remaining is £13,109. Already an interim dividend at 4 per cent. has been paid, and the directors now propose a final payment of 6 per cent. per annum, making 5 per cent. for the year, and leaving £1,447 to be carried forward. The company publishes a list of its investments and on the whole the selection seems to be a fair one. The balance-sheet value is £260,520 and the auditors say that the profit realised on sale of securities during the year has been applied in reduction of the cost of certain stocks. Loans and real estate in the United States represent a further amount of £6,395, a sum of £3,412 has been advanced on security and £9,412 is due as instalments on investments made. These figures represent a larger total than the issued capital, £245,507, and we note that the company has raised a loan of £17,600.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Isle of Wight.—For past half-year of 2½ per cent. per annum on the deferred converted ordinary stock.

Lancashire and Yorkshire.—For past half-year at the rate of 4 per cent. per annum, carrying forward £20,000.

Liverpool Overhead.—At the rate of 5 per cent. per annum on the (1892) preference shares, carrying forward £3,796.

London and South-Western.—For half-year ended June 30 at the rate of 4 per cent. per annum on the ordinary stock, carrying forward £26,222, after placing £20,000 to reserve.

London, Chatham, and Dover.—£1 8s. 6d. per cent. for half-year on the arbitration preference stock, making £3 13s. 6d. per cent. for the financial year, carrying forward £1,088.

North-Eastern.—For half-year ended June 30 on North-Eastern Consols at the rate of 5¼ per cent. per annum, carrying forward £62,000.

North Staffordshire.—On the ordinary stock for past half-year at the rate of 4 per cent. per annum, carrying forward £10,372.

Rhymney.—At the rate of 7 per cent. per annum.

MINING RETURNS.

Brilliant Central.—Crushed 1,430 tons, for a total value, including residues and concentrates, of £6,900.

Briseis Tin.—Shipped 30 tons, including 7 tons on account of New Brothers Home No. 1.

British Broken Hill Proprietary.—2,484 tons crude ore produced 420 tons concentrates, containing 265 tons lead and 11,760 ozs. silver.

Broken Hill Proprietary Block 14.—6,589 tons of ore, producing 912 tons concentrates, containing 573 tons lead and 27,369 ozs. silver.

Chinese Engineering.—Output of coal 16,500 tons, sales 15,500 tons, consumption 1,100 tons.

Indarama Co.—Butterfly.—Milled 2,050 tons, 500 ozs.

Kalgoorlie Amalgamated (New).—Tributors' returns 218 ozs., realising £877.

Kelantan.—Recovered 38 ozs. gold.

Komata Reefs.—Crushed 1,680 tons, £3,525.

Mount Lyell.—28,746 tons of ore treated. In addition 963 tons of purchased ore and metal-bearing fluxes. Converters produced 778 tons blister copper containing: copper 770 tons, silver 50,169 ozs., gold 1,514 ozs.

Mount Roudny.—Ore crushed 3,300 tons, 271 ozs.; concentrates 71 tons, 180 ozs.; tailings (cyanide) 1,724 tons, 34 ozs.; total, 485 ozs.

Ottos Kopje Diamond.—"Blue ground, 2,787 loads washed, 105 carats."

Roberts Victor Diamonds.—1,516 loads yielded 1,139 carats, equal to 75 carats per 100 loads.

St. John Del Rey.—Gold produce, £6,445; yield per ton, ·54 of an ounce troy.

Stratton's Independence.—1,841 tons shipping ore averaging 2 ozs. 2½ dwts. to the ton

Tasmanian Copper.—Shipment of ore, 1,048 tons.

SIX MONTHS' PRICES AND DATES.—Compiled and printed by Frederick C. Mathieson and Sons. (London: Copthall Avenue, E.C. Price, 2s. 6d.) Messrs. F. C. Mathieson and Sons have sent us a copy of their very useful and popular publication, "Six Months' Prices and Dates." This compilation comprises the highest and lowest prices for the six months from January 1 last to June 30 of every stock quoted on the Stock Exchange, with the dates on which they were recorded and the extreme fluctuations. There is nothing to say beyond this except that it is carefully compiled and is a trustworthy reference work.

SOUTH AFRICAN MINE RETURNS.

Although June was a shorter month than May the gold output for that period was so much larger that it was shouted forth as another wonderful "record," an achievement still inconsistent with the persistent whining over the dearth of labour. From the mines on the Rand the return was 456,014 fine ozs. and from those in the outside districts 19,961 ozs., an aggregate of 475,975 ozs., valued at £2,021,813, against 461,202 ozs. and £1,959,062 for May. Thus the increases were 14,773 ozs. and £62,751, whilst the daily average advanced from 14,877 ozs. to 15,865 ozs. This was, therefore, a splendid return, but why cannot it generate a feeling of enthusiasm amongst the public? Because their mistrust is too deep to be probed by "record" outputs, from which their gain is trifling. There is a new comer in the list in the Cason Gold Mines, which contributed 13,130 ozs. to the increase and explains much.

* Includes £33,766 not declared previously.

The reduced profits from the Crown Deep and the Geldenhuis Deep are due to a falling off in the grade of the ore mined, whilst the smaller profits of the Langlaagte Deep was the effect of crushing a less tonnage caused by the mill being stopped for connecting up with new stamps, also to decreased crushing duty due to delay in connection with tube mills. On the other hand the Rose Deep raised its profit by crushing from the accumulations of broken ore. The labour returns show a nett loss of 233 on the month.

Letters to the Editors.

SIRS,—In your reply in last issue to my inquiry you say that I "have evidently not studied your rules," &c. Your rules state that for each question answered in THE INVESTORS' REVIEW the charge will be one shilling. I asked you one question, *i.e.*, which of a given list of securities you would select as the most desirable investment. This you refuse to answer, on the ground that the fee, being the fee named in your rules, is not sufficient.

You can, of course, please yourselves about this, but that you should refuse to answer my query and at the same time pocket the fee sent you for doing so is a stroke of genius which fully bears out Mr. Wilson's reputation as one of our ablest financiers. Is he by any chance a Scotsman? I am a Glasgow man myself, and I don't know any other race which produces men capable of these brilliant financial operations.

Might I suggest that you make your rules more explicit? At present I am in this unhappy position, that I have lost a week's time and "twa saxpences," and am still quite in the dark as to what it is you want.

Yours truly,
JAS. R. TOLMIE.

60, Delaunay's Road, Crumpsall,
July 23, 1906.

[The fee is not "pocketed," but retained until the gentleman who writes this letter puts his query in a reasonable form. Or if a stamped and addressed envelope is forwarded the shilling will be returned.—EDS.]

Mr. David Smith, stockbroker, Aberdeen, has retired from business, and Mr. D. C. Gibson, his late assistant, has commenced and will carry on business independently on his own account at 181A, Union Street.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended July 21, $2,334, decrease $760.

Argentine North Eastern.—Traffic receipts for week ended June 22, $24,953, increase $6,960; aggregate from January 1, $479,295, increase $35,774.

Assam Bengal.—Traffic receipts for week ended June 23, Rs. 84,327, increase Rs. 20,854; aggregate from January 1, Rs. 17,68,411, increase Rs. 3,04,815.

Canadian Northern Railway.—Traffic receipts for 9 days ending July 21, $141,400, increase $48,500; total from July 1, $415,300, increase $146,900.

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent. on June 21.)

Norfolk House, Friday Evening.

This week's Bank return is not a particularly good one, but if the market is not compelled to borrow heavily between now and August 1 we may look forward to a period of comparative ease during that month. There will, however, be a large further increase in the active circulation, coin and note, not only at the end of the month but during the early part of August, and unless gold flows in with greater force than has been the case lately we may quite expect hardening rates and a more anxious market as the autumn comes on. It must not be overlooked that the grave financial troubles with which the market wrestled last week and the week before have not been completely eliminated, but only put on one side. The burden has been shifted, and for the time being a sense of relief, if not of comfort, pervades the City, but the autumn is certain to bring a recurrence of trouble for many reasons which we need not now enter upon.

Meanwhile the discount market is rather subsiding, and bill brokers, who were strenuous earlier in the week to push the rate on three months' bank bills up to 3⅝ per cent., were yesterday working readily at 3½ per cent., and to-day the quotation is only 3⅜ per cent., with the market not particularly firm at that, although some houses still quote 3⅜-½ per cent.

All the time money rates have not been by any means stiff, in spite of the fact that the market had to go to the Bank for about £1,000,000 in the middle of the week, as is shown by the increase of £959,000 in its other securities. Call money has fluctuated between 2 and 3 per cent. and seven-day money rose to 2½ per cent. when the date of repayment was within the month and became 2¾ per cent. when pay-day was in August, but since then there has been some recoil. So easy has the market become that balances are declared to-night to be unlendable at 2 per cent. Throughout the morning, however, the Stock Exchange and other demands caused the seven-day quotation to be 2¾ per cent. as a minimum, some paying 3 per cent., and call money was just as dear, rose in fact to 3½ per cent. in places. No applications, however, were made at the Bank of England, and in the afternoon some of the joint-stock banks whose monthly balance-sheet exigencies caused a withdrawal of credit from the market earlier in the week were releasing money, and there is no doubt that the Stock Exchange, under the influence of last week's terrors, made greater preparation for the settlement payments than were required. Balances from that quarter likewise poured into the short loan market in the afternoon.

What are the prospects of the bullion market? For the present they are decidedly more favourable than they were when the New York exchange was down at gold point against us and all the supply in the open market was being snapped up for the States at a high price, a price which threatened drafts upon the stock in the Bank of England. Thanks partly to arbitrage sales of stocks by Europe on Wall Street, the New York exchange has risen considerably and put American bankers quite out of our bullion market. From no other quarter does there seem any immediate probability that an export demand will arise, so that the Bank stands a good chance of securing the metal coming in from the mines as well as such parcels of sovereigns as may stray here from any quarter. We cannot be sure of anything for more than a week or two, if for so long, while the uncertainty as to the future of Russia keeps all markets anxious, but as things are to-night this is the prospect. Any day events might arise in Russia which would upset the equilibrium of the Paris Bourse and involve our market in troubles not its own, but taking things as they are and putting aside extreme views of all kinds, it does seem fairly probable that the gold reserve of the Bank of England will now be strengthened against the autumn, whatever its depletion by the holiday requirements may be, and next week, at any rate, the supply of short credit in the open market will be more abundant than now, because of the Government disbursements at the end of the month.

SILVER.

Quotations for bars were lifted last Saturday to 30 5/16d. per oz. for cash and 30¼d. per oz. for future delivery on the announcement of a French Mint tender for 20,000 kilos. to be delivered early in August. The bazaar and Far Eastern support, however, has been at best spasmodic, and prices ranged between the figures given above and 30d. for prompt and 29⅞d. per oz. for forward metal, closing only 1/16d. per oz. above the lowest. Applications for the Rs.70,00,000 Council drafts on India this week reached a total of Rs. 4,57,30,000 for bills and Rs. 52,000,00 for telegraphic transfers. Of these, Rs. 54,96,000 were allotted in bills and Rs. 15,04,000 in transfers, tenders at 1s. 4d. and 1s. 4 1-32d. per rupee receiving about 30 per cent. Next Wednesday another Rs. 70,00,000 will be offered.

Stock Market Notes and Comments.

We were told last week to look for trouble on the Stock Exchange at this settlement, but at the moment of writing there is no trace whatever of anything serious likely to occur. It does not follow that before this meets the reader's eye we shall not find some weak spot disclosed, but the account is progressing so smoothly as to allay that fear of a great catastrophe which frequently haunted men's minds during the past fortnight. That the elements of a formidable crisis then seemed to be gathering to a head is beyond question, but whatever the danger was, wherever it lay, means have been found to avert or remove it, and a relieved feeling has supervened. Many people are accordingly now beginning to talk hopefully. There is much less of that nonsense about the whole fault being with the present Government, and much more of an effort to find out where buying should begin. It has already begun hesitatingly in the Kaffir Circus, as we intimated last week. Not only is the public nibbling, picking up small lots of shares, but the "bears" have been frightened both here and in France, so that a distinct recovery has already taken place throughout the Kaffir Circus. It only needs the public buying to grow in volume to bring about a brisk recovery in all markets. One stimulating tale which had a transient influence on Kaffir shares is said to be the knowledge which has leaked out that the coming Constitution of the Transvaal is going to be pleasing to the mine masters. They have some representatives here interviewing, haranguing, letter-writing and lobbying, with a view to prevent the granting of an honest free Constitution to the Transvaal and Orangia. Among these delegates are Sir Percy Fitzpatrick, an employee or member of the Wernher, Beit, Eckstein firm, and Mr. Abe Bailey, best known to people in this country by his successful sales of Banket shares at prices the buyers are never likely to see again. We should not imagine that a delegation made up of men of this type and position would have much weight with the present Cabinet, but there is no knowing. The Earl of Elgin has proved himself to be rather a hesitating and over-anxious sort of statesman, very deferential towards forms and precedents. It may, therefore, be that the players in the Kaffir market are justified in looking for such a Constitution as will rivet the tyranny of the South African monopolists—"progressives" they call themselves—upon the necks of the population, white, black, and yellow. If that were so we should counsel the public as strenuously as ever to keep clear of the Kaffir madness, and to sell out what they possess of its wares when a favourable opportunity occurs through a rise. In some things the favourable chance may already be gone.

If, on the other hand, a really liberal, honest, and workable Constitution is betowed upon the inhabitants of the extinguished South African republics, we should begin to have substantial grounds for hope, because, for one thing, the population may be trusted to deliver the mines from the incubus of Chinese forced labour, and, for another, because the destruction of the power of the monopolists is almost certain to bring scientific and economic mining into fashion. It will take a little time, but if the local authorities are backed by a resolute home Government, whose mind is made up to have done with shillyshally and subterfuge, these ends ought to be reached without any hurt to the mining industry, and with an immense amount of benefit to the white and black population of the Transvaal. From the point of view of the mine shareholders we continue to regret that no effort has been made to agitate for greater control over the industry by the Government. There have been so many breaches of the mining laws by the bosses that it should be no difficult matter to put an ultimatum before them informing them that unless they mended their ways the whole industry would be put under public control, worked by the State in the interests of the community and the genuine shareholders. Were such a step to be taken we feel certain that mining dividends would increase even if a large sum were devoted out of the gross yield to meet the expenses of the Government, and to cover the charges upon any loans that may be necessary for the development of the country. Putting that aside, however, we are confident that prosperity greater than any existing before the war may come

back to Witwatersrand mining if the people are allowed to manage their own affairs.

Turning to other markets, we may note that there is a disposition now to look at Home Railway stocks and dividends have shown such improvements, or have been so well maintained, that but for the gloom hanging over the Stock Exchange through the San Francisco fire, the clogged position of underwriters, the disorganisation in Russia, and other influences, including the liquidation of many swollen-out speculative accounts, we should probably have had an active and rising market in Home Railway stocks before now. Ought the public to buy these right away? On the distant view of their position, no; but on a view limited to the next year or two, probably yes. Buying ought not to be indiscriminate, but with due regard to the actual yield of the past half-year and the probabilities affecting the estimates for the current one there are a few stocks which those who love to lay hold of things promising a rise might turn to with a fair hope of profit.

It is otherwise with the Yankee Railroad market. That is, and so far as can be seen will continue, in too restless and inflated a condition to make it prudent for any investor or speculator here to be a buyer. We do not deny that on the occasion of every fall the nimble player may buy with a fair probability of turning out his purchase again in a day or two or a week at a profit, but the game is a dangerous one for the market is like a raging torrent, now swelling up over obstructions and anon plunging into depths.

There may, however, be things to pick up in the Miscellaneous markets, and readers should study carefully the analyses of company reports given every week in this Review. They are all worked out upon the same principle of absolute impartiality, and indicate faithfully the condition of every company dealt with, as well as the prospects of most of them. For some time, however, there will not be an overwhelming stream of money coming into the Stock Exchange, no matter what the temptation may be. The country's capital has been too much depleted or is too deeply engaged in its expanding commerce to admit of much being left either to invest or to play with in Throgmorton Street. By-and-by, when losses have been surmounted and profits from trade begin to accrue, the volume of capital seeking investment will grow sensibly larger but for some months to come, what with the political situation in Russia and the consequent embarrassment of the French investing classes, let alone the turbulent condition of the Wall Street market and the ever-recurring fears of sharp advances in money rates here through foreign demands for gold, we do not think that speculation for the rise can assume large proportions in any class of securities. And the wise man will act always with his eye on contingencies, never committing himself overmuch, never loading himself up on the assumption that money is going to be cheap for months yet.

The Week's Stock Markets.

Dealers on the Stock Exchange commenced the week in a very despondent mood. The worst fears had been realised in regard to the situation in Russia, and when it became known that the Tsar had dissolved the Duma operators regarded the outlook with the most pessimistic feelings. With the forces of reaction again temporarily triumphant, most people could see nothing but red revolution in prospect, and the first thing that happened this week was a violent collapse in the price of the new Russian loan. A drop from 6¼ to 11¼ discount was the work of a very short time, and everyone was prepared for a repetition of last week's wild stories of difficulties and impending bankruptcies. It need hardly be said that there is not a shadow of truth in any of these statements, and after a little while dealers began to think that because Russian stocks were suffering a violent collapse there was no very good reason why other securities should be allowed to do the same. An attempt was therefore made to localise the trouble, and while for a time Russians continued to go down, other sections took the opposite course, and during the final days of the week markets wore a brighter and happier appearance than anything witnessed for a considerable time. Prices went forward with a bound, Consols, Home Railways, Foreign Railways, Yankee Railways, Foreign bonds and even Kaffirs all participating. Indeed, Kaffirs enjoyed quite a little boom during the last day or so, and although quotations did not close quite at the best the improvement is pretty substantial. Values are undoubtedly low in some directions, and if securities are picked with discrimination purchases now may turn out pretty well provided an eruption in Russia does not upset all calculations. The recovery in prices was assisted by the easy progress of the settlement. Everything seemed to be carried through with the utmost smoothness, and there was no hint of important default. Bankers charged 3⅞ per cent. for loans and the general rate may be called 3⅞-4 per cent. Consols opened rather dull, but soon began to pick up, and finished substantially higher. Other British Funds were not slow to follow the lead, and a particularly sharp rally took place in India 3 per cent. Home County and Corporation and Colonial inscribed stocks were likewise firm. The latter were continued at 4-4⅛ per cent.

The sensation of the Foreign bond market was, of course, the violent collapse in Russians. At the end of last week the quotation for the new 5 per cent. loan had been left at 6⅜ discount, but on the news of the dissolution of the Duma the price fell to 8 discount. Business was quite lively and the quotation continued to fall until it touched 11¼ discount. A rally to 10⅛ discount ensued, only to give place to another violent drop to 12⅛ discount. From that point, however, there was a fairly steady recovery, and the final figure is some pounds above the worst. The other issues of the country naturally broke as well, and the 4 per cent. of 1889 dropped 4¾ before showing any sign of improvement, but when the turn came a good part of the loss was wiped out. Spanish, Japanese, Argentines and Brazilians all commenced somewhat heavy, but Perus and Cedulas kept steady and were even inclined to harden. The latter were sustained by more settlement talk. Portuguese also kept up pretty well, and late in the week, when other things began to improve, Spanish, Turkish and Greeks participated. Japanese also hardened and Chinese issues were unaffected by the resignation of Sir Robert Hart. Peruvians fluctuated somewhat wildly, the "bulls" finally having the best of it, and in the Central American section Colombian, Venezuelan and Guatemalan all pulled up. Rates were exceedingly easy in this section and borrowers on stock had a very pleasant experience. On leading South Americans and Chinese bonds the charge was no more than 2-4 per cent. Japanese were done at 3-5, and only on Central Americans and Uruguays did the rate rise to 5 or 6 per cent. Russian new 5 per cent., however, cost 5-6 per cent. to carry over, although the 4 per cent. 1889 could still be done at 1-2 per cent. On Spanish the charge was 2-3 per cent. and Turkish commanded a small back. Most of the making-up prices were adverse, the lead being taken by Russians, which ended 6¼ to 6⅞ lower. Japanese were down ⅛ to 1¼, Venezuela 1½, Honduras ¾, Greeks ¼ to ½, Costa Rica 1 and Colombian 1½. Bulgarian 6 per cent. 1892 dropped 2½, Brazil Rescission 1⅜ and the 4 per cent. 1889 1½, and Argentines were down ¼ to ⅜. Chinese bonds made up ¼ to 1 better and Uruguays ½ higher.

For the greater part of the week the Home Railway market continued lifeless and dividend declarations have again provided the chief topic of interest. Dealers were well satisfied with the South-Eastern distribution at the rate of 1 per cent. per annum on the ordinary stock, giving the preferred 1 per cent. for the half-year, as this was 2s. 6d. per cent. better than had been looked for when the joint revenue statement was issued. The Chatham achievement, too, of paying 28s. 6d. per cent. against 25s. per cent. a year ago on the first preference, although 6d. less than expected,

was also considered good, as it makes £3 13s. 6d. per cent. for the entire year against £3 10s., and has been accomplished without the need of drawing upon the carry forward compared with about £7,000 appropriated from that balance in 1904-5. Equally pleasant was the Lancashire and Yorkshire distribution of an extra ¾ per cent. per annum at 4 per cent., with about the same amount carried forward as a year ago, while the South-Western did well in maintaining its distribution at the rate of 4 per cent. But for the accident at Salisbury another ¼ per cent. could have been paid, as £20,000 is this time put to reserve and the balance forward is slightly larger at £26,222. The Taff Vale dividend was also unchanged at 4 per cent., but £5,000 is put to reserve and £16,230 or about £4,000 more carried forward, and the North Staffordshire paid an extra ¼ per cent. at 4 per cent. per annum. No distributions were declared on Wednesday, but on Thursday announcements were resumed by the North-Eastern declaring a dividend at the rate of 5¼ per cent. against 4¾ per cent., with nearly £21,000 more carried forward at £62,000. Although this was fully as good as most dealers expected, it did not quite come up to the more sanguine forecasts, and the price flinched a little at first. Taken altogether, the market failed to respond appreciably to the announcements and the best that could be said was that the tendency was rather better. At least, such was the case until Thursday, when dealings became rather more active in several directions and quotations of one or two stocks were lifted sharply. Metropolitan came into favour on the chairman's speech at the meeting and was dealt in as high as 66½, while the Surplus Lands stock met with a good deal of support owing to the report that the company owns a lot of land as yet unbuilt on adjacent to plots which have recently been sold at £1,000 per acre. Amongst other Underground things, City and South London was hoisted 2, but District and Central London ordinary and deferred were all lower. The "heavy" stocks, where they moved at all, went down, and the same thing happened with Brighton deferred, Great Central issues, Hull and Barnsley and North Staffordshire, but South-Eastern issues, on the other hand, were all substantially up. Scotch stocks, too, were in some demand, but Caledonian deferred was the only one to show marked improvement at the end. The improvements came too late to influence making up prices for the settlement on Wednesday, and with the market more or less affected by outside influences the changes on the fortnight are mostly adverse. In many cases the declines were fairly substantial, North-Western, for instance, being 2 down, and Great Central preferred, Hull and Barnsley and South-Western deferred 1¾ lower. Great Western and Midland deferred lost 1½ each and Metropolitan fell 2¼, but the Surplus Lands stock of the latter company improved 1½ for the reason given above. Brighton and South-Eastern preferred stocks rose 2 and 3½ respectively and the ordinary stocks were 1 higher, but the deferred stocks in both cases dropped 1¼. Chatham first preference gained 1, Taff Vale 2½ and City of South London 1½. Contangos were somewhat lighter than at the previous settlement at 4½ to 5 per cent. as a general thing.

American Railroad shares being almost the only section in which there is any large account open, the news from Russia of the dissolution of the Duma had more effect there than almost anywhere else, and with something of a rush to sell prices fell away sharply. Wall Street, however, lent vigorous support, and contrived not only to wipe out the earlier losses, but to add a little more, but the improvement led to renewed selling, and so the market see-sawed from day to day, almost from hour to hour. On Wednesday the aim of the New York magnates was to lift quotations, and buying orders were reported to have come from the Continent and London, but they seem to have originated in Wall Street, and the effect was discounted to some extent before the close. Thursday was in great measure a repetition of the previous day's business, prices being carried up during the earlier hours and then allowed to fall away again, but the declines each day have never quite rubbed out the earlier gains, and quite a number of the more popular stocks show substantial improvements on balance. Union Pacific, Southern Pacific, and Milwaukee put on the most, the rises in these cases amounting to between $6 and $7, but Atchison, Denver, Louisville, Missouri and Kansas, New York Central, and Reading all advanced from 2½ to 3½. Movements on the account were not very numerous, business having been so entirely professional and so much confined to a few selected shares. Southern Pacific were freely played with and gained 5½, carrying the preference up 1, Union Pacific ordinary rose 3, Milwaukee 4, and Reading 1, but the rest of the improvements consisted of fractions only. On the other hand, Erie ordinary and first preference lost ¾ and 1, Chesapeake fell 1, and Denver preference ⅝, while Wabash income debentures receded 2. Carrying over charges were not quite so heavy as of late, and money was obtainable at 4 to 5 per cent.

Canadian Pacific shares were sold from Berlin early in the week, probably because of the nervousness over the Russian affair, and the price dipped to 163⅜. New York, however, has displayed considerable interest in these shares, and by dint of steady pushing managed to carry them up to 169¾, but they finished well under that level, although still showing a good advance on the week. Grand Trunk stocks were also decidedly harder, the third preference in particular being pushed up to 69⅝. Qu'Appelle, Long Lake, &c., bonds and Canadian Northern 4 per cent. debenture stock improved ½ each. South African issues guaranteed by the Chartered Company were likewise firm and substantially higher. On the fortnight the gain in Canadian Pacific shares was only 1¼, while Grand Trunk stocks showed improvements of no more than ¼ to ⅝, the smallest change being in the third preference. Qu'Appelle and Long Lake bonds were 5 up on the reported acquisition of the line by the Canadian Northern Railway. Money on Grand Trunk stocks cost from 5 to 5½ per cent.

Sales by nervous speculators on the developments in Russia gave an appearance of flatness to the whole Foreign Railway market, which it has not been able altogether to shake off. Russian Railway issues were naturally amongst the heaviest sufferers, although dealings in them never assumed large proportions, and in spite of a late recovery the Nicolai bonds were 4½ down, and Moscow Jaroslaw stock lost 1½. Moscow Rybrisk bonds, however, showed a small rise on balance. United Railways of the Havana stock was very depressed early in the week, but picked up as smartly and finished 3 up, but San Paulo ordinary was dull to the end, and Antofagasta ordinary and deferred also finished lower on the week. Guayaquil and Quito bonds, too, were again pressed for sale, and are once more down to 64. Argentine issues continue more or less neglected, and beyond gains of £1 each in Buenos Ayres and Rosario ordinary and deferred, and losses of a similar amount in Entre Rios ordinary and second preference, the movements amongst the principal stocks were trifling. Mexican Railway preference stocks rose 1 and ½, but the movements were not accompanied by indications of any active dealings. The few changes which occurred during the fortnight were on the whole trifling, and many even of the leading securities in this section show no alteration at all. San Paulo ordinary, however, rose 2, Antofagasta ordinary 2, Paraguay Central debenture stock 1½, while United Railways of the Havana was 1 lower. Amongst Argentine things Buenos Ayres Great Southern ordinary and Villa Maria preference gained 1 each, and Buenos Ayres and Pacific ordinary and one or two others were ½ higher, while Great Western ordinary fell 1 and Transandine preference declined 1¼. Guayaquil and Quito second bonds dropped 5½, and Central Uruguay relapsed 1. Mexican Railway ordinary fell 1⅛ and the second preference 1½, and Mexican Southern ordinary lost 1. The general money rate in this section also was 5 to 5½ per cent.

Although very little business was visible Miscellaneous markets felt the influence of the recovery elsewhere and closed strong. Bank shares were steady on the whole, and in the Brewery section Watney, Combe issues all went up on the report showing a 3 per cent. dividend on the reduced deferred stock. Allsopps were steady while the amalgamation proposals were being discussed, but Manchester Brewery debentures fell 6. Docks deferred improved on the revenue statement, which shows 1 per cent. on the deferred carried forward to the end of the year. Associated Cements were improving again, but Russian Oils were distinctly flat. Catering shares were inclined to pick up, but Textiles were somewhat irregular. English Cottons were dull at the end, although the 8 per cent. dividend on the ordinary was quite up to expectations. Gramophones rose to over 40s., and an all-round advance occurred in Nitrate shares. British Westinghouse preference eased off again, but motor companies' shares were steadier. Meat shares hardened, particularly Eastmans. General Hydraulic Power showed slight dulness, while Eastman Kodak common had another big rise. Salt Unions and Brunner Mond went back, but United Alkalis closed rather better. Hudson's Bays ended strong, and Pekin Syndicates rallied sharply. Gas Light stock fell away after the recent recovery, Iron and Steel shares showed only small unimportant changes, and shipping shares were easier. Anglo "A" dropped at one time to 20¼, but ended about a couple of pounds better. Other Telegraph issues were good, and London United Tramways preference were better. Contango charges in this department were much the same as usual, and making-up prices mostly downward. Apollinaris ordinary and Cement preference fell 8/16, B.E.T. ordinary and preference 3/16 and ¼, City of London Electric ½, Lautaro Nitrate ⅝, Mazawattee preference 3/16, Metropolitan Electric, Niger Company, and Nobel Dynamite ¼, Russian Petroleum 21, and Santa Rita Nitrate ⅝. Schibaieff Petroleum ordinary and preference dropped 2s. 3d. and ⅜, Underground Electric notes 1½, Allsopp 4½ per cent. debenture stock 3, Bieckerts' Brewery ordinary 2, Hudson Bays 3½, and Anglo "A" 1½. Against these declines we have Anglo-Malay Rubber ¼ up, Eastmans' ordinary 1/16 higher, and a rise of 3/16 in Gramophones. Pease and Partners rose ¼, Allsopps 4 per cent. debenture stock 1, Watney, Combe debenture stock 1, Eastern Telegraph 2, National Telephone deferred 3¼, and Commercial Union Assurance 2½.

Prices were steady on the Stock Exchange, and the market is entering on a nineteen-day account, which includes the August Bank-holiday interval, with considerable cheerfulness. At the same time if it wishes business to come back to it, a policy of pushing up prices may not be a very wise one, as the public continues timid and easily persuaded to leave markets alone. No further rise of any importance took place amongst Kaffir shares, but they were steady at the close after a period of dulness, and most classes of Home securities were also maintained at previous figures. Russian bonds, too, were better.

The Great Northern Railway dividend seems to have disappointed some people. It is at the rate of 3 per cent. per annum on the ordinary stock, which gives 3 per cent. for the half-year on the "B" stock and 2 per cent. on the preferred ordinary. Some people in the market looked for more, and made prices flat, but the carry forward is £51,390 against only £16,040 this time last year.

We have neither time nor space this week in which to congratulate the Government upon the first step it has taken towards a reduction of our swollen expenditure upon the fighting navy to reasonable proportions. Mr. Edmund Robertson said in his speech this afternoon that the estimated saving will be about £2,500,000, but only a portion of this will go into this year. We should have been glad to see a larger slice knocked off what is really a systematically provocative display of jealousy towards our Continental neighbours, infinitely costly and ultimately destructive of the nation's strength. It must, however, be recognised that there are forces of reaction still most powerful in this country, and that the Government has therefore probably gone as far as it at present dare.

THE WEEK'S PRICE MOVEMENTS.

British Funds—*Rise:* India 3½ p.c. Account ¼, to 103½, ditto 3 p.c. Account ¼ to 93-93½. *Fall:* 2¾ p.c. Annuities ⅛, to 92½-93½, Bank of England Stock 1, to 277-281, India 3 p.c. Scrip ½, to 42½-43½.

Corporation Stocks—*Rise:* Met. Water Board ½, to 92½-93½, Lon. County 3 p.c. Account 1, to 88½-89½, Dover 1 to 88-90. *Fall:* Metropolitan 2½ p.c. 1, to 76-78; Birmingham 3 p.c. 1, to 90-92, ditto 1902 1, to 90-92, Leeds 2½ p.c 1, to 74-76, Middlesex 1, to 88-89, Leicester 3 p.c. 1, to 85-87, Manchester 4 p.c. 1 to 123-125.

Colonial Government Stocks—*Rise:* British Columbia 4½ p.c. Debs. 1, to 103-105, Cape 4 p.c. Bonds ½, to 101½-102½, ditto 4 p.c. (1882) ½, to 101½-102½, ditto 3 p.c. ½, to 82½-83½., S. Australian ½, to 102-103. *Fall:* N.S. Wales, 3 p.c. 1935 ½, to 87-88.

Foreign Government Securities.—*Rise:* Argentine Port of B. A. ½, to 102-103, Chinese 5 p.c. Imp. Rly. ½, to 104½-105½, ditto 1905 ½, to 102½-103, Colombian Con. Ext. ½, to 41½-42½, Greek 1881 ½, to 52-52½, ditto 1884 ½, to 51½-52, ditto 1887 ½, to 52½-53½, ditto Rentes ½, to 40½-41, ditto 1890 ½, to 50½-51, Guatemala 2, to 35-37, Honduras (Issues) ½, to 9½-9¾, Japan 4½ p.c. ½, to 98-98½, Venezuela 1, to 48-49½. *Fall:* Argentine 1897 ½, to 99¾-100¼, ditto 1899 ½, to 99¾-100¼, ditto B. A. Water ½, to 100½-101½, ditto 1897 ½, to 88-89, ditto 1898 ½, to 88-89, ditto 1899 ½, to 88-89, ditto 1900 Issues ½, to 88-89, Brazilian 1879 ½, to 91-92, ditto 1888 ½, to 93-94, ditto 1889 ½, to 88½-88¾, ditto 5 p.c. Loan 1903 ½, to 100 101, Bulgarian 1888 ½, to 102½-103½, ditto 1892 ½, to 99½-100½, Costa Rica "A" ½, to 48-50, ditto "B" ½, to 38-40, Japan 4 p.c. Stg. ½, to 87-90, Liberian 1, to 75-77. Russian 5 p.c. 1822 1, to 94-99, ditto 1859 2½, to 58-62, ditto 1867-9 2½, to 71-73, ditto 3 p.c. 1882 3, to 60-63, ditto Ser. II. 3, to 72-73, ditto Ser. III. 2, to 72-74, ditto 4 p.c. Rentes 1½, to 60-64, ditto (Dvinsk and Vitsk) 4½, to 68-72, ditto 5 p.c. 1906 3¾, to 9½-9 dis., San Paulo (Brazil) 1, to 98-100, Uruguay 3½ p.c. Bonds ½, to 72½-72¾, German 3 p.c. 1, to 85-87, Prussian 3½ p.c. 1, to 96 98, ditto 3 p.c. 1, to 85-87.

Railways, Ordinary—*Rise:* Gt. N. of Scotland Pref. 3 p.c. 1, to 68-71, Metropolitan Surplus Land 2, to 73-75, S. Eastern Pref. 6 p.c. 5, to 126-128. *Fall:* Caledonian Pref. 3 p.c. ½, to 77¼-77¾, Cardiff Pref. Stock 1, to 96-99, Hull and Barnsley Consolidated ½, to 45½-46½, North London 1, to 93-98, North Staffs Consolidated 1, to 103-105, Rhondda and Swansea ½, to 11½-12½.

Debentures—*Fall:* Brecon and Merthyr "B" 4 p.c. Stock 1, to 98-101, London and S.-Western 3 p.c. "A" Stock 1, to 92-94, do. 3 p.c. Consolidated Stock 1, to 92-94, Metropolitan District 6 p.c. Stock ½, to 149-152, do 4 p.c. stock 1½, to 95-98, North-Eastern 3 p.c. 1, to 91-93, Rhondda and Swansea 4 p.c. Stock 1, to 112-115.

Preference—*Rise:* Great Central 5 p.c. Convert. 1881 1, to 126-128, Lanc., Derby, &c. 5 p.c. No. 1 ½, to 10-11, London, Brighton, &c. 2nd Consolidated 5 p.c 1, to 143-145 *Fall:* North British 4 p.c. Convertible 1884 to 1904 1, to 118-120, Rhondda and Swansea 5 p.c. ½, to 12½-13½.

Indian Rys.—*Rise:* Darjeeling Himalayan 3½ Deb 1, to 90-94, Southern Punjab 4 p.c. Cum. Pref. 1, to 104-106, Midnapore Zemindary 5 p.c. Mort. Debs. 1, to 103-105. *Fall:* E. India Def. "D" 1, to 138-141, Madras 5 p.c. Guar. Stk. 1, to 121-126, ditto 4½ p.c. 2, to 112-118, ditto 4½ p.c. 1, to 106-112

Colonial—*Rise:* Canadian Northern 4 p.c Cons, Deb. Stk. ½, to 100-101, Grand Trunk 4 p.c. Guar. ½, to 103-104, ditto 5 p.c. 1st Pref. Stk. ½, to 119½-120½, ditto 5 p.c. 2nd Pref. ½, to 109½-110½, ditto 4 p.c. Perp. Cons. ditto ½, to 108-109, Klerksdorp Streams 5 p.c. Mort. Debs. ½, to 106½-108½. Mashonaland 1st 5 p.c Debs 3, to 89-91, ditto 5 p.c. Guar. Mort. Debs 1½, to 89 91, Qu'Appelle and Saskatchewan 6 p.c. 1st Mort. Bds. ½, to 101-103, Quebec Central New Bds. ½, to 116-118, Rhodesian 5 p.c. 1st Mort. Debs. 1½, to 90-92, ditto 4 p.c. ditto 1½, to 78-80.

American Rys.—*Rise:* Chicago Gt. Western Com. Stk. ½, to 17⅞-18, ditto 5 p.c. "A." 3, to 74-77, Erie 4 p.c. 1st Pref. ½, to 79½-80½, ditto 2nd ditto 1½, to 71-72, Gt. Northern (U.S.A.) Pref. Stk. 7, to 302-307, Missouri, Kansas, and Texas Pref. 4 p.c. 1½, to 69-70, National of Mexico 4 p.c. Pref. ½, to 40-41, Northern Pacific Cap. Stk. 4½, to 209-212, Rock Island Com. Stk, 1½, to 25-26, Wabash Pref. Stk. ½, to 46½-47½, ditto 6 p.c. "B" Deb. 2, to 81-83. *Fall.* Minneapolis St. Paul, &c., Pref. Stk. 7½, to 170-175, Southern 5 p.c. ½, to 101½-102½.

Bonds, Currency—*Rise:* Alleghany Vall. 7 p.c. 1½, to 112-117.

Gold Bonds—*Rise:* Atchison and Santa Fe 4 p.c. Converted ½, to 104½-105½, Central Pacific 1st Mort. 4 p.c. Guar. 1, to 102-104, Chicago, St. Louis, &c. Guar. 2½, to 122-126, Long Island Guar. 4 p.c. Mort. 1, to 103-105, N. York Cent. and Hudson 3½ p.c. Collat. 1, to 91-93, ditto 3½ p.c. Coup, Collat. 1, to 91-93, ditto 4 p.c. Debs. 1, to 103-105, Norfolk and Western Mort. 1, to 132-136, ditto Extension ½, to 130-133, Oregon 1st Mort. 1, to 104-106, Pennsylvania 4 p.c. Equip. Trust 1, to 100-104, ditto Con. Mort. 4 p.c. 1½, to 108-112, ditto 3½ p.c. Converts. 1, to 100-102, San Antonio, &c., 1st Mort. 4 p.c. 1, to 90-92, Southern Pac. 4 p.c. Stk. 1, 95-97.

Sterling Bonds—*Rise:* Alleghany 1st Mort. Guar. ½, to 112-116, Illinois Central, 3 p.c. 1st Mort. 1, to 88-92.

Foreign Rys.—*Rise:* Argentine Gt. W. ¼, to 11⅜-11⅞, Bahia Blanca, &c., 4 p.c. Scrip ½, to 76½-77½, Central Uruguay Nrth. Extn.

5 p.c. Deb. ¼, to 6¾-7¼, Cordoba Central Buenos Ayres Extn. 5 p.c. Debs. ⅛, to 73-74, Entre Rios 5 p.c. 1st Pref. 1, to 87-89, Gt. W. of Brazil Ord. ¼, to 13½-13¾, Interoceanic of Mexico 7 p.c. "B" Deb. 1, to 115-117, Manila 5 p.c. 1st Mort. Stck. 1, to 99-101, Moscow, Windau 4 p.c. Bds. ½, to 74-79, Ottoman Smyrna 1, to 21½-22½, Paraguay 5 p.c. Deb. Stk. 1, to 60-62, Rio Claro Sao Paulo Shrs. ½, to 27-28, Salvador 5 p.c. Lien Dbs. 1, to 101-103, ditto 5 p.c. Mrt. Dbs. 1, to 90-92. *Fall:* Arica and Tacna ¼, to 3⅝-4¼,

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The unexpected has happened in that the Kaffir Circus has this past week been brighter than we have seen it for months past. Tuesday was carry-over day, and the betterment has coincided with the progress of the settlement and the crisis in Russian affairs. On Monday, despite the news of the dissolution of the Duma, the first symptoms of the improvement were already discernible. The opening was unsteady and dull, but this did not last long, for even during the morning bidding for some of the favourite speculative shares gave an unusual appearance of animation to the market. Reasonably enough selling was expected from Paris, but as there was no liquidation from that quarter, "bears" began to show fidgetiness and hastened to cover. It was out of this that the hardening of prices developed, not out of legitimate business on behalf of the public. This was none the less welcome to the "bulls" on the eve of the carry-over, for it helped to improve the look of the making-up list on the following day.

Carry-over rates were still weak, showing there was but a trifling account open for the rise. It was impossible in many instances for takers-in to get even 5 per cent. The nominal rate was given as 6 to 7 per cent., but it is doubtful if much was done at this. On Goldfields and East Rands it was quoted at 4½—5½ per cent. against 6—7 per cent. and 5—6 per cent. respectively. Such things as Rand Mines, Modderfonteins and Randfonteins were carried over at 5—6 per cent., Johannesburg Investment at 6—7 per cent., and Gold Trusts at 5½—6½ per cent. There was no change in the charges on De Beers, Jagers and Premiers. Rhodesians, including Chartered, were continued at 6—7 per cent., and this was the ruling figure in the West African and Egyptian sections. West Australian rates were irregular, Great Fingalls being done at 5½—6½ per cent., Golden Horseshoes at 4—6 per cent., Lake Views at 5—7 per cent., and Sons of Gwalia at "even" to 2 per cent. Other shares, such as Associated, Northern Blocks, Great Boulders, Ivanhoes, and Kalgurlis were arranged at 6—8 per cent.

The South African making-up list showed a majority of movements in favour of operators for the rise. Modderfonteins advanced as much as ⅝, Gold Fields, East Rands, Rand Mines and Rose Deep ⅜ each, with rises of ⅛ in Cason Gold Mines, Driefontein Consolidated and Robinson Central Deep; of ¼ in Apex, Central Mining, H. F. Company and Rietfontein, and ⅛ in South African Gold Trust, Robinson Deep, and Tanganyikas. The chief losses were ⅜ in Montrose Diamond and Lace Props, ⅛ in Frank Smith, ¼ in De Beers deferred, and ⅛ in the preferred, Modder Deep and Van Dyk. West Africans were mostly lower on the fortnight, but Egyptians scarcely moved. Australian shares also weakened a little, Mount Boppys falling ¼, but Mount Morgans made up 7-32 higher. In the copper group the principal rise was ⅛ in Ancondas, Rio Tintos falling ⅞, and Cape Coppers ⅜.

For the new account, which will be of 19 days' duration, prices have advanced to higher levels still, giving the resemblance of a boomlet, an uncommon spectacle in the South African market. If we seek for causes we shall find that the least effective of all is public support, for this is still trifling. We must attribute it mainly to manipulation on the part of the controlling houses, for it would be nonsense to say that outsiders have combined to buy in a capricious and sudden spirit of unanimity. What has happened to make Kaffirs look more tempting? Nothing definite, nothing outside the region of vague rumours. Many of these have been in the air, and have been playing a little with the sensitive nerves of the "bears," whose covering has been the main forcing impulse. One rumour has it that the Constitution to be given to the Transvaal will be more favourable to the bosses than these high principled gentlemen anticipated. At the same time the public are undoubtedly buying small lines of shares, and these on such a market tend to have a disproportionate effect upon prices, especially after such a prolonged period of liquidation.

Higher prices are also quoted for diamond shares, especially for Premier deferred, whilst Rhodesians in several instances have risen concomitantly.

West Africans and Egyptians have not generally shared in the improvement, though they are mostly steady, but in the last day or two West Australians have shown a tendency to harden on reported buying orders on colonial account. Copper shares also close better, particularly Anacondas and Rio Tintos, and Indian and tin shares are firm.

Charter Trust and Agency.—As customary with them, the directors of this ally of the Chartered Company do not enlighten shareholders in the very least in regard to the operations carried out in the financial year to April 30. Nevertheless, the few figures given in the profit and loss account are impressive enough. As the company has invested over three-quarters of a million of its funds in high-class securities and does a considerable bucket-shop business, interest and dividends yielded £54,942, profits of £11,838 were made on share selling, £2,465 was received from commissions and trustee fees, whilst other revenue made up the total income to £70,192. Expenses of every kind are put in the lump at £11,537, hence a nett profit of £58,655 is shown, making an aggregate credit of £113,629. No dividend is paid, however, because the directors will not write off heavy losses in the shape of depreciation. The auditors draw attention to these. Those share assets for which they have seen published quotations, entered in the balance-sheet at £948,720, show in the aggregate a depreciation of about £130,000, or 13¾ per cent. As for the rest, valued at £573,828, consisting chiefly of Rhodesian shares, loans to Rhodesian companies and mortgages, these show further depreciation, but the auditors have not sufficient information to enable them to form an estimate of the amount. Thus the profit shown is really fictitious. The directors apparently convince themselves that they are acting with magnanimous, high-principled spirit in confessing that, "Although low quotations are not the same as loss of capital (sic), the directors are advised that no dividend can be legally paid until the fall in quotations is recovered or a corresponding amount made good out of current revenue." What a glorius prospect for the shareholders! So they recommend that out of the credit £60,000 be placed to a contingencies account, and that £53,629 be carried forward. Whatever action the directors choose to take, they cannot make good the real losses, and shareholders will get no dividends. And, despite all this display of wealth, the directors are obliged to raise money by pledging some of the securities. There is a loan of £336,506 from the bankers, and another of £94,031 from other creditors, together with deposits amounting to £12,500, to say nothing of considerable contingent liabilities. Here is a ruinous way of doing business!

Wanderer (Selukwe) Gold Mines.—For once in a way there reaches us a Rhodesian report which in many respects shows a creditable improvement upon past results, but in this there is no assurance that the improvement will be long lasting. The Wanderer is probably at the moment turning out a greater quantity of gold than any other mine in Rhodesia, but experience has taught us that Rhodesian reefs are apt to peter out very quickly. In the year to April 30 the company has derived considerable benefit from a substantial decrease in the working costs, which were reduced from 8s. 2½d. per ton to 6s. 8½d. In all 178,560 tons were treated, an increase of 33,159 tons, from which 26,830 ozs. were extracted, realising £104,622. In Rhodesia the profit was £45,038, and after paying the London expenses and making provision for depreciation, mine development, &c., the nett profit was £22,567. This disposes of the previous debit and leaves a credit of £5,748 to carry forward. What is really remarkable is that this result has been obtained from ore giving only 2.78 dwts. of fine gold per ton, and if one company can do this others ought to, so we should hear little more about high working costs. Should the reefs in this particular mine not soon be exhausted, as they have been in so many other mines, we may shortly hear of it paying a dividend. In any case, the ore will last another two or three years at the least, for the manager estimates the reserves at 442,516 tons, and there seems to be a likelihood of a goodly quantity behind this. So shareholders may actually look ahead for possibly four or five years, an uncommon experience for Rhodesian investors.

Associated Gold Mines of Western Australia.—The report of this leading West Australian company has been awaited with some interest in the expectation of hearing something definite in regard to the stories that have been floating about of promising developments in the mine, but those who looked for sanguine expectations to be confirmed will probably feel greatly disappointed. The past financial year, to March 31, was the first year of Mr. Roberts' management, but up to the present he has not succeeded in doing anything very wonderful. We are assured, however, that he has vigorously developed the mine, and that he has made extensive alterations to the plant and machinery. Perhaps by-and-bye he will discover a new reef or two, and perhaps he will not. Anyway, he has reduced the working costs, and this is better than nothing. In 1905 these averaged £1 11s. per ton, in March last the figure was £1 2s., and the directors anticipate that it will eventually be brought as low as £1 1s. Moreover, as a result of the energetic development work, the ore reserves have been increased from 109,071 tons, containing 86,707 ozs. of fine gold, to 263,696 tons, containing 150,388 ozs. The quantity of ore treated was 89,481 tons against 86,619 tons, for a total of 57,069 ozs., compared with 85,645 ozs., so the realisable value fell from £298,444 to £232,405. Adding £2,922 for ore on hand and £15 from interest in the Colony, the working revenue totalled £235,342, giving a gross profit of £98,669. After adding £5,969 dividends on investments, and £416 from transfer fees, and deducting administration expenses, &c., the nett profit was £95,969, a drop of £26,060. Out of this the directors write £42,125 off expenditure on development, shaft sinking, and diamond drilling, and allow £22,986 for depreciation on plant, &c., leaving £65,111, to which is added the credit of £12,181 from the previous accounts. Thus there is an available balance of £43,030, carried forward. In view, however, of what is described as the sound position of the company's affairs, the directors have decided to declare a dividend for the year 1906-7 of 2s. per share, payable

on the 10th prox. Mine prospects are still in a condition of much uncertainty, despite the above directorial opinion, but the finances are sound enough.

Road Block Gold Mines of India.—In order to understand the present position of this company it should be explained that in 1905 the directors suspended all mining operations on the Kolar gold field, and entered into an option agreement with the Sangli Gold Mines, covering a period of two years from October 1 last, giving the right of exploring a property known as Jelishirur, in the Dharwar district. Mining operations were started in the same month, but no discovery of value having resulted from certain explorations it was decided to continue the sinking of the shaft with a view to undertaking further lateral explorations at greater depth. On May 19 the directors received a cable from the superintendent advising a marked improvement in the lode in the shaft, where at a depth of 160 ft. the quartz was found to be 2 ft. wide, assaying 1 oz. 4 dwts. of gold to the ton. Much importance is attached to this, so the deepening of the shaft is continued with vigour. The directors express the opinion that the work so far done has proved the area to be promising, and they anticipate it will soon be proved worthy of development on a large scale, in which case the option would be exercised.

Company Reports and Balance Sheets.

**** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Metropolitan Railway Co.

During the half-year ended June 30 the gross revenue was £389,014, or a drop of £51,316 compared with the opening six months of 1905, against which the working expenses were reduced £3,653 only to £213,032, so that the nett income shows the very startling drop of £47,662 at £175,982. Ratio between expenditure and income is 5.45 per cent. higher at 54.79 per cent. This can only be regarded as a very unsatisfactory result, and up to the present the change from steam to electric traction has been a great disappointment. In extenuation the directors say that from circumstances entirely beyond the control of the company the electrification of the trains has not yet been completed, and the undertaking is therefore not reaping the full advantage of the new method of development. The effect is seen in a considerable increase in the working expenses, and the directors admit that the development of the passenger traffic has not been so great as might reasonably have been expected. That the gross revenue for the period under review would show a big falling off was, of course, quite well known, because during the half-year the Great Western and Great Central companies opened their new route via High Wycombe and Grendon Underwood, and the Metropolitan Company's agreement with the Great Central authorised by the Act of 1905 came into force on April 2. The Great Central have diverted to this new line a portion of their through traffic hitherto worked over the Metropolitan system, and the falling off in revenue is partly attributable to this fact. The traffic figures indeed provide quite an instructive study. For the first 13 weeks of the half-year the drop in the gross take was less than £3,000, while, according to the published figures, the half-year wound up with a decline of just under £31,000 at £423,588, against the decline shown in the revenue account of £51,316 at £389,014 only. This seems a little curious at first sight, but is not really so, because the published traffics include the income from City lines and extensions, and in respect of the past six months also took in a new credit for rent of leased lines and the proportion of nett revenue of Metropolitan and Great Central joint lines which now accrues. Examining the details of traffic, we find that an increase in the number of first-class passengers of 342,377 was accompanied by a decrease in revenue of £5,830, due, it must be supposed, to the reduction in fares. Second-class passengers, following the abolition of the second-class carriage on the electric trains, were almost two million less, meaning a drop in income of £16,766, while the third-class passenger revenue was down by £1,535, despite an increase in the numbers carried of 3,419,602. This means a total decrease in ordinary passenger business of £24,131, partly due to motor 'buses probably, and there was moreover a shrinkage under season tickets of £2,218, a very serious item. Revenue from parcels, horses, carriages, &c., was smaller by £3,615, merchandise fell off £14,131, live stock income almost disappeared, and minerals yielded only £18,477, against £25,152. It would be difficult to minimise the serious nature of a series of decreases such as these, and whether they arise directly from the electrification or from the loss of traffic in other ways the declines are equally important. Even the rents for stations, refreshment rooms, advertising, &c., and transfer fees were somewhat smaller. Just as important and disappointing is the exceedingly small decrease in working expenditure. It was at least hoped that the loss of the Great Central traffic would be accompanied by a good saving in expenses, but in one or two directions the outgo is actually higher. Cost of maintenance of way and works was less by £6,334, which is not altogether a good sign, but the locomotive and generating expenses actually increased £3,692, partly due to a charge of £1,305 for electric current purchased. Why was this necessary? Cannot the Neasden station provide all the current required? Repairs and renewals cost £4,000 more, which seems to indicate that the upkeep of motors is more expensive than locomotives. A year ago the locomotive and generating expenses were relieved to the extent of £8,500 by a transfer from reserve, but nothing of the kind is done now, which renders the nett revenue account so much worse off. Carriage and wagon repairs increased £557, traffic expenses, which last year were credited with £1,000 from reserve, showed a drop of £1,200 only, and general charges were very little lower. Retiring allowances to officers showed the comparatively important increase of £438, while law and Parliamentary charges and compensation were each sensibly lower. Rates and taxes were, fortunately, very little larger, Government duty was down about £500, and joint lines and station expenses were reduced by £1,193. All these items added up show an increase of almost £4,000, but the company received £8,279 against £656 for working trains for other companies, so that the actual expenditure charge was £3,653 lower. Balance of nett revenue was down by £35,468 to £175,982, which is transferred to the nett revenue account. There we find that the income from bankers and general interest, including interest on investments, was £2,465 only against £11,578, but the balance brought forward was slightly larger at £11,448. Interest on Hammersmith and City debenture account was £1,130 compared with £920, and the City lines and extensions gave an extra £11 at £12,087. Railway estate also yielded more, and rent of leased lines £17,548 and proportion of Metropolitan and Great Central joint lines £3,059 are new items. This account, therefore, shows a drop of £35,468 at £230,664, but while one or two of the fixed charges were higher there was nothing to pay this time on account of the Harrow and Uxbridge Railway guarantee account against £7,077 a year ago, so that the balance available for dividend was £151,169 against £180,031. Preference charges rose £2,221 to £104,511, and the dividend on the ordinary stock has to be reduced from 2½ to 1⅜ per cent. per annum with a drop in the carry forward from £6,090 to £3,668. On surplus lands stock the dividend is ⅜ per cent. per annum better at 2¾ per cent. per annum, and we are glad to hear it stated that the management of these properties is now carried on with more energy than heretofore. Capital expenditure of the railway company for the half-year was £143,469, of which £122,454 was directly connected with electric traction, and the total includes £14,221 for loss on sale of rolling stock, a matter which promises to burden the capital account with a considerable amount of deadweight, and we are inclined to think that actual realised losses of this kind should be written off the reserve. Exclusive of electrification outlay, the capital expenditure for this half-year is set down at £57,000, and the present debit to the account is £109,233. Of the reserve of £88,402 existing at the end of December, £10,000 has been added to the fire insurance fund, leaving the general account at £78,402. Dividends will be payable on August 3.

South Eastern and Chatham Railway Managing Committee.

We never see the half-yearly reports issued by the South Eastern and Chatham companies without regretting that their fusion was not carried a step further. Their capital accounts are kept distinct, and we have practically three boards of directors all living upon these more or less dilapidated roads whose capitalisation is enormous, and whose spendings out of capital account still continue. The managing committee's report for the past half-year is already known so far as the nett revenues are concerned. The lines earned nett £666,843, of which £393,437 goes to the South Eastern Company and £273,406 to the Chatham Company. This means an increase of £19,422 in the South Eastern portion, and of £13,497 in the Chatham portion, compared with the first half of 1905. Of the increase £16,868 came from passenger traffic, entirely from first and second-class and season tickets, and from parcels and mails, third-class traffic having shown a decrease of £3,528. We have no doubt that the traffic would be indefinitely extended if the committee would liberalise its policy in the matter of fares and treat travellers with greater consideration. Some step apparently is being taken in this direction, for it is stated in the report that arrangements have been made with the Northern of France Railway Company for extended facilities to excursionists between the two countries. More than that, however, is required. Merchandise traffic went up £15,404, the improvement coming from all classes of business. Working expenses, it should be added, show an increase of only £3,950 against an increase of £37,000 in the gross receipts, hence the increase of £33,050 in the nett revenue. There was actually a decline of £4,616 in the rates and taxes, mainly due to a reduction in assessments, so that all the railway companies are not being devoured by the rate collector. The proportion of expenses to receipts was 63.28 per cent., the lowest since the corresponding half of 1900, but we remain unconvinced that some of the saving is not obtained at the expense of the capital account, for in the past half-year £47,084 was spent by the committee out of capital entirely on lines open for traffic. We find such items as reconstructiong and strengthening bridges, the committee's proportion £4,487. New machinery £1,360, station improvements at Ashford £3,073, the committee's proportion of the cost of reconstructing Swale Bridge £9,[illegible], and other items of the same description, most of which we fear ought to have been charged direct to revenue, and in addition no less than £17,242 was spent, principally on six motor steam carriages, five carriage trucks, steam heating apparatus, brake work, electric lighting, and new passengers' communication apparatus. That also ought to have gone mostly, if not wholly, against revenue. It is stated in the report that the cost of remedying the Charing Cross station roof collapse up to the close of the year was £35,283, and in addition since the half-year closed, it has been settled that £20,000 should be paid as com-

pensation to Mr. Cyril Maude and other parties interested in the Avenue Theatre. These sums will be withdrawn from the reserve funds of the two companies in their proportion. Not much change is shown in the details of working expenditure Locomotive power cost about £3,000 less, and traffic expenses fully £1,000 less, but general charges rose by about £1,000, and law charges were little more than £100 down at £5,630, which seems a heavy amount. Apparently the gross profit on the steamboats was £22,326, but the harbour, canal, and pier expenses rather exceeded the receipts, and £20,000 was written off the steamboat account for depreciation. We see from the general balance-sheet that there is a suspense account of £8,500 debited to Port Victoria Pier, and wonder why that has not been written off.

South Eastern Railway.

There is not much of special interest in this company's half-yearly report after dealing with the figures furnished by the managing committee formed out of the two boards. The South Eastern Company's proportion of the nett revenue, £393,437, together with other revenue receipts from rents, &c., enables the board to declare a dividend of 10s. for the half-year on the ordinary stock, or at the rate of 1 per cent. per annum. This means £1 on the preferred for the half-year and the dividend is payable on the 8th prox. Capital expenditure during the half-year was £53,258, but the company received a windfall of £60,000 for easement granted to the Charing Cross, Euston, and Hampstead Railway, besides £504 from sundry bits of property sold, so that actually the capital account was in credit on the half-year's transactions to the amount of £7,245. None the less is money still being poured out upon the line, the company having spent £15,293 on its own account, and irrespective of its proportion of the joint expenditure. Its capital account, too, is overdrawn to the extent of £449,000, but there is no immediate necessity to raise more money in spite of the fact that it owes £90,659 on temporary loan, because its various funds, including £526,361 of provident saving bank money amount to £883,000, its own reserve fund being still £244,375, after paying the proportion falling to the company of the expenditure on Charing Cross station to date.

London and South-Western Railway Company.

Gross revenue for the six months ended June 30 £2,534,349, increase £30,885; working expenditure £1,643,298, increase £30,229; ratio between railway expenditure and income 62.15 per cent., against 61.73 per cent. So far as the passenger revenue is concerned the company may be said to have had a very successful half-year's working, and it may be that for the present the worst of the electric tramway competition has been experienced. First and second-class passengers both show a falling off, the decline in the seconds being fairly sharp, but the losses were all made good by the first-class business, which showed an improvement of £21,594 at £841,675. Season tickets too gave the important increase of over £6,000, and parcels, horses, carriages, &c., went up by £9,215 to £226,931. These movements and moderate advances under rents, minerals, and dock receipts practically exhaust the increases, because merchandise, live stock, and the Waterloo and City Railway all produced a smaller revenue. Steamboat receipts were better by about £600 at £84,642, but the working expenses alone went up £1,856 to £95,644, and the renewal and insurance charges were very little less at £11,367. Under all heads then the steamship service cost £107,011 to work, a direct loss of £22,369, and a serious matter when we consider that the amount of capital involved is nearly £578,000. We can, however, commend the directors for letting us know the true position of affairs, because these are details which most companies seek to hide. Dock working expenses were up £866 to £86,881, against an improvement in the receipts of £1,014 to £117,410, and as the capital expenditure on the docks is £3,921,976 this is another branch of the business which does not pay. But neither the docks nor the steamboats must be judged on their own performances, but from the extent to which they feed the railway. From that standpoint they are doubtless very valuable adjuncts, and although we do not altogether believe in railway companies becoming ocean carriers there is probably no question that the South-Western Railway did a good stroke of business when it acquired the Southampton dock. Of other items of expenditure the most striking movement is under maintenance of way and works, which increased £14,050, and accounts for a good part of the total advance on the expenditure side of the accounts. Locomotive power cost £2,479 more. carriage and wagon repairs rose about £1,000, traffic expenses were larger by £7,549, general charges moved up by £2,299, and law and Parliamentary expenses were each moderately higher. Compensation did not require quite so much, but the Salisbury disaster, for which the directors express their profound regret, will swell the item very much for the current six months. Rates and taxes actually showed a small decrease, mileage and demurrage cost £1,477 more. and tolls and expenses of joint lines were reduced nearly £1,000. Nett revenue balance is only up £656 to £891,051, and the total nett credit, including £32,035 brought forward, is £930,300 against £929,394. Fixed charges were smaller, mainly because of a saving under bankers' and general interest, and the directors this time place £20,000 to reserve fund, compared with a similar sum reserved for steamboat renewals, &c., a year ago. These sums provided, and the directors have £637,194 or £5,332 more for dividend purposes, which enables them to meet the preference dividends and provide an increased amount to maintain the dividend at 4 per cent. per annum on the original ordinary stock, carrying forward rather more at £26,222. The dividend on the preferred ordinary stock is also at the rate of 4 per cent. per annum. An expenditure of £233,373 in the half-year increases the debit to capital account to £670,645, but the company has a very fair amount of cash and is by no means pressed for money, as various savings bank and other funds add up to over £1,147,000. Nevertheless, the directors are seeking power to create a large amount of fresh ordinary stock, quite apart from the capital required for the acquisition of the Waterloo and City and Axminster and Lyme Regis Light Railways. Dividend payable August 15.

Central London Railway Company.

In the six months ended June 30 the gross revenue was £180,226 or £5,650 less than in the corresponding half of 1905, against which the working expenses were reduced £1,626 to £94,048, so that the nett revenue shows a drop of £4,024 at £80,178. It would appear then that even this undertaking is feeling the effect of motor 'bus competition, because up to the present there is no particular sign that the Metropolitan Railway is recovering any of the traffic which the Central London Company took away. Last half-year the Central London carried 22,336,489 passengers, or 700,946 less than in the first six months of the previous year, and it is quite worth noting that the number is the smallest handled in the June half-year since 1901, which was the first complete six months that the line was opened. This must be considered somewhat discouraging, because it goes to show that the system has been developed to its utmost, and that any fresh form of competition must inevitably send the earnings back. That is one of the drawbacks of an electric line sunk in the bowels of the earth. Passenger traffic alone must be relied upon, and if that goes down the directors cannot seek to fill the gap by developing the goods or parcels traffic, because there is none. And as we know passenger traffic of any kind is always more expensive to handle than other business. All the points, however, are not adverse. Although, of course, the directors do not think so, it must be considered a very good thing that the company's Bill for a line from Hammersmith to the City has been, at least, temporarily abandoned. So far as we can see, there is not the slightest justification for the construction of this line, present facilities being ample, and it is to be noted that another Bill for a line from Hammersmith to Southgate *vid* Piccadilly, the Strand, and the City, referred to in the last report, has been allowed by Parliament to be suspended until next Session. Whether the line will be eventually sanctioned cannot be said, but even if it is there is the finance difficulty to be faced. We very much doubt if the public will put up the cash for any more tube railways, because, however unpalatable the truth may be, the fact has to be faced that on the whole electric railways are not a financial success. The Bill for an extension of the North-West London Railway from Marble Arch to Victoria has passed the House of Commons, and is now unopposed in the House of Lords. This may bring a little traffic to the Central London one day, and the directors think that the facility for exchange at Oxford Circus between this company's station and that of the Baker Street and Waterloo will be more largely taken advantage of when the latter is completed to Paddington at one end and the Elephant and Castle at the other. One of the most important movements on the expenditure side of the revenue account was the increase of over £1,000 on rates and taxes. It seems that the quinquennial reassessment of the company's property was made by the several parishes concerned in the early part of the year, with the result that the valuation for rating purposes has again been increased, so that the amount paid by the company in rates and taxes during last half-year amounted to no less than 18½ per cent. of the nett revenue. That seems a lot, we admit, but when you have your premises in some of the finest thoroughfares in London the privilege has got to be paid for. Maintenance of way and works cost £360 less, locomotive and generating power showed a drop of £2,688, traffic expenses were down £838, and general charges £472. On the other hand, repairs of carriages and lifts cost £1,266 more, and as the system gets older this must become a growing charge. There was an increase of £450 at £679 under compensation, and we are inclined to wonder what the accidents and losses could have been. Balance of nett revenue is nearly £4,000 down at £86,178, but the sum brought in was larger by £3,282 at £25,394, and general interest rose by £440 to £1,213, so that the actual sum for disposal of £112,785 was only £300 less. Debenture interest was the same, but interest on reserve fund was £1,102, against £770 and £1,995, against nothing, is provided for the replacement and renewal of electric cables, &c. Credit still left is £92,257 compared with £94,886, and the directors propose dividends at the rate of 4 per cent. per annum on the undivided ordinary and preferred ordinary stocks, reserving £10,884 for deferred dividend, payable at the end of the year, and carrying forward £32,257. Capital expenditure in the six months was £14,270, and the estimate for the current six months is £20,000. The account is already overdrawn £6,555, and while the company has a reserve of £74,540 we must never forget the locomotive suspense account £67,811 or the Parliamentary expenses £24,726.

Great Northern, Piccadilly, and Brompton Railway Company.

Sir George Gibb is now the chairman of this electric railway enterprise, one of the offshoots of the Underground Electric Railways Company of London, and if the line possesses the elements of success no man is more capable of ensuring prosperity than the late general manager of the North-Eastern Railway. During the six months ended June 30 capital expenditure amounted to £1,039,928, a deal of money truly, but a tremendous amount of work has been accomplished. The running tunnels and station tunnels between Finsbury Park and Hammersmith

have been completed, and the permanent way and conductor rails have been laid the entire distance, with the exception of a small piece at Covent Garden. Lifts, stairways, and ventilation system are nearing completion, and the sub-stations are all finished and running, save Hyde Park Corner, which it is anticipated will be running early in September. The car sheds and repair shops at Lillie Bridge have been completed, and are ready for the reception of the rolling stock, which is now arriving at the rate of 15 cars per week. Construction of the surface station buildings is likewise progressing satisfactorily, and it is expected that the railway will be opened for public traffic throughout its entire length in January next. Capital received during the half-year was £1,278,530, making the total to date £4,735,600, against an aggregate expenditure of £5,738,240, so that the debit to capital account is £1,002,640. Of this £755,658 has been advanced by the Underground Electric Company, and the contractors' retention fund amounts to £265,000. In the current half-year the outlay is put down at £800,000, with a subsequent expenditure of £667,760, so that by the time the line is absolutely completed its cost will have been about £7,200,000 for rather less than eight miles. To pay 4 per cent. all round on this sum the company must earn at least £600,000 a year gross, or about £12,000 per week. That is a rare lot of money for an electric line, be the route never so populated. Even the Central London Railway, which is supposed to touch the finest traffic-yielding thoroughfares in London, earns on its 6½ miles little more than half the sum we have put down for the Great Northern and Brompton line. The Central London pays 4 per cent. on its ordinary stocks, but its total authorised and issued capital, including loans, is a long way below four millions. This company's ordinary shares should be all right, because they enjoy a 4 per cent. dividend guaranteed by the Underground Electric Company, but we do not altogether like the prospect. The rent due to June 30 was, of course, forthcoming, and admits of a dividend at the rate of 4 per cent. per annum. Dividend warrants will be posted on August 2.

Capital and Counties Bank, Limited.

The most interesting point about the yearly statement of this first-rate bank is that the directors apply £30,000 of the profits and £100,000 from the reserve towards writing down the holding of Consols. When all the other big joint stock banks were reducing their Consols in the early part of 1904 this bank gave no hint of similar action, and although, when the annual report for the year ended June 30, 1904, appeared, there was a reference to the subject of depreciated investments, no special mention of Consols was made. Thus we did not know at what price the bank kept its Consols in the books, but it must have been quite 90, because £2,600,000 of Consols can be reduced by £5 per hundred pounds for the sum of £130,000, which is now provided. In their report the directors say that the depreciation in the value of Consols having continued for so long, they "are of opinion that the time has arrived when the large holding by the bank should be written down to 85," the figure which is now generally adopted by the other big joint stock institutions having their chief offices in London. We are glad this step has been taken, regretting only that the bank did not before realise the necessity of carrying out the reduction, for, when the chairman of the London and Provincial Bank is hinting at the possibility of a further writing off to 80 it is quite obvious that 85 is not too low a figure. The bank now values its Consols and other British Government securities at £2,494,284, being a decrease on the year of £282,815, India Government stocks, British railway debenture and preference stocks, and Colonial Government stock and bonds have been reduced £73,312 to £1,581,226, and English Corporation stocks and other investments amount to £815,620 against £872,453. This means a total decrease in the investments of £412,960 at £4,817,819. Cash in hand and at Bank of England is a little larger at £4,912,642, while the money at call and short notice is less by £79,711 at £3,997,261, the two items together adding up to £8,909,903, or about £1,000 above the figure shown a year ago. Bills discounted, loans, and other accounts show the important increase of £2,234,105 at £20,104,394, liability on acceptances is about £100,000 less at £733,298, and bank premises have increased by £36,917 to £968,968, notwithstanding a reduction of £15,000 from the past year's profits. This advance is, of course, connected with the acquisition of the businesses of Messrs. Berwick and Co. and Messrs. Lechmere and Co. The absorption of these institutions has likewise involved an increase of 4,500 to 157,000 in the number of shares issued, and as all the shares are £10 paid, this means a rise in the paid-up capital of £45,000 to £1,570,000. Current deposit and other accounts have gone up £1,911,820 to £32,378,793, and the aggregate of the balance-sheet is £35,553,088 against £33,795,935. Amount of gross profit earned in the year to June 30 was £739,937, or £56,682 more than in the previous 12 months, and there was a very minute increase in the balance brought forward at £50,095, so that the total credit comes to £790,032 against £732,992. General expenditure rose £18,543 to £404,191, but the directors can provide a rather larger sum to maintain the dividend at 18 per cent., apply £30,000 to the reduction of Consols as mentioned, and again allocate £15,000 against cost of premises, and £10,000 to the officers' superannuation fund, carrying forward £52,291 compared with £50,095. The reserve fund is now down to £800,000.

London and County Banking Co., Limited.

This bank's current and deposit accounts on June 30 were £1,315,491 less at £43,497,900 than they were at the corresponding date a year ago, while on the other hand cash and money at call and notice showed decreases of £341,216 and £420,317 respectively at £7,580,819 and £2,992,669. Bills discounted, too, were £1,361,252 down at £7,423,075, and investments £37,683 smaller at £9,357,611, but advances rose by £1,041,823 to £19,157,797. The half-year, however, was a prosperous one, and gross profits, including £32,798 or £5,364 more for rebate brought forward were no less than £119,987 higher at £823,229. Interest to customers took £160,991 or £72,900 more, expenses increased by £11,647 to £333,476, and after setting aside £28,715 for rebate on bills the nett profits were £294,047 compared with £264,066. The usual £50,000 having been placed to reserve, £25,000 was written off premises against nothing a year ago, but with £78,318 from the previous account the balance available was still £16,908 larger at £297,365, and the directors therefore declare the customary dividend of 10 per cent. for the six months, or at the rate of 20 pet cent. per annum, and raise the amount carried forward to £97,365.

London and Westminster Bank, Limited.

There was a small decline of £4,859 to £344,682 in the gross profit of this powerful bank for the six months to June 30 compared with the corresponding period of 1905. On the other hand the expenditure was £2,329 higher at £151,159, but thanks to an increase of £10,915 to £29,630 in the balance brought forward, the directors have rather more at their disposal, the nett credit being £223,153 against £219,426. The dividend is, therefore, maintained at 6½ per cent. for the half-year, being at the rate of 13 per cent. per annum, with £3,727 more at £41,153 carried forward. The profits are arrived at after providing for all bad and doubtful debts, paying income-tax, appropriating £3,000 towards buildings account, and making contributions to the pension and life insurance funds. Rest or surplus fund remains at £1,400,000, or 50 per cent. of the paid-up capital of £2,800,000. The balance-sheet shows some fairly important changes. Current accounts and deposits have been reduced by £1,179,172 to £26,637,647, circular notes, credits on agents, &c.; show an increase of £71,145 to £547,786, and acceptances are up by £116,797 to £1,170,499. Cash in hand and at the Bank of England £3,630,094 is lower by £691,434, and money at call and short notice has been increased by £638,750 to £8,003,450. The bank's four millions of Consols are held at 85, and therefore appear at £3,885,000, while other investments are £282,607 lower at £499,113. Bills discounted, loans, and other accounts show a contraction of £791,380 to £14,807,744, and bank premises have increased by the important sum of £22,372 to £783,185. Mr. Alfred Lyttelton has been elected to a seat on the board in place of Mr. Charles Edward Johnston, retired.

London and India Docks Company.

In the past six months there was a decrease of 6,116 tons, at 2,541,997 tons, in the weight of goods from abroad discharged at the docks, and an increase at 358,627 tons, of 21,283 tons, in the goods entering coastwise, compared with the corresponding half-year, but there was a decrease of 20,733 tons in the weight of goods landed at the docks for warehousing or immediate delivery, the total being 524,698 tons, and the stock in the warehouses was also less by 2,934 tons at 196,819 tons. The gross revenue was accordingly less by £33,139 at £888,542. But there was also a reduction of £21,489 in the working charges, which aggregated £590,829, including £61,960 for rates and taxes, £48,997 for maintenance and renewal of premises and plant, and £24,550 for superannuation allowances. It follows that the nett available balance is only £11,650 lower at £297,713, and the directors are able to meet all interest charges, to pay the full dividend on the "A" and "B" preference stocks and the preferred ordinary stock, and still have £50,354 left to carry forward for the benefit of the deferred stock, on which the terms of amalgamation do not allow any distribution to be made until the year has run its course. This sum, however, is equal to 1 per cent. on this stock, with a balance exceeding £2,000 left over. As the Government has notified to the company its intention to deal with the Port of London question next session, and to insert in its Bill a sterilisation clause which the directors of the company cannot accept they decided to drop their own Bill promoted to effect the amalgamation of the Millwall Dock with the London and India undertaking.

English Sewing Cotton Co., Limited.

A preliminary statement issued by the board relating to the business of this company for the year ended March 31 last informs us that after providing £29,835 for depreciation and £37,947 for debenture interest the nett profit was £254,303, exclusive of £23,666 brought forward. Directors' and auditors' fees and law charges took £5,667 and brought the available balance down to £272,303 all included. Out of that handsome total the directors pay the full preference dividend for the company's year and a dividend at the rate of 8 per cent. on the ordinary shares, placing £50,000 to reserve and £20,000 to a specia lreserve. Even then £72,303 will be left to carry forward subject to the commission payable to the board.

American Thread Co.

This subsidiary of the English Sewing Cotton Co. made a profit last year ended December 31 of £184,410, after setting aside £48,377 for bond interest and £72,573 for depreciation. Adding the £58,922 brought forward the aggregate free balance is £243,332, and from this the preference dividend of 5 per cent. is paid, after which the common stock gets 14 per cent., these dividends together absorbing £172,055 and leaving £71,278, subject to the executive committee's percentage; to be carried forward.

COMPANY MEETINGS.

THE UNION OF LONDON AND SMITHS BANK, LIMITED.

The half-yearly general meeting of the shareholders of this bank was held at the Cannon Street Hotel, London, E.C., on Wednesday, July 25, 1906, Sir Felix Schuster, Bart. (the Governor), in the chair.

The Secretary having read the notice convening the meeting, the report was taken as read.

The auditors' certificate having been read by the secretary,

The Governor announced that the directors had declared a dividend of 15s. 6d. per share, equal to 10 per cent. per annum, and a bonus of 1s. 6d. per share, equal to about a further 1 per cent. per annum, clear of income-tax, on the paid-up capital of the bank. The dividend is payable on and after July 26.

The Governor: Ladies and gentlemen, in presenting our report for your consideration, it is a pleasure to confirm what is apparent from the figures, viz., that the past six months have been very profitable from the bankers' point of view, and that the growing activity of trade throughout the country—of which such remarkable evidence is afforded by the Board of Trade Returns—has given us ample opportunities for an increased turnover and for remunerative employment of our funds. Thus we are again able to show larger figures in almost every item of our balance-sheet, and, what you will probably consider even more important, the largest nett profit we have ever earned in one half-year during the history of the bank.

In strong contrast with the favourable circumstances which one would imagine ought to be reflected in the stock markets, we have, on the other hand, an unexpected and very marked depression in those markets and the prices of investments, and a feeling almost of pessimism, which hardly seems to be warranted by either commercial or monetary conditions, nor even, I venture to say, by the general political situation. Two prominent factors are responsible for this prevailing feeling—the internal condition of Russia and the disaster caused by the earthquake at San Francisco; the effect of these on the stock markets has been immediate and pronounced, more so almost than any effect produced either by the South African or by the Russian-Japanese war, although both of these must have been far more wide-reaching and important, certainly as far as this country is concerned.

The changes in our money market have been very few; money throughout the half-year has been in good demand, but there has not been any period of very great pressure. The year began, as you are aware, with a Bank rate of 4 per cent., with considerable activity at all our trading centres, and with a political outlook which, owing to the termination of the war in the Far East, was distinctly hopeful, although a European conference, then about to assemble, gave rise to some anxiety. This conference, after several months' hard work, came to a satisfactory conclusion of its labours, and once more the prospect seemed brighter than it had been for many years past. Monetary conditions became easier, and early in April the Bank reduced its rate to 3½ per cent.; but only a fortnight after the San Francisco disaster took place, a disaster the magnitude of which, certainly as regards its effects on the money markets of the world, was not sufficiently appreciated at the time. The tendency for withdrawals of gold to the United States, which had already existed before that event, was accentuated, and on May 3 a continued American demand for gold compelled the directors of the Bank of England to raise the rate once more to 4 per cent., the reserve having been reduced to below 22 millions. Altogether the United States took from London upwards of six millions of gold during the half-year, in addition to large amounts withdrawn from Paris; and a somewhat serious condition of affairs might have been caused but for the continued and increasing arrivals of gold from South Africa, which amounted to nearly 12 millions, an increase of £1,600,000 over the corresponding period of last year and of nearly £4,000,000 over two years ago.

The successful issue of the new Russian loan in April, the English portion of which amounted to £13,000,000 has to be noted as not without considerable influence on the present condition of the markets. It has been said that a large proportion of this soon after the issue found its way to France; to what extent this is correct it would be difficult to say.

Altogether the new issues during the half-year have, owing to the higher value of money, been considerably less than those of a year ago. British municipal and county authorities have for reasons into which it is not necessary to enter refrained from making those urgent appeals to the investors, to which we have been accustomed for some years past. British Government loans, which a year ago amounted to 15 millions, were restricted to an issue of seven millions of Irish Land stock, which was successfully placed early in June.

In connection with this issue of Irish stock and its effect on the market, I should like to say that the proceeds of these loans after all must find their way back to the stock markets again. It is not like an issue for war purposes or armaments, but the proceeds of these loans must sooner or later be available again for reinvestment, so that the effect on the market eventually ought not to be as marked as it has the appearance of being at the present moment. Its effect, I think, ought to be only temporary.

Notwithstanding this issue of Irish Land stock, the Bank of England was able on June 21 to reduce the rate to 3½ per cent., the reserve in its banking department having risen from only £17,800,000 at the beginning of the year to 26½ millions, an amount only slightly below that of a year ago, whereas throughout the half-year the totals hardly ever came up to those of the previous year. The amount in question nevertheless cannot be considered high when we look at the expansion of trade which has taken place during that period.

It is impossible on this occasion to dwell at length on the general condition of trade in the country; suffice it to say that all our reports from various centres where we are represented are satisfactory, that while complaint is made in one or two quarters of the heavy pressure of rates and taxes, the outlook is generally described as distinctly improving and in several instances as most promising. From the official returns we see that the imports have increased by 27½ millions or 10 per cent. compared with the corresponding period of last year; the exports have increased by upwards of 29 millions or close upon 15 per cent.; and compared with the figures of only four years ago our exports show an increase of no less than 33⅓ per cent. The total increase in imports of manufactured articles for the six months amounts to £8,750,000, the increase in exports of manufactured articles was £20,400,000, a condition of affairs which cannot be without influence on the general well-being of the country, and which has already had its effect on the labour market. If foreign trade is expansive the home market cannot fail to respond to such conditions. Already the traffic receipts of the 17 principal railways have compared with last year grown by £1,665,000 or over 3¾ per cent. This increased activity has also shown itself in the turnover of the London Clearing House, which amounted to £6,405,000,000 compared with £6,081,000,000 a year ago, and of this large turnover our own share of 19 per cent. is fully maintained.

I do not think I need detain you very long with our own figures, which have already been before you. We will glance at the principal items only. Deposits and current accounts now stand at £36,600,000 compared with £34,500,000, an increase for the year of upwards of £2,000,000, and compared with the figures of two years ago the increase shown would be £4,000,000. This, you will no doubt agree, is most satisfactory. I would only add one word in reference to that large increase. I observe that it consists in some cases of a few very large accounts. I will not describe them as temporary accounts, because I hope they will not be temporary; still, the figures are, perhaps, in considering this report, exceptionally large as regards the item shown on June 30, and I do not think it would be quite fair to ascribe the whole of this increase to the general growth of our business; although I have to add that the business has gone on most satisfactorily in every rrespect, not only in London and at our metropolitan branches, but all over the country, and we are constantly increasing the number of our accounts and connections. The next item to which I wish to allude is that of acceptances, which stand at £4,000,000, compared with £2,500,000 a year ago, and during the half-year the amount was even larger—I think at one time it amounted to nearly £5,000,000. This increase, we consider, is most satisfactory. Business of this class we conduct only with clients of the very first standing, and only against approved collateral security. The cash in hand and money at call show in one case a decrease of £800,000 and in the other an increase of over £800,000, so that the two items together amount to the figures of a year ago. Bills discounted amount to £5,400,000, showing an increase of £1,000,000. Loans and advances £15,700,000 also show an increase of £1,000,000. Then we come to investments, £6,360,000, compared with £6,300,000 a year ago, or practically the same amount. But I cannot help saying, with regard to the investments, that it is the one item in the balance-sheet which does not look quite so satisfactory as it looked a year ago or even six months ago, because, although I am glad to say that the value at which these investments stand in our books is still below the low values which you see quoted in the markets, you cannot hold £6,000,000 of investments without being to some extent exposed to the depreciation which we see going on all round, and especially in the gilt-edged stocks which a bank like ours is compelled to hold. And I would ask you to bear in mind this severe depreciation in investment stocks when you come to the profit and loss account, about which I will now say one or two words, and the division of our profits. Turning to the profit and loss account, you will find that interest allowed to customers amounted to £246,000, compared with £156,000, an increase of £90,000. This shows the difference in the value of money during the past half-year, and our depositors have profited by that increase to the tune of £90,000. Salaries and other expenses amount to £204,000, compared with £201,000, an inevitable increase. In connection with this, I should also like to say that these charges include a liberal contribution towards the pensions allowed to the officers of the bank, and also the automatic writing down of all our leasehold premises, which will be written down to nothing long before the leases expire. All these automatic provisions for reduction of bank premises are provided out of the current charges. We come now to the gross profits, which show the very large amount of £737,000 for the half-year, an amount of gross earnings of something over £4,000 per day, and I think from that you will conclude that the work imposed on your managers and staff is not of a light nature, but entails very heavy responsibilities and a great deal of hard work. The nett profits are £258,000, compared with £208,000 a year ago, or an increase of £50,000 for the half-year. The dividend which we have declared amounts to £194,000, and this enables us to carry forward to the next half-year an amount of £184,000, compared with £88,000 a year ago, or an increase of £96,000.

Now, ladies and gentlemen, later on there will be an opportunity to ask questions, and we shall endeavour to answer them to the best of our ability; but there is one question which I quite anticipate on this occasion, and which I had better answer at once, and that is, why, in the face of these figures, the directors do not see their way to increase the dividends? Well, this point we have considered very anxiously and very seriously; but as I have stated on previous occasions, the carry forward with which we used to be satisfied in former years does not satisfy us altogether. I think an institution like this ought to have a very large sum in hand to carry forward to the next half-year to meet possible eventualities, although we see absolutely no reason to anticipate any losses, and everything that appears to us of a doubtful nature is provided for. It is not that we anticipate losses that we carry this amount forward, but one reason is that I think we ought to have a half-year's dividend well in hand, in order to feel quite comfortable; an additional reason is the fact I have already alluded to, namely, the depreciation which with somewhat lower rates for money, and if the great depression no doubt affects what really amounts to a secondary reserve of the bank, namely, the higher value of our investments compared with the book value. This secondary reserve is to some extent affected, and for that reason, amongst others, we think it wise to carry a large amount into the next half-year.

We have, then, as reflected by our figures and as indicated by the condition of trade throughout the country, a promise of further activity and prosperity. As usual the half-year has begun with somewhat lower rates for money, and if the great enterprise sion in the stock markets should continue and new enterprises not find encouragement, the high rates which are almost generally expected for the autumn may, perhaps, not be so pronounced.

Two items must not be overlooked—the condition of the United States and the large amount of money placed on this market by the Japanese Government. In the United States there has been a period of great expansion, of extensive railway construction, of speculative activity, especially in real estate, which according to some good judges has reached its climax, and is on the decrease. But these vast operations have, according to some good judges, to contend with the obstacle of an inelastic currency and a banking system which, also according to some good judges, does not adapt itself to the needs of the country's business, so that after periods of prosperity a process of re-adjustment of values has to take place. These conditions were making themselves felt prior to the San Francisco disaster, which further accentuated them, leading to the creation of a considerable amount of American indebtedness to Europe; not only in the placing here of investment stocks of a more or less permanent character, but also of short-dated loans, very large in amount. As far as our own markets are concerned, the feature is not unsatisfactory. It shows that we have been able to reassert our position as lenders—as the true international money market; and though we should be mindful of the indebtedness of our money market to Japan, this is more than outweighed, in all probability, by the indebtedness of the United States to this and other European markets. The United States themselves appear to have another abundant harvest in sight which should go a long way towards their meeting this indebtedness without much difficulty. On stock markets generally these conditions have had their influence, and the revelations that have been made as to the conduct of certain large insurance companies in the United States have also to be considered. As the writer of a letter from New York aptly put it, their investment market is in a peculiar position; on account of the San Francisco losses their large fire insurance companies have to sell, on account of recent legislation their life insurance companies must sell, on account of mercantile demands for money their large manufacturers and merchants can employ their money better in their own businesses than by buying bonds. To some extent this affords an explanation of what is taking place in our own stock markets. The United States, instead of assisting them, are themselves rather sellers than buyers. While these remarks do not, of course, apply to the life insurance companies on this side of the Atlantic, yet our own fire insurance companies, well able as they undoubtedly are to meet their heavy losses at San Francisco, and to meet them quickly as is the habit of British fire companies, are, if not actual sellers, certainly not buyers of securities to the extent they generally are; and this affects the situation very considerably. Trade demand for money lessens the demand for investments. The rapid creation of Government issues of all kinds during the South African and Eastern wars could not at once be absorbed by permanent investors, and thus a certain amount of floating stock is in existence, which is singularly subject to rapid market fluctuations. In addition to which, some disappointment undoubtedly prevails in certain quarters that the sinking fund for our own debt has not been more largely increased and devoted to the reduction of floating rather than that of permanent debt; yet a reduction of floating debt is eminently desirable, and cannot fail to be instrumental in restoring the credit of the nation to the level to which it is entitled. Such are some of the considerations which appear to me to account for the depreciation that has taken place in investment stocks. The financial effect of the Russian crisis is much more acute in Continental markets than in our own, where the holding of Russian securities is after all very small compared with that of various foreign countries; but, of course, whatever affects foreign markets reacts also on our own. However, as long as commercial conditions are favourable, as long as credit remains unimpaired—as is unquestionably is—there seems to be no need for that feeling of pessimism to which the stock markets for the last few days have given way.

I have on former occasions had to refer to a Bill promoted in Parliament by bankers some years ago, which is of considerable importance to us in the conduct of our business—I mean the Bills of Exchange Act Amendment Bill—and I am glad to be able to state that it has now been passed by the House of Commons in the form in which we desired, and that there is little doubt of its successful passage through the House of Lords, and its thus becoming law this session.

Another subject not unfamiliar to those who are in the habit of frequenting these meetings is that of the gold reserve of the country. As you are aware, Lord Goschen made this the subject of an important spech a few weeks ago, and the present Chancellor of the Exchequer has referred to it on more than one occasion, and we have his assurance that it is engaging his serious attention. The importance of the matter thus being publicly recognised, we may confidently hope that it has now been advanced a stage further, that full, free, and impartial discussion will take place amongst all those interested, and that through their co-operation a solution will be found of what is not only a banking but a real national question of the greatest importance. Such a solution cannot fail to be of the greatest benefit to our commerce, by saving it from the sudden and violent fluctuations in the value of money to which it is at present exposed. This being so, I need not dwell on the subject to-day, especially as my views are already sufficiently known.

In looking forward to the new half-year, and in considering the general aspect of affairs, I cannot help feeling that the clouds which for the present overhang the stock markets should not obscure the view into a prospect of a somewhat brighter appearance. The stock markets themselves are but the reflection of conditions which, though their influence may be retarded, must eventually make themselves felt, and these conditions are those of the general trade of the country. If the outlook in Russia itself is gloomy—and our sympathies are fully with that unhappy country—we must nevertheless not overlook the fact that the general political outlook is far less threatening, and the prospects of peace being maintained far more promising than for many years past. In that lies our best hope for our commerce, with the prosperity of which the prosperity of our own institution is so intimately connected. Without being too sanguine, we may, I think, reasonably look forward to another profitable half-year; the activity of trade should ensure ample employment of bankers' funds at remunerative rates, which, as the ordinary demands of the autumn and winter months arise, will probably be somewhat higher than those prevailing now, while the cautious attitude generally adopted of late should be a safeguard against great stringency or excessively high rates. Monetary conditions thus do not appear to me unfavourable to general trade. I have now much pleasure in moving the adoption of the report.

This was seconded by the Deputy-Governor (Mr John Trotter) and carried unanimously.

Mr. Alfred Laurie, who offered the governor the congratulations of the shareholders on the honour recently conferred upon him, moved: "That the best thanks of the meeting be given to the governor, the deputy-governor, and the directors for the able manner in which they have directed the affairs of the bank during the past half-year."

This was seconded by Mr. W. E. Lane, and carried unanimously.

It was moved by the Governor, seconded by the Deputy-Governor, and carried unanimously: "That the thanks of the meeting be given to the general manager, the managers of the head office and branches, the secretary, and the staff of the bank generally, for the efficient discharge of their several duties during the past half-year."

Mr. Millar Wilkinson, in moving a special vote of thanks to the governor for presiding, said that all the shareholders would most heartily endorse the congratulations offered by Mr. Laurie to the governor on the honour recently conferred upon him.

This was seconded by Mr. Lane, and carried unanimously.

The proceedings then terminated.

EASTERN TELEGRAPH COMPANY (LTD.).

The sixty-eighth half-yearly general meeting of this company was held on Wednesday, July 25, under the presidency of Sir John Wolfe Barry, K.C.B.

The secretary (Mr. A. R. Hardie) read the notice convening the meeting and the auditors' certificate.

The Chairman then said: It is now necessary for me to make a few explanatory remarks on the report. Although the accounts now submitted to you do not show such a large nett profit as those for the corresponding period to March 31, 1905, the result of the half-year's working may, I think, be considered satisfactory. Before moving the customary resolution for the adoption of the report and accounts, I will, as usual, make a few cursory remarks on some of the more important items contained therein. The gross income for the half-year amounted, in round figures, to £628,300, as against, for the corresponding period, £676,200, or a decrease of £47,900. The most important reductions are in the receipts from India, China and Japan, South Africa, and Egypt. The decreases in the receipts from India and Egypt are principally due to the reduction of the tariff from 2s. 6d. to 2s. per word in the former case, and from 1s. 5d. to 1s. per word in the latter. These reductions only took effect from August 1, 1905, and we are now consequently comparing a full six months at the reduced tariff with the half-year which was not affected by the alteration in rate. I dealt very fully with the Indian section of tariff on the last occasion I had the pleasure of addressing you, when I stated that we might, perhaps, look forward to be to some extent recouped for the loss of revenue resulting from

the reduction of tariff by the normal development of trade in the Indian Empire. I am glad to say that this traffic is, on the whole, showing an upward tendency, though with fluctuations in the opposite direction, but I am afraid it will take some considerable time before the "standard" figure is again reached. We are, in the half-year under review, comparing our revenue from traffic with China and Japan with the abnormal revenue earned on that traffic during the war between Japan and Russia, and naturally the cessation of hostilities has caused a considerable reduction in Government and Press traffic. From the progressive tendencies, however, showing themselves in China, and the commercial activity which is bound to take place in Japan, we look forward to a growth of commercial traffic with these countries. Although the traffic with Egypt has increased since the reduction of tariff in August last, it will, as in the case of India, take some considerable time before we are able to earn the same revenue as we derived from that traffic before the reduction came into force. The reduction in our earnings from South Africa is caused entirely by the diminution in business. It was believed by many that the development of commercial enterprise after the cessation of hostilities would have been rapid, but this has not been the fact, and we can only trust that South Africa will soon experience a more prosperous period. When this much-desired result has been achieved, and the country settles down and recovers from the effects of the prolonged war, our receipts from messages may be expected, as a natural sequence, to improve. I am glad to say that the traffic with Australia has shown a substantial improvement, and as the Associated Companies have continued to carry approximately the same proportion of the total traffic as they have done since the opening of the opposition Government Pacific Cable route, this company has participated in this general increase of business. It is satisfactory to note that the traffic exchanged with South America has for some time past shown considerable expansion, and the boards of the Eastern and Western Companies have decided to enlarge their cable-carrying capacity between Great Britain and St. Vincent. We have considered this necessary for several reasons. In the first place, we desire to improve our system for this important South American correspondence. We have also to meet the action taken by the French Government in laying a cable from Brest to Dakar to connect their existing cable from the latter place to Pernambuco, thus giving France a direct route to South America. We have also to provide against the competitive opposition of the Central and South American Company, who have lately laid additional cables along the West Coast of South America. It has been decided to lay our new cables viâ Fayal, in the Azores, not only opening a new route by this means, but also enabling the Western Company to effect a junction with the Commercial Cable Company at Fayal for the more rapid interchange of traffic between North and South America. The Eastern Company will lay the section between Porthcurnow and Fayal, and the Western Company will lay that between Fayal and St. Vincent. The expedition will leave London about August 3, and the cables should be laid and in working order by the end of that month or the beginning of September. This additional route will also have the effect of relieving our existing lines between Porthcurnow and Portugal of a considerable amount of traffic, thereby enabling us to have more carrying capacity for our Mediterranean, Egyptian, and Far East traffic. Leaving these general considerations, I will now deal with the expenditure side of the revenue account. It will be seen by the accounts that the total ordinary expenditure for the half-year shows an increase of £5,300 when compared with the half-year to March 31, 1905. The principal increase is under the heading of "Working expenses at Stations," the total expenses under this head being £157,100 against, for the corresponding period, £145,400, or a difference of £11,700. Salaries and wages account for £5,500, while our contributions towards the expenses of stations worked by other companies with which we are associated have increased to the extent of £6,000. With a view to improving the service to South Africa, it has been found advantageous to alter the system of working the West Coast route, and for this purpose arrangements were made to carry the cable into the Madeira station of the Western Telegraph Company, who deal with the traffic over this line on our behalf. We have, therefore, now to bear a share of the expenses of that station, and from this fact a large proportion of the increase referred to is due. As a set-off against the increase under Abstract B, general expenses in London show a decrease of £1,500, while the expenses attending maintenance of cables are £8,000 less than they were in the corresponding half-year. There are various, though unimportant, variations in the different items of expenditure, some showing increases and some decreases, and the net result being, as before stated, an increase of £5,300. We have recently built a small cable repairing steamer named the *Sentinel*, specially designed for carrying out repairs in comparatively shallow water. She will be stationed on the West Coast of Africa, where a considerable proportion of cable is laid in shallow water. We have always one of our larger vessels stationed on that coast, fully manned and ready to proceed to sea at short notice. Although the small ship will not take the place of the larger steamer, she will be able to carry out many of the repairs in these regions, and we shall have the additional security of a second ship on this coast, while it is anticipated that the saving in coal and other matters through being able to keep the larger vessel for longer periods in port, will result in the annual expenditure not being much increased. When I last addressed you, I intimated that the amount of £115,000, representing the balance of expenditure on new cables, would be written off during the current half-year. Effect has been given to this, and the sum named has been charged against the general reserve fund. This completes the outpayment for the new cables from Great Britain to the Cape and to Mauritius, &c., and is our contribution to the new main route to Australia viâ South Africa. The large sum involved, about £2,000,000, has been met out of our reserve fund, and the financial operation has taken us seven years to complete. We could not have done this in so short a period had our traffic not been abnormally increased owing to the South African and the Russo-Japanese wars. The policy adopted by your directors of applying the reserve fund from time to time, as necessity arises, in strengthening our system and so giving a better service to the public, enables us to deal with the increase of business which we hope will accompany the important reductions of rates and the increasing development of the world's commerce. I think it necessary to emphasise what I have said at former meetings as to the financial burden on this company through reduction of rates. Not only does the annual outlay for additional staff and all other incidental expenses at stations become greater, but large capital outlay has in most cases to be incurred to provide sufficient cable capacity to carry the number of words required, if the loss of revenue caused by the reduction in rates is to be recouped. This is a point which is generally either forgotten or ignored by those who are constantly urging further reductions, but it is one which is ever before us as a board, and must be taken into serious account before any further important reductions can be effected. What we have done has thus a twofold aspect. The public have gained an improved service with a large reduction of tariff. The company have strengthened their position by being able to meet all reasonable requirements. Without our reserve fund none of these objects could have been secured, and the consistent policy of the board has been amply justified from both points of view. Our general reserve fund now amounts to about £1,000,000, and, in view of our possible cable requirements in the future, I would like to see it increased as much as our ordinary dividends will permit. We shall, no doubt, be able to add to this fund in future, but, unless something unforeseen happens, we cannot expect to be able to carry such large sums to reserve as we have been able to do during the last five years. I now move the adoption of the report and accounts and the declaration of the dividend and bonus therein set out.

The Vice-Chairman and Managing Director (Sir John Denison-Pender, K.C.M.G.) seconded the motion.

The Chairman, in reply to a shareholder, said it was true the company had no fund for widows and orphans, but they had a very efficient superannuation and pension fund.

The motion was then carried unanimously.

There being no further business, a hearty vote of thanks to the chairman and directors terminated the proceedings.

EDMUNDSONS' ELECTRICITY CORPORATION

The ninth ordinary general meeting of Edmundsons' Electricity Corporation, Limited, was held on Monday at the Westminster Palace Hotel, Victoria Street, Westminster, Mr. Henry Wolfenden (chairman and joint managing director) presiding.

The secretary (Mr. G. W. Jeffery) having read the notice convening the meeting and the auditor's report,

The Chairman said: It is unfortunate that on my first appearance before you in my new capacity it falls to my lot to propose a reduced dividend on the ordinary shares, but I do not think any alarm need be felt at this reduction. It is unpleasant, of course, but the reason for it at the present time is obvious The nett trading profit for the year ending March 31, 1906, is £27,709 as against £38,618 in the preceding year, a falling off of £10,909. This contrasts with £12,000, the sum by which the dividend is reduced. The reason for the decrease in net trading profit is that less capital has been spent during the year on installation or promotion account, as I may term it, the reduction of expenditure under this head being £150,517 as compared with the preceding year. A further diminution of expenditure under this head will be shown this year, but, of course, our financial position becomes thereby strengthened. On the other hand, the interest and dividends receivable from our investments have increased by £2,078 only, a very disappointing position so far, and it may naturally be asked how it comes about that with increased investments of £132,509, and with a transfer in addition from the non-dividend earning to the dividend-earning stage of about £39,000, so small an increase in interest and dividends should result. The explanations are various. We know that whatever may be the state of trade now, business generally was not brilliant in the early part of our financial year under review. Economy was undoubtedly practised by users of current for lighting, and this was continued throughout the year. We think we see evidences now of an improved demand. Another explanation is that, acting upon optimistic views, our expert advisers may have recommended the outlay in the past of capital in some instances in excess or advance of what has proved to be the requirements so far, but that we hope will largely correct itself in time. Whilst our stations at work generally show progressive results for the year, one of them—Guernsey—has slightly retrograded to the extent of about £500 of income to us, notwithstanding that about £2,000 or £3,000 additional has been expended on capital account. Hamilton, also—one of the local authorities—has not done so well as in 1904. On the other hand, £25,000 has been invested in the Inverness undertaking, and is included in the dividend-earning class, because it forms part of the North of Scotland capital, which is already earning dividend but, as a matter of fact, Inverness contributed scarcely any profit to the parent undertaking owing to the fact that it commenced to generate only in May, 1905. In

other words, there is a larger capital said to be earning dividend, but without practically any increase in the sum to be divided. In like manner the Scarborough investment shows an increase of nearly £12,000, with an increase of income to us of £189 only. At the foot of the schedule of investments and advances which was enclosed with the balance-sheet a figure is shown of £398,474, which was not at March 31 last earning anything. This figure, which equals practically the whole of our ordinary share capital, is made up mainly of our holdings in the following companies, namely:—Lancashire Power Company, Ramsgate Supply Company, Urban Electric Supply Company, Alderley Supply Company, and Isle of Wight Supply Company, and I need hardly point out that every 1 per cent. which the total amount may yield in the future is equivalent to 1 per cent. on our ordinary share capital. We have considerable hopes for the future of these companies. Take the Lancashire Power Company for instance. It had last October begun to supply customers with current, but owing to the limitations imposed by the original Act, practical difficulties were created in the way of being able to approach consumers direct. These difficulties have just been removed, as the Power Company has promoted a Bill this session to that end, and I am glad to be able to inform you that it has passed the two Houses and now only awaits the Royal Assent to become law. The local authorities are expressing their willingness, and even anxiety, to make arrangements with the Power Company which will enable the company to cover the ground, and the Power Company, on their side, are taking steps actively to push the business. It must be borne in mind, however, that a power company requires a certain period of time to acquire customers, and during that time the revenue may not be yielding dividends. Ramsgate only commenced supplying to customers in October, 1905, so that the year did not derive any profit from this station, but at the end of June, 1906, it had 8,151 equivalent eight candle-power lamps installed, which I think you will agree is satisfactory progress in the time. The Urban Company is showing a distinct advance, the units sold during the half-year ended June 30, 1906, being about 30 per cent. in excess of those for the corresponding half of 1905. The whole of the benefit arising from this increase will be felt by Edmundsons, as, by agreement, we guarantee the dividends of the Urban Company for a period of years, and under this guarantee we have had to make good a deficit. Alderley and Isle of Wight are making good progress also, and ought before long to become dividend payers on their ordinary shares. In the summary at foot of page containing details of investments and advances you will find some changes when compared with the previous year. The shareholdings are increased by £259,552, but the advances are decreased by £100,558. The total increase in investments on the year amounts to £132,509, being the difference between £1,413,101 and £1,252,789, plus £27,803, the investments at end of March, 1905, in the Local Authorities undertakings. The principal additions on capital account are Alderley, where we have spent about £19,000. This increase has been necessitated by our linking up Wilmslow, which we hope will be a valuable addition to our earning power. The Lancashire Power, the North of Scotland on account of Inverness, and Ramsgate are all up, but you quite understand these additions, and I have dealt already with their position and prospects. The Scarborough Tramway Company is also up about £10,000. So far we are receiving a very inadequate return on this investment, which has proved a very disappointing one. As to the immediate future, we feel that our concern needs rest, and we intend to confine ourselves to developing our existing undertakings and bringing them to a remunerative state, limiting capital expenditure as far as possible, consistent with the proper carrying on of the business. Including the balance brought forward from last year, there is a disposable sum of £50,173, out of which it is proposed to place to reserve fund £3,962, which, with £1,037 premiums on new issues, less expenses, will make that fund £95,000, to pay a balance dividend at the rate of 3 per cent. per annum, thus making 4 per cent. in the year, and to carry out £15,211, or £204 more than was brought in.

Mr. W. R. Davies seconded the motion for the adoption of the report and accounts, which was carried, after some discussion, and the dividend, as recommended, was declared.

The retiring director (Mr. W. B. Hopkins) and the auditor having been re-elected, the proceedings terminated.

UNION BANK OF AUSTRALIA.

The ordinary general meeting of the Union Bank of Australia, Limited, was held on Monday at 71, Cornhill, E.C., under the presidency of Mr. Arthur Flower (the chairman of the company).

The secretary (Mr. T. C. C. Saunders) read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, first of all compared the figures of the balance-sheet with those of the previous six months. There was an increase in the deposits of £1,700,000 and a decrease of £250,000 in advances. The expenses showed a reduction of £2,000. The whole of the liquid resources totalled £10,780,000, which, after deducting £1,000,000 for investments specially allotted to the bank's reserve fund, represented some 9s. 3d. in the £ of all their liabilities in London and the colonies, which amounted to £21,091,000. He went on to say: You will notice from our report that since our last meeting the bank has opened branches at several new points—viz., one in New South Wales, one in Victoria, two in Queensland, one in Tasmania, and two in New Zealand. In his recommendation of this policy the general manager has been no doubt influenced by the course now being pursued by the Governments of various States with a view to ensuring closer settlement on the land, and this extension of interests should, I hope, tend towards reduction of the unduly large proportion of unemployed funds shown in our present accounts. I am glad to say that the season in Australia, on which so much depends, is unusually favourable, and prices for wool and other produce are also most satisfactory. It is only reasonable to conclude that as a result of the large increase of stock following on recent good seasons the price of wool should show some falling off from the high level recently established, though at present there certainly seems but faint indication of such decline in values. You will notice in our accounts a further appropriation of £4,000 in aid of the bank's guarantee and provident fund. When addressing you last July I hoped that our contribution in aid of this fund would have terminated by this time; but while our actuary has not yet concluded his examination of the accounts at the end of the quinquennial period, he advises us that it would not be wise at the present time to cease this contribution. It is therefore continued in the present accounts pending full quinquennial report on the position of the fund, which should before long be in our hands. It is a matter of much satisfaction to the directors that the results of the half-year admit, while continuing our dividend at the rate of 10 per cent., of a further increase of £15,000 in our reserve fund, as well as a further reduction of £10,000 in the amount at which bank premises and property stand in our balance-sheet. I will now close these remarks with a renewal of our thanks to the general manager and staff in Australasia and the London manager and staff in London, to whose united efforts these results are due. I now beg to move: "That the report and accounts now presented be received and adopted."

Mr. W. O. Gilchrist seconded the motion, which was carried unanimously.

Mr. C. A. Galton and Mr. C. Parbury having been re-elected directors of the company,

A special general meeting was then held to approve of the new articles of association of the company.

These were unanimously agreed to.

THE GORDON HOTELS, LIMITED.

The sixteenth ordinary general meeting of the Gordon Hotels, Limited, was held on Thursday at the Whitehall Rooms of the Hotel Metropole, Whitehall Place, W.C., the Earl of Bessborough, C.V.O., C.B. (chairman), presiding.

The Secretary (Mr. Charles Shilson) read the notice convening the meeting and the auditors' report.

The Chairman said: In rising to move the adoption of the report and accounts, I shall follow the usual practice of offering you a few remarks. Although I do not think we have reached anything like booming times, nor that the difficulties mentioned last year have been altogether removed, we have undoubtedly done better during the year under review, and this is encouraging, and the more so, when one remembers the Charing Cross accident, for I have not the slightest doubt about the matter when I say that that unfortunate accident, which resulted in the closing of the Continental traffic for seven months, the entire closing of the station for five, and the destruction of the Avenue Theatre, had a very detrimental effect on the business of your Northumberland Avenue establishments. As you are aware, a dissolution of Parliament was announced in December which had a prejudicial effect on our Riviera season, as some of the intending visitors found something else to do, and there is no doubt that the state of the weather for about three months in the early spring was such that visitors were not attracted to the seaside hotels for week-ends. In addition to this, City gentlemen were amongst our best customers, and we are sorry to miss many well-known faces, but we are aware of and sympathise with the difficulties they have experienced. We, however, hope for a relief of the depression on the Stock Exchange, and to see them soon again, but I fear the events of the last few days are not very encouraging. However, notwithstanding these drawbacks, and the serious accident above referred to, there has been an improvement over last year, and one can hardly imagine that such a catastrophe affecting us so seriously could occur again. In conclusion, the Chairman said: We sympathise with those who expected, and perhaps wanted, a larger dividend, and although we might have paid an additional 1 per cent. we could not advise such a course, and considered it better to spend the money in improvements rather than divide it. This policy we feel sure will work out in the long run to the better advantage of the shareholders, believing as we do that the position created is a thoroughly sound one. Should times improve we shall get, I am convinced, our full share, and I hope when we meet next year that you will get a better reward for your patience. I now beg to move "That the report and accounts for the year ended May 31, 1906, be received and adopted, and that the payment of the dividend therein referred to be confirmed and approved."

Sir Henry Burdett, K.C.B. (deputy-chairman), seconded the motion, which was carried unanimously after a little discussion.

On the motion of the Chairman, the retiring directors, Mr. Edward H. Byas and Mr. Claud G. Gordon, were re-elected directors of the company.

Votes of thanks were then given to the managers and the staff, the chairman and directors, and the proceedings then terminated.

SAMUEL ALLSOPP AND SONS.

An extraordinary general meeting of Samuel Allsopp and Sons was held on Tuesday to consider the scheme of the directors to acquire the businesses of Thomas Salt and Co., Limited, and the Burton Brewery Co., Limited.

Mr. C. J. Steward presided, and in the course of his speech said the directors were unanimous in recommending the

scheme by which the company would acquire trade and properties to between £1,500,000 sterling and £1,750,000. Referring in the first place to the position of Allsopp's, he said that the present Board took over the management at a time when the company was committed to very heavy liabilities in respect to unpaid purchase-moneys, the position being one that caused them the gravest concern. They had been occupied in realising properties which they considered to be outside the scope of a brewery, and though the times had not been favourable they had succeeded in clearing the company from liabilities amounting to close on £800,000. The consequence was that the financial position was immensely improved. During this time they had encountered a steady decline in trade. Had the volume of trade been as great as it was in the earlier years of the company's management, they would be now in the position of paying not only the preference dividend, but a dividend on the ordinary shares. Unfortunately trade had declined in two directions—the earning powers of the company's properties were decreased and there was an increased desire on the part of all local brewers to exclude Burton beer in their houses. The volume of free trade which they could acquire was consequently immensely decreased, and they had not money with which to purchase new outlets. During the current year the sales had shown a further diminution of 7 per cent., but since Christmas the sales had only been showing a loss of 3 per cent. on last year, an improvement which he believed would continue. They also had cheaper hops. They proposed to acquire two companies which last year—admittedly a bad one—did 202,900 barrels, of which 70,000 were tied and 132,000 were free. All this could be brewed on the company's premises with practically no addition of plant, and with a very small addition of expense. The payment for the breweries would be spread by annuity over 50 years, the annuity being £77,500, of which £70,000 was on account of interest and £7,500 on account of principal. They would therefore acquire the businesses in something under 50 years. The properties were valued at £1,720,000, but had been written down for the purposes of this scheme by £300,000. The tied trade of 70,000 barrels, reckoned as giving a profit of 13s. a barrel, would bring in £78,000 a year, which would more than pay the interest and sinking fund, so that the tied trade alone covered their risk. Then they had in addition the free barrelage of 130,000 barrels, which they took at a profit of 8s. a barrel—to allow for the possibility of losing some of it—and this was the profit they would make by the agreement. The directors had received proxies to the amount of 330,000 shares in favour of the scheme, and 37,000 against.

Mr. Remnant, M.P., seconded the proposals.

Mr. Hugh Mayberry, late chairman of the Advisory Committee, closely analysed the figures as given in the printed statement issued by the directors. He strongly differed from some of the conclusions arrived at by the board. He advocated that the company should work out its own reform. The two breweries to be acquired had been unable to make headway, and the Allsopp Company was, as it were, to be taked on to them, and at what price? For assets valued at £1,726,000 the shareholders were to pay £1,432,000. He considered that a payment representing 50 per cent. of these assets would have been ample. (Hear, hear.) What would happen in the event of some of the conditions imposed in the scheme failing to be carried out? He could not understand why the concern should not be left as at present. He urged that there should be some delay in the acceptance of the proposals, at all events pending the publication of the results of the past year's working of the Allsopp Company.

After some discussion, the Chairman submitted the resolution, and declared it carried by 48 votes against 13, the proxies held by the directors not being used.

RAPHAEL TUCK AND SONS.

The fifth annual ordinary general meeting of Raphael Tuck and Sons, Limited, was held on Monday at Salisbury House, London Wall, E.C., Mr. Adolph Tuck (the Chairman of the company) presiding.

The Secretary (Mr. J. W. Bretherton) read the notice convening the meeting and the report of the auditors.

In moving the adoption of the report and accounts the Chairman delivered a lengthy address, in the course of which he said:—The total profits realised during the last five years of the business previous to its being taken over by the present company amounted to £192,741 0s. 7d., or a yearly average of £38,548 4s. 1d., each individual year exhibiting an increase in the profits over those of the present year, a fact commented upon at the time as showing the steady and expanding nature of the business. The profits for the five years, commencing with the first year of the company, namely, May 1, 1901, to April 30 of this year, this representing the first five financial years of the public company, are £250,744 3s. 10d., an amount equalling half the entire capital of the company, and giving an average profit for each year of £50,144 12s. 9d., an advance this of £11,596 8s. 8d. per annum, and representing an excess of upwards of 30 per cent. over the previous five years' profits. This result is, I venture to think, highly gratifying, and added to the fact that here again each individual year has shown its small but regular quota of increase over its predecessors, and that the last of these five years—for the consideration of which we have met to-day—proves no exception to the rule, we may fairly claim this as representative of a healthy state of affairs. Another satisfactory feature will be found in the circumstance that the fluctuations of the various departments contributing to the yearly profit total have been comparatively trifling all along, proving not only the continued soundness of the business as a whole, but of every one of its component parts. Reverting to these varied elements, I start with the premier department, which embraces Christmas and New Year cards, with its kindred branches of birthday cards, Easter cards, text cards and the like, and which continues to monopolise one of the leading places in the departmental returns and their attendant profits. The popularity of our delightful greeting missives with all sections of the public shows no sign of diminution, and this information I already venture to predict will hold good for next year's statement, for the returns from the remarkably fine collection we have placed upon the wholesale market for the coming season nearly three months ago are as satisfactory as ever, and experience has proven that the reception accorded to our collection in these first opening months is a safe indicator for the rest of the season. With regard to picture postcards, one of the most popular of all the departments of the company, I am glad to be able to place it on record that at no time have Tuck's postcards stood higher in the estimation of the public all the world over than at this moment. Our famous "Oilette" postcards still continue their great lead, and our range of novelties in this and other processes, such as the "Glosso," the "Photochrome," and many others, was never more in evidence than in our splendid line for the coming season. Referring to the branch of the company in Berlin, he said that a separate company had been formed to carry on that part of the business registered under the laws of the German Empire, which would, he thought, be advantageous to the interests of the company. A considerable increase had taken place during the past twelve months in the colonial demand for almost all the company's productions. The figures in the balance-sheet denoted that the board had at their disposal available liquid assets of considerably over £50,000 in excess of their actual requirements necessary to carry on the business. That was a fairly strong position, and one which would enable the directors to take advantage of any favourable opportunity that presented itself to add to the earning power of the business. Their total reserve stood at £67,714, or three times the amount foreshadowed in the original prospectus. He did not know whether he was likely to be asked the same question that had agitated the minds of some of the shareholders at each annual meeting during the past three years, namely, why, in the face of such satisfactory results, the directors did not pay a larger dividend. He would anticipate such a question at any rate by again repeating the statement of former years, that the building up of a strong reserve fund, which, by the articles of association, was limited to £200,000, could not but be to the interests of the company and to each individual shareholder. The result of the trading was that the directors proposed the payment of a dividend of 10 per cent. for the half-year on the ordinary shares, making 8 per cent. for the year, which would absorb £12,500. They transferred another £5,000 to special dividend reserve, and £10,000 to general reserve, and carried forward to next year £3,064.

The report was unanimously adopted.

Gas, Light, and Coke Company.

This great undertaking presents a very satisfactory report for the half-year ended June 30. Sales of gas for the six months showed an increase of 3.94 per cent. over the corresponding period of 1905, the number of consumers increasing by 13,412, and the gas stoves sold and let on hire by 14,379. The market for residual products was steady, and prices generally were maintained. Sales of gas, including public lighting and under contracts yielded £1,549,655 or an improvement of £56,909, rental of stoves advanced £2,496, and residual products gave £2,575 more. There were small decreases in rents and transfer fees, so that altogether the revenue amounted to £1,967,654, being an advance of £61,883. Manufacture of gas, however, only increased £4,515 to £981,825, although repairs and maintenance of works, &c., alone went up nearly £19,000, and coal cost more. Oil, coke, and breeze, wages and purification showed substantial savings. Cost of distributing gas was heavier by £4,741, rents, rates, and taxes were less by £2,688, and charges for management decreased £2,721. There were small declines, too, in other directions, so that the actual increase in expenditure was little more than £1,000 at £1,397,775, leaving the nett revenue larger by £60,656 at £569,879. Against this we must place a decrease of £66,894 at £181,299 in the balance brought forward, leaving the sum for disposal over £6,000 smaller at £751,178. Debenture and other interest reduces this to £554,950, and after again placing £10,000 towards the redemption fund the directors repeat the dividend at £4 8s. per annum on the ordinary stock, carrying forward about £7,000 less at £210,481. On the whole, a very agreeable display, but it may be well to point out that the annual contracts for the supply of coal have been made at prices materially higher than those of last year. The directors state that the Hybrid committee of the House of Commons appointed to consider the L.C.C. (Electric Supply) Bill decided, after prolonged investigation, not to pass the preamble. This Bill was opposed by the company with a view to obtaining protection both as ratepayers and trade competitors. Protective clauses in sundry other bills affecting the company's interest have been obtained.

The Union Bank of Australia has opened a branch at Black Range, the East Murchison district, W.A.

F. C. GOODENOUGH, General Manager. F. A. BEVAN, Chairman. H. GOSLING, E. R. DODSWORTH, } Directors.

We certify, in accordance with Clause 23 of the Companies Act, 1900, that all our requirements as Auditors have been complied with. We report to the Shareholders that we have verified the Cash at the Lombard Street Office and at the Bank of England, and have examined the Securities representing the Investments of the Bank and those held against Loans at Call and Short Notice. We have also compared the above Balance Sheet with the balances on the books at the Head Office, and with the detailed returns from the Branches, and report that in our opinion it is a full and fair Balance Sheet, properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by such books and Returns.

London, 14th July, 1906. C. F. KEMP, SONS & CO., PRICE, WATERHOUSE & CO., } Auditors.

On July 11 last this private bank owed £2,229,017 on current and deposit accounts, the paid-up capital being £500,000, and the reserve fund £111,045, making up a balance-sheet total of £2,840,062. Investments £1,121,802 form the largest item on the assets side, followed by loans to customers, £1,011,728. Cash in hand and at the Bank of England amounts to £322,332 and £300,000 has been lent at call and short notice. Bank premises are entered at £84,200.

The LIST OF APPLICATIONS will be CLOSED on or before WEDNESDAY, 1st August, 1906.

CITY OF TOKYO 5% STERLING LOAN

FOR

£1,500,000.

Created under the authority of THE MUNICIPAL ASSEMBLY OF TOKYO and sanctioned by THE IMPERIAL JAPANESE GOVERNMENT.

Secured both as to Principal and Interest by a first charge of Yen 974,500 per annum (equal at the Exchange of 2/0½ to £99,480 4s 2d) on revenues to be specially set aside in each year for this purpose.

SUBSCRIPTION PRICE . . PAR.

Repayable at par 1st August, 1936, with option to the Municipality to redeem on or at any time after 1st August, 1916, on giving six months' previous notice.

In Bonds to Bearer of £100 and £20, with half-yearly Coupons attached, payable 1st February and 1st August.

Coupons and Bonds payable at the Office of the Yokohama Specie Bank Limited, 120 Bishopsgate Street Within, London, E.C.

The first Coupon representing Interest at the rate of Five per cent. per annum on the instalments will be £1 17s 6d, payable on 1st February, 1907.

The Yokohama Specie Bank, Limited, Parr's Bank, Limited, and the Hongkong and Shanghai Banking Corporation, on behalf of the Industrial Bank of Japan, Limited, which is duly authorised by the Municipality of Tokyo to issue this Loan, are prepared to receive subscriptions for the above-mentioned £1,500,000 5 per cent. Sterling Bonds, payable as follows:—

£5	per cent.	on application,
£20	,,	on allotment,
£25	,,	on 1st September, 1906,
£25	,,	on 1st October, 1906,
£25	,,	on 1st November, 1906.
£100		

Payment in full may be made on allotment under discount at the rate of 2½ per cent. per annum.

The proceeds of this Loan will be applied to the repayment of all outstanding Loans amounting to Yen 5,505,000 (equal at the Exchange of 2/0½ to £561,968 15s.), and the balance to harbour works, street improvements, and other public works.

Besides being a general charge upon the Revenues of the City, the Municipality of Tokyo undertakes to set aside in each year a sum of Yen 974,500 (equal at the Exchange of 2/0½ to £99,480 4s. 2d.), to be applied to the annual service and to provision for the redemption of this Loan.

This amount of Yen 974,500 is constituted a first charge upon the revenues derived from the Water Rates, Special Duty Tax, Rents of City Properties, &c., the aggregate average income from which for the last five years has amounted to Yen 1,040,000 (equal at the Exchange of 2/0½ to £106,166 13s. 4d.) per annum.

Particulars relating to the population, revenue and expenditure of the City of Tokyo are given in a letter from the Consul-General of Japan in London, a copy of which is appended.

The Loan is repayable at par on 1st August, 1936, but the Municipality reserves the right to redeem at par, all or any of the Bonds on or at any time after 1st August, 1916, on giving six months' previous notice. Partial redemption to be effected by drawings in the usual manner at the Office of the Yokohama Specie Bank, Limited, London.

Scrip Certificates to Bearer will be delivered as soon as possible, in exchange for the allotment letters, accompanied by the Bankers' Receipts.

A coupon payable 1st February, 1907, for interest on instalments at the rate of 5 per cent. per annum from their respective dates of payment, will be attached to the Scrip.

The Bonds will be delivered in exchange for the Scrip Certificates as soon as practicable after payment of the last instalment.

Application must be made on the form enclosed with the prospectus, accompanied by the deposit of £5 per cent.

If no allotment be made the deposit will be returned in full, and if only a portion of the amount applied for be allotted, the balance of the deposit will be appropriated towards payment of the amount due on allotment.

Failure to pay any of the instalments at due dates will render all previous payments liable to forfeiture.

A London Stock Exchange Settlement and Quotation will be applied for in due course,

Prospectuses and forms of application may be obtained from the undermentioned Banks, viz.:—The Yokohama Specie Bank, Limited, 120, Bishopsgate Street Within, London, E.C.; Parr's Bank, Limited, 4, Bartholomew Lane, London, E.C., and Branches; the Hongkong & Shanghai Banking Corporation, 31, Lombard Street, London, E.C.; and Messrs. Panmure Gordon & Co., Hatton court, Threadneedle Street, London, E.C.

27th July, 1906.

Copy of letter from the Consul-General of Japan in London.

Consulate General of Japan,
1, Broad Street Place,
Finsbury Circus, London, E.C.
25th July, 1906.

To
THE YOKOHAMA SPECIE BANK, LIMITED,
PARR'S BANK, LIMITED,
THE HONGKONG AND SHANGHAI BANKING CORPORATION,
LONDON.

Gentlemen,

In reply to your letter of even date, I have much pleasure in certifying to the correctness of the figures relative to the City of Tokyo, hereinafter set forth, which I have obtained from the Imperial Japanese Government, viz.:—

Population		1,969,000
Estimated Revenue for 1906/7 (including Balance brought forward)	Yen	7,163,000
Estimated Expenditure for 1906/7	,,	4,922,000
Average Annual Revenues for last five years (including Balances brought forward)	,,	8,540,000
Average Annual Expenditure for last five years	,,	5,090,000
Total Debt of the City of Tokyo	,,	5,505,000

The aggregate average revenues, derived from the Water Rates, Special Duty Tax, Rents of City Properties, etc., from which the sum of Yen 974,500 is to be specially set aside in each year for the service of the 5 per cent. Sterling Loan for £1,500,000, have amounted for the past five years to Yen 1,040,000 per annum.

The authority of the Imperial Japanese Government, as required by law, for the raising of this Loan was given to the Municipality on 18th July 1906.

I am, Gentlemen,
Yours faithfully,
(Signed) MINOZI ARAKAWA,
H.I.J.M.'s Consul-General.

A Prospectus (a copy whereof has been filed with the Registrar of Joint Stock Companies) is now being issued, which, in addition to containing the information necessary to comply with the Companies Acts, states as following, viz:—

The SUBSCRIPTION LIST will OPEN on MONDAY, the 30th day of July, 1906, and will CLOSE on or before 4 p.m. on TUESDAY, the 31st day of July, 1906, for London, and WEDNESDAY, the 1st day of August, 1906, for Country Subscriptions.

THE WAGON FINANCE CORPORATION, LTD.

(Incorporated under the Companies Acts, 1862 to 1900.)

SHARE CAPITAL - - - - - £1,000,000

(Divided into 100,000 Shares of £10 each).

The Company has power to issue First Mortgage 4 per cent. Perpetual Debenture Stock and/or First Mortgage 4 per cent. Terminable Debentures all ranking pari passu in point of security, to an amount limited as hereinafter mentioned.

Applications are now invited for 100,000 Shares of £10 each at par, and £200,000 of First Mortgage 4 per cent. Perpetual Debenture Stock at 94 per cent.

Payable as follows:

SHARES.

10s per Share on Application.
10s per Share on Allotment.

DEBENTURE STOCK.

10 per cent. on Application.
24 per cent. on Allotment.
20 per cent. on the 29th September, 1906.
20 per cent. on the 31st December, 1906.
20 per cent. on the 30th March, 1907.

The Debenture Stock may be paid up in full on Allotment, or on the date for payment of any subsequent instalment, and interest will be allowed on sums paid in advance at the rate of 4 per cent.

The Debenture Stock and Debentures will be secured by a First fixed and specific charge upon the uncalled capital of the Company, and by a floating charge upon the whole of its undertaking and property. The interest on the Stock will be payable half-yearly on the 30th June and 31st December in each year, the first payment calculated from the dates of payment of the different instalments being payable on the 31st December, 1906.

In the event of liquidation the Stock will become repayable at a premium of 10 per cent., payable after payment of the principal and interest on the Stock and Debentures.

The Stock will be transferable in the usual way by registered transfer in sums of £1 or multiples of £1.

By the Trust Deed power will be reserved to the Company to issue further Debenture Stock and/or First Mortgage 4 per cent. Debentures ranking pari passu in point of charge with the Debenture Stock now offered for subscription to any amount, provided that the total principal amount of the Stock and Debentures at any one time outstanding shall not in any event exceed four-fifths of the nominal amount of the Share Capital of the Company for the time being issued, or the amount remaining uncalled and unpaid on the Share Capital of the Company for the time being issued whichever amount is the less. The Debenture Stock will be irredeemable and repayable only in the event of the security constituted by the Trust Deed becoming enforceable and the Trustees determining or becoming bound to enforce the same, but the Debentures will be capable of being made redeemable and/or repayable at any period.

The Articles of Association provide that (except in a winding up or for the purpose of enforcing any security on the uncalled capital) not more than one-fifth of the nominal amount of each share (i.e., £2 per share) shall be called up without the consent of a special resolution, and the Trust Deed securing the Debenture Stock will provide that no share shall be called up beyond one-fifth of its nominal amount (being £2 per share). The Company will have power under the Trust Deed to make calls to this amount for the general purposes of its business, but the Directors hope that it will not be necessary to call up more than £1 per Share.

No Promotion Money or Underwriting Commission has been or will be paid.

Trustees for the Debenture Stockholders.

Col. Sir CLEMENT M. ROYDS, C.B., Greenhill, Rochdale, Chairman of Williams Deacon's Bank, Ltd.

The Company has been formed with the objects mentioned in its Memorandum of Association, and in particular for the purpose of carrying on a general Wagon Finance business. The Company will finance the purchase of wagons, locomotives and rolling-stock of every kind, and let the same upon hire upon terms which will provide for the wagons becoming the property of the hirer at the expiration of an agreed period. The Company will also engage in all transactions which are commonly entered into by Wagon Companies, but it will not build or manufacture wagons or rolling-stock or engage in any manufacturing business.

Owing to the heavy first cost of rolling stock, it is not usual for coal, iron or other companies which require wagons for the purpose of their businesses to purchase their wagons outright. They generally take them from Wagon Companies on the hire purchase system. This enables them to pay for the wagons by instalments, spread over a period of years (usually five, seven or ten), the instalments being so calculated that at the expiration of the agreed period the Wagon Company has been recouped the initial cost of the wagons, and has also received interest on such cost in the meantime. The business is an eminently profitable and safe one for the Wagon Companies, as until all the agreed instalments have been paid the wagons remain the absolute property of the Wagon Company, owner plates being attached to the wagons so that such ownership may be publicly known. In the event of default being made in payment of any instalment the Wagon Company is entitled not only to sue for payment of such instalment and keep all instalments already paid (such instalments being treated as rent for the hire of the wagons), but also to claim unconditional possession of the wagons free from all claims by the hirer. It will thus be seen that the security of the Wagon Company is constantly improving.

All the Directors are largely interested in important iron, steel, or colliery companies, or other similar companies, carrying on business in South Wales, the Midlands, Yorkshire, Scotland, or elsewhere, and their intimate special knowledge of the requirements of these industries should be of great value to the Company.

The Directors are aware from personal experience that there is a very large and increasing demand for rolling stock in the coal and iron trades owing to the annual expansion in the output, and that the present time offers a favourable opportunity for the profitable investment of further capital in the business. Adequate transport facilities are essential to the well-being of all large colliery and manufacturing businesses, and it is for the purpose of providing these facilities that this Company has been formed.

The Directors have made arrangements with Mr. G. E. Cooper to act as Manager for the Company, and a contract will be entered into with him as soon as the Company is in a position to commence business. Mr. Cooper has had a very considerable experience in Wagon Finance business, having been in the employ of one of the largest Wagon Companies for upwards of 26 years past, and it is believed that his services will prove of great advantage to this Company.

The whole proceeds of the present issue (subject to the payment of preliminary expenses and brokerage) will be available for the purposes of the Company's business, and the Directors are confident that the Company will, in a short time, prove as successful as some of the principal existing wagon companies, and pay substantial dividends to its shareholders.

The following table supplies some figures with reference to the principal existing wagon companies and the dividends paid on their shares during the last six years, from which it will be seen that the companies named are paying substantial dividends on their Ordinary Shares, and such shares are quoted at large premiums. The Directors believe that this Company will be equally prosperous.

These Figures are taken or calculated partly from the Published Balance Sheets of the Companies, and partly from the Stock Exchange Official Intelligence and the Stock Exchange Year Book for 1906.

	Rate per cent. of Dividends and Bonuses on Ordinary Shares for the last six years, calculated on the amounts for the time being paid up on such Shares.						Nominal Value of Ordinary Share on 31 Dec., '05.	Amount called up on each Ordinary Share on 31st December, 1905.	Stock Exchange Quotation, 2nd July, 1906.

FORTY-SECOND REPORT OF THE DIRECTORS,

Submitted to the Shareholders at the ORDINARY GENERAL MEETING, held at the Offices of the Company, 39, Cornhill, in the City of London, on Thursday, the 19th day of July, 1906, at Half-past Twelve o'clock in the Afternoon.

The Directors beg to submit to the Shareholders the statement of the affairs of the Company for the half-year ending 30th June, 1906.

The Accounts, including the balance brought forward from last half-year, and after making provision for bad and doubtful debts, show a gross profit of £234,796 7s 8d. Allowing rebate of interest, amounting to £112,583 3s 5d, on bills not yet due, and deducting current expenses, there remains a balance of £103,256 1s 5d. Out of this sum the Directors have placed £10,000 to Reserve Fund, making it £440,000, and recommend the payment of a Dividend at the rate of 11 per cent. per annum for the half year, free of Income Tax, carrying forward £52,006 1s 5d.

The Dividend will be payable on and after the 21st inst.

By Order of the Board,
W. B. HOBBS, *Secretary.*

39, Cornhill, London, E.C., *9th July*, 1906.

Balance-Sheet, 30th June, 1906.

Dr. *Cr.*

	£ s. d.	£ s. d.		£ s. d.
To Capital Account, 150,000 Shares of £10	1,500,000 0 0		By Cash at Bankers	480,080 6 0

		£234,796 7 8		£234,796 7 8

W. B. HOBBS, *Secretary.*

W. T. BRAND, T. JACKSON, } *Directors.*

Balance brought down .. £52,006 1 5

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements, as Auditors, have been complied with.

We have examined the Securities representing investments of the Company, those held against Loans made by the Company at call, short and fixed dates, and all Bills discounted in hand. We have also verified the Cash Balances, and vouched the Securities and Bills given as collateral security for Loans, and we have now to report to the Shareholders that the foregoing Accounts agree with the Books, and in our opinion the Balance-sheet is properly drawn up so as to exhibit a true and correct view of the state of the Company's affairs as shown by the Books of the Company, except that, whilst it shows the amount of the Bills discounted which have been re-discounted, it does not show the amount of the Bills and other Securities given out against Loans shown on the debit side of the Balance-sheet.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 448. New Series. SATURDAY, AUGUST 4, 1906. (Registered as a Newspaper.) Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Finances of Japan.

Another issue, the sixth, of the "Financial and Economic Annual of Japan," recently made its appearance, but does not seem to have been circulated to the Press. We have, however, obtained a copy and studied it with interest and profit. The story of Japanese war finance is frankly told, and from many points of view is a most distressing story; for, although the war is over the burden created by the war continues, and appears for the time being to increase, the total expenditure estimated for the year ended March 31 next being 494,705,000 yen, or nearly six times as much as the total expenditure of the State 11 years before. There is an increase in the ordinary expenditure of £16,527,000, and the aftermath of war involves all manner of extraordinary charges, the aggregate of which reaches almost £26,000,000. In that heroic spirit which always marks the attitude of the Japanese Government and people towards their country the brave resolution was come to that a stupendous effort must be made to reduce the burden of the debt, and in fulfilment of this determination a sum of £11,270,491 is to be annually transferred to a sinking fund with the view to accomplish this object. In the meantime, however, further loans will be necessary, not of large amounts, perhaps, but still in sufficient sums to partly neutralise the working of this formidable sinking fund.

The powers of Western Europe might well study Japanese finance with a view to learn what war means in these days. It might help to confirm them in the disposition to live at peace with each other, and to cease this emulation in wasteful outlay which threatens them all if persisted in with more or less complete insolvency. The total extraordinary expenses connected with the war, this interesting Annual tells us, amounted to £203,073,770, and most of this had to be provided by borrowing. The total of what may be called the war debt amounted to £174,180,327, which, it is added, is three times the total amount of loans in existence prior to the outbreak of the war, and forms an unprecedented burden upon the State. And it is still being added to in various ways, and the development of Manchuria, of Korea, as well as of the islands of Japan promises to involve appeals to the foreign capitalist for many years to come for the means wherewith to make progress. That Japan may surmount her burdens, and, thanks to the splendid prestige she has acquired in Asia, grow into a great and once more independent State, independent that is of the foreign creditor, is what all her friends hope for, but the hope is unquestionably dashed at times by doubts, because the task laid upon her is so formidable.

One has only to look back at the near past and to note how small the revenue and expenditure of the nation was until a few years ago to understand what the new conditions mean. As recently as 1893-94 the total Imperial expenditure, ordinary and extraordinary, was only about £8,500,000, and it is now nearly £50,000,000. In order to meet this appalling increase in the public burdens all manner of additional taxes have had to be devised, and several new monopolies created. There is, for example, an income-tax which might afford useful hints to the Parliamentary committee which has just been inquiring into the incidence, methods of levying, and other matters connected with

our own income-tax. It has been advised to tax the rich more heavily than the poor, and in Japan this tax ranges in incidence from 10 per cent. upon incomes of 300 yen, or, say, about £30, per annum, to 55 per cent. on incomes of 100,000 yen, or £10,000 per annum. Recipients of a nett income of 1,000 yen, or £100, must pay 15 per cent. of the amount as income-tax, those who receive 10,000 yen per annum must give 30 per cent. of that income to the State, and so on until 55 per cent. is reached as a maximum. We have used the word "nett" because it would appear that certain charges are allowed for, at any rate on smaller incomes, before the tax comes into force, but on any interpretation this impost is of a weight so crushing that only the ardent patriotism which animates the minds of the Japanese people would support it for one year, let alone for decades. There is also the business tax ranging from 5 per mille to 40. A succession duty has also been imposed, the details of which we cannot be sure that we quite understand, but which exempts from the tax property of less value than 1,000 yen when it passes to the headship of a house or of less than 500 yen, no matter who succeeds. When property passes more than once within brief periods of years, there are corresponding easements and remissions, but in spite of these the tax is obviously heavy. Then there are taxes on liquor, a sugar excise, a mining tax, a tax on stock-jobbing, on bank notes, on patent medicines, and a variety of special taxes, all of which are kept in force after the war is over, simply because of the enormous amount of reparatory work which has to be done, and because the war debt is so burdensome. The new Customs tariff is higher than the old, and there are extraordinary taxes on land, on travelling, on the consumption of textiles, additional stamp duties, besides several State monopolies—the tobacco monopoly, the salt monopoly, and the camphor monopoly—and even with all the help possible from every source it promises to be difficult to maintain revenue at the required level. For, although the population of Japan is nearly 49,000,000, the standard of wealth or of comfort is necessarily low in a country where the earnings of the bulk of the people are so small. Sixpence per day is still a very good wage in Japan, and it is upon a foundation of this kind that the enormous load of State charges of every description is imposed. Moreover, large amounts of additional capital will be required in order to extend and improve the railways, to construct and repair telephones, to increase the harbour accommodation, and to develop the young but vigorous industries of the country in a variety of ways. The normal expenditure which excludes some of these items is put for the current year at £24,693,000, and the special after war budget absorbs all the balance. As the writer in the Annual says, although the war with Russia has now been brought to a peaceful conclusion, there still remain large disbursements to be made on account of the withdrawal of forces from the late theatre of war and other consequences of the war. The restoration of arms and warships to their former strength has been transferred to the general budget, but the entire supplementary charges come to £52,254,000, and of that sum £6,148,000 was so urgently required that the Government had to specially obtain the Imperial assent for its immediate disbursement. Of the entire cost of the war itself £21,721,311 came from increased taxation, £6,865,000 from special funds, £154,000 from voluntary contributions to the war fund, £51,229 from miscellaneous receipts, and £1,690,573 from proceeds of the sale of articles no longer of use in the Army and Navy, and receipts from posts and telegraphs in Manchuria and Korea.

How much the Imperial Government will have to borrow in the current year we cannot make out, but it is to be presumed that foreign money markets will not have to be applied to, at any rate to any embarrassing extent, and the Government is doing the utmost possible to stand up to its obligations by, amongst other things, restricting local taxation, so as, by pinching in that quarter, to set free more of the earnings and wealth of the people for the purposes of the Imperial budget. It is satisfactory to learn that thus far the weight of additional taxation has not crippled the productive capacity of the people in any way. For a time, at the beginning of the war, there was a pause in the foreign trade of the country, but it soon recovered, and has made steady progress ever since, and the Government does everything possible to nourish the nation's industries, devoting attention to the development of its minerals, the improvement of its flocks and herds, to the extension of cultivation and the initiation of new branches of agriculture. A great development has taken place also in native joint-stock enterprise, and a still more rapid expansion in this direction must be looked for in the near future. As recently as 1897 the total paid-up capital of Japanese joint-stock companies was only about £53,500,000, and by 1904 this had risen to upwards of £93,000,000. The foreign trade of the country, too, has expanded in quite a remarkable manner. It was under 2 yen per head, exports and imports together, in 1885, and in 1905, 20 years later, it was 16.88 yen per head, the aggregate having risen from 66,504,000 yen to 810,072,000 yen. In the last two or three years exports were swollen by the drafts made upon the stock of gold, but these have now, in great measure, ceased and the ordinary trade of Japan out and in is growing at a great pace In its further rapid development lies the main hope of success in the heroic effort the Government and people are now making to prove equal to the herculean labour the war and its consequences have summoned them to undergo.

German Trade in 1905.

If the reader of Mr. Consul-General Francis Oppenheimer's report upon the trade and commerce of Germany for the past year stopped short at the first two pages, the impression produced would be that Germany is amazingly prosperous. There was a set-back some years ago, but as early as 1903, after barely two years of depression, a revival set in, and improvement has gone on ever since, affecting not merely the foreign trade of the Empire, but the home trade as well. Factories were overcrowded with orders just before the new tariff came into force as it did on March 1 last. Foreign customers strove to obtain their commodities at the lower rates, and the great number of these foreign orders induced the manufacturers to engage fresh workmen, and to put up new machines for the extension of their establishments, the home demand being contemporaneously also augmented. The building trade is instanced as an example. It was lively throughout the year, and characterised by the tendency more marked in the rising cities to do away with comparatively recent and still sound buildings, and replace them by modern ones. All this and more to the same effect would seem to indicate that everything is happy in this tariff-bound Empire, whose military system alone ought to be crushing its life out.

And there is another side to the picture. In spite of the fact that the year was an excellent one for the banking world, that the Stock Exchange turnover was considerably larger, at least in the second half of the year, and that dividends were satisfactory upon industrial values, all is not perfectly happy in Germany. "Industrial concentration" is going on there, and that is a nice phrase which means that trusts and rings, cartels and syndicates are more and more laying hold of the producing and distributing businesses of the country. Mr. Oppenheimer instances the steel works combine which we have had occasion to allude to before. The iron industry, he says, more than any other, believes in concentration for the future success of its manufactures, and hopes thereby to strengthen its competitive power in the world's market. It will do this by selling dear at home and cutting prices abroad, not the highest form of industrial enterprise. And in the struggle to force all businesses within the ring

the weak suffer. This development, the Consul-General says, naturally affects those enterprises which are not financially strong enough to participate in the general movement. Industries in this weak position will be scrapped, and it does not matter how many people suffer so long as the combine rides triumphant over the consumers within the country.

And this new tariff is not apparently an unmixed blessing. It has led to conflicts with workmen, to an advance in wages, not great enough, however, to compensate for the increased price of food-stuffs of all kinds, for although the miners in particular get more money for their labour a considerable part of the success in this direction was neutralised by the increased cost of food, and it is now openly said that a permanent increase of cost of competition in German manufacture will be the result, and that the protectionist policy may thus undermine Germany's position in the world's market even if it has to a great extent safeguarded her home market. That is quite our view, but the struggle may be long, especially if peace continues, for Mr. Oppenheimer is quite right in saying that peace is of the greatest moment for the quiet development of commercial life, and one of the most pleasant portions of his valuable report is that in which he sketches the attitude of the manufacturing classes in Germany towards international disputes. "The Algeciras Conference," he says, "was as anxiously watched by the commercial world as by the world of diplomacy," and the economic world is coming to attach more and more importance to efforts to bring about feelings of amity between nations. Its attitude in this respect found expression in the spontaneous and widespread endeavours to bring about a better understanding between Germany and the United Kingdom, for Germany is beginning to learn how easily national ill-feeling can impede the exchange of goods. No wonder then that in Germany the economic circles more than all others felt the necessity to proclaim that there was a genuine desire to establish and foster friendly relations with Germany's great commercial customer and competitor. That is the right attitude to take, not the attitude of our fire-eaters, blue funkists, and alarmists of all shades. The Press in both countries has been guilty of many indiscretions which might in former days have disturbed the peace between England and Germany, but in spite of the simulated animosity among the scribes the common sense of Englishmen and Germans is more and more leading them to recognise each other as friendly rivals, as helpful complements in the world's industrial struggle.

And the victory of Free Trade at the last elections in the United Kingdom had the curious effect of facilitating the change in Germany from the old Customs duties to the new, the victory being interpreted as a guarantee that the United Kingdom will not, at least for many years to come, resort to protection, and that the world's market has thus escaped a disturbance such as must have been caused by any such radical change. For all that, in German industrial circles the view is not seldom expressed that the German Customs tariff has been overdone, and that every day brings fresh proofs that British industry now has the advantage over German. It is an oft-repeated argument that the British workman enjoys the cheaper food and the British manufacturer the cheaper raw material, and that in view of these facts alone the competitive capacity of the Germans must be adversely affected. So, after all, the German mind may not only come to accept friendship with England as the true, the politic, the humane, and wise attitude to stand by, but to regard Free Trade as the one sure method by which durable prosperity can be attained. "It would not be surprising," says the Consul-General, "if the ideas just mentioned as to the effects of Free Trade in strengthening the competitive power of England should steadily swell the number of the convinced Free Traders in Germany." Ah, yes, Free Trade will win yet the world over when men grow sane and seek pretexts for friendship instead of motives for strife.

Economic and Financial Notes and Correspondence.

The Saving on the Navy Estimates.

It will not be £2,500,000 this year, but may reach that sum within two years. Here again we must be thankful for small mercies, and recognise that the Government is beset with difficulties, many of them raised by the almost invincible power of the contractors and furnishers of weapons of destruction by whom our spending departments have been ruled these many years past, and incited to continual further extravagances. Practically the bulk of the saving will be the result of a slowing down in the construction of monster vessels of the *Dreadnought* type, vessels costing nearly £2,000,000 each, and more likely than not to go to the bottom, or on the rocks, like the *Montagu*, when sent out to sea, or in any the least emergency. It is here we cannot help feeling that the Government have fallen short not only of the popular aspirations, but of the true wisdom which should dictate their policy. We have never been able to discover any substantial or really intelligible reason for the construction of these monsters of the deep beyond those furnished by the engineer, the armoured plate-maker, the gunfounder, and other inventors and contractors interested in getting as much of the public revenue to flow in their direction as possible. It has seemed to us these many years past that the explosive, the projectile, has beaten the strongest defensive armoured fleet the ingenuity of man can put together, and because it is so we have held, and hold, that the construction of enormous ships, costing from £1,500,000 to £2,000,000 each, the expense of whose upkeep in time of peace is crushing, and whose utility in war may be destroyed by a tiny torpedo sent against their hulls under water, is a species of madness for which there is no rational accounting. If there is any danger to British commerce from the navies of other nations, which we do not believe, the true way surely to protect that commerce from attack is to construct and keep in a high state of efficiency swarms of sea wasps, as they might be called, of small vessels of war capable of stinging to death the mightiest monsters of the deep. Swift, heavily armoured cruisers of a moderate size, or still smaller gunboats, torpedo boats, torpedo destroyers, a whole host of vessels, costing, perhaps, from £100,000 to at the outside £400,000 each, would not only be most efficient as protectors to our world-wide commerce, but as weapons of attack or of defence against attack should a naval war break out, and we might have this serviceable and efficient fleet for less than half what our navy now costs us.

But there are other grounds upon which the continual expansion of the navy ought to be resisted, the grounds of a higher morality, and the growth of a nobler aspiration in international policy. Or put these also aside, and rest the opposition to the wasting of tens of millions every year upon a navy which rapidly deteriorates, and is soon thrown on the scrap heap, on the mere ground of business expediency, and surely the argument against the constant increase in our sea fighting appliances becomes irresistible. What motive can any nation have at the present day to attack us? What would spur Germany on—Germany being the favourite bugbear of the hour—to wage war upon England? Would our loss be Germany's gain? How could Germany gain anything substantial by such a war? We cannot see how it would be possible for her, for any foreign foe, to reap anything but irreparable loss. What we do see is a steady increase in the peaceful intercourse between the German people and ourselves. Their banking interests are becoming more and more interlinked every year with ours, and the volume of their interchange of commodities with us tends to expand steadily and profitably to both countries. Is it conceivable that peoples who are thus continually increasing their stakes in each other's good fortune,

British have learned so much from the bitter experience of the last five years as to what boss rule implies—the tyranny of the monopolist who calls himself progressive—that we may be quite sure nothing in the nature of reactionary legislation will find support, provided the legislature be not packed by the hired slaves of the cosmopolites. We do not, for the very reason that De Beers is still all powerful, like the nominated Second Chamber, and are glad that it is only set up temporarily as a sort of transition thing. There does not seem in a small community such as the Transvaal any necessity at all for a Second Chamber, except as a means of coercion and thwarting, but perhaps the creation of such a body, which is to consist of 15 members and to be called a Legislative Council, after the Australian fashion, may help to smooth over the change of *régime*. Or it may spur up Boer and Briton alike to assert their independence.

What is really the most satisfactory point of all about this grant of freedom to the people of the destroyed South African Republic is the frankness with which the Imperial Government has assumed responsibility for putting an end to the Chinese coolie system. As was announced some time ago, the issue of licences for the importation of coolies is to cease in November next, and there is a clause in the new Constitution intimating that the Imperial Government will refuse to sanction any form of servile labour in the Transvaal, even if it were passed by the Legislature thereof. No law, it says, will be assented to which sanctions any condition of service or residence of a servile character. The word "servile" has been substituted for slavery, but it means the same thing, and should herald the end not only of Chinese servile labour but of the compound system in every form. Not only has this satisfactory step been taken, but Mr. Churchill further informed the House of Commons and the country that the Robinson group of mines, in consideration of being delivered from the tyranny of the Witwatersrand Native Labour Recruiting Association, set up by the Wernher, Beit group, and its lieges and dependents, is forthwith to surrender 3,000 outstanding licences which it holds to import Chinese coolies. There will now be competition, in other words, for the black labour available, which is abundant, and always has been abundant, if it were only fairly paid and reasonably treated. And even this is not all, for an experiment with white labour is going to be tried in one of the Robinson mines, under the management of Mr. Creswell, a gentleman who has proved himself by his consistent opposition to Chinese coolies from the first to be a man capable of making great sacrifices for his convictions. We have great hopes of the success of this experiment, and believe that every facility will be given by Mr. Robinson and his colleagues to Mr. Creswell in carrying it out. If Mr. Creswell succeeded at the Village Main Reef Mine in utilising white labour to profit, no reason appears to exist why it should not be so on other mines. But this is the statement which was received with mocking laughter by our Imperial Opposition, so anxious is it to glorify Englishmen and to work for the interests of the people of this country, to open up new channels into which our redundant population may flow to its own advantage. To crown all, the claim for that £30,000,000 loan, which was dangled like a carrot before the British donkey's nose to make him consent the more readily to take an obligation for £35,000,000 of a Transvaal guaranteed loan on his back, is to be surrendered, or, at any rate, transferred to a loan of smaller amount, which may be raised to be spent on certain objects directly for the benefit of the war-wasted territories now under the British flag. Altogether it was a good piece of work that done on Tuesday in the Houses of Parliament, a piece of work, in spite of imperfections and shortcomings, that we think calculated to restore harmony to the warring elements in the much-afflicted Republics, and to mark the beginning of a new era of hopeful progress in South Africa. A free Government in the Transvaal should, above all, be good for all that is wholesome and genuine in the gold mining industry. But what cowards some of us are, going about in fear and trembling lest the Boer should get the upper hand at the polling booths, arm himself again, and arise and turn us out of South Africa! Is this the fear of the guilty conscience or of unreflecting ignorance, or what?

The Wernher, Beit Trust.

The question has often been asked of late, "What has become of the several Kaffir Trusts recently formed to buoy up the South African market?" And the question is pertinent, for despite the millions known to have been amassed the market has sunk even deeper in the morass. One Trust, the Robinson, did not come into being at all, but even had it matured it would in all probability have shared the distressing fate of those actually formed. Three weeks ago we learnt what had happened to the Gold Mines Investment Company, the Consolidated Goldfields Trust—how it lost half a million in 18 months. But the Wernher, Beit concoction has beaten that feat with ease. Its first report has been published, and we waited patiently for a copy to be sent to us in the ordinary course, but waited in vain. So we had to send for it, and do not regret the trouble. As we expected, the directors say as little as they decently can. The entire report makes no more than an ordinary paragraph, and quite half of it says nothing worth reading. The Trust was formed in May of last year, with a capital of £6,000,000 in 300,000 £20 shares, all of which, we are somewhat surprised to hear, have been issued, and are fully paid. We believe a large portion of the shares have been taken up in France; investors in this country were too circumspect to touch them, or did the sacred cosmopolites themselves subscribe? Notwithstanding the support given to the market by these millions from somewhere, prices have fallen to depths never before plumbed. Thousands of shares have been bought by the Trust, shares thrown on the market by tired and ruined holders, and the reward is loss upon loss. Try to imagine, though, what would have happened without the help of such relief institutions. What other lodgment would the mass of liquidated paper have found? Would not the slump have been more disastrous and appalling? So in a way these Trusts have done a little good—they have created buyers where no buyers were. And this is something for sellers to be thankful for; their losses have been lessened. Without this help we might at this moment be gazing on a market without a bottom.

Say the directors: "The results of the Corporation's operations for the period under review have, unfortunately, been very unfavourable in consequence of the great depreciation of South African mining securities, and it has been found necessary to set aside a large sum to meet this fall in values." This is grievous, but there is the consolation we have mentioned—the Trust itself has helped to arrest the avalanche. Nevertheless, the loss by depreciation is tremendous, just within one million and a-half. In the profit and loss account the income is aggregated at £231,823, the main item being such a composite one as this: By dividends and interest (less interest paid) and balance of realised profits and losses on closed share accounts, £215,846; credit is taken for £15,930 from premiums, and the balance is made up of £46 from transfer fees. Expenses are put down at £12,788, so a nett profit of £219,034 is shown, "before making provision for depreciation."

Under the lamentable circumstances no dividend is possible, nor are the directors brave enough to face the position as it actually is and to carry forward a huge debit. No details are vouchsafed of the paper held; we are simply given their book values. All are generically differentiated as follows:—Dividend-paying gold shares £2,355,961, interest and non-dividend-paying gold shares £1,543,911, first-class securities £1,091,857. The total depreciation on these is estimated at £1,449,480, on the basis of the end-June market prices, which reduces the book value to £3,542,249, at which figure they appear in the balance-sheet. "Then they have written off the losses?" Not at all, for lower

down in the accounts the depreciation is entered as a separate asset, and a beautiful, awe-inspiring one it is. Other assets consist of contango loans to the tune of £741,000, bills receivable £162,987, debtors £61,096, shares in other companies taken in £97,550, and cash only £7,766, the current liabilities being nothing to speak of, the sum total of the balance-sheet being £6,234,394. The auditors report that securities relating to shares and loans entered at £163,407 have not been produced to them, but they have been informed by the Wernher, Beit firm that these were held by them or their Johannesburg representatives for account of the Corporation.

In their report the directors immodestly boast that all the preliminary expenses in connection with the formation of the company, with the exception of bearer shares, have been written off, and if we accepted this statement without inquiring into the circumstances we might applaud such pseudo-magnanimity. But we find there is really no virtue in the act whatever, for these expenses, £59,070, have been debited to premiums, £75,000, not to revenue, and, as we have already said, the balance has been used to swell out the credits of the profit and loss account. This is the first exhibit, then, of the Central Mining and Investment Corporation, a concern that was, so said the promoters and the subsidised Press, destined to do wonderful things for the Kaffir Circus. It was to pump vitality into an inert, prostrate market, but instead of performing this miracle it has exhausted itself in efforts which anyone could foresee would be futile. Wealth! Yes, it still has much of this left, although such a prodigious quantity has been vaporised. But it will all come back, the directors believe; in the rare atmosphere of confidence and cheerfulness it will be reconcentrated into its original solidity. "It is to be hoped that when South African affairs become more settled there will be a substantial recovery, and your directors have every confidence that this will be the case." We shall see. But the surest way to settle South African affairs is to justify the recovery of confidence by new methods of honesty and fair dealing. Will the bosses try the experiment?

The "Fowler" Return.

This annual exhibit of the income and expenditure of the United Kingdom ought to be in the hands of every intelligent tax-payer, for it is a valuable record, taking one year with another, of the way we have been hurrying down the road to ruin. Last year's figures have now been analysed in the return just published and display, as is well known, a revenue of £143,978,000, and an expenditure of £140,512,000, leaving a surplus of £3,465,000. These figures, as Mr. Gibson Bowles has demonstrated, do not really cover the entire absorption of public money which every year takes place in connection with the administration of the Empire, but they are gross figures so far as the usual Exchequer accounts go, and in order to arrive at the nett outgoings, the working expenses of the Postal and Telegraph services, together with sundry other items, have to be deducted, with the result that the nett revenue is brought out at about £126,870,000, and the expenditure at £123,405,000, the resulting surpluses being necessarily the same in both cases. What is more interesting and useful than this arithmetical exercise is the remarkable exhibit made of the National Debt charges. This shows that the nation has not only entirely lost the benefit arising from the saving effected by the reduction of the interest upon the consolidated debt to 2¾ per cent., but has been compelled to add in various ways to the fixed debt charge. In 1891-92 this fixed debt charge was £25,000,000, including the balance devoted to the redemption of debt, which, for that year, was £1,542,000, but in 1905-6 the amount assigned to the debt charges was £28,000,000, and the interest upon the funded debt alone was about £6,350 more than in 1891-92, notwithstanding the saving of interest effected in the interval, while the interest charge on the unfunded debt has increased from £820,000 in the earlier year to £1,919,000 in the later.

Owing to the larger assignments last year of £28,000,000 to the debt service, there was £3,449,000 available for the redemption of debt, but even deducting this sum and looking at the inevitable debt charges alone, we are fully £1,100,000 to the bad on the years compared. And every other branch of the public expenditure grows in the same manner, while the debt is not only not appreciably diminished, but most years augmented. The sinking fund operates rightly enough when there is a surplus, and the terminable annuities are to-day costing the country almost as much as they did in 1891-2, viz., £6,549,000 against £6,558,000 at the earlier date, but debt is continually being added to under the barracks Act, military works Acts, and the naval works Acts, so that in 1905-6 the addition to the public mortgage under these accounts alone was £2,037,000. This really means that while we paid off debt by the operation of the arbitrary sinking fund to the tune of nearly £3,500,000 we neutralised this reduction by an addition to the debt of upwards of £2,000,000 in the form of new short annuities raised to meet the devouring requirements of the spending departments—the War Office and the Admiralty. These two "services," as they are called, alone took £62,365,000 nett in the past financial year, including this £2,037,000 of money raised by debt. It was surely time we began to reduce the outgoings in these directions, especially as continually increasing demands are likewise being made on behalf of the "domestic" or civil and pacific services of the country. One section of this return shows the amounts transferred at different times to local from Imperial funds. These charges embrace such items as contributions in lieu of rates on Government property, aids to the cost of meeting the Metropolitan fire brigade charges, certain expenses of poor law unions, reformatory and industrial schools' expenditure, and so on. In 1891-2 the total thus assigned was about £3,327,000, and in the past financial year it was £4,545,000. So we go on and the new Education Bill, when it becomes law, will add at least £1,000,000 to the public burdens; so will the efforts to deal with the unemployed, to open up the land for the small cultivator, and a thousand things besides. The uprising democracy must be housed, fed and clothed with decency, must be amused and instructed, shielded from disease, and given facilities for social progress, and all this costs money, ever more money. Grumble as we may, progress in these directions is imperative.

Tanganyika Concessions.

The sudden lift-up of the shares of the Tanganyika Concessions in the end of last week, so perplexing to the market, proved merely to be an intelligent anticipation of events. The event is the publication of the annual report, but we fail to see how the contents of this justify the rise. It certainly shows that some further progress has been made towards the goal the company is endeavouring to reach, but circumstances compel the progress to be slow, and it cannot be foreseen when the date of profit-earning will arrive. Though the accounts are published, it is not the intention of the directors to convene the annual meeting yet awhile, in view, they explain, of the negotiations now being conducted by Mr. Robert Williams for the formation of a mineral company in conjunction with the company's Belgian co-partners to include the Tanganyika's interests in Katanga. These negotiations, though well advanced, are not sufficiently complete to lay before the shareholders. So the meeting is postponed "until such time as the matters in question are ripe for discussion." This may prove to be an affair of a few weeks only, but in any case the meeting will be called between now and the end of October. As an interim report was issued last November, there is not very much additional information to give. At the Ruwe mine, where the gold mining operations are mainly carried on, the washing for gold has resulted

in a total output to May of 9,175 ozs., work being suspended in the early part of the year owing to the shortness of native food. Development work upon the reef has been carried on at water level for over 800 feet, and boring by diamond drill is being carried out in order to prove the bed below the water level. A small quantity of the ore has been sent to London, and experimental tests have been made with different concentration tables in order to ascertain the best method of saving the values. Other ore is *en route* for England. No further work has been carried out on the copper mines, the values of these having already been proved, and samples of ore are being tested in order to find out the most economical method of treating it. The tin discoveries made to date are declared to be very important, the area of the tin belt extending for a distance of 110 miles, whilst the further developments carried out have confirmed all previous reports as to the importance and value of the Kansanshi mine. The engineers state that so long as the reefs maintain their present strength this mine will yield upwards of 100,000 tons of ore for each 100 feet in depth. So far the ore exposed averages about 20 per cent. in copper. In the profit and loss account the income is put at £5,456, of which £4,287 is profit on the gold from the Ruwe mine for thirteen months to the end of June. Expenditure totalled £9,843, so there was a loss of £4,387, which is debited to the share premium account, reducing it to £220,771. Current liabilities are at £32,803, but these are nearly covered by cash.

Vogelstruis Consolidated Deep.

We feel a certain human sympathy for the directors and shareholders of the Vogelstruis Consolidated Deep, as we feel sorry for all South African mining companies that want money and cannot get it. There are directors' fees to pay, for one thing, and unless they are paid these servants of wisdom might as well throw up their jobs. No one can expect them to toil in vain, even to plan abortive schemes for raising the wind when there is not even a shilling's worth of silver to put in their purses. Not that the company has been without plenty of the one thing needful in the past. But money is soon dissipated when boards are in the way of it, and the Vogelstruis has spent hundreds of thousands, and the shareholders seem as unlikely as ever to get any of it back. The present company was formed as long ago as 1895, being then a reconstruction of the Vogelstruis Deep. Only as recently as January, 1905, it was decided to reconstruct a second time, and the arrangements then made placed £107,404 at the disposal of the directors, after paying off loans and other liabilities. Where has all this money gone? A circular explains that up to May 31 last £60,000 was spent on the property, mostly in shaft sinking and development, £29,332 was required for redemption of and interest on debentures, £6,649 defrayed general expenses, and, these things valiantly done, a balance of some £11,471 was left. Practically the whole of the 196,500 shares offered to the shareholders were taken up by the guarantors, and we cannot feel disgusted with those other folk prudent enough not to buy them. "The completion of the scheme," the circular bewails, "depended upon the successful issue of the 80,000 shares which the board was given the right to issue, and which are under option at 30s. per share to July 25, 1906. Owing to the state of depression which exists, the issue of these shares on those terms is out of the question, and it is on account of the failure of this part of the scheme that the present difficulty has arisen." This we can easily understand, for difficulties do arise when a company has not a sou in its coffers, but it does not cogently follow that even were the 80,000 shares placed at the high figure of 30s. apiece similar difficulties would not arise a few months afterwards. Shareholders are assured that the results of development work have been very satisfactory, but this is a relative term, for those who have put their money in this mine are not likely to feel satisfied unless they get dividends. If they can see no prospect of these they are not to be blamed for cautiousness. Even on the showing of the directors profits are a long way off. They estimate that the expenditure of a further £65,000—and no doubt this is the minimum, not the maximum—would bring the property to the producing stage, but the first profits would be devoted to meet the cost of further development and to increase the mill from 40 to 60 stamps. As, however, the money is not being provided, work on the property has been restricted. The directors, says the circular in the concluding paragraph, feel it unnecessary to refer to the causes of the depression, "but you will appreciate the fact that its existence makes it uncertain whether they will be in a position to submit a satisfactory proposal for your consideration. They are sparing no efforts in that direction, and they feel that if these efforts be unsuccessful the shareholders must be prepared to afford practical assistance, after consideration of the information submitted." If the shareholders have not been too eager to part with their money in the past, we fear the hazy prospects here foreshadowed will not make a more seductive impression on them.

The New Railway Law in the United States.

If we may judge by the comments of the New York *Commercial Chronicle* and other papers interested in upholding most things as they are on American railroads, on the new Hepburn Railroad Rate Bill which will soon come into effect in the American Union, it having been signed by the President on June 29, the American people are at last going to get a little of their own way with the railways. It is a drastic measure, the terms of which deserve careful study in this country especially by those who are agitating to bring our railways into some degree of effective control by the national authority. Whether such a measure could be passed by the British Parliament may well be doubted, but the whole tendency of modern legislation is to reduce the great railway carriers to some measure of subjection to the popular will. As interpreted by papers like the New York *Commercial Chronicle*, this Hepburn law seems to be designed to establish an absolute dictatorship over the railroads through an independent and autocratic interstate railroad commission. The powers of that body are indefinitely enlarged so that it will be able to fix through rates by its own judgment and without appeal, to order the railroads to keep their accounts in a specified form under severe penalties, and to put a stop to everything in the shape of rebates, favouritism in freights, facilities, or anything else. In this respect the law is extremely severe, and penalties of a very onerous description for violating any of the orders of the commission are imposed. The commission is authorised to determine and prescribe what will be the just and reasonable rate or rates, and if its orders are violated those guilty of doing so may be fined $5,000 for each offence. In other instances terms of imprisonment ranging from one to three years may replace the fine for disobedience.

Still more drastic is the enactment with reference to the owning of mines or other undertakings by railroads, but this part of the law does not come into operation until May 1st, 1908. The clause dealing with this common form of railroad enterprise—and we fear railroad corruption—prescribes that it shall be unlawful from the date given for any railroad company to transport from any state or territory in the United States to any other state or to any foreign country any article or commodity other than timber and the manufactured products thereof, manufactured, mined, or produced by it or under its authority or which it may own in whole or in part, or in which it may have any interest direct or indirect; except such articles or commodities as may be necessary and intended for its use in the conduct of its business as common carrier. We are bound to say that severe as this measure seems the railroad interests have brought the punishment upon themselves. Middle aged people in this country know well the history of the Reading coal properties and of the frightful loss their acquisition by the railway company involved upon

its stockholders. But all the big companies have systematically become possessed of mines and it is out of their dealings with property of this description that so much of the favouritism in rates has arisen. They have gone so far not only in owning property of this kind but in leaguing themselves with trusts like the Standard Oil Trust, the Beef Trust, the Ice Trust and so on, as to have created in the minds of the American people a fixed determination to bring them to order, to compel them to deal justly between one customer and another. Naturally the howl raised by papers published in the interests of the railroads and trusts is piercing, but the fact remains that if the railroads had stuck to their business as common carriers and acted impartially towards the community this Hepburn law would not have been called for. If it fails we may be sure the democracy will next agitate for confiscation, and that such a danger lies a-head is a consideration which investors must never overlook.

American Business Notes.

Last week's return of the New York Associated Banks showed an increase of £668,000 in the reserve, bringing the total up to £56,784,000. But, thanks mainly to an increase of £2,550,000 in the loans and discounts, the liability of the banks on deposits rose by upwards of £3,000,000. It follows that the surplus reserve was only £3,778,000, or fully £100,000 less than in the previous week, and Mr. Noyes, the Financial Editor of the New York *Evening Post,* in his last week's telegram to the *Observer,* points out that the surplus is now lower than at the corresponding date in any year of the past decade, except 1905, 1902, and 1889, all of which years witnessed a violent money squeeze and a deficit in the reserves during the ensuing autumn.

This able financial writer also points out that the City of New York Loan was not a conspicuous success. The average bids for the $12,000,000 offered were not only the lowest for the past two decades, but within a fraction of the minimum price at which the city's charter allows it to place loans. This result, he adds, is taken generally as evidence that capital is excessively tied up in other engagements, and the inference is drawn that the New York market must rely on Europe to finance its operations in the coming season. European purchases of American stocks are probably essential to continued speculation for the rise. New York bankers appear to be of the opinion that they can draw large amounts of gold from London in the next few weeks, but we do not agree with this, simply because they cannot sell their securities here in adequate amounts.

Mr. H. H. Rogers and Mr. William Rockefeller, brother of the Standard Oil magnate, have announced that they withdraw from the board of trustees of the Mutual Life, and Mr. Charles A. Peabody, the president of the company, has intimated that he does not intend to be a candidate for re-election. Mr. Rogers in his letter of resignation repudiates insinuations that during his connection with the Mutual for 28 years he used his position as trustee to benefit the Standard Oil Company, and says it was the other way—that himself and Mr. W. Rockefeller brought business to the Mutual and its allied companies that brought them much profit. In connection with the nominations to the new board of the Mutual, there was great surprise that without even consulting them four of the more prominent men belonging to the list of the International Committee, Judge Gray, Colonel Shook, General B. F. Tracy, and Mr. H. N. Higginbotham, were placed on the ticket of the Mutual administration. All four have repudiated this action of the Mutual, and have declined to serve. The public is at a loss to understand the motive of the step taken by the Mutual, as it could not possibly strengthen its position, now thoroughly shaken in public estimation.

Among undesirable American habits being introduced into this country is that of gum-chewing. It is both unsightly and unwholesome, but the report of the American Chicle Company or Chewing Gum Trust, which was presented to the stockholders at the annual meeting held in Jersey City, N.J., U.S.A., on July 17, shows it to be both popular and profitable. About 85,000,000 more pieces were sold last fiscal year than the previous one, and the nett profits for the year were $1,404,000. The report stated that the company's product had invaded England, and that a very successful business had been done in London during the past year.

A despatch to the *New York Herald* from Washington of July 17 states that the dissolution of the Standard Oil Company is now the object of proceedings which the Department of Justice is preparing to take against that corporation. The means the Government is said to rely on to accomplish this undertaking is to get officials of the railways that have been giving rebates to the Standard to turn Federal evidence, and furnish the material for conviction under the Sherman Anti-Trust law and other statutes that would involve the dissolution of the company. The prosecution will begin in September. The indications are that there is a good deal more behind the change of policy on the part of the Government in deciding to prosecute the impersonal corporation instead of the persons directing its affairs than appears on the surface. The result of the prosecutions, which, according to report, will be simultaneous in several States, may disclose some very curious manœuvres on the part of persons and institutions now invisible.

American diplomatic and consular agents in Japan are sending some remarkable reports about the financial and commercial operations being undertaken by the Japanese Government in Manchuria and in Japan itself. A despatch from Mr. Miller, United States Consul-General at Tokio, says that the return of the Japanese Premier, Saionji, from a tour in Manchuria and Corea was followed by a meeting of the Elder Statesmen, at which his plan for the Government management of commerce and industry in Manchuria was discussed. The scheme includes the protection, supervision, development, and practical nationalisation of Japanese industries. The Government and private capitalists are to co-operate for the working and developing of the railways, mines, and forests of Manchuria, and a financial combination will advance money at 4½ per cent. on cotton goods, lumber, and all other kinds of manufactures of Japanese origin for export to Manchuria and Corea. The development of the wheatfields and cattle raising in Manchuria will, it is believed, in a very short time render Japan entirely independent of foreign supplies of flour and meat. Almost needless to say that there is a good deal of concern at Washington over this new aspect of the Japanese policy in the country that has come under their control as a result of the late war, and that an effort is being made to discover what meaning is to be attached to the phrase "the open door" under the circumstances.

Tremendous progress is shown by the United States Steel Trust in its statement for the quarter ended June 30 last. This shows, according to the telegraphic summary, that the nett earnings of that period amounted to $40,125,000, as against $36,634,000 in the March quarter and only $30,305,000 for the June quarter of 1905. After providing for sinking fund, depreciation, &c., and interest, the balance is $24,536,000, as against only $11,872,000 for the March quarter and $16,876,000 for the June quarter of last year. Out of this the quarterly dividend at the rate of 7 per cent. per annum on the preferred stock takes $6,305,000, which still leaves $18,231,000 against $5,567,000 in the previous quarter and only $3,071,000 in the June quarter of last year. From this handsome balance of £3,650,000 the directors have decided to give the common stock a dividend of 1 per cent., the first distribution since 1903. It is to be paid in two quarterly instalments, and the stock reached 40 on the Wall Street Stock Exchange last Wednesday afternoon. It is stated further that the

unfilled orders on the books amounted on June 30 to 6,810,000 tons against 7,019,000 tons on March 31 and 4,830,000 tons on June 30, 1905. Could anything be more stupendous?

American enterprise is stretching out its hands into India. A Schenectady, New York, establishment has obtained the contract for supplying the machinery required for the new electric railway to be built between Srinagar, in Kashmir, and Abbotabad, in the Punjab, a distance of some 165 miles. American participation in other enterprises in India is spoken of.

Compared with 1904, it appears that the life insurance companies doing business in the State of New York in 1905, issued 83,396 fewer policies, with a decrease of $151,724,854 in the amount of assurance written. There were 70,934 more policies terminated in 1905 than in 1904, and $98,548,766 more insurance. These facts are contained in the 47th annual report of the State Superintendent of Insurance, issued July 21. It states that the terminated policies are set forth as follows :—

	Number.	Amount. $
Deaths	50,290	123,952,831
Maturity	12,263	28,201,579
Expiry	94,203	171,800,963
Surrender	82,636	191,416,929
Lapse	315,854	452,759,491
Change	4,926	57,538,123
Not taken	96,987	170,831,828
Total	657,159	1,196,501,744

The policy business for 1905, the industrial not included, shows that the New York State companies issued 597,379 policies insuring $966,848,898, and terminated 430,250 policies insuring $785,982,331 ; while the companies of other States issued 420,338 policies insuring $766,252,613, and terminated 226,909 policies insuring $410,519,413. On December 31, 1905, the gross assets of the New York State companies were $1,590,990,206—an increase of $104,505,100. The liabilities of the same companies were $1,368,242,050, and the gross surplus (including $3,965,000 of capital) $84,804,500 ; special funds, $138,015,252. The income of the New York companies is given at $361,744,172—an increase over 1904 of $17,278,887.

The 42 casualty and fidelity companies doing business in the State of New York reported assets on December 31, 1905, to be $78,546,287 ; liabilities, except capital, $37,598,977 ; capital, $19,710,100 ; nett surplus, $21,237,209 ; income, $48,335,214 ; disbursements, $42,349,166.

Reports have reached New York of extraordinary finds of gold in a district some 80 miles north of the Cobalt silver deposits in the Canadian province of Ontario. Prospectors are said to be rushing in from every direction, and large areas are said to have been "blanketed" by speculators, which, under the mining laws of the province of Quebec, in which the gold field lies, can be done for three months on payment of $5 per square mile. There are, however, cautious persons who advise waiting until those who have gone in send out substantial results. Meantime, finds of all kinds are reported from the Cobalt district itself, and out of one working of smaltite over $250,000 worth of ore have been taken since last autumn.

Mr. Stilwell, president of the Kansas City, Mexico, and Orient Railroad Co., is trying to place $15,000,000 of bonds in Europe to complete the building of the line from Kansas City to the Mexico Pacific. The road is being built wholly on debt, as its outstanding indebtedness and that of its subsidiary construction companies amounts to between seven and ten millions of dollars. There have been issued $5,242,000 first mortgage 4 per cent. bonds, and, in addition, some one-year notes which were put out by the International and the Union Construction Co. with a bonus of stock 18 months ago. In August, 1905, an agreement was made with the St. Louis Union Trust Co. to secure $2,000,000 car trust bonds.

Mr. A. B. Stickney, president of the Chicago Great Western Railroad Co., has published an analysis of the new inter-State commerce law, from which it is to be gathered that the benefits to shippers will depend on the way in which the Government officials perform their duties of supervision over the rates and schedules of the railway companies. Mr. Stickney says in one place that "the schedules which have been made, and which are now in force, disregard the plain provision of the law, inasmuch as even the original schedules are so constructed that no layman can by inspection determine for himself the legal rates." He further says that "many of the amendments and rules have been made obscure by ingeniously constructed, ambiguous language, designed to give the issuing company some temporary advantages over its competitors." Starting with the original schedules filed with the inter-State Commission at the time of the passage of the original law in 1887, amendments in the form of schedules and circulars containing rules, changing some rates and leaving others unchanged, have been filed from time to time until at the end of November, 1905, the commission reports that there have been filed with it 2,315,991 schedules, including supplements, circulars, &c., affecting rates, an average of over 400 per day for 19 consecutive years.

A Washington despatch to the *New York Herald*, of July 24, states that the issue of $30,000,000 2 per cent. Panama Canal bonds was oversubscribed nearly 15 times. The aggregate of the bids was $445,000,000, and the average price offered 103.95. When the Secretary of the Treasury advertised for bids for these bonds, he offered the national banks as an inducement to them to enter into the competition, to make deposits of Government funds with them to the amount of one-third of the par value of the bonds they would purchase or offered to buy at 3¼ premium or more. As a result, the Treasury has made the allotments of Government funds among the banks, nine New York State national banks receiving $2,100,000, of which one, the Hanover National of New York City, had $1,400,000. The deposits, which were withdrawn some time ago from 300 small depository national banks, will, Mr. Shaw has announced, be restored to them to the extent of $50,000 to each.

It is said that the United States Zinc Co., formed two weeks ago with a capital of $1,700,000, is a subsidiary of the American Smelting and Refining Co. The control of the stock is owned by the Smelting Trust, which recently bought out German interests in the property. The mines are situated in the Pueblo district, Mexico.

Passing Events.

The decision of the House of Lords rendering the De Beers Company liable to pay British income-tax upon its profits should have far-reaching consequences. If a company registered in Cape Colony, but whose principal seat of business is in London, must pay income-tax here upon its profits, what about the numerous companies registered in Pretoria, but which also perform their chief administrative, or at any rate financial, operations on the London market? Will not the profits of companies like the Consolidated Gold Fields, Rand Mines, and other similar finance organisations be also compelled to contribute to the British Exchequer? The point is interesting, not so much because such a contribution might have some effect upon the profits left to distribute amongst shareholders, but because it will affect the masters of finance by whom such companies have been organised, and to whom the bulk of the profit resulting from their operations has hitherto gone under one guise or another. The more they pay in taxes the less will they have for the game of politics and Press corruption.

We are sorry that the debenture holders in the Beira Railways have been so supine. In spite of all the efforts of their committee they allowed the Chartered

Company to beat them at Monday's meeting by votes representing £11,000 more stock than the committee could muster. Altogether £775,000 worth of stock was voted on out of £1,100,000, leaving £325,000 stock unaccounted for. It seems a pity after all the exertions made to compel the Chartered Company to behave with decency to the creditors of this railway the results should have been so poor. The Chartered Company holds £120,000 of the debentures itself, the City Editor of the *Pall Mall Gazette* tells us, which has been pawned as security for money advanced, but it was voted on all the same, and contributed materially to the defeat of the committee. We hope one more effort will be made, and that the supine debenture holders will really wake up and look after their own interests.

As we intimated when dealing with the late Mr. Beit the other week, his fortune would not seem to be so stupendous as we have been taught by the millionaire-worshipping Press to expect. The day is not so far distant when what is called expert testimony was cited to the effect that Mr. Beit was worth any amount up to £100,000,000 sterling, and now his will has been provisionally proved for a sum of £3,000,000 only, and, though in all probability this represents only part of his fortune—when the whole is ferreted out its total might reach a figure as great as the £6,000,000 or so of the late Cecil Rhodes—we should not be surprised if it turns out to be the larger part. Probably the British Exchequer will never discover what the estate really amounts to, for, although a naturalised British subject, Mr. Beit was still a German, a native of Hamburg, and it would not be in accordance with his principles of business if he allowed anything like the whole of his possessions to remain within reach of our Inland Revenue officials. As it is, some sensible addition will be made to the Exchequer receipts by his death, and we are always disposed to be thankful for small mercies.

Shareholders in the Fresno Copper Co. were in a state of considerable excitement at the meeting held in Glasgow last week. They met in order to deliberate, as calmly as shattered nerves and lost hopes would allow, upon the report of a mining expert who had condemned the mine. Only a short time ago there was considerable activity in Fresno shares on the strength of glowing reports, the price being manipulated to over £3. Naturally enough, shareholders dreamed blissful dreams of incomputable wealth, hence the more staggering is their disillusionment. For no sooner was the condemnatory report issued than the price fell flop to two shillings and the visions of airy fortunes collapsed. The chairman said the report took the directors completely by surprise, but as the opinions of the experts who had examined this particular mine were at variance he suggested another examination. One shareholder wanted the late manager prosecuted for alleged misrepresentation, but the chairman answered: "We do not know where he is. We can only set detectives to trace him," whilst the solicitor did not think the company had grounds for a prosecution. However, the upshot of the meeting was, after long and heated discussion, a decision to send out Mr. McArthur and to appoint a consulting committee of five.

From quarters whose precise localities cannot be discovered by searching, come statements calculated to disturb the mental serenity of West Australian mining shareholders. On the face of them the rumours are somewhat exaggerated and sensational, for they assert that "vast" sums of gold are lost to the companies through thefts. We can imagine that a little pilfering goes on, for the temptations are undoubtedly great, and cleverness can elude diligent observation, but we do not think shareholders lose much from this in comparison with their losses from deliberate dishonesty on the part of some of the managements. Instances of this have frequently come to light, but no one can believe that it is entirely suppressed through belief that virtue of this kind pays. However, the Coucil of West Australian mineowners have thought fit to publish a manifesto on these gold thefts. In this they say the evil is not to be attributed to the absence of vigorous supervision on the part of the managements of the companies.

It is well known, at any rate in Western Australia, the circular proceeds, that every possible precaution is taken by the mine managers against these peculations, but their efforts are, in many cases, rendered abortive by the leniency of the existing laws, and their still more lenient administration, which so often nullify the efforts of the police in endeavouring to bring guilty parties to justice. The Chamber of Mines has suggested certain amendments of the existing laws with a view to imposing greater restrictions on gold dealing, and heavier penalties in cases of conviction for improper dealing or theft. Should these be carried into effect it is anticipated that gold stealing will be reduced to a minimum within six months. In conclusion, I should state that, while it is unfortunately true that thefts of this nature are still frequent, the annual loss to the gold mining companies has been greatly exaggerated.

The Peruvian Corporation issued in the end of last week a letter summarising its long and futile negotiations with the Government of the Republic. The sum of it was that all attempts to come to an agreement have failed, and the blame is naturally laid upon the Government of Peru, which the directors of the Corporation say made demands it could not accede to. It has been a long drawn-out business, and at one time it seemed as if an agreement were likely to be reached. The Corporation deputed Mr. Shearman, who for many years was the head of the house of W. R. Grace and Co., of Lima, to represent it, and that gentleman submitted to the Peruvian Government no less than seven alternative bases on any of which he offered to make arrangements, and, failing an agreement on any of the terms proposed, he offered to submit to arbitration at the Hague all the questions at issue; but the Government would not hear of this, and formulated eight counter propositions, which the directors of the Corporation found to be inadmissible. What these propositions are it may be as well to put on record:—

1. To cancel the obligation to construct 160 kilometres under the contract of 1890. 2. To cancel the annuity of £80,000. 3. To cancel all claims on both sides, including accounts due from the Government for railway services, &c. 4. The corporation to construct a railway from the port of Ilo to the Southern Railway (100 kilometres more or less), and a mole or pier at Ilo, the Government of Peru granting in consideration thereof 35 annuities of £24,000 each; the railway and mole to be delivered up to Peru at the expiration of the contract of 1890 (*i.e.*, in about 50 years) on payment of its appraised value; the mole to be worked by the corporation for, probably, 70 per cent. of the gross receipts. 5. To cancel the contract for the construction of the Mollendo breakwater, the Government recognising, at an appraised value, the capital already expended in useful works. 6. The claim by Peru regarding the liability of the corporation for the debt contracted by President Iglesias with the Chilian Government (not exceeding two million sols) to be submitted to arbitration. 7. The corporation to be free from all taxation for 35 years. 8. The Cerro de Pasco question to be excluded from the settlement so proposed.

The news from Russia will distress all sympathisers with the efforts of the people to acquire constitutional freedom. We are not so downcast at the failure of the mutineers at Sveaborg, Cronstadt and elsewhere to gain the upper hand as that the outbreaks should have occurred at all. Liberty, enduring and beneficent, is not to be attained by revolt and massacre, but by passive resistance. If the Russian people were capable of rising to the heroism of eschewing drink they would do more to bring the autocracy to its senses than any number of sporadic revolts and strikes. The way of assassination is well-nigh equally futile and quite as mischievous, for murder breeds murder always, and the powers that be, fighting for their place and power, for their lives often, are sure to become more and more brutal in their reprisals the more they are goaded by revenge and fear. Witness the assassination of Mr. Hertzenstein. Reaction may not ultimately triumph—cannot, indeed, do so in the existing economic condition of the Empire—but it may gain a new lease of life through the divisions, the blunders, the precipitancy and the crimes of some of the disunited factions now fighting for liberty.

Critical Index To New Investments.

Llandudno and District Electric Tramway Construction Co., Limited.

This enterprise, if not the present company, has really been in existence for some time. As far back as 1898 an order was obtained for the construction of a system of electric light railways between Llandudno and Colwyn Bay in one direction and between the famous Welsh watering place and Deganwy, near Conway Castle, in another. Construction was commenced quite a long while back, but financial and other difficulties cropped up, and progress was interfered with after work to the estimated value of £20,000 had been accomplished. But a contract has now been entered into under which the line will be completed for a sum of £73,650, and this Construction Company has been formed in order to provide the money. It has a capital of £100,000, in shares of £100 each, and during the week offered 775 of these shares for subscription. Whether public money was really wanted seems a little doubtful, because the prospectus was not flourished about in the usual way, and the Electric Conversion Syndicate have agreed to find all the capital now offered for an underwriting commission of 5 per cent. and an overriding commission of 1 per cent. on the nominal amount. Quite a host of contracts have been entered into, and all kinds of people seem to be interested in the enterprise, but, generally, the payments to be made are small. Mr. Stephen Sellon, who, by the way, heads the list of directors, works out a nett profit of £12,300 per annum, which sounds all right, but it is to be noted that no depreciation is allowed before arriving at this figure. That fact must be carefully borne in mind, because later on, when the tramways are finished and working, they will be turned over to another company having a capital of £160,000, £80,000 in 4½ per cent. debentures, and £80,000 in ordinary shares. This will be the company that the public will be asked to subscribe to, but with a promotion profit of £60,000 staring them in the face, they will hardly be keen. Unless, indeed, the enterprise turns out a very great success.

Leonor Nitrate Co., Limited.

Some of the regular nitrate people are connected with this new venture. It has a share capital of £170,000 in £1 shares, all but seven of which will be issued in part payment for the property to be acquired. The public are now invited to subscribe to an issue of £120,000 in 5 per cent. debentures, meaning that outsiders are asked to find the money for equipping and working a property which will remain in other hands. It does not follow, however, that the debentures now offered are not a comfortably secured investment of the second class. The company takes over a property, which will be specifically mortgaged in favour of the debenture holders, situated in Antofagasta, Chili, about nine kilometres only from the main line of the flourishing Antofagasta (Chili) and Bolivia railway, and some 145 kilometres from the Port of Antofagasta. Machinery and plant in course of erection will also be taken over. The property consists of about 1,500 English acres, and the company has been granted a quota of 1,000,000 quintals, which will give a present effective output of 700,000 quintals. Cost of production being estimated at 5s. per quintal f.o.b., and selling price being taken at 8s., which is considerably below the present figure, the annual profit on working is brought out at £105,000. Compared with this the annual debenture charges of £16,000 seem quite trifling. Such sum includes provision for redemption within nine years at not less than £105, or sooner under certain conditions, so that the debentures seem to offer a fair chance.

Mr. N. A. Cooper, inspector at the Liverpool branch of the Central Insurance Company, Limited, has been appointed assistant local manager of the branch.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and July 28, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to July 28, 1906.	Total Receipts into the Exchequer from April 1, 1905, to July 29 1905.
	£	£	£
Balances, April 1:

Treasury, July 31, 1906.

TRADE AND PRODUCE.

Wheat.—Trading has been more or less of a retail character, and on several markets no English wheat has been offered. When it has been so prices have ruled firm, but foreign has ruled dull and occasionally a shade easier. The markets have had a downward tendency all the week, with spot parcels neglected. Farmers' deliveries for the week amounted to 8,015 qrs. averaging 30s. 5d. against 7,691 qrs. averaging 32s. 3d. in the same week of last year. Imports 449,703 qrs. against 666,407 qrs. American markets have had a dull trade also, though later in the week they were better supported, bullish news from Russia and rains in the North-West, coupled with a good export

business, helping to steady them. Bradstreet's estimates of the quantities in sight east of the Rockies increased the "bear" pressure of the earlier markets, as they amounted to 39,633,000 bushels against 35,317,000 last week.

Wool.—Although business is only moderate no weakness appears in the tone of the markets. Merinos and crossbreds are steadily held, and in home-grown produce there is a tendency among growers to keep back their clip rather than accept the prices offered in the expectation of higher rather when the autumn demand comes into force. In yarns spinners are doing a steady trade, the Continent proving a good customer, and fancy spinners are better employed than they were a year ago. Some districts working in the piece trade are doing fairly well, all round Leeds factories employed in cheap and medium body are busy, but as a rule this branch is slack, and manufacturers so far do not seem to have benefited much by the easier rates for raw material.

Linen.—It is a very long time, says the *Linen Market*, since the state of the new crop was so favourable as at present. Pulling has been completed in Belgium and France; another week should see it finished in Holland, and the majority of reports in Russian crops are all that could be desired, but now the political situation with probable strikes and stoppage of shipments will have to be reckoned with. The yarn market shows an improvement in tone, and already it seems that the summer slackness is over. Prices tend upward, and contracts extending to 1907 have been given at enhanced quotations. Foreign yarns are in good demand at full rates; weft lines are firm; warp lines scarcer than ever. The manufacturing end is again busy also; all classes of goods, but particularly dress linens, are receiving a good deal of attention.

Cotton (from our Manchester correspondent).—In few sections of our market during the past week has there been anything like activity in the way of new orders being given out to producers. The general demand being met with at the moment in both cloth and yarn is unimportant. The raw cotton situation shows few changes as compared with a week ago. The tendency of prices has been lower, but there is really no particular alteration. Advices generally with regard to the new crop are of a favourable character. It is yet too early, however, to say what the crop will be, and a good deal will depend upon the weather during the next few weeks. So far, however, the position of affairs is satisfactory. In cloth for export shippers have not been stimulated by advices from abroad to anticipate future requirements. Stocks are still heavy in most of our outlets abroad, and until these are reduced there seems to be very little prospect of renewed activity. Merchants abroad hardly seem prepared to pay the prices being asked on this side. In cloth for India a few odd lots have been sold for Bombay, but the offers from Calcutta do not come up to the requirements of manufacturers, and very little for the latter place has been entered on the order books. Mull dhootie makers still complain of the lack of demand, and looms are as quickly as possible being transferred to other makes of cloth. The trade for China continues generally slow. Rather more bids have been placed before sellers, but very little can be done with them. There seems to be no development in the demand. For the smaller markets no particular fresh feature has shown itself. Buyers for the Levant and Egypt do not seem disposed to purchase more than for immediate wants. Odd lots are being put through for the outlets of South America, but the total sales have not been important. In home trade cloths the buying is in small lots. So far as can be ascertained, however, the prospects for the autumn trade are encouraging. The fancy department in this section have had a remunerative trade so far this year. Burnley goods continue fairly steady, but the business coming round is of small dimensions. T-cloths and Mexicans are generally firm, but offers do not lead to orders being placed. A rather better demand has shown itself for coloured woven goods. Manufacturers of most makes of cloth find their order lists running down. In home trade American yarns the demand has not been at all important. Users seem to prefer to adopt a hand-to-mouth policy. Only odd lots are bought to meet buyers' immediate needs. There is still some scarcity of the finer numbers of twist. In export bundles a fair trade has again transpired in doubled 32's for China, and a healthy demand has shown itself in Egyptian yarns for India. Bolton spinnings for home use have again been quiet, but rather more offers have again been mentioned for distant delivery.

In New York at the beginning of the week the cotton market opened with a steady tendency, but prices immediately weakened, only to recover a little subsequently on encouraging cables and covering by shorts. This was followed by a further decline on expectations of a bearish monthly Government crop report. This weakness continued for some time, but the close is just a trifle steadier.

Coal.—Trade is good, mostly and in one or two quarters very brisk indeed. Collieries in the North of England are well supplied with orders over the autumn. Gas coals have been put up 3d. per ton, and are now quoted at 10s. 9d. to 11s. for best, with seconds at 9s. 9d. Large quantities of steams continue to be taken at Hull for shipping purposes to the Baltic, and the requirements of the fishing fleet and the railway companies also continue to absorb heavy deliveries. The foreign trade, too, in gas coals is also brisk from the South Yorkshire and Midland districts. Welsh trade also shows improving signs. The drop in prices which looked ominous for a while has apparently ceased for the present. Inquiries for deliveries in 1907 are good, and indicate no falling off in the demands from abroad, and some heavy orders have already been placed. Shipments from the Scottish ports amounted to 236,998 tons during last week, compared with 183,544 tons in the week before.

Copper.—It is said that the position of this market is now much stronger, the recent shake out of weak "bull" accounts having had a good effect. Standard copper is apparently again controlled by strong hands. Business this week, however, has been very quiet, partly due no doubt to the universal stagnation. Buyers do not display much anxiety to deal, but on the other hand American advices are pretty good and sellers act with caution. Prices opened with a harder tendency, but gave way moderately on the slack demand. Short covering then brought about a rally, but prices were down again before the close, the figures being £82 2s. 6d. cash and £81 12s. 6d. for three months forward. Messrs. Henry R. Merton and Co. give the visible supply as 12,628 tons, against 12,195 tons a fortnight ago; the supply for the month of July amounts to 27,387 tons, and the deliveries to 27,034 tons, making stocks in England and France 7,728 tons, against 7,020 tons on July 15. The Chile charters total 1,800 tons for July.

Tin.—This market is still kept in check by the uncertainties surrounding the liquidation of the heavy August account, but America is apparently buying with more freedom and business in Holland displays increased activity. On expectations of favourable monthly statistics prices moved up sharply, helped by favourable exchanges. Inquiries to cover were numerous. The rapid rise, however, brought out sellers, and as the market lacked good support values soon gave way. Small fluctuations ensued, the close being pretty firm again on general demands with prices at £174 12s. 6d. cash and £175 for three months forward. Messrs. A. Strauss and Co. give the visible supply as 13,013 tons against 12,590 tons a month ago. The quantities on the spot and landing total 3,650 tons against 1,915 tons at the end of June. July deliveries in Holland were 1,061 tons, and in London 1,214 tons, making a total of 2,275 tons against 2,408 tons for June. Straits shipments were 4,136 tons, of which 2,610 tons are for London, 856 tons for the United States and 670 tons for the Continent.

Iron and Steel.—The season of the year, together with the approaching holiday time, have naturally had some effect upon all branches of the iron and steel markets. Business has for the most part been rather dullish; at any rate, it has been a little less brisk than has been noticeable for some time past. In the North a fair trade has been done in pig-iron and the previous week's improvement has been maintained. In Middlesbrough G.M.B. is quoted 51s. 6d. Hematite iron has been bought in goodish quantities, mixed numbers being firm at 64s. 9d. In manufactured iron and steel there is little change. In Scotland a meagre business has been done in pig-iron warrants, and with an absence of speculation the tone is dull.

Sugar.—Mr. Czarnikow's weekly circular states that the feature of the market during the week has been a pronounced increase in the actual demand from the trade in the United Kingdom as well as a stronger tone in America. Values have hardened gradually, establishing an advance of 3¼d. per cwt. in August beet and 3¾d. on foreign granulated. All offers so far have been easily absorbed here and in America, and distributors on this side, the former having paid 8s. 8¼d. to 8s. 9¾d. f.o.b. for 88 per cent. and the latter 10s. 11¼d. to 11s. for granulated and 10s. 8¼d. to 10s. 9¾d. for French crystals. In the speculative market new deliveries attracted more attention, but operators still act cautiously, awaiting further crop news. These are so far, on the whole, favourable from the Continent, France excepted; but it is too early to attach much importance to them yet, especially this year, when the weather has been so variable in the different districts, and last prices are 8s. 9d., October-December; 8s. 10¼d., January-March; and 9s., May. The American market, as has been said, showed more animation, and spot price for 96 per cent. Centrifugals has advanced 3.81 cents —9s. 9d. c.i.f. for 96 per cent. non-preferential—8s. 9d. f.o.b. Hamburg for 88 per cent. Notwithstanding the comparatively large stocks in the United States refiners seem to have become aware that the great deficiency in Java shipments this season will necessitate supplies being drawn from elsewhere. The landings in the three ports for the week were 45,000 tons, meltings 47,000 tons, leaving stocks at 321,000 tons. Business in cane sugar in the United Kingdom, Mr. Czarnikow further states, has been rather checked by the paucity of available refining grades, but where sales have been effected prices show an advance of 3d. Crystallised grocery West Indian also show a rise of about 3d. per cent.

Tea.—Indian auctions were rather smaller this week and last, total offerings amounting to 14,634 packages, and demand was slightly better, though the old season's offerings, says Messrs. W. J. and H. Thompson's circular, were for the most part neglected, the teas being nearly all red and stalky in appearance. But useful qualities showed a steadier market, and the best averages were Tingri T. Co., Hoogrijan, 1s. 2¼d.; Deohall, 1s. 1½d.; Majicajan, 1s. 0¾d.; Harmutty, 1s. 0½d.; 6,631 packages of new season's tea were sold on garden account averaging 7.27d.; 11,597 packages of 1905, averaging 7.78d. Conditions in the Ceylon market were the same, rather more buyers were in evidence, and the comparatively large supply of 32,199 packages was easily taken, bidding being chiefly among the useful and medium grades priced between 6d. and 9d. Diyanilakelle, 11d.; Meria Cotta, 10¼d.; West Holyrood and Hinfold, 10d. were the best averages. The average for the week was 6.63d. against 7.30 last year. Java had no sale this week

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended July 21, $2,334, decrease $760.

Argentine North Eastern.—Traffic receipts for week ended June 29, $21,678, increase $1,132; aggregate from January 1, $500,973, increase $36,907.

Assam Bengal.—Traffic receipts for week ended June 30 Rs. 79,386, increase Rs. 24,980; aggregate from January 1, Rs 18,54,544, increase Rs. 3,36,541.

Canadian Northern Railway.—Traffic receipts for 9 days ending July 21, $141,400, increase $48,500; total from July 1, $415,300, increase $146,900.

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent on June 21.)

Norfolk House, Friday Evening.

Money has been quite usable all week at fair rates, and the Bank return shows that the market has no appreciable surplus. On Tuesday, in fact, it had to go back to the Bank and reborrow about a quarter of the seven-day loan money paid off in the morning. This, however, was owing to the demands of the Consol settlement payments and the call on the new Russian loan Balances were more fully occupied than usual in consequence of these temporary demands, and next day all that was due by the market of the Bank was paid off without driving call money higher than 3 per cent. All week seven-day money has commanded only 2½ per cent. at the joint stock banks, and the India Council has not got a higher rate for any money renewed by it to the end of the month. But it secured 2¾ per cent. to-day on some monthly money, perhaps because the London County Council took £923,000 off the market by its bills.

The most favourable influence affecting the Money market at present is the influx of gold. Last week the Bank got practically all that came into the market, and in spite of the low French exchange it seems likely to continue to get most of the weekly supplies for some time to come. In this way the Bank of England will be strengthened against the contingencies of the autumn, and we may for the next few weeks rub along with rates much where they now are. Much of a decline is not to be expected, and there may be passing wrenches of scarcity.

Discount rates have been wonderfully steady, and brokers have struggled to get at least 1/16 more than 3 per cent. upon two and three months' remitted bills. The short bill rate, in fact, has hardened, since a sixty-day bill meant that the due date fell in October. There has also been a disposition to put up the rate on four and six months' bills to 3¼ and 3⅜ per cent., but business has been done in both these classes of bills at 3⅛ and 3 5/16 per cent. respectively. There is a good supply of paper, and in view of the autumn outlook the bill brokers are perfectly justified in keeping rates up. Were three months' bank paper to be bought at less than 3 per cent. we might find Paris taking away some of our gold, at least from the open market, and within a very short time we may count upon another effort being made by New York bankers to get gold here. It is well, therefore, that rates should be kept up, especially as money does not promise to become much cheaper than it is now all this summer.

Nothing in the Bank return calls for particular notice, for the expansion in the circulation, which amounted in the past Bank week to over £1,500,000 all told, is usual enough at this time of year. Other deposits, however, were depleted to the extent of £1,181,000, and the total of £42,395,000 at which they stand is not now very much above the minimum with which the business of the market can be carried on.

It is an indication of the generally clogged state of the investment market that the 5 per cent. loan for £1,500,000 raised by the City of Tokyo, Japan, was not fully subscribed by investors. The underwriters had to take up 14 per cent. of it, and as there were a few "stags" about who promptly sold, as well as the underwriters, the scrip slipped back to about ¾ discount. Some people say that the loan should have been offered at a lower price, and that it would have gone better, but we doubt that statement, and from what we hear in the market judge rather that the public has begun to deprecate a little Japanese demands for money, no matter what shape they assume. There is no hostility to Japan in this feeling, but very much the reverse; the market merely thinks that as Japan has such a formidable job on hand the more her rulers can restrain the tendency to borrow abroad the better in the long run will it be for her Government and people.

Next Tuesday £60,000 becomes payable on Palinas of Mexico debentures, and a like amount next Thursday on Provincial Motor 'Bus shares.

SILVER.

It has been a very dull silver market throughout the week, and prices have shown a weakening tendency. No business has been done at any time worth mentioning, the supply being at all times in excess of the trifling demand from the Indian bazaars and other quarters. Buying has been chiefly forward. The quotation on Saturday last was 30⅛d. per oz. for spot, and 30d. per oz. for two months, but it has gradually dwindled to 29⅞d. per oz. for ready metal and 29 13/16d. per oz. for forward delivery. Applications for the Rs. 70,00,000 Council drafts on India this week reached a total of Rs. 3,88,30,000 for bills, and Rs. 56,00,000 for telegraphic transfers. Of these Rs. 58,20,000 were allotted in bills, and Rs 11,80,000 in transfers, tenders at 1s. 4d. and 1s. 4 1-32d. receiving about 21 per cent. Next Wednesday another Rs. 70,00,000 will be offered.

Stock Market Notes and Comments.

We are now in the holiday season, and the Stock Exchange has what it calls a "long" account before it. Business will, therefore, be bad for some weeks, whether in speculation or investment, and there is no irresistible temptation to speculate at any point. All the interest this week has centred in the new Transvaal Constitution, which the markets have received with an equanimity hardly to be expected, judging by the talk indulged in beforehand, the ignorance exhibited, and the readiness to think the worst of the Government. What that Constitution will do for the mines no one can yet say, and we are not going to prophesy. One thing only appears to be certain—there is no scope at present for any sustained advance in the prices of Kaffir shares, of that holders may be satisfied. This week the French, for one reason or another, have been sellers of their Kaffir holdings—last week they bought back their "bears"—and consequently the effort made by our local market managers to play things up came to naught, and prices in the latter part of the week have shown the old tendency to slide. One week or month with another, it must be so, let us once more insist, while the shareholders here take no real or intelligent interest in the business to which they have entrusted their money. As a rule, they know nothing about mining or about the management of mines; they are perfectly ignorant as to the charges borne by the gross receipts of the various mining companies, and have no means whatever of making their wishes felt, even if they had any knowledge. This ignorance is the natural product of the temper animating almost the whole mass of those who have been beguiled into the South African market. They bought shares not as they would have bought a horse even, or a house, or a cow, after a more or less careful examination of the property to be acquired, but entirely in the gambler's spirit, bought for a rise, caring nothing about the industry they were embarking upon, very often knowing nothing whatever as to where the mine was actually situated whose shares they purchased. They thus became an easy prey, and until a change comes over the spirit of the tens of thousands of the people in this country now caught in the mine share gamble we cannot hope to see any material improvement in the state of affairs on the market, because we have no guarantee whatever that improved methods of extraction and more enlightened and economical management will prevail at the mines.

The one strong market this week has been that for Yankee Railroad and Steel shares. We note elsewhere the splendid exhibit made by the United States Steel Corporation for the past quarter, and it is only necessary to say here that the British public will do well to continue cautious in their attitude towards this volcanic market. As mere investments there are no American Railroad shares worth looking at at present prices, and there is precious little temptation to buy them for a turn. It may be that the financial potentates who have engineered the advance upon Wall Street and here will be able to continue to make an immense show of activity during the autumn, but they are bound to have difficulties to face before the end of the year, and the amount of credit involved in the sustenance of their enormous speculation for the rise is so great as to warn everybody who regards his peace of mind to leave the market to the professional players. It is too treacherous a place for an outsider to gamble in, and as for investment, that must not be thought of.

There should be more prospect in our Home Railway stocks, and we have no doubt at all that they would have shown a considerable elasticity, thanks to the improved dividends they have all been announcing, had it not been for the drag put upon all markets by the weakness of Consols. The Consol account has been got over this week apparently with ease, contango rates being comparatively light, although still higher than the interest obtainable on the stock, but there has been no rally in the market. On the contrary, directly it shows any little firmness—a rise of 2s. 6d. or 1s. 3d.—selling is renewed, and this may be taken as a proof that the dangerous crisis which seemed to loom over the market during the latter half of July has not been squarely dealt with, is not rooted out. The threatened insolvency, whatever it was, is there still, and promises to give us plenty of trouble between now and the end of the year. The broad result of all this is that at present we have really no large free markets on the Stock Exchange. The old-fashioned lively dealing, amid which even the tyro might play and sometimes make a little money, does not exist. The market is in the grip of syndicates and combined manipulators, or oppressed by the masses of securities held off it, pawned outside. A jobber, therefore, is seldom now able to deal freely. If he sells a security thinking he can pick it up again at some slight profit, in all probability he finds the market against him, and has to cover his sale at a loss. If he buys he often can find no one to take the stock off his hands, except at a sacrifice. All day and all week hundreds of jobbers who used to be busy making a good "book" and on the average handsome profits stand about in the markets miserably, looking at each other, condoling each other, waiting for they know not what. As for the broker, especially the careful broker, who does not "punt on his own," words would fail to depict his lot—if you are to believe all he says about it. But it is the holiday season after all, and the Russian revolution may have made such progress by October as to bring all soaring market values near enough mother earth to allow business to be resumed. Cheer up, then, and hope still.

The Week's Stock Markets.

Nothing very exciting has happened in the Stock markets this week. Dealers professed to be waiting for the Government's statement regarding the Transvaal Constitution, and made little or no attempt to

deal. They were probably glad of an excuse to do nothing, because there is no public just now to relieve them of purchases made, and continually putting stock on one's book, on which there might easily be a loss is a thankless business. Some dealers professed to be disappointed with the action of the Government on the Transvaal question, and could read all kinds of sinister possibilities into the decision to provide the country with an honest constitution, but there was nothing sincere in the grumbling, and all right-thinking people know that the proper thing has been done. The Russian news is still unsatisfactory, causing some little unrest in Paris, which was naturally reflected here, and brought about another sharp fall in Russian bonds. Gilt-edged securities were also inclined to be flat, but Home Railways kept tolerably steady, and quite a boom took place in Yankees when the dividend on Steel common was announced. The monthly settlement in Consols took place during the week, and the making-up price of 87⅞ was exactly the same as a month ago. At first lenders on stock tried to get 3—3¼ per cent. for monthly loans, but there seemed to be a good supply of money available, and the charge gradually eased off, closing about 2¾—3 per cent. Prices, however, did not respond, and finished with a moderate loss on the week. Other British funds, after showing slight strength, also became dull, but Home County and Corporation and Colonial inscribed stocks were inclined to be firm, particularly the latter.

Russian bonds are still the chief attraction in the Foreign Government market, and largely influence prices in other directions. The price of new 5 per cent. opened weak, and soon went to 10½ discount, option day in Paris for the monthly settlement causing a good deal of selling against unexercised calls. Bears were also active, and although the price recovered to 9⅞ discount, it continued very flat, and when the stories of revolts, mutinies, and bloodshed came along, a sharp break to 12 discount ensued. There was a quick recovery to 10⅞ discount, but the loss on the week is still considerable, and other issues of the country naturally sympathised. Latest reports say that the revolts have been crushed, but probably only to break out in another quarter. Peruvians weakened on the letter from the company, announcing a breakdown in the negotiations with the Government, and after recovering a little again went back. Cedulas dropped below 22, and Argentines and Brazilians showed small fractional losses at first, but ended pretty steady. Chinese and Japanese were firm. The new Tokyo loan was only a qualified success, the underwriters being called upon to take up 14 per cent. At one time the price fell to 1 discount, but it picked up again to ½ discount. Amongst European stocks other than Russians, Portuguese, Spanish, Turkish, Bulgarian, and Greeks showed early strength, but Italians were somewhat dull, and before the end Spanish and Turkish were inclined to weaken again. Central Americans were steady, and Colombians had a small rise.

The Home Railway market still absorbs very little attention, and business throughout the week has been on the smallest possible scale. The majority of the daily movements were merely fractional, but Metropolitan had a sharp reaction one day on profit-taking. No influence on the price of the ordinary stock was produced by the District dividend at 1½ per cent. per annum on the 4 per cent. guaranteed, because no one had expected anything better. Nor was Dover "A" knocked back at first by the decision of the Hamburg-American line to temporarily abandon Dover as a port of call in favour of Southampton, and South-Western deferred did not go up. Later in the week, however, when the South-Western chairman expressed the opinion that the recovered business would be permanently retained, Dover "A" suffered a sharp relapse. City and South London stock was still in the ascendant, and a recovery of 2 took place in Tilbury ordinary. On the whole, the traffic returns were considered satisfactory, although they were not always easy of comparison. The Hull and Barnsley does not declare an ordinary stock dividend at this period of the year, but the company carries forward an extra £20,000, so that stockholders may reasonably look forward to an increased return at the end of the financial year. On Thursday the North London Company announced its dividend at 4½ per cent. per annum, with an increase from £1,453 to £5,220 in the sum carried forward. This goes against the distribution at 5 per cent. per annum for the corresponding period, but on that occasion £7,000 was withdrawn from reserve, so that the return is better than it looks. The stock did not move. The dividends on the principal "Heavy" stocks are mentioned in our final paragraph.

The American railroad section has certainly been the liveliest spot in the entire market, judged by the numerous rises and the substantial gains in many instances. The players both in Wall Street and on this side have paid no heed whatever to developments and conditions affecting other markets. They made up their minds to hoist prices, regardless of events and tendencies elsewhere, and they have succeeded in their intention probably beyond their own expectations. As the week neared its close there were signs of a pause in the advance, as though the inflaters were taking breath after their tremendous exertions, and this gave an opportunity to profit takers to snatch their plunder. Despite this the improvements on balance in many cases are appreciable and remarkable, but seem far to have exceeded the limits of prudence. The best has been made of the stunning earnings of the Steel Corporation for the past quarter, and of the astounding fact that it has paid a dividend of 1 per cent. on the common stock, after standing out in the bitter cold since December, 1903. This is pointed to as evidence of the marvellous prosperity of a wonderful country and a glorious combine, but this can easily be achieved by the neglect of maintenance and depreciation. A sounder policy would have been to devote the extra earnings to this all-important necessity. Be that as it may, it has served the ends of the master players, and if they reap their harvest it must come out of the pockets of the duped. The greatest advances, ranging from $6 to $10, are shown in Chicago Milwaukee common and preference stocks, with Union Pacifics and Southern Pacifics close seconds and thirds, these movements being accompanied by rumours of an impending combination between the roads, with Harriman a vigorous "bull." No doubt the rise is the effect of clique manipulation, not of sound business, and the theory is not far-fetched that it is the effect of a contest for control. Where rises have been so general and numerous we need not particularise, for hardly one stock has been neglected. The gains range from $1 up to several.

In the beginning of the week Canadian Pacifics rose 1⅝ on the really fine showing for the month of June. Later they lost the greater part of this gain, but picked up again at the end, so on balance they are 1½ to the good at 170¼-¾. The increase in the gross revenue was $1,047,000 obtained at an additional cost of $612,000, so the gain in net revenue was $434,000. On the whole year the gross earnings total $61,669,000, the highest aggregate in the company's history, showing an advance of $11,187,000, while net earnings have jumped up from $15,475,000 to $22,974,000. This large increase has encouraged the expectation of a higher dividend than the 6 per cent. previously paid. In contrast with Canpacs, Grand Trunks have been dull, the third preferences being ⅜ lower on the week.

It cannot be said that the Foreign Railway market had any pronounced tendency, principally because business was too small to durably influence prices in either direction. Antofagasta issues enjoyed another sharp rise, San Paulo ended better on a few inquiries, and the early movements in Argentine Railways were upward, but all the active issues subsequently eased off, due to continued stories of drought in the Republic. Advices regarding the position of the railways, how-

ever, continue favourable. United of Havana opened dull, and remained so throughout, the final quotation showing a sharp fall. Leopoldina stock was heavy again, and a fall in one or two Russian railways was no more than might have been expected. Paraguay Central debentures reacted a little, and Guayaquil and Quito Railway bonds were again inclined to move down. Mexicans were dull throughout, with particular weakness in the second preference.

Miscellaneous markets were quietly steady, and in a few instances prices were inclined to improve. Bank shares were fairly firm, and there was some improvement in the shares of the South African institutions. Watney Combe issues were again good in the Brewery section, but, amongst others, Whitbread stocks gave way. A heavy fall took place in City of London ordinary stock, which was sold as low as 35. A good deal of dissatisfaction was expressed by the shareholders at the company's meeting held during the week. Ohlsson's Cape ordinary was also flat. Canals and Docks were neglected. Amongst Industrials, motor companies shares were on the up-grade again. Textiles were quite firm, the English Cotton report having a stimulating influence, and Nitrates steadily advanced. Associated Cements were dull, but Eastman Kodak was sold after the recent rise in price, and fell 5. Meat shares were a little harder, but there was next to nothing doing in Catering shares. Waring and Gillow debentures advanced 2½, Bradbury, Greatorex shares improved on the dividend, and Lister shares rose to 7. British Westinghouse preference again went down. Mazawattee Tea preference firmed up. Russian Oil shares were rather harder, and British Oil and Cake Mills attracted some attention on the good interim report. Electric Lighting and Power issues showed only small movements either way. Hudson's Bays were quiet and a little easier towards the end, and Pekins steadily lost ground. Gas Light stock was bought at par, and Insurance shares were a better market. Iron and Steel shares were neglected, but in the Shipping list Furness Withy met with some support. Anglo "A" was pressed back a little, and National Telephone preferences continue to weaken. Great Northern and Eastern Telegraph issues closed strong. Road Cars were easier in the Tramway and Omnibus section.

Stock markets are very uninteresting, quite holiday markets in fact, but they close for the Bank Holiday with a firm appearance, and the flatness noticeable in Kaffir shares yesterday has given place to a harder tone, due, it was said, to the more conciliatory tone of Sir Julius Wernher's speech at the meeting of the Central Mining Corporation. It was not at all a Jingo speech in the sense we have been accustomed to from orators like Lord Harris, the Duke of Abercorn, Mr. Rochfort Maguire, and other distinguished, if lesser lights of the Kaffir Circus and Charterland; therefore, it soothed instead of excited the minds of holders of Kaffir shares, and prices hardened, although business was still as thin as it well could be, or as holidays usually make it.

A favourable impression was also produced by the Midland and Great Western dividends, or at any rate by the balances carried forward. The Midland Company pays 2½ per cent. per annum on the preferred, and 2¼ per cent. on the deferred, the latter getting thus ¼ per cent. per annum more than a year ago, while £23,483 is carried forward against £12,254. Then the Great Western distributes 3¾ per cent. per annum, the same as this time last year, with £42,000 carried forward compared with £28,500. Prices did not move much, because the expectation was barely fulfilled, but the market was steady.

The North-Western Company's dividend was not revealed in business hours. It, too, was excellent, 5½ per cent. per annum against 5, with £96,000 forward against £74,494.

Gas.—*Rise*: Gas Light and Coke ¼, to 99-100, Buenos Ayres ¼, to 11¼-12¼, Tuscan ¼, to 10¼-10⅜. *Fall*: Continental 1, to 122-125.

Insurance.—*Rise*: Commercial Union ½, to 76-77, Employers' Liability ¼, to 9⅜-10¼, Liverpool and London and Globe ⅛, to 43-44, London and Lanc. ½, to 23-24, London Guar. ¼, to 19-20, North British and Mercantile ½, to 38½-39½, Phœnix ¼, to 32½-33½, Royal Exchange 5, to 180-190, Royal ½, to 48-49. *Fall*: Sun ¼, to 11¼-12¼, Thames and Mersey Marine ⅛, to 8-8⅛.

Iron, Coal, and Steel.—*Rise*: Cammell, Laird Pref. 1/16, to 5 1/16-5 7/16, Hadfield's ¼, to 3⅞-4⅛, Hill (R.) 1/16, to ⅛-1, Pease and Partners ¼, to 12¼-12⅜, South Durham 1-32, to 1-1 1/16, United States 1⅞, to 42-42¼, ditto Pref. 3, to 110½-111. *Fall*: Cory (W.) ¼, to 7¼-7⅜.

Shipping—*Rise*: Furness, Withy, 3-32, to 1⅛-1 1/16. *Fall*: Orient ½, to 6¼-6⅜.

Tea and Coffee—*Rise*: Dumont Pref. ¼, to 7¼-6⅜.

Telegraphs, &c.—*Rise*: Amazon ¼, to 3¼-4, ditto Debs. 1, to 84-89, Direct Spanish Pref. ¼, to 8⅜-9¼, United River Plate ¼, to 7-7½, Western Deb. 1, to 103-106. *Fall*: Anglo-American Def. ⅛, to 21⅛-21⅝, Natl. Telephone 1st Pref. ¼, to 10¼-11¼.

Tramways, &c.—*Rise*: British Columbia Pref. 1, to 108-111, Calcutta (New) 1/16, to 7⅛-8¼, ditto Deb. 1, to 103-106, Sao Paulo 1, to 140-142. *Fall*: B. A. and Belgrano "A" Pref. ¼, to 5¼-5⅜, Provincial Pref. ⅜, to 10-11.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

After hoisting prices roofwards for a whole week professionals returned to their labours on Monday morning feeling somewhat nervous. Not a few looked forward with some confidence to a

heavy relapse in prices after the rise. This would have been no surprising sequel. In all likelihood the majority of dealers expected some such contretemps. But the expected did not happen for once. Prices kept up wonderfully well, notwithstanding the admitted suspense. Not that any business worth talking about was done, but some support was evidently given by the controlling houses, who did not desire to see a collapse. It was Option Day in Paris, but the position of affairs there really favoured the Kaffir Circus. All were, of course, awaiting eagerly the promised statement in Parliament on the following day, and various anticipatory conjectures were naturally outlined. On the whole the market felt hopeful that the terms of the Transvaal Constitution would be satisfactory, but towards the close of the day prices developed a weakening tendency. This hopefulness was manifested throughout the greater part of Tuesday, but it was not until the hour of closing that the substance of Mr. Churchill's speech reached dealers. At first they hardly knew what to think or to make of it; ideas were confused. Some considered it satisfactory and up to anticipations, others felt disappointed. Anyway, optimism was predominant, and shares were bid for with much animation, the "Street" market continuing until quite a late hour, but just at the finish some speculators effected "bear" sales in anticipation of a reaction on the morrow. It was early noticeable, even after a night's cogitation, that minds were far from made up as to the value of the statement from the exclusive market point of view. "Bulls" and "bears" were alike perplexed, and this has accounted for the fluctuations in prices during and since Wednesday. According to interviewers, even the mining houses hardly know how to construe things, favourably or otherwise, so their views are far from unanimous. At any rate, their suspense is ended. They know the worst, or the best, according to the individual point of view. The bosses need no longer manipulate the market and do desperate things out in South Africa to terrify the Government. The decree has gone forth, and no suicide will enforce revocation. As for the public, nothing could be better. Their minds are rid of an incubus, and the relief must be great. The monopoly of the bosses' recruiting institution is ended, arrangements are to be made with the Portuguese Government, and Mr. Robinson intends to try experiments with white labour, under the supervision of Mr. Creswell. These innovations and the ending of Chinese serfdom cannot but benefit the mining industry. Nothing has been gained from the domination of the bosses, and nothing is to be lost from its suppression. The dulness of the Kaffir market in the past day or two is not the fruit of the market's diverse views. Paris has been more a seller than a buyer, the further slump in Russian bonds and the approaching holidays all inevitably making for flatness.

In the diamond group De Beers' issues have scarcely been affected either way by the decision of the House of Lords that the company should pay income-tax on its profits of £1,557,693. Prices have been a little weak, that is all, whilst Premiers and Jagers have been invariably firm.

Rhodesians have been more or less stationary, with the exception of Tanganyikas, which have substantially advanced. They went up some days before the report was published, and likewise as soon as it was issued, but this was largely the effect of manipulation and option buying. Chartereds are steady.

West Africans and Egyptians are as sleepy as ever, whilst the only conspicuous movements in the West Australian list have affected Great Fingalls. In the beginning of the week they fell heavily, on the liquidation of a deceased account, but they have smartly recovered since. Simultaneously comes hopeful views from the mine, a cable announcing that the reef in a winze sunk about 200 ft. below the No. 12 level is 6 ft. wide, and assays £2 16s. per ton, which means that payable ore has been met with on the horizon of the No. 13, the lowest level.

Copper shares have been irregular on a fall in the price of the metal. Tin has, on the other hand, improved, but it has made little difference to the share market. Mysores, amongst Indians, have given way a little.

Bulawayo and General Exploration Company.—Another banket reef discovery? It looks like it, and it is made an excuse to ask shareholders for more money. A circular announces this interesting fact, prospecting operations having resulted "in proving the existence of a banket reef practically through the entire length of the claims." One would have thought anything but a banket reef would have been an attractive bait for gudgeons, but these fishermen still believe it has irresistible charms. What is more, "it seems almost certain," the circular adds, "that our property is an extension of the Main Reef series of the Rand." So the directors consider the properties are likely to prove of great value, and that in normal times the importance of the discoveries would have met with proper recognition. Therefore, they bemoan, there is no alternative but to appeal to the shareholders for further cash, not only to develop the properties in Rhodesia, but those in far-off Idaho. The scheme is now being prepared, but we do not think one sufficiently attractive will be the result of the directorial cogitations.

Rezende, Limited.—This reconstructed company has commenced its new career most unpromisingly, but this is hardly surprising; the experience is so common in Rhodesia. The report and accounts, too, are rather heavy, as they cover the period from inception, April 6, 1905, to December 31 last. Although a working capital of about £25,000 was available for equipment and development, it seems speedily to have been exhausted. Therefore a loan of £5,000 has been arranged, to be repaid out of the first profits. It likewise became necessary, owing to the shortage of water power, to close down the mill at the end of July of last year. During the four months to that date 10,811 tons were treated for a yield of 3,736 ozs., which, together with 22 tons of concentrates produced, realised £16,465. From this figure, however, has to be deducted the value of the gold won during the first five days of April under the old company's *régime*, leaving £15,046, and as working costs amounted to £13,622, it left a gross profit of £1,424. Standing costs in Rhodesia during the suspension period have been charged to profit and loss, and after allowing for London administration expenses, a first debit of £3,047 has to be taken to the balance-sheet, with every prospect of its being substantially increased.

Tasmanian Consols.—We know not why the directors have waited so long before issuing their report and accounts. The previous ones were brought up to the end of 1903, so the present ones deal with the lengthy period of two years and three months, viz., from January 1, 1904, to the end of last March. Throughout this long time the total income was only £16,652, but then the small battery of 20 heads did not commence running until October 15, 1904. Up to the end of March it crushed 8,346 tons of ore for a yield of 4,564 ozs. of gold, of a value of £16,444. Expenses at the mine amounted to £12,099, and the London outgoings took £2,238, leaving a nett profit of £2,314, all of which is absorbed in writing off the balance of mining and general expenditure account and the cost of mine development. Since the date to which the accounts are made up £30,000 additional capital has been subscribed by means of an income bond issue, to be devoted to paying off liabilities, establishing a large ore reserve, strengthening and increasing the efficiency of the present plant, and erecting a cyanide plant.

Spassky Copper Mine.—A committee of the board of this company has recently returned from a visit to Russia. As a result of conferences there, it has been decided to register the company in Russia, with a view to its properties being transferred to its own name from that of Monsieur Carnot. The necessary legal steps are now being taken, and it is hoped the registration will soon be completed. Whilst making this interesting announcement the directors take the opportunity of assuring shareholders that the development of the Yuspenssky Mine has been proceeding most satisfactorily, having exceeded expectations both in the increasing size of the known ore bodies and in finding new bodies of high-grade ore. A new and large seam of high quality coal has been discovered at the Karagandy collieries, and will shortly be supplying the smelters. The general manager reports that rapid progress is being made with the erection of the large new plant, which should be in full operation next spring. Its capacity will then be four times that of the old. It is expected that the new plant will be partially at work towards the end of this year.

Arizona Copper Company.—The report of the Arizona Copper Company for the half-year ending March 31 sets forth the results for that period thus:—Copper company's operations—profit, £211,141, from which fall to be deducted expenses of administration at Clifton, less interest received and taxes in Arizona for the whole of 1905, together with charges and expenses in Edinburgh applicable to the copper company, in all £10,363, leaving a surplus of £200,777. From the Arizona and New Mexico railway the net returns were £63,520, whilst expenses of administration and taxes for the whole year took £5,091, leaving £58,428. This is without charging the railroad with interest on its bonds, or with rent for the Lorasburg and Hachita railroad, leased by it. Thus the company's nett revenue totalled £259,206, from which there fall to be provided interest for the half-year on terminable debentures, interest received on deposits and balance of income-tax, together £9,707, leaving free profits of £249,499. Dividend on the "A" preference shares for the half-year absorbs £1,187, and on the preference stock £11,078, leaving a surplus of £237,234, raised to £249,108 with the sum brought in. From this there will have to be deducted at the close of the financial year an amount to be set aside for capital expenditure, redemption of debentures and contingencies. The directors have resolved to pay interim dividends for the year to September 30 next of 2s. 3d. per share on the preferred and deferred ordinary shares, leaving a balance of £78,119, subject to the deductions above mentioned. The outlay during the six months, other than that charged to revenue, was £108,286. During a portion of the half-year great difficulty was experienced in obtaining supplies of coke and coal, owing to a general shortage of railroad cars in the Western States. Alterations and adjustments on the existing concentrators and the erection of the new mill have not yet been quite completed.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns*

Great Central Railway.

In the half-year ended June 30 last this company's gross receipts increased by £147,500 to a total of £1,982,863. Working expenses rose by £91,926 to £1,305,373. These figures include the receipts from the Wigan and St. Helens lines, and indicate that the proportion of expenses to receipts was 65.83 per cent., compared with 66.11 per cent. for the first half of 1905. The result was an increase in the nett revenue amounting to £55,574, the total being £677,490. In addition, the Great Central proportion of joint lines' nett receipts rose by £13,685

to £106,088. There was also £812 more brought forward at £7,044, so that altogether the nett free balance for the half-year was greater by £70,067 at £790,622. At the same time the fixed charges went up by £30,055, debenture and other interest being greater by £23,432, and the interest on advances made by the Great Western Railway higher by £8,583, while £6,698 came on the revenue as rent for the Canfield Place to Harrow line and £7,396 as rent for the Great Central and Midland joint lines. The general interest account was also larger by £1,443 at £14,250, but £3,290 less was disbursed as interest on Lloyd's bonds, the total charge therefor being thus brought down to £19,740, and the hire of working stock also cost £4,250 less at £9,250. These adjustments made the amount left over allowed the directors to pay the full dividend for the half-year on the 5 per cent. preference stock of 1881, which a year ago only got 1½ per cent., and to make a distribution at the rate of 2 per cent. per annum on the 4 per cent. preference stock of 1889, leaving a balance of £8,282 to be carried forward. It would thus appear that the company is making steady progress back towards solvency, and we do not gather that the current expenditure is being pinched in any way to produce this result. Maintenance of way, &c., took nearly £18,000 more in the past half-year, locomotive power £28,000 more, carriage and wagon repairs about £9,000 more, and traffic expenses some £23,000 more. Various other items show slight increases, the greatest being one of over £4,000 in steamship expenses. What, however, is still impressively conspicuous is the capital expenditure, which in the past half-year amounted to £490,288, of which no less than £203,725 was sunk in lines open for traffic and £132,593 on new working stock. Also £68,794 was spent on new steamships, a branch of the company's business which can only be indirectly profitable, and £25,993 was laid out on improving the accommodation at Grimsby docks. In the current half-year another £533,000 of new capital is estimated to be disbursed, of which £110,000 will go into new working stock and £246,000 into lines open for traffic. At the present time the capital account is about £3,826,000 in debit, and the company is accordingly still waterlogged by liabilities which it has not the means to meet. It owes £1,151,394 to the Great Western Railway on account of the Banbury branch and the Great Western and Great Central joint lines, besides £941,500 due on Lloyd's bonds and £300,000 to the railway rolling stock trust for working stock supplied under hire and purchase agreement. Its savings bank deposits and pension fund aggregate £908,000, all of which is sunk in the undertaking, but even so a readjustment of the capital account, involving large fresh creations of stock, would seem to be inevitable, and the company has available borrowing powers to the amount of £2,014,447. No proper account is given of the various subsidiary undertakings connected with the railway. The ferry boat expenses, for instance, are set down, but not the ferry boat receipts, and no detailed account is furnished of the working of the steamboats. Steamboat receipts, however, are stated at £61,034 and expenses at £51,676. There is a steamship renewal and insurance account, however, of the amount of £236,813, and presumably the surplus of receipts over expenses in this branch of the business is habitually carried to this account. There are still two preferences to come into the dividend list before the ordinary stock can come in sight of any share in the profits, and these two stocks are larger than any one of the preferences, which have already begun to taste dividends. The 4 per cent. stock of 1891 amounts to £2,230,000, and the 5 per cent. stock of 1894 to £3,100,000, or together £5,330,000, whereas the whole of the preferences 1876 to 1899 inclusive come to only £5,400,000. Dividends will be payable on and after Friday, the 17th inst., except on the South Yorkshire rent charge, stocks which are payable on the 15th. No large new works are projected, but the company takes over the Lancashire, Derbyshire, and East Coast line as from January 1 next, and is busy not only with a new dock at Immingham, near Grimsby, but with important works at the Humber Dock undertaking, as well as with widenings of the line, the erection of additional workshops, the formation of concentration yards at various places, and so on.

Great Northern Railway.

In the June half-year this company's gross receipts came to £2,867,681, an increase of £113,905 or 4.14 per cent. on the first half of 1905. Working expenses rose only £67,792 or 3.75 per cent. to £1,875,070, so that the ratio of expenses to receipts was slightly down at 65.39 per cent. against 65.63 per cent. It follows that the nett revenue is £46,113 or 4.87 per cent. up at £992,611, and this, after providing for all fixed charges enables the directors to pay a dividend at the rate of 3 per cent. per annum on the original stock, which gives £2 per cent. on the preferred ordinary and £3 per cent. on the "B" stock, leaving £51,390 to be carried forward against only £16,040 in the corresponding half-year. All departments of traffic except first and second-class passengers and live stock show increases, the increase in third-class passengers alone being £18,422, but the decrease in first-class passenger receipts was £3,875 and in second £1,768. Relatively the decline in second-class passenger receipts is heaviest, being no less than 15.53 per cent. as compared with only 4.88 per cent. in the receipts from first-class passengers. As Sir Charles Scotter said at the meeting of the London and South-Western Railway Company the higher grades of passenger traffic are bound to continue to suffer until the wealthy travelling public tires of its motor-car toy. One of the most satisfactory things about the Great Northern of late has been the careful limitation of capital expenditure. Last half-year only £181,604 was spent, including £8,428 on account of the Great Northern, Piccadilly and Brompton Railway. In the current half-year the capital expenditure is not expected to exceed £210,640, including £91,000 on working stock, an item which last half-year took about £46,000, without allowing for credits to the amount of £15,600 transferred from other branches of the capital expenditure account. All branches of the working expenditure appear to indicate that the line is kept in excellent condition without the help of drafts upon capital account. Maintenance of way, for instance, took nearly £6,000 more, locomotive power nearly £11,000 more, and traffic expenses nearly £6,500 more in the past half-year. There was also an increase of £9,360 in the general charges, and rates and taxes went up by £1,590. There was also an expansion of £11,400 in that portion of the cost of working the joint lines charged to joint account. At present the capital account is overdrawn by no more than £156,000, and as the amount of the various trust funds in hand is £898,000, it is clear that the necessity to raise new capital is not immediate. The dividend is payable on the 22nd inst.

Lancashire and Yorkshire Railway.

The gross income for the six months ended June 30 was £2,817,084, and the working expenditure £1,671,407, the revenue being larger by £131,486 and the outgo up by £54,658. The ratio between expenditure and receipts was, therefore, lower by 0.87 per cent. at 59.33 per cent. This company has probably benefited more than any other, in proportion to size, from the flourishing condition of the country's trade. The textile industry has left little to be desired, and we find an increase under merchandise of £48,682, while the gain in minerals and coal of £37,029 shows that the company has reaped advantages from the pronounced recovery in the iron, steel, and coal trades. These things, too, naturally have an effect upon the passenger traffic, because greater employment naturally leads to increased travel both for business and pleasure. First and second class passengers showed only small improvements in revenue, but while there was an advance in first-class numbers the total in the second-class was slightly less. In third-class, however, there was a very substantial increase. Passengers carried rose by 1,460,261, and the revenue by £32,804, while there was the very important gain of over 3,000 in the number of season tickets, leading to an advance in revenue of £4,504. From these figures it seems pretty clear that the company's experiment in introducing electric traction on a portion of the system has been a considerable success. Parcels, horses, carriages, &c., produced £3,041 more, live stock rose by £2,410, rents advanced by £4,115, and the company's proportion of the Fleetwood, Belfast, and Londonderry steamers was £2,155 against £545. One item only produced less, mileage and demurrage going down by £3,458 to £7,211, but this is a revenue which depends on other companies. The expenditure items show some very important movements. Maintenance of way cost £7,523 less, but locomotive power rose £24,477, carriage and wagon repairs £9,675, traffic expenses £17,825, and general charges £1,085. All these movements may be considered incidental to the larger traffic, and we need only express the hope that the decrease in maintenance does not mean any sacrifice of efficiency. Possibly the electric tracks, being new at present, cost less to keep up. Compensation made away with considerably more, owing, no doubt, to the very bad accident on the electric line, rates and taxes were higher by £3,610, and Government duty rose £445. Increase in nett revenue is £76,828 at £1,145,677, and the balance brought in was slightly larger at £31,768, making the total £1,177,446 against £1,099,897. A sharp advance in bankers' interest caused fixed charges to increase by £4,958, but the preference interest was less than £2,000 larger, and the directors are able to increase the ordinary stock dividend from 3¼ per cent. to 4 per cent. per annum, carrying forward £20,177 against £20,504. Capital expenditure for the six months looks a little heavy at £296,908, but the large proportion of £161,282 was on lines and works in course of construction, and £30,000 was subscribed to other railways. This left £70,192 for lines already under traffic, and £35,434 for working stock. Capital account is now overdrawn £1,470,119, and although the company has superannuation, savings bank, and other funds to the amount of £1,243,377 to draw on, it will be well to be prepared for a fresh issue of capital. Dividends payable August 9.

London, Chatham, and Dover Railway Company.

Of the nett revenue earned by the South-Eastern and Chatham managing committee during the past six months this company is entitled to £273,406, or 41 per cent., which compares with £259,909 for the corresponding period last year. Rents of property £33,259 and transfer fees £246 were rather smaller, but the general charges also went down a little to £6,080, so that the credit carried to the nett revenue account comes to £300,830, or an advance of £13,102. There was also an increase of £8,812 to £28,876 in the sum brought forward, so that with sundry credits for interest the available balance is raised to £335,025. A year ago it was £320,611, but that was with the aid of £7,500 taken from the reserve fund. Fixed charges show an increase of about £1,000, thanks to the issue of 3¼ per cent debenture stock, and the directors are now in a position to pay a dividend of £1 8s. 6d. per cent. on the arbitration preference stock, or 3s. 6d. more, making the total payment for the year £3 13s. 6d., against £3 10s. The sum carried forward is about £600 higher at £1,088. The company will take its proportion of the Charing Cross roof expenses and the payment to Mr. Cyril Maude in connection with the destruction of the Avenue Theatre from the reserve fund, and could hardly do otherwise, because the revenue account is altogether too poor to bear the burden of these unlooked-

for disasters. None the less is revenue the proper source from which to gather the money, for the roof at least, but the result would be too serious for the proprietors, who get next to nothing out of the undertaking, thanks to the ghastly waste of capital in the past. Including the money spent by the managing committee, the capital expenditure for the six months was £35,171, and it is probable that £40,000 will be laid out in the current half-year. At present the capital account is overdrawn by £863,941, and the company is kept going by advances from the South-Eastern Company and issues of Lloyd's bonds. The reserve fund, from which the mentioned appropriations will be taken, amounts to £67,492.

London, Tilbury, and Southend Railway.

In the half-year to June 30 the gross receipts amounted to £243,393, an increase of £13,791, whilst expenses were £3,196 higher at £151,217, which sent the ratio down from 64.35 per cent. to 62.12 per cent. Thus net receipts were £92,176, or £10,595 more. Nevertheless, the dividend is reduced by ½ per cent. to 3½ per cent., for twelve months ago the balance brought in was not only £7,087 larger, but £5,000 was taken from the special reserve fund to meet additional interest charges on capital expenditure. The sum carried forward is £4,159 compared with £1,135. Traffic receipts show increases of £13,327 in passenger revenue, £103 in merchandise, £27 in minerals, and £67 in live stock. Capital expenditure amounted to £136,970, and for the current half-year the estimate is £143,000. There is now a debit of £42,533 to capital account against a credit of £196,000 this time last year. Dividends will be pai don August 3.

North Staffordshire Railway.

For the six months ended June 30 the gross revenue was £476,460, increase £20,406; working expenses £281,850, increase £8,779; ratio between expenditure and income 59.16 per cent. against 59.88 per cent. Passenger traffic yielded an extra £1,150, merchandise advanced £4,309, minerals £15,071, the Canal £242, railway rents, &c., £246, and limestone receipts £247. The only decrease was in parcels, horses, carriages, &c., down £779. There was a practically all-round increase in the expenditure, the principal rises being in carriage and wagon repairs £2,670, maintenance of way £1,657, general charges £1,547, locomotive power £983, and canal expenses £854. To the nett revenue of £194,610, which shows an improvement of £11,218, must be added balance brought forward £7,348 and other revenue £1,651, making £203,609 against £192,391. Fixed charges were rather less, and after providing the preference dividends the directors propose to increase the dividend on the ordinary stock by ¼ to 4 per cent. per annum, with an advance of £5,086 in the carry forward. Capital expenditure during the half-year was only £9,650 against receipts of £191,635, so that the debit to the account is no more than £6,377. The capital outlay for the current half-year is put down at £9,500 only. Dividends payable August 16.

Lancashire, Derbyshire, and East Coast Railway Company.

The Bill providing for the transfer of this undertaking to the Great Central Railway now only awaits the Royal assent, and as this is a purely formal matter the absorption may be considered completed. The transfer will take place on January 1 next on terms which have already been outlined in these columns, and which, therefore, need not be repeated. For the six months ended June 30 the gross revenue was £80,602, an increase of £14,692 compared with the corresponding period, but the working expenses rose by the enormous sum of £20,318 to £52,857, meaning an increase in the ratio between expenditure and income of 16.21 per cent. to 65.58 per cent. The company may have been called upon by the Great Central to put the railway and works in the best order possible in view of the amalgamation, but whatever the cause the increase in the revenue was sufficiently striking to suggest some neglect in the past. On maintenance of way and works the expenditure went up by £6,047 to £10,475 and locomotive power cost £11,392 more at £25,293. On repairs and renewals of engines alone the company spent an extra £10,000, and while the running expenses rose £1,425, this was only natural in view of the heavier traffic. Carriage and wagon repairs rose from £1,708 to £3,322, traffic expenses were moderately larger, and general charges showed an increase of £575. Most other items, including rates and taxes and tolls payable to other companies, were also higher, but £580 more at £3,680 was received for working the Sheffield District Railway. On the revenue side passengers contributed only £761 to the improved revenue, the coaching business being quite unimportant, and merchandise likewise gave very little more, but in minerals the increase was £11,787, and carriage and wagon hire produced £2,978 against £1,100. The nett result is a profit balance of £27,745, being a decline of £5,026, and after adding the sum brought forward, &c., and providing debenture interest and rents, the credit remaining is £11,000 compared with £16,537. The directors, however, square things up by passing over the general renewal suspense fund which a year ago received £5,500. They do not recommend any addition on the present occasion because of the large sums spent directly from revenue. It is, therefore, possible to again provide the full dividend on the first preference shares, together with a payment at 2½ per cent. per annum on the second preference shares carrying forward £375. Capital expenditure in the half-year was less than £520, and only £11,148 will be laid out in the period under review. There is a credit to capital account of £7,941 and sundry reserves adding up to £21,100, so that the position will be clean and healthy when the time comes for handing over. Dividend warrants payable August 14.

East and West Yorkshire Union Railways Company.

This little line earned a gross revenue of £11,436 in the half-year to June 30, being an increase of £787 compared with the corresponding period. All the increase was due to minerals, every other item of revenue showing a decline. The company apparently has no passenger traffic. Expenditure was £5,285, or £266 less, leaving the nett balance over £1,000 larger at £6,151. Sum brought forward was £323, making £6,474, and while fixed charges were a little heavier there was no engine loss to provide this time, against £537 a year ago. Nett credit therefore is larger by £1,508 at £3,760, and the directors can raise the dividend on the preference stock from 3¼ to 4 per cent. per annum, carrying forward over £1,000 more at £1,140. Capital expenditure for the six months was £508, and the credit to the account is £3,760.

Taff Vale Railway Company.

Gross revenue for the six months ended June 30 £503,793, increase £24,472; working expenses £279,842, increase £13,764; ratio between expenditure and income 55.55 per cent. against 55.51 per cent. A small decline took place in all classes of passenger traffic, but the drop was partly made good by a moderate improvement in season tickets, so that the entire passenger revenue was less than £1,000 down. Parcels, horses, carriages, &c., gave more, mails produced the same, and merchandise advanced by £1,456. The principal gain, however, was in minerals, which went up £20,800, and there were further improvements of £566 in shipping receipts, and £3,730 in dock and harbour revenue. Expenses of the latter were higher by £1,594 at £8,091, so that this part of the business yields a fair profit. The shipping expenses, however, were within £3,000 of the revenue. On maintenance of way and works the outlay increased by £3,160, locomotive power went up £4,022, and traffic expenses £2,309. There was a big increase in law charges of £1,780, Parliamentary expenses rose £654, and there was a small increase in rates and taxes. Carriage and wagon repairs and general charges were rather smaller. Nett revenue shows an improvement of £10,708 at £223,951, but there was a decrease of nearly £1,000 in the balance brought forward, and general interest gave £139 less, so that the disposable credit is £234,532 against £224,825. Fixed charges were only a little heavier, and after providing the preference dividends the directors again propose a dividend on the ordinary stock at the rate of 4 per cent. per annum, receiving £5,000 for disputed accounts or special contingencies and carrying forward over £4,000 more at £16,230. The dividend is equivalent to 10 per cent. per annum on the old ordinary stock. Capital expenditure for the half-year is modest enough at £20,868, and it is only proposed to spend £22,400 in the current six months, which is satisfactory because the existing debit to capital account is £321,543, and the company has nothing to speak of in the shape of reserves. Dividends payable August 13.

Barry Railway.

This company's gross revenue for the six months ended June 30 was £376,075, an increase of £40,320 against an advance in the expenditure of £16,543 to £108,671. Proportion of expenditure to gross receipts works out at 52.82 per cent. against 54.27 per cent. The company reports a very small advance in passenger revenue and a slight decline in season tickets, the total coasting income, including rather more from parcels, &c., being up by £513. Merchandise yielded over £2,000 more, and minerals improved a good £2,000, but the principal gains were in shipping receipts, £5,758, and dock revenue, £12,812. There was a rise of about £4,000 in the outlay on maintenance of way and works, locomotive power cost £6,631 more, a very serious advance of nearly £4,000 occurred in parliamentary expenses, and an increase of £882 in law charges. Nothing at all is mentioned in the report as to the reasons which have led to these abnormal movements. Rates and taxes are up by the extremely important sum of £3,308 and general charges rose £1,540, but under other important heads, such as carriage and wagon repairs, traffic expenses, shipping expenses and dock working expenses and repairs, the outlay had a downward tendency. Nett revenue is larger by £18,558 at £179,555, but the balance brought in was less by £5,538 at £1,215, and other sources of revenue contributed a smaller sum, so that all told the available income is better by £18,558 at £179,555. There was an advance in fixed charges of £2,092 to £45,669, but after providing the usual amount for preference dividend the directors can increase the dividend on the ordinary stock from 8 to 10 per cent. per annum, carrying forward £1,133 against £3,087. Capital expenditure in the six months was commendably light at £8,672, but the estimate for the current six months is put down at £56,561. Already the capital account is overdrawn £224,675, necessitating a loan of £134,465 from bankers. The company's projected railways into the Sirhowy valley, as well as those promoted by the London and North-Western Railway and the Gt. Western and Rhymney Railway Companies jointly, have all been rejected by Parliament. The leased Vale of Glamorgan Company pays a dividend at 4 1/16 per cent. per annum.

Rhymney Railway.

Gross revenue for the half-year ended June 30 was £157,547, or £4,175 more than in the corresponding six months of 1905. Coaching traffic was very little changed, merchandise was slightly less and there was a gain of £4,402 in the minerals traffic. Expenditure, however, showed the important increase of £8,075 to £100,377, so that the ratio between expenditure and income was

63.71 per cent. against 60.18 per cent. Nearly every important item showed an advance, but, as with the Barry, there was a big rise of £4,033 in the Parliamentary expenses. This has not escaped the attention of certain stockholders, and Mr. W. G. Devon Astle has appealed to the proprietors not to meet the board's request for proxies. It is asserted that the administration of the company leaves much to be desired, and it will probably be best if shareholders do not give proxies either to the directors or the opposition, but attend the meeting personally to hear what explanations are offered. The expenditure was partly incurred in fighting antagonistic Bills, but principally in the promotion of the joint Bill with the Great Western, which was rejected. On maintenance of way the expenditure was increased by £1,265, locomotive power cost £1,704 more and carriage and wagon repairs and traffic expenses each showed small increases. In rates and taxes there was the considerable advance of £1,347. Nett revenue is almost £4,000 worse at £57,170, and despite an improvement of £2,454 at £4,778 in the balance brought forward, the balance available for interest and dividends shows a reduction of £1,446 to £61,948. Fixed charges were a little higher, so that after meeting the preferred dividend the distribution on the ordinary stock is reduced from 7½ to 7 per cent. per annum with £2,017 carried forward. It must, therefore, be admitted that the heavy Parliamentary expenditure is directly responsible for this decline, and we think stockholders have a legitimate cause of complaint. Capital expenditure in the half-year was £14,394, and the estimate for the current half-year is also light at £35,000. That is fortunate, because the account is already overdrawn £120,340, and £97,522 has been borrowed from bankers. The dividends will be payable on August 14.

Great Northern Railway Company (Ireland).

In the six months ending June 30 the gross receipts amounted to £465,869, an increase of £7,010, but there was an advance of £5,092 in the expenses, so the nett revenue rose from £198,006 to £199,924. On the income side there were increases of £5,087 in passengers, of £1,631 in parcels, horses, &c., of £816 in minerals, of £578 in live stock, and £233 in rents, the only fall being the heavy one of £1,411 in merchandise. The principal saving was in maintenance of way, whilst about £3,500 extra was spent under locomotive power and £2,400 more in traffic expenses. A balance of £51,510 was brought in, and as prior charges were £1,000 heavier the available balance was £187,310, compared with £186,770. After paying the interest on the 4 per cent. preference stock the ordinary again receive 6¼ per cent. per annum, the lower balance of £38,363 being carried forward. During the half-year £17,908 ordinary stock, £39,805 4 per cent. preference stock, and £5,667 Consolidated 4 per cent. debenture stock were issued, and the premium of £17,909 has been credited to the capital account. The capital spent in the six months was £91,890, and the estimate for the December half is £76,000. The debit to capital has risen from £227,080 to £289,955. Dividend warrants are to be posted on August 31.

Great Southern and Western Railway (Ireland).

Gross receipts from all sources during the six months to the end of June amounted to £643,371, an increase of £7,587, accomplished with a reduction of £7,171 in the working expenses at £386,063, so the nett revenue advanced by the considerable amount of £14,758 to £257,307. After meeting all debenture and other fixed charges and bringing in the slightly higher balance of £51,893, the sum available for dividend is £230,100 against £213,944 a year ago. This allows the directors, after paying dividends on the preference stocks, to increase the distribution on the ordinary by ¼ per cent. to 3¾ per cent., to place £5,000 against £15,000 to the reserve fund, to double the allocation to the general improvement account at £10,000 and to increase the sum put aside to the fire insurance fund by £1,000 to £3,000. Even then a large surplus is left, which the directors use in increasing the forward credit from £19,298 to £32,762. As regards the reserve fund, the directors intimated a year ago that it stood then at £120,000, and might not call for large additions in the future. During the half-year £29,669 was spent on capital account on lines open for traffic. The debit to capital account has increased from £194,170 to £254,910. Dividend warrants will be posted on August 31.

Midland Great Western of Ireland Company.

Gross receipts in the six months ending June 30 amounted to £278,585, a decrease of £3,266, whilst the working expenses were reduced by £1,251 to £166,286, so the nett revenue was £2,016 lower at £112,298. The heaviest shrinkage was £1,974 in passenger traffic, and there was a decline of no less than £1,889 in merchandise, whilst minerals fell off to the extent of £25 only. Gains were £640 in live stock and £112 in parcels, horses, &c. The principal savings were under the head of locomotive power, traffic expenses, and compensation, the latter taking nearly £1,500 less than a year ago. On the other hand £160 more was spent on maintenance of way, and £360 more on carriage and wagon repairs. A balance of £13,610 against £12,398 was brought in, but as prior charges were slightly heavier the available surplus was £700 lower at £68,546. After paying the interest on the two classes of preference stocks, the ordinary stock again receives 3 per cent. per annum, but the forward balance is reduced from £5,398 to £4,690. The sum spent on capital account was only £3,440, and the estimate for the current half is £3,900. There is a debit of £11,263 to capital account. Dividend is payable on the 1st prox.

Brazil Great Southern Railway.

In the year 1905 this company earned £3,058 more at a cost of only £841 more in working expenses. Gross receipts came to 191,466 milreis and expenses to 156,587 milreis. Converted at 16 25-32d. per milreis, the rate curent on December 31 last, the nett credit balance was £2,439 compared with £179 for 1904. The final balance at credit of nett revenue is £6,696, which added to the previous gatherings makes the total accumulation £28,352, but no distribution to shareholders can be made because, as the auditors, Messrs. Price, Waterhouse and Co., point out, no dividend can be paid until the items placed to the debit of the suspense account have been recovered. These items aggregate £65,024, and are composed of a claim of £19,605 against the Brazilian Government for loss on sale of scrip, and one of £44,419 for flood loan interest held back until the company has been paid for the St. Angelo Extension Railway concession. Besides the income from the Great Southern Railway itself, the company received £1,598 as profit on working the Porto Alegre Railway, and credit is taken for £1,572 as difference in exchange. With interest receipts added in, however, the free balance is only £5,469, and the company is indebted to the £40,500 received from the Brazilian Government as interest on its authorised capital for the means to pay its debenture charges amounting, including sinking fund on the 6 per cent. bonds, to £37,122. In addition £1,743 has been written off the discount and charges on the issue of the debentures of 1893 and the debenture stock. London administration charges absorbed £2,326. Reserves aggregate £80,670, exclusive of £98,347 nett applied out of revenue to the redemption of debentures.

Martin's Bank, Limited.

This bank's liabilities to its customers on deposit and current accounts, on June 30, amounted to £3,352,780, or an increase of £361,577 over the corresponding date last year, against which cash was £188,075 up at £946,398. Money at call and notice was £221,631 higher at £582,600, and British Government securities showed very little change at £394,374. Bills receivable, too, were £160,950 larger at £918,338, but a substantial reduction of £667,278 to £992,067 was made in loans. Gross profits for the six months rose by £10,168 to £65,692, and with £25,188 brought in gave a total income of £90,880 compared with £80,913, but interest to customers took £6,181 more at £15,155, and after meeting general charges and providing £5,254 against £3,424 for rebate on bills, the nett profits were only £1,506 better at £50,439. Out of this the customary dividend at the rate of 8 per cent. is paid, another £5,000 is transferred to reserve, making that fund £140,000, and the balance carried forward is increased to £25,439.

Stuckey's Banking Co., Limited.

On June 30 last this old and flourishing bank owed £6,548,123 on current and deposit accounts, &c., being an increase against the same date in 1905 of £82,632, but drafts and notes in circulation are rather less at £79,110. Reserve remains at £355,000, against the paid-up capital of £408,000, and the balance of profit and loss is £47,798, or an increase of £137. Including £7,661 brought in, the undivided credit is £55,459, compared with £55,284, and although the method of appropriation is not mentioned it is evident that the dividend paid must be a very excellent one. A fine array of investments, valued at £3,879,674, or £97,775 more, constitute the principal asset, bills discounted, loans, and advances coming next at a total of £2,812,654. This item is also moderately higher, but cash at Bank of England, bankers', and in hand is a trifle less at £382,198, and the money at call and notice has been reduced by £91,581 to £263,069. Bank premises have again increased to £80,108, and other freehold and leasehold properties show an advance of £2,912 to £27,988. The balance-sheet aggregates £7,445,692, against £7,369,562.

Coutts and Co.

This private banking business makes up its balance-sheet to July 18, and on that date owed £8,526,303 on current and deposit accounts, being £165,033 less than on the same date in 1905. Acceptances £373,997 constitute a new entry, partners' capital is £600,000, and the reserve £400,000 makes up a balance-sheet total of £9,900,300, compared with £9,691,336. Cash in hand and at Bank of England has been increased by £29,353 to £748,190, and money at call and short notice shows a large reduction of £425,000 to £1,525,000. Investments £2,705,097 have been reduced by £486,141, but bills discounted and loans are up by £496,755 at £4,328,016. Bank premises and adjoining property in the Strand are valued at £220,000.

Halifax Commercial Banking Co., Limited.

An improvement of £200 to £19,060 took place in the nett profits of this bank for the past year compared with the previous 12 months. Balance brought in was up by £85 to £5,492 making £24,552, and after providing two dividends of 4 per cent. each the directors apply £2,000 against depreciation of investments, pay £530 in income-tax, and carry forward £6,022. Reserve remains at £100,000, or 50 per cent. of the paid-up capital. Public liabilities on deposits and other accounts have increased by £86,056 to £1,649,330, and there is a big advance in the acceptances from £14,025 to £60,224. Bills discounted, advances on current accounts, &c., have gone up about £200,000 to £1,505,398, meaning that other assets have been reduced. cash and money at call being £102,831 less at £164,661, while the investments are £11,330 smaller at £245,193.

South Metropolitan Gas Company.

This flourishing enterprise continues to sell its gas at 2s. per 1,000 cubic feet, and although consumption is somewhat restricted by the use of incandescent mantles, there was an increase in sales during the half-year ended June 30 of nearly 3 per cent. This resulted in an advance of revenue by the sum of £16,239 to

£618,807, and meter and stove rents increased over £3,000 to £60,630, but residual products again showed a decrease, yielding only £242,463 against £250,330. The directors complain of the very low price obtained for tar—little more than one penny per gallon—bearing in mind the very valuable products derived from this residual. It would probably prove advantageous if the gas companies cultivated a demand for other purposes than distilling and sold as much tar as possible for fuel and road making. By thus reducing the quantity to be marketed values ought to be enhanced, and it may be, as the directors say, that tar should be worth 6d. a gallon for distilling purposes if the amount offered to the market were no more than its needs. Including £1,537 from rents and transfer fees the total income adds up to £923,436 against £912,120, and as the expenditure was very slightly higher at £715,801, the nett balance is better by £11,075 at £207,636. The amount payable under the co-partnership scheme was £25,962 against £24,092, making a total for 12 months of £43,962 or 9¾ per cent. on salaries and wages. The employees now have £320,000 invested in the undertaking, and Sir George Livesey, the chairman of the company, has every reason to be proud of his achievement in making the employees partners in the business they labour for. In this way a contented and hardworking staff is assured, because each man feels that his work is not solely for the benefit of the wealthy classes, but also for himself. With gas at 2s. per 1,000 cubic feet stockholders are entitled under the sliding scale to a dividend at £5 14s. 8d. per cent. per annum, but as this rate was not earned the directors have been obliged to restrict the dividend to 5¾ per cent. per annum, and recommend a distribution at the same rate for the period under review. This is after providing for all interest charges and materially reducing the Monazite sand suspense account. It may be recalled that the directors purchased a concession of Monazite sand when they feared that the price of mantles might be seriously advanced owing to the fact that the sand from which the thorium used in the manufacture of incandescent mantles is extracted was in monopolist hands. The board's action seems to have already led to a drop in the price of thorium by 50 per cent., with the result that for a time at least mantles will be plentiful and cheap. Under the circumstances it is not at present necessary to work the company's property to any great extent, but it will be reserved for future contingencies. Coal is likely to be dearer, thanks to the improvement in the iron trade, and putting price and freight together, the extra cost to the company will probably amount to £60,000, a very important sum. This causes the board to dwell on a little ancient history, and the hope is expressed that the gas companies will never again get so alarmed regarding the supply of coal that colliery owners will be able to extort the extravagant prices they did a few years back. The company's reserve, renewal, and insurance funds amount to over £308,000 and the financial position is sound and strong.

Pease and Partners, Limited.

Few industries are liable to greater fluctuations than the iron and steel trades. When business is good it is often very good, but when the reverse side of the picture has to be faced there is usually a great deal of misery. Since this enterprise was converted into a limited liability company its annual profits once soared to £351,000 odd, but within three or four years they were down to £62,000. That was in 1903-4, when the iron and steel boom had run its course. For the following twelve months there was a slight recovery to £88,741, and for the year to June 30 last, the period covered by the report and accounts just issued, this figure was exceeded by no less than £90,788, a very notable advance. The directors say that during the early months of the financial year there was little or no increase in either prices or demand, but the latter months have exhibited a decided improvement, resulting in an enhancement of profits which can only be regarded as very satisfactory. Included in the profit is an item of £11,066 for interest, dividends, &c., and the board thinks that the return on the capital invested in Wilsons, Pease, and Co. continues to justify the purchase. After providing debenture and other interest, &c., together with £22,659 for depreciation of leaseholds, the balance remaining is £125,802, to which is added £4,699 brought in, making £130,501. From this the sum of £9,062 is applied to meet special expenditure in connection with bye-product coke ovens, electric installation, &c., and it is considered prudent to set aside £25,000 for future special expenditure on renewals and improvements. A sum of £5,000 is then placed to reserve, and after raising the ordinary dividend from 5 per cent. to 8 a similar distribution is made on the deferred shares, which last year received nothing, the increased balance of £11,439 being carried forward. A further amount of £97,909 second debenture stock has been placed, making the total issue £125,000. In addition the £65,000 of stock referred to in the last report remains deposited with the bankers, the directors being advised that in view of recent legal decisions the stock would be cancelled if transferred. The best method of dealing with this question is receiving careful consideration. Capital expenditure last year was not heavy at £12,333, and after making deductions for leasehold depreciation, &c., the property account appears at £1,385,901 against £1,400,223. Coal wagons, rolling stock, &c., are valued at £139,911, and shortworkings, upheld as recoverable, amount to £12,994. The company owes £104,574 for unpaid purchase moneys and loans, and £124,023 to sundry creditors, but there is a good array of liquid assets such as debtors £148 688, stocks £12.994, investments £192,289, and cash £73,786. It is proposed in future to make up the accounts to April 30, so that the next balance-sheet will cover a period of ten months.

Anglo-American Telegraph Co., Limited.

Traffic receipts for the six months ended June 30 showed a substantial increase of £17,802 at £195,282, and as the charter of the s.s. *Minia* brought in £5,494 more at £8,094, while miscellaneous revenue was also slightly higher; the total available, notwithstanding a big reduction to £847 in the amount brought forward, was still £21,241 larger at £204,919. Actual working expenses were much about the same at £57,493 and expenses of the *Minia* were £1,185 less at £9,032, but the company had to pay out £2,249 for taxes in Newfoundland and £6,100 for charter of ships for repairing cables, making the total only £80,224 or £9,299 more. Nothing, however, is put to renewal fund this time compared with £10,000 transferred a year ago, and the balance available for distribution is, therefore, £21,942 up at £124,695 out of which two interim dividends have been paid of 15s. per cent. each on the ordinary stock and 30s. per cent. on the preferred stock and £19,695 is carried to the next account. The renewal fund was increased by £15,418 from interest and £5,407 was written off for cost of cable expended, &c., leaving that fund at £1,010,936, of which £970,616 is represented by investments and £37,971 by value of cable in stock. Current accounts are well in favour of the company, £39,526 being due to sundry creditors and £2,556 on bills payable against £65,908 to come in from sundry debtors, while cash stands at £61,247.

Millars' Karri and Jarrah Co. (1902), Limited.

The improvement in this company's position during the year ended December 31 was comparatively trifling, and the directors state that the causes which in 1904 compelled them to reduce the output continued to exist throughout the 12 months under review. Applications to the Arbitration Court in Western Australia resulted in the Court making awards which were to remain in force until September 30, 1906, in order that it might be seen whether the Government would afford relief to the industry by reducing railway and wharfage rates, and so avoid reduction of wages. These awards, however, classified the workmen and made certain reductions which were not satisfactory to either side, so an agreement was made with the men's representatives that the old rates should be continued down to the expiration of the award, and that if no relief was then afforded by the Government the wages and hours should be adjusted in the manner claimed by the company. Up to the present no reduction has been made and the rates, which were increased after the formation of the company by 100 per cent. for wharfage and 47 to 64 per cent. for railage, continue in force, but the directors are still hoping that the Government may see its way to return to the old scale. Trading profits for the 12 months after providing for a portion of London office charges and managing director's commission were £4,467 up at £108,642, and transfer fees yielded £64 more at £132, but the investment in the Purfleet Wharf and Saw Mills, Limited, produced no return this year against £2,850 in 1904, so that the total revenue was a mere £1,681 higher at £108,774. The reasons put forward for the failure of this dependent undertaking to pay a dividend are the small number of ships that discharged at the wharf and the necessity to provide for a loss caused by an accident to a ship lying at the wharf. London charges were reduced by £942 to £7,280 and £1,000 less at £1,750 was reserved for income-tax, leaving nett profits at £99,744 compared with £96,121, to which was added £26,753 or £9,857 more brought in. The amount available was therefore £126,498, and after providing for debenture interest and transferring another £35,000 to depreciation reserve, a balance of £71,841 or £13,330 more was left. Preference dividend required £31,758 of this, which would leave £40,083 to be carried forward but the resources in hand are apparently insufficient to enable the directors to pay the whole dividend, and they propose that a distribution should be made for the first six months and the remainder paid as soon as the position of the company justifies it. Capital expenditure amounted to £11,540 making a total of £1,324.657, and in addition the 100,000 shares in the Purfleet Company are taken into the balance-sheet at par, so that the depreciation reserve of £105,000 or about 7¾ per cent. is not over good, especially as the larger proportion of the issued share capital is receiving no return and does not seem likely to receive any for a considerable time yet. The amalgamation and preliminary expenses, amounting to £9,841, have been written off out of the property reserve, bringing that fund down to £1,525. Current liabilities, although still very heavy, have been reduced on balance, loans being £30,880 down at £69,193 and sundry creditors £28,861 lower at £82,979, against an increase of £36,260 to £148,979 in bills payable On the other hand, stocks are valued at £504,960 or a decrease of £18,504, sundry debtors owe £142,591, and in addition to an increase of £16,383 to £52,574 in cash the company holds bills receivable for £11,163.

Peel River Land and Mineral Co., Limited.

Shareholders of this rapidly improving undertaking should derive considerable satisfaction from the perusal of the interim report just issued. The directors recommend an interim dividend of 3½ per cent., which gives promise of not less than 7 per cent. for the complete year. The half-yearly returns made up to December 31 last show the live stock department on the company's properties to consist of 245,993 sheep, 6,288 cattle, and 529 horses, the Peel River Estate having by far the larger proportion. Sales of live stock to the same date have been made to the amount of £6.411. Prices continue satisfactory, and further sales have taken place during the second half-year, the proceeds of which will be included in the accounts for the complete financial year. The wool clip, including fellmongered

wool, comprised 3,684 bales as compared with 2,710 bales last year, and the nett realisation will amount to about £176,000 against £50,410 from this source in the previous season. The latest news from the Peel River freehold states that rain has fallen, but not in sufficient quantity to supply fresh grass suitable for lambs, and forage has been provided for the ewes and lambs in certain paddocks in case it should be required. It is estimated that 148,000 sheep will be shorn, and lambing is expected to yield an increase of 36,000 lambs. A satisfactory decrease is reported in the number of rabbits on the estate. Reports from the Currawillinghi station are encouraging, although more rain would be welcome. The shearing complement will amount to about 56,000 sheep, and the increase in lambing is estimated at about 9,500. Land sales by auction in March last amounted to 28,024 acres, and a communication has been received from the Premier of New South Wales to the effect that the Government desire to acquire land for close settlement and suggesting that the Peel River Estate would be suitable for the purpose.

Royal Brewery, Brentford.

Unlike many another brewery company, great and small, this little firm found its business appreciably increase in the 12 months ending June 30. So for once in a way we read a brewery report that does not whine over misfortunes begotten of legislation, nor over trade depression, nor even over the alleged "wave of temperance sweeping over the country," a wave that may not necessarily engulf the nation in irretrievable ruin. Maybe the customers of the Royal Brewery have stood beyond the limits of this wave, it has not reached them, or it may be that they have liked this firm's beers better than the brews of rivals. Conjecture as we may, the fact stands that the gross profit, which includes rentals, transfer fees, &c., advanced by £1,666 to £68,732. The usual sum of £5,000 has been allowed for depreciation, the expenditure on the brewery amounted to £2,322, which with £9,649 spent on repairs and alterations to houses, was charged to profits, whilst a sum of £14,421 has been debited to capital on account of improvements and additions With £1,488 brought in the nett credit is £15,770, out of which the preference dividend is paid for the second half of the year, but the distribution on the ordinary shares is reduced by 2 per cent. to 12 per cent., the carry forward being raised to £5,320. Once again nothing is put to reserve, which stands at £58,000, the depreciation seems inadequate contrasted with the capital additions, trade balances are still against the company, and altogether the finances could do with buttressing up. We are glad, therefore, that the dividend has been reduced, that being a step taken in the best interests of the proprietors.

Threlfall's Brewery Co., Limited.

A further small increase of £493 to £179,189 took place in the profits of this well managed brewery during the 12 months ended June 30, but the dividend on the ordinary shares is reduced from 20 per cent. to 16. There were some heavier charges to provide in various directions, and it is far better to at once reduce the dividend than run the risk of straining the position. Depreciation of freeholds, leaseholds, and plant was about £3,000 heavier at £6,039, £11,000 or £5,507 more was written off debenture issue expenses in order to extinguish the item, and £7,544 had this time to be found for the compensation fund. Debenture interest absorbed £40,000, deposit and bank interest £18,001, and directors' fees £2,214, so that with £79 for transfer fees, the balance remaining is only £94,470 compared with £112,399, a difference of nearly £18,000. To this credit is added the sum brought forward £13,251, making £107,721, and after providing the preference dividend of 6 per cent., the directors declare 16 per cent., or 4 per cent. less, on the ordinary shares, carrying forward £13,221. This is still a very excellent dividend, and shareholders have the satisfaction of knowing that the financial position of their company is exceedingly strong. A further nett addition of £62,748 was made to the property account during the year, increasing it to £2,543,685, a heavy figure truly, but it is said to be worth far more than its book value, and there is, moreover, a reserve fund of £480,000. This, however, is invested entirely in the business. What must be considered the floating liabilities are rather important, especially when compared with the free assets. Deposits, trade creditors, rents payable, &c., reach the tidy sum of £417,833, and £100,000 is owing to bankers. On the other side trade debts, loans, rents receivable, &c., amount to £123,726, stocks are worth £122,032, and the cash at bankers and in hand the outcome of the loan, stands at £43,038. Perhaps shareholders would not be considered inquisitive if they asked the actual additions to properties for the year and the allowance for depreciation.

Rylands and Sons, Limited.

The pronounced recovery which took place in this company's profits during 1904-5 was well sustained during the 12 months to June 30 last. Nett profit amounted to £109,918 or £5,839 more than in the corresponding period, so that with the largely increased balance of £31,729 brought forward the available credit is £141,647 against £125,277. Therefore, after again providing a dividend at 12½ per cent. per annum, £15,000 against nothing is placed to reserve, and £32,897 carried forward. Reserve will now be £485,000, and the insurance fund is £245,000, or together £730,000. This is a fine accumulation, rendering of less consequence the absence of a properly detailed balance-sheet, but we are still much dissatisfied with the way the accounts are rendered. Stock-in-trade, ledger balances, investments, bills receivable, and cash constitute one item standing for £3,425,634, and the freehold and leasehold land, buildings, and plant, £820,570, complete the credit side of the statement. The company owes £985,282 to sundry creditors, &c., the debenture debt is £600,000, and £304,275 has been paid in advance of calls in addition to the paid-up capital of £1,500,000.

York Street Flax Spinning Co., Limited.

This is rather an important company, possessing a paid-up share capital of £550,000 and a debenture debt of £250,000, a fair enough proportion. The position indeed is a very strong one, because against the property account of £620,324 the company has accumulated a capital reserve of £330,000, so that the balance-sheet valuation of the property is well below £300,000. Not only that, but there is an ordinary reserve fund of £150,000, making it clear that financial stability has been put first and dividends second. Floating liabilities are not in any way excessive at £164,689, including £45,463 on terminable loans, and on the credit side there are sundry debtors £255,706, cash and bills £48,144, and stock of flax, yarn, cloth, stores, &c., £553,655. Profit in the 12 months ended June 30 was £86,773, and after deducting debenture interest £11,250, and adding £12,044 brought forward, the balance for disposal is £87,568. Income-tax, directors' remuneration, auditors' fees and sundry expenses account for £2,927, preference dividend takes £15,000, and the 6 per cent. proposed on the ordinary shares £18,000. Capital reserve then receives £25,000, and the ordinary reserve £10,000, leaving the considerably increased balance of £16,641 to be carried forward. It will be noted that the sums set by are a good deal in excess of the total dividends paid.

D. and J. Fowler, Limited.

This Australian company did pretty well during the year ended March 31, and increased its profits from £29,979 to £34,257. Debenture interest amounts to £4,500, directors' fees and departmental remuneration require a similar sum, a good amount, and trustees' fees are fixed at £300, leaving £24,957. After providing the preference dividend with £8,250, 10 per cent. of the balance, or £1,671, goes to the preference reserve and £13,000 pays dividends aggregating 6½ per cent. on the ordinary shares. This entitles the directors to additional remuneration of £720 in respect of departmental management and £4,963 is carried forward, against £3,647 brought in. Preference shareholders' reserve now amounts to £10,415, invested in first-class securities, and there are sundry other reserves, reaching £7,697, including £5,134 for depreciation of plant and machinery. We hope these savings will be steadily added to, because the goodwill, trade marks, &c., are pretty substantial at £111,723. Freehold properties, buildings, &c., are valued at £103,810, and machinery, plant, &c., at £18,453, while sundry trade investments at cost and under appear at £81,961. We ought to be told what these bring in. Sum due on bills payable is £35,169, and to sundry creditors £94,493, against which there are sundry debtors and outstandings £118,893, bills receivable £31,368, and cash £1,617. The company seems to have made advances on security to the amount of £12,021, but had to raise the needful from bankers, a rather curious procedure. Did some dependent business want the money?

London Improved Cab Co., Limited.

The revenue gathered from every source by this company for the year ended May 31 was £84,630 against an expenditure of £79,325, leaving the nett profit at the rather slender sum of £5,505. In explanation the directors say that the condition of the cab industry during the past twelve months has been unsatisfactory, and there is no doubt that motor 'buses, tubes, and electric tramways must hit a business of this kind very severely. However, the question of motor cabs is receiving careful attention, and negotiations are proceeding which may shortly result in the adoption by the board of a chassis suitable for London cab work. This is encouraging up to a certain point because the motor cabs in use in Continental cities seem to be good and trustworthy, and there is no reason why similar success should not attend the London experiment. But we have to bear in mind that motor cabs cost a great deal of money, and shareholders must probably be prepared to face a severe loss on the present capital account. No doubt the change from horse to mechanical traction will be made very slowly, if it come about at all, but the company cannot expect to realise balance-sheet figures for the horses £34,230, or for the vehicles £40,526. There are also harness and furniture £5,295, and stable utensils and sacks £450, and a good deal of alteration would be necessary to the freehold and leasehold property, buildings, &c., £37,883, before they could be adapted for motor garages. The company has a depreciation and reserve account of £17,000 and an amortisation of leases fund £5,823, or £22,823 in all, but, as usually happens when the money would prove useful, these savings are involved in the business. Moreover, the company has a loan from bankers, which is included in the sundry creditors items of £10,208, and as debtors owe no more than £3,287 we fear motor cabs will mean more capital. To the nett profit on the past year's operations £5,505 must be added £888 brought forward making £6,393, and after providing a dividend of 5 per cent. the directors place £500 each to lease redemption and depreciation and reserve accounts, carrying forward £750.

A. M. Peebles and Sons, Limited.

In the year ended June 30 last this company did better, the directors claim, at least they report, a continued increase in the business and improvement in the affairs, but this is not reflected

in the account, for the gross profit was only £14,420 and the nett, including £2,671 brought forward, only £6,304, against £9,600 in the previous year. Hence no dividend is paid on the ordinary shares for the second half of the year, but the preference share dividend is met in full, and the ordinary did get an interim distribution at the rate of 4 per cent. six months ago. It is stated, however, that owing to the opening of the new Art mills considerable sums have been necessarily spent which the board thinks it wise to charge to revenue account. They also add that the increase in the cost of raw material has very largely affected the profits of the past year, and stock in hand is larger by upwards of £14,000, owing to the inclusion of £9,532 for the stock held at the Auxiliary mill. Cash in hand has fallen from £16,262 to £5,682. Bills payable, however, are also down by some £8,700, but on the other hand there is an increase of £15,000 in the amount payable to sundry creditors. The amount charged to profit and loss for depreciation was slightly less than in the preceding year at £7,547, but the amount spent on repairs and renewals and charged to this account was, at £7,409, £504 larger. We cannot quite say from these and other figures in the balance-sheet whether the profits for the current year are going to be larger, but the account seems to be a clean one, and the most striking thing about it is the absence of any effort to reduce the goodwill or to accumulate a reserve against it.

Dublin United Tramways Co. (1896), Limited.

Traffic earnings for the six months ended June 30 were only £932 up at £126,311, while working expenses rose by £1,559 to £72,328, and with miscellaneous receipts, the nett income, after providing for repairs to cottages, parcels delivery expenses, and advertising, was £527 smaller at £58,005. Wayleaves, and debenture, and other interest required £20,148, leaving a balance of £37,857, to which were added £7,107 or £259 more brought forward, £39 from interest on investments, and £2,500 set aside last half-year for current maintenance, making a total of £47,503. Preference dividend having been paid, the ordinary shares receive their customary dividend at the rate of 6 per cent. per annum, after which another £5,000 is put to reserve, £2,000 is set aside for current maintenance during the present half-year, and £5,403 is carried forward. Capital expenditure amounted to £12,248, of which £4,336 was on additional cars, £3,510 on new lines and overhead equipment for the Dartry extension, &c., and £1,318 on an additional motor generator at the Clontarf substation. This brings the total outlay to date up to £1,980,460, and nominally leaves £31,540 in hand, but against this there is the debit of £24,704 for discount on "B" debenture stock, which is still carried as an asset. The company owes £5,751 to sundry creditors, and £9,116 to its bankers on current account, but on the other hand has no less than £65,900 on deposit and £3,575 to come in from sundry debtors.

British Oil and Cake Mills, Limited.

In accordance with the promise made at the last ordinary meeting the directors of this concern submit an interim report upon the trading for the six months ended June 30. It appears that the improved conditions which were apparent early in February were maintained in the succeeding months of March, April, and the first half of May, after which, as usual at that period of the year, the demand for feeding stuffs of all kinds fell away very considerably. Nevertheless the volume of trade over the whole six months shows a considerable expansion compared with the corresponding period of 1905, or, indeed, any half-year since the company was formed. Profits at branches, after deducting management salaries and other working charges, amounted to £62,252, dividends, transfer and other fees were £893, and income-tax recovered reached £1,079 making £64,225. From this depreciation was allowed to the amount of £10,191, and amongst other charges that may be mentioned are administration, directors' and trustees' fees £5,925, mortgage and debenture interest £13,807, other interest £4,778, and income-tax £877. Sum remaining is £28,647, making, with £4,031 brought in, a sum for disposal of £32,678 out of which the interim preference dividend of £16,500 has been paid. It seems probable therefore that the ordinary shareholders who received nothing on account of the last financial year may get a look in again for the current 12 months.

Normanby Iron Works Co., Limited.

This hitherto unhappy Pease promotion got a badly needed smile from fortune during the year ended June 30 last. Profits were actually returned at £26,511 or £18,635 more than in the previous 12 months, from which debenture and loan interest took £3,194, directors' and trustees' remuneration £550, and income-tax £432 leaving £22,334. There was also a trifle of £212 brought forward, making £22,546, so that besides providing three years' arrears of preference dividend, bringing the payment down to June 30, 1904, the directors can transfer £7,500 to the depreciation fund, write off the balance of the formation expenses, £1,500, and extinguish the special expenditure account, £1,127. The balance then carried forward is £1,619. Additions to property account during the year were £6,685, so that despite the writing off for depreciation, the item is not very much lower at £160,513. Sundry creditors are somewhat heavier at £47,159, although the unsecured loans have been reduced by £500 to £10,500, but debtors reach £31,372, cash amounts to £9,117, and stocks are valued at £42,476.

Letters to the Editors.

BIRMINGHAM SMALL ARMS COMPANY.

Sirs,—I am very pleased with your remarks about the Birmingham Small Arms Company in the current issue. It never seems to have been properly recognised that the consideration which should be given in return for the privilege of limited liability is publicity. We have, it is true, publicity of the share register, in a less degree of the debenture register, but only of accounts, in respect to shares issued otherwise than for cash. There should be full publicity of accounts, any public company's being open to inspection on payment of adequate fees. If people desire the advantage of secrecy they should do without limited liability.

Yours, &c.,
R. W. Western.

9, Albert Square, S.W.,
July 30, 1906.

ENGLISH MUNICIPAL TRADING.

Sirs,—Mr. Burns a few days ago in Battersea drew attention to the fact it was 18 years since they started their progressive crusade. In 1887-8 the municipal debt of the country stood at £192,222,000; to-day it stands at £500,000,000, whilst the annual expenditure exceeds the Imperial by some £10,000,000!

In 18 years Mr. Burns and his friends have succeeded in placing upon the backs of the ratepayers the enormous debt of five hundred millions sterling!

The rich men do not feel the burden; it is the professional men, including journalists, shopkeepers, small property owners, including the widow and the orphan!

The annual expenditure to-day approaches the entire debt in 1888, viz., £152,000,000!

Yours obediently,
H. R. Gawen Gogay.

Gawenhurst, Southchurch Beach, Essex.

NEXT WEEK'S MEETINGS.

Tuesday, August 7.

Caledonian Banking.—Inverness, noon.
Normanby Iron Works.—Middlesbrough, 11.30 a.m.

Wednesday, August 8.

Edinburgh and Bathgate Railway.—Edinburgh, noon.
Great Northern (Ireland) Railway.—Belfast, 12.30 p.m.
Great Southern and Western Railway.—Dublin, 2 p.m.
Hull and Barnsley Railway.—Hull, noon.
Lancashire and Yorkshire Railway.—Manchester, noon.
Manchester Brewery.—Manchester, 4 p.m.
South Metropolitan Gas.—Cannon Street Hotel, 2 p.m

Thursday, August 9.

Bromley Gas Consumers.—Bromley, 6 p.m.
Corn Exchange.—Seething Lane, 11 a.m.
Great Western Railway.—Paddington Station, 1 p.m.
J. P. Restaurants.—17, Charterhouse Street, 3.15 p.m.
Midland Great Western of Ireland Railway.—Dublin, 1 p.m.

Leyland and Birmingham Rubber.—Leyland, 12.30 p.m.
London and North-Western.—Euston Station, noon.
Rhymney Railway.—Cardiff, noon.
Vale of Glamorgan Railway.—Barry, 3 p.m.

The August *Book Monthly*, amongst other interesting material, contains an article by Mr. W. Arnot Craick, editor of the *Canadian Bookseller and Stationer*. It is entitled "Books in Canada," and is most interesting as illustrative of the state of the book trade there, the methods by which literature gets circulated, the size of editions of copyright novels printed in Canada, and much besides. Original publishing in Canada, he says, has passed very little beyond the school-book stage, although Canadian printers can produce excellent books when they get the opportunity. Approximately 150 novels are published annually in Canadian editions by the six Toronto publishers who at present participate in the trade, but much of the business appears to be in the hands of American publishing houses, and in the struggle it is to be feared that the English publisher and author go to the wall. A system, in fact, has come into vogue whereby a bookseller or wholesale dealer in Canada merely acts as agent for publishers elsewhere selling on samples. By representing half-a-dozen different publishers a house of this kind is able to cover the country thoroughly at a minimum expense, and where the trade is in such a primitive state there are naturally few booksellers, in the old English sense of the term. Book stores in Canada are found to mix up that particular business with the sale of stationery, wall-paper, fancy goods, and a dozen other articles, while in the West "druggist" and "bookseller" are frequently synonymous. Altogether an interesting article in an interesting number.

MINING RETURNS.

Briseis Tin.—Shipped 27 tons, including three tons from New Bros. Home No. 1.

British Broken Hill.—2,421 tons crude ore produced 400 tons concentrates, containing 248 tons lead and 10,800 ozs. silver.

Broken Hill South Silver.—16,500 tons crude ore produced 2,900 tons concentrates, assaying 65 per cent. lead, 8 per cent. zinc, 17 ozs. silver per ton, the lead and silver contents being 1,885 tons and 49,300 ozs. respectively.

Cecil Syndicate.—Crushed 310 tons, 226 ozs.

Chinese Engineering.—Output, 19,000 tons; sales, 19,000 tons; consumption, 1,125 tons.

Day Dawn Block.—780 tons, value, including residues (concentrates, tailings, &c.), £2,900.

Glencoe (Natal) Collieries.—Output, 8,746 tons.

Hyderabad (Deccan).—Output of coal 38,307 tons.

Kelantan Dredging.—Recovered 42 ozs.

Lloyd Copper.—Production 145 tons.

Lace Diamond.—Loads blue ground washed, 25,634, yielding 3,103 carats, equal to 12.10 carats per 100 loads. Blue ground floored, 49,651 loads, making 926,232 loads on the floors.

Mills' Day Dawn United.—Treated 1,836 tons, total value, including residues, £6,700.

Mount Lyell Blocks.—Treated 6,274 tons for 58 tons copper.

New Vaal River.—Diamonds registered by diggers on Vaal River Estate, £3,350.

North Broken Hill.—Treated 1,150 tons crude ore, producing 220 tons concentrates, containing 151 tons 16 cwts. lead and 3,212 ozs. silver.

Oroville Dredging.—Returns, $16,750.

Orsk Goldfields.—Tributors' ore and alluvial deposits on Siberia claim produced 1,223 ozs.

Ottoo Kopje Diamond.—Recovered 37 carats; £106.

Premier.—Loads washed, mine ground, 251,277; overburden, 39,640; yielding, 63,958 carats ·25; in addition 10,742 carats recovered from Pulsator residues; total, 74,700 carats.

Transvaal Gold.—Crushed 8,900 tons, 2,251 ozs.; central cyanide 3,930 tons, 840 ozs.; central slimes 2,700 tons, 456 ozs.; Kameel's cyanide 1,590 tons, 318 ozs.; Kameel's slimes 780 tons, 162 ozs.; old slimes 350 tons, 93 ozs.; total, 4,120 ozs.

Vereeniging.—Total sales 20,800 tons.

Victoria Proprietary.—Crushed 510 tons, 179 ozs.

Waihi Gold.—25,597 tons of 2,000 lbs., yielding £63,070.

Weardale Lead.—Ore raised 223 tons; pig lead smelted, 60 14-20 tons.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barry.—At the rate of 10 per cent., with £1,133 forward.

Great Northern.—For half-year ended on June 30, at the rate of 3 per cent. per annum on the ordinary capital, giving for half-year 2 per cent. to the preferred converted ordinary stock and 3 per cent. on the B stock, carrying forward £51,390.

Great Western.—For the past half-year on the consolidated ordinary stock at the rate of 3¾ per cent. per annum, carrying forward £42,000.

Midland.—At the rate of 2½ per cent. per annum on the preferred ordinary, and 2¼ per cent. on the deferred ordinary stocks, carrying forward £23,483.

North London.—For half-year at the rate of 4½ per cent. per annum, carrying forward £5,220.

Port Talbot Railway and Docks.—At the rate of 1 per cent. per annum upon the ordinary shares for half-year, although the accounts show sufficient to enable 2 per cent. per annum for half-year on the ordinary shares to be paid, the 1 per cent. being, in fact, an interim dividend, as the financial year does not end until Dec. 31.

Vale of Glamorgan.—4⅞ per cent. per annum for last half-year, with £636 forward.

BREWERIES.

Holt.—Interim for half-year ended June 30 at the rate of 5 per cent. per annum on the preference and ordinary share capital.

Smith, Garrett and Co.—7½ per cent. on the ordinary shares, making 10 per cent. for the year, carrying £8,477 forward.

Southdown and East Grinstead.—Interim on the ordinary shares for half-year ended June 30 at the rate of 10 per cent. per annum, payable Sept. 1.

MINES.

Briseis Tin.—Further interim (No. 3) of 9d. per share.

Dolcoath.—1s. 6d. per share, being at the rate of 15 per cent. per annum.

Golden Horse Shoe Estates.—Second interim for 1906 of 5s. per share.

Mount Morgan Gold.—3d. a share for July.

Pusing Lama Tin.—Interim of 1s. per share.

MISCELLANEOUS.

A. D. Foulkes.—Interim at the rate of 6 per cent. per annum on both preference and ordinary shares for past half-year.

Birmingham Railway Carriage and Wagon.—Interim at the rate of 6 per cent. per annum on the preference shares, and at the rate of 7½ per cent. on the ordinary shares for half-year ended June 30.

Bournemouth and Poole Electricity Supply.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended June 30, payable Aug. 15.

Borax Consolidated.—Interim of 5s. per share for quarter ended March 31, being at the rate of 10 per cent. per annum.

Bradbury, Greatorex.—Interim at the rate of 8 per cent. per annum on the ordinary shares.

British Wagon Co.—Interim of 4s. per share for half-year to June 30.

Brompton and Kensington Electricity Supply.—Interim for half-year to June 30 on the ordinary shares at the rate of 9 per cent. per annum.

C. and W. Walker.—Interim at the rate of 5½ per cent. per annum on the preference shares, and at the rate of 10 per cent. on the ordinary shares for half-year ending July 31.

Cardiff Gaslight and Coke.—Maximum dividends for half-year ended June 30—viz., at the rate of 10 per cent. on the A stock, 8 per cent. on B stock, 7 per cent. on C stock, 5 per cent. on D stock, and 4½ per cent. on the preference stock.

Charing Cross, West-End, and City Electricity Supply.—Interim on the ordinary shares at the rate of 5 per cent. per annum for half-year ended June 30.

Coatbridge Gas.—At the rate of 11 per cent. per annum on the original stock, and £7 14s. per cent. per annum on the new shares for half-year to June 30, carrying forward £6,558.

Crocker, Sons, and Co.—Interim at the rate of 5 per cent. per annum on both classes of shares (preference and ordinary) for half-year ended June 30.

Hayes, Candy, and Co.—Interim at the rate of 5⅛ per cent. per annum on the preference shares for half-year ended July 19.

Henry Bessemer and Co.—Interim of 5s. per share on the ordinary shares, being at the rate of 5 per cent. per annum for half-year ended June 30 last.

Jones Sewing Machine.—Transferring £2,500 to the reserve, final of 4 per cent. on the ordinary shares, making 7 per cent. for year ended May 31, placing £2,500 to reserve, and carrying £929 forward.

Joseph Travers and Sons.—Interim on the ordinary shares at the rate of 5 per cent. per annum (or 6d. per share) for half-year ended July 31.

London United Tramways (1901).—For half-year ended June 30, at the rate of 3 per cent. per annum.

Main Colliery.—Final of 14s. per share on both preference and ordinary shares, making with interim 10 per cent. on both classes of shares for year ended June 30.

Melbourne Tramway and Omnibus.—Bonus for year ended June 30 at the rate of 2½ per cent., payable Aug. 5.

Metropolitan Electric Supply.—Interim of 4s. per share on the ordinary shares, being at the rate of 8 per cent. per annum.

National Gas Engine.—Interim at the rate of 20 per cent. per annum on ordinary shares for six months ended June 30.

Newbury's.—Interim at the rate of 10 per cent. per annum for half-year ending Aug. 19.

North Central Wagon.—At the rate of 10 per cent. per annum, and a bonus at the rate of 3 per cent. per annum, placing £3,500 to reserve and carrying forward £482.

Northern Accident Insurance.—Interim of 1s. per share.

Owen and Robinson.—Further, which, with the interim paid, 6 per cent. on the ordinary shares for the year ended May 31, placing £350 to reserve, and carrying £761 forward.

Pawsons and Leafs.—Interim for half-year ended July 26 at the the rate of 5 per cent. per annum.

Read Brothers.—Interim for the six months ended June 30 at rate of 8 per cent. per annum on the ordinary shares.

Roburite Explosives.—Interim on the preference shares at the rate of 10 per annum for six months ended June 30, payable Aug. 14.

Rochdale Canal.—For half-year ended June 30, at the rate o 10s. per cent.

"Sanitas."—Usual interim at the rate of 5 per cent. per annum for six months ended June 30.

Sheffield and Rotherham Bank.—Interim of 8s. per £8 paid share.

South Staffordshire Water Works.—At the rate of 7 per cent. per annum for half-year ended June 30, carrying £6,469 forward.

Spratt's Patent.—Interim for the six months to June 30 on the ordinary shares at the rate of 4s. per share.

Swan and Edgar.—Interim at the rate of 8 per cent. per annum on both preference and ordinary shares for the half-year ended July 31.

Thatched House (Sheffield).—Interim of 5s. per share on the ordinary shares.

Walker and Wallsend Union Gas.—Interim at the rate of 4⅜ per cent. per annum on the 3½ per cent. consolidated stock, and 6⅜ per cent. per annum on the ordinary stock.

Walter Scott.—At the rate of 5 per cent. on the ordinary shares for half-year ended June 30.

Wath Main Colliery.—Interim of 9d. per share on the ordinary shares.

Western Wagon and Property.—Interim at the usual rate of 10 per cent. per annum for half-year ended June 30.

Westminster Electric Supply.—Interim for half-year ended June 30 at the rate of 11 per cent. per annum.

Wm. W. Nell.—Interim at the rate of 5 per cent. per annum on the ordinary shares.

Wilts United Dairies.—Final for past year of 5½ per cent., making 8 per cent. on the ordinary shares, placing £1,730 to reserve, and carrying £1,443 forward.

Woolcombers.—Interim on the preference shares for the half-year ended June 30 at the rate of 7 per cent. per annum.

COMPANY MEETINGS.

CENTRAL MINING AND INVESTMENT.

The annual general meeting of the Central Mining and Investment Corporation, Limited, was held on Thursday, at the offices, 1, London Wall Buildings, E.C., Sir Julius Wernher presiding.

The Secretary (Mr. L. Bluen) read the notice calling the meeting and also the auditors' report.

The Chairman said: Before going into the business proper of the meeting I wish to refer to the painful event which has occurred recently—the death of my friend, partner, and co-director (Mr. Alfred Beit). (Hear, hear.) I think that everyone who knew him will feel that an exceptional personality has passed away—a man who combined a rare degree of ability with great tenderness and kindness of heart; one who was ever ready to hold out a helping hand; and many are those who will remember acts of kindness rendered by him in the most unobtrusive manner. One of the most prominent characteristics of Mr. Beit was his intense love and devotion to South Africa—the country in which he spent the happiest portion of his life, and in whose welfare, prosperity, and advancement he took the deepest interest. His aims have often been misunderstood and misrepresented; his ideal, like that of the late Mr. Rhodes, was to see a united South Africa under the British Crown, forming part of the great Empire, the country of his adoption, which he greatly admired, without losing his attachment to the country of his birth. There was no more fervent believer in the future of South Africa than Mr, Beit, and neither the fearful time through which we are passing nor the enfeebled state of his health, due to over-work and endless worry, could disturb his confidence. We shall miss him sadly in the direction of our affairs, as he possessed an inside knowledge of all South African matters which has rarely been equalled, and in such difficult times as the present his counsels will be greatly missed. (Hear, hear.) We have selected in his place Mr. Lionel Phillips, a partner in our firm, who left for South Africa last year to devote himself more especially to the management of the mines, which naturally remain, from the shareholders' point of view, the most important question. Mr. Phillips has special knowledge of this. He has been a manager himself on the diamond field, and also on the goldfields, for many years, and there is every hope that his labours will be successful. The report and balance-sheet is before you, but, unfortunately, it is not a thing to be very proud of.

I will take you through the figures, with your permission, and I may at once say they reflect the state of affairs in South Africa. We have earned a certain amount—quite a nice amount—in dividends, and the expenses of management, consisting of rent, stationery, &c., are £6,100. I do not think that can be called excessive for a company with a capital of £6,000,000. I think the profit and loss account explains itself. Turning to the balance-sheet, we find that the capital of £6,000,000 has been fully issued. The other items on the debit side explain themselves. Coming to the credit side, we have invested in shares and interests in other companies, nearly all South African—in fact, there is only one small item which does not belong to South Africa—£3,899,872, other investments £1,091,000, and various items, which may be called cash, of over £1,000,000; so that the readily available funds of the company amount to about one-third of the total capital—over £2,000,000. We have had to be very careful, perhaps we have not been careful enough; but, still, we have been as careful as we could be in regard to our South African investments, which, unfortunately, showed at June 30 a considerable depreciation. It is a very large sum that we have had to put aside for depreciation—£1,450,000—against which, of course, we have the profit of £215,000 on the other side; but, still, a large deficiency remains, with which we have dealt in the manner set out in the balance-sheet. You see exactly how we stand, and the report gives you an indication of how the money has been spent. We had on June 30 £2,355,000 in dividend-paying gold shares and £1,543,000 in non-dividend-paying gold shares and interests; but I may say that a considerable proportion of this we hope will be dividend-paying in the near future; in fact, there are two large items which I am sure will come in in the course of this year, and others gradually. I do not think there are any other items in the balance-sheet that call for comment on my part. To anybody accustomed to balance-sheets I think the other items will be perfectly clear and intelligible. I might say that before commencing operations there had already been a severe fall in the prices of South African securities—securities in which we had been dealing, most of us, for a number of years, and which we thought that we had full knowledge of, and we still think we had a good deal of knowledge of them. The fall in prices at that time was so large that the idea of forming this company suggested itself to a great many of our friends. They came to us to speak about it, and finally we consented to form it, and to take advantage of the market and of all the chances which, as we still believe, exist in South Africa, and possibly elsewhere. We proceeded slowly and cautiously to buy certain interests, partly developed and partly in course of development. We were buying at falling prices, but the collapse which followed was quite beyond human foresight. The war had disorganised the industry to a greater extent than was realised at first sight, when people returned, after a long exile, full of hope.

There were many disappointments in store; but the greatest, no doubt, was the difficulty—the impossibility—of getting sufficient unskilled labour in South Africa. It was not decided lightly or rashly to turn to foreign countries to obtain what we all hope and desire will be only a temporary expedient. The whole position of South African labour was studied and reviewed most carefully by an impartial commission and without undue haste. The prospect of foreign labour was repugnant to all; but it was a question as to whether poor, exhausted South Africa was to be thrown back for long years, her reconstruction delayed, and most of her inhabitants ruined, or whether foreign labour should be imported for a time to supplement the deficient labour forces of the country. It is well known that most of the unskilled labour in South Africa is performed by the native races, who, on the whole, are excellent labourers, but who, unfortunately, do not exist in sufficient numbers to meet the requirements. Moreover, the needs of these labourers are small, and a very short period of wage-earning suffices to place them in a position of independence. Consequently, the men work, as a rule, only for a very short time, and an everlasting system of recruiting is necessary to make good the wastage in the labour supply. Mining, too, is the most trying form of unskilled labour in South Africa, and only a portion of the labour available at any time comes to the goldfields. Well, as you know, the importation of Chinese was finally decided upon. The necessary Ordinances were passed by the local Legislature and received the Royal Assent. On the faith of this a good deal of work was projected and undertaken, and a large expenditure incurred. Indentured labour was not a novel institution in the British Empire: it had already received the sanction of various Governments; and we were justified in reckoning on a continuous supply until such time as South Africa could furnish her own requirements. You all know what followed. A change of Government took place, and with it a complete change of policy. What we had every reason to regard as a settled policy, affecting only the people who were directly interested, became a matter of party politics; everything was disturbed; nobody knew exactly what was going to happen; but the greatest alarm prevailed, and the depreciation followed which, it is not too much to say, has ruined half South Africa and tens of thousands of people on this side of the water. In spite of the continuously progressive industry we have been living through months of panic; we have been the sport of parties, and quite helpless to restore confidence.

I know that the Government were in an extremely difficult position. Many statements had been made during the elections which could not be proved. I do not wish to make accusations; but I may be permitted to defend the industry against such baseless charges as that it endeavoured to profit by slavery or semi-slavery or by the ill-treatment of its labourers. The fact that the Chinese refused to return home, despite repeated and tempting offers on the part of the Government—offers which amounted to inducements to the Chinese to break their contracts—will be sufficient proof to the contrary for fair-minded men. It is not surprising that capital has become extremely nervous and shy, and that we see a condition of affairs almost unparalleled. You cannot possibly localise the effects of the unfriendly policy to which we have been subjected. If you maim a limb the whole body suffers, and this is the phenomenon which we are witnessing now. In spite of the prosperous state of trade in England and elsewhere and excellent international relations—so good, indeed, that this country has seen fit to enter upon a policy of disarmament—in spite of comparatively cheap money, you find the confidence of the public is shaken, and the losses are by no means confined to speculative securities, but are extended even to what are called gilt-edged securities. Capital is proverbially timid, but Great Britain has always been considered the safest place for it. The country has had the advantage of this feeling of security, and it would be a thousand pities to frighten capital away, because the combination of capital and labour is necessary to produce the results which have made Great Britain what she is. If, in times of peace, with a Government passionately pacific, you have Consols at the lowest price, what will the position be if there should arise the slightest cause for alarm? The uncertainty in South African affairs has caused infinite trouble and widespread ruin. I sincerely hope that the statements made in Parliament two days ago will put an end to the prevailing feeling of uncertainty, and will give a sense of security for the future, and that the Transvaal may be permitted to work out its own destinies. I trust that everybody concerned will try his utmost to work loyally on the lines laid down, and to make a success of the new Constitution—a success not for one section, but for every class of the community. In all settlements of this kind there must be the spirit of give and take, and I would recommend this specially to our brother Boer, and then I have no doubt that we shall see a return of confidence and further great developments. I am very far from saying that all our difficulties and drawbacks are caused by the political situation. A large industry like ours never stands still. It is susceptible of constant improvement, and we welcome helpful hints and intelligent criticisms. We are fully alive to the fact that there remains much to be done, and that we are still far, very far, from perfection; but changes are very expensive in distant countries, and we have to proceed with the utmost care.

You will notice that, in spite of many drawbacks, the industry as a whole is progressive and the output an increasing one. There is the open question whether the mines increase or decrease in value in depth. A certain amount of uneasiness has been created by the fact that most of the mines give a lower return now than in former days; but that in itself would be no proof of a declining yield. It has long been known, since the

inception of the industry, that there are poorer and richer reefs in all the mines, and that, as our working expenses come down, larger quantities of the poorer reefs are worked than was the case in the past—reefs which still leave a fair working profit, and the exploitation of which adds materially to the life of the mine. This is a most important point, and the reduction of working costs is really, to us, a weightier factor than a little greater richness or poverty of the reefs. It cannot be doubted that the mines of the Witwatersrand are not entirely exempt from the variations in value which are the experience of all other goldfields. We have to-day companies poorer in the matter of yield than in days gone by—I hope only temporarily—and others which show decided improvement in this respect, and the results of some of the very deepest exploitations are extremely encouraging. But, as I have before indicated, our main hope lies in a substantial lowering of working cost and prolongation of life. Is such a hope realisable? I am distinctly of opinion that it is, and the problem is receiving our constant and unflagging attention. Despite what has been said and written to the contrary, we encourage white labour in every possible way, and a young generation is growing up in the country which will prove exceedingly useful; but white labour can never take the place of unskilled labour in South Africa. Even if you get rid of every Chinaman, the 5,000,000 or 6,000,000 of natives south of the Zambesi remain, and some at least—a few hundreds of thousands in the aggregate—have to be employed. Our industry depends on an adequate supply of coloured labour, and, given that, the outlook cannot but be regarded as distinctly hopeful.

When I speak of reductions in working costs I do not mean reductions of trifling significance—I mean shillings per ton. (Cheers.) I know this will take time; but it has to come if we are to work our low-grade reefs at a profit. A certain amount of extravagance seems inseparable from mining for precious stones or metals. We have had a good share; but the severe lessons of past years have not been lost on us; they have been taken to heart, and if we find a satisfactory solution of all our political anxieties and labour problems I think we have a right to be decidedly optimistic as to the future. Our anxieties have lately been almost beyond endurance; in spite of larger returns and better dividends, we have seen falling prices and people in despair. The leaders of the industry come in for a good deal of blame, as is but natural; still, they are the people on whose shoulders lie the heaviest burdens, and were they removed there would be chaos. Whatever their faults may be, they have, with one exception, always been on the British side. Their task is to work the mines to the best advantage, and this will be our constant endeavour in the future as it has been in the past. You will notice that we have about one-third of our capital virtually free. Although prices have lately been exceedingly tempting, we have hesitated, in consideration of the political outlook, to put more money into South Africa until we could see the position more clearly. The depreciation of our investments is very severe. I feel the position very acutely; but if we get a fair run I shall not be in the least discouraged. We shall come out all right, as we have often before, when things, from an industrial point of view, looked far less favourable than they do to-day. (Applause.) That is all I have to say, and I will now move: "That the report of the directors and statement of accounts to June 30, 1906, now laid before the meeting, be taken as read, and that the same are hereby received and adopted."

Mr. Friedrich Eckstein seconded the resolution, which was carried unanimously, without discussion.

The Chairman then moved: "That Mr. Georges Rouliot, who retires by rotation, be, and he is hereby, re-elected a director of the company."

This was duly seconded, and agreed to.

Mr. Sonn Wetzlar proposed the reappointment of the auditors (Messrs. Cooper Brothers and Co.), which was seconded by Mr. Kitzinger and carried.

Mr. Imroth moved a vote of thanks to the chairman.

Mr. John Seear, in seconding the propostion, said he thought they all owed a debt of gratitude to the late Mr. Beit, to whom the chairman had referred, and he was sure that they all regretted his untimely death. He hoped that Mr. Imroth would allow the resolution to be added to so as to express their deep regret at the death of Mr. Beit, and that this should be inscribed on the minutes of the meeting. All must agree that that was the proper way to chronicle such a sad event. (Hear, hear.)

The proposition was agreed to.

The Chairman, in reply, said that it would be his sad pleasure, if he might so express himself, to see that their vote of regret at the death of Mr. Beit was formally entered on the minutes. Mr. Beit's death was a great loss to them, and how they would get on without him they hardly knew; but, still, in this life their friends and helpers were constantly going from them, and those who remained must do their best, as he and his colleagues would certainly do.

LONDON AND COUNTY BANKING COMPANY, LIMITED.

The half-yearly meeting of this bank was held on Thursday at Cannon Street Hotel, E.C., under the presidency of Mr. W. G. Rathbone.

The notice convening the meeting having been read,

The Chairman proceeded to move the adoption of the report and accounts. In doing so he reviewed the position and affairs of the bank itself, and made some interesting comments upon matters of public interest, particularly on the subject of the gold reserve. Shareholders of the bank, he observed, would not have failed to notice that both the export and import trade of the country had exhibited substantial advances when compared with previous figures, although these had also exhibited a marked degree of prosperity. During the past six months bankers had had nothing to complain of, and the London and County had not been behind its neighbours in the profitable employment of its funds. The one blot upon this condition of things had been the inactivity and depression of stock markets, especially in the high-class investment section, and the anomaly of a prosperous industrial and banking community combined with depression and exhaustion in the market for securities had apparently puzzled some of the commentators. Three of the reasons given to explain this anomaly appeared to him to amply account for it. The San Francisco fire undoubtedly had its effect. It was estimated that from £10,000,000 to £12,000,000 must be remitted to San Francisco from London to pay insurance losses, and the greater part of this sum must be provided by the sale of securities in this market. In addition, £40,000,000 in cash had to be provided in America, largely by sales of securities in New York, and the interdependence of the New York stock market and the American section of our own was so close that this could not but affect us here. The same remark as to the close interdependence of foreign markets with our own applied to the effect of the Russian loan. But the main cause of the depression in gilt-edged stocks had undoubtedly been the one indicated by the Governor of the Bank of England in June last—the inadequacy of the savings and accumulated profits of the past few years to absorb the increased issue of first-class securities—in other words, the repletion of the *bonâ-fide* investor, the man who bought securities for cash and locked them up. It was generally acknowledged that the reckless borrowing of municipalities was the chief cause of the comparative scarcity of money seeking investment. Lord Avebury last month gave the last completed figures of municipal indebtedness, those of 1903-4, as £469,000,000. That figure was below the mark to-day, not only because of subsequent issues, but of the very large floating debts of many corporations, which took the shape of six and twelve months' bills, deposits, and so on. It was well within the mark to say that the saving classes had been called upon to absorb within the last ten years between £200,000,000 and £300,000,000 of municipal obligations, though enfeebled by the increasing weight of taxation. They had not only to pay the income-tax, but, as Sir Robert Griffin had pointed out, "the payers of one large branch only had £20,000,000 a year more to contribute on account of the rates." The income-tax paying class—the chief investors in gilt-edged securities—had to pay the death duties, which in ten years amounted to £126,000,000. It would be noted with satisfaction that a strong feeling had arisen among the public, and among some of the municipalities themselves, that local borrowing and expenditure had gone much too far, and must be checked. The first essential seemed to be an amended system of representation. Banks and dock companies had no voice in the administration and no control over the expenditure of the funds they contributed. The rates paid by this bank last year amounted to £31,000. They had risen more than 25 per cent. in five years, yet they had no representation. They could therefore confidently appeal to Government to remove this blot from our system of local government. Referring next to the question of the gold reserve, he said that the discussion which had followed Lord Goschen's recent speech had created some confusion by not distinguishing between the gold reserve of the country, held by the Bank of England, and the cash reserves of banks. Though these two questions sometimes affected one another, they were distinct and must be kept distinct. Banks must keep adequate cash reserves at their own expense; and secondly, there must be an adequate and visible gold reserve—a war chest or an emergency chest—sufficient to protect us against finding ourselves dependent in an emergency on the Bank of France, and adequate to sustain the confidence of the world in the ability of our financial machinery to stand any strain that might be put on it. There were only two other joint stock banks in London maintaining as high a proportion of cash as they did. They had thus at some sacrifice proved their faith in the soundness of Lord Goschen's advice of 15 years ago, and any just scheme for strengthening the national gold reserve would receive their hearty support. Turning to the balance-sheet, he said they had again been able to add £50,000 to reserve, bringing it to £1,500,000. They had thus repaid to reserve more than half of the £450,000 taken in February, 1904, to write down their Consols to 85. This had been done without any sacrifice of dividend, and he hoped that in five or six years' time their reserve would be equal to their capital. Their customers' balances, standing at £43,498,000, were about £1,300,000 less than a year ago. This was a fluctuation which he would rather see in the upward direction, but which had since been partially recovered. They need not be unduly discouraged by this one figure; it must be taken in connection with another, even more important—the number of current and deposit accounts. These had increased in the last five years by about 20,000. The pause in the growth of customers' balances was merely a question of smaller average balances being kept. The acceptances, £1,780,000, showed a shrinkage of rather over £500,000, fluctuating with the requirements of customers. The nett profit was £204,047, exceeding by £30,000 the nett profit of the first half of last year.

The motion for the adoption of the report and accounts was seconded by the Hon. G. J. Goschen, and carried unanimously.

The meeting closed with a vote of thanks to the chairman and directors.

PEARKS' STORES (AFRICA).

The third ordinary general meeting of Pearks' Stores (Africa), Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. Charles Steel (chairman of the company) presiding.

The secretary (Mr. John Dumphreys) having read the notice convening the meeting and the report of the auditors,

The Chairman said: The most important business during the year to which I need specially call your attention is, I think, the increase in the capital. Last year when I had the pleasure of meeting you the amount of issued capital was £25,000. We have now issued the whole of the capital for which the company was registered, namely, £100,000. Out of the balance of £75,000 which remained unissued £15,000 in shares has been paid to Pearks, Limited, the parent company. That was in accordance with the terms of the purchase of this business from Pearks, Limited. Under the arrangement they were to have 20 per cent. of any further unissued capital, and the unissued capital being £75,000 they received one-fifth of that, namely, £15,000. The remaining £60,000 has been issued to the public, and so far as we are concerned we shall receive the whole of that money, the shares having been underwritten. As to the justification for issuing that capital I do not think it is necessary to say anything. You will find from the profit and loss account that we paid in interest and discount £2,392, and consequent upon the issue of our further capital that amount will be saved in the current year. A further advantage will be the reduction in the amounts which are shown on the debtor side of the balance-sheet, and which amount to £75,159. Dealing now with the question of trading and the other items both on the profit and loss account and the balance-sheet, I will refer first to the profit. The profit was £27,099. That is what I may term the gross profit, but, of course, from that must be deducted the administration expenses, which amount to £17,164, leaving a balance of £9,935. So far as the administration expenses are concerned, we endeavour to keep these down as far as possible but always consistently with efficiency. We do not believe in false economy, although we do not believe in spending more than is necessary; at the same time, we have regard to all that is necessary to further our interests in South Africa and at home. Our managing director, Mr. John Cansfield, went out to South Africa in February last, and he assures me and my colleagues that after having gone thoroughly into the working of the various places in South Africa, there is no undue expenditure, and I know of no one better qualified than Mr. Cansfield to express an opinion upon that point. We now come to the consideration of the disposal of the nett balance of £9,935. I have already mentioned the sum of £2,392. That, as I have said, will be saved in consequence of the increase of the capital, and it will go in the current year in aid of a dividend upon the larger capital. After further observations on the accounts and other matters the Chairman formally moved the adoption of the report and accounts.

This was seconded by Mr. Lensh and carried unanimously.

The Chairman next moved the re-election of Mr. E. T. Boxall, the retiring director, remarking that that gentleman knew South Africa very well and was a very useful director.

Mr. Salmon seconded the motion, which was unanimously agreed to.

On the motion of Mr. Knott, seconded by Mr. Hettinger, Messrs. W. R. Taylor Carr and Co. were reappointed auditors.

A vote of thanks to the Chairman terminated the proceedings.

CERRO MURIANO MINES, LIMITED.

The fourth ordinary general meeting of the Cerro Muriano Mines, Limited, was held on Thursday at the Cannon Street Hotel, E.C., Mr. William Frecheville (chairman of the company) presiding.

The Secretary (Mr. F. H. Williams) having read the notice convening the meeting and the report of the auditors,

The Chairman said: In dealing with the accounts the first point which, perhaps, should be noted is that the total capital of our company now stands at 235,000 shares, of which 225,000 have been issued. When we met a year ago the capital stood at 125,000 shares issued, and in addition to this there was a debenture debt of £25,000. This debenture debt was extinguished by the holders exchanging their debentures at par for shares. In the autumn of last year the capital was increased by the issue of 75,000 more shares to provide further working capital. This brings the total up to the before-mentioned figure of 225,000 shares issued. On the other side of the account the first item which might seem to call for comment is that of £4,629 for buildings. I should explain to you that the buildings were required by the increased number of men, and the increased staff which our operations now demand. On the next page there is an item to which I will call your attention, namely, copper ore sales, £5,152. I should explain to you that this is for ore taken out incidentally, as it were, in the course of proving the mine. It does not mean that ore has been in any way stoped away from the reserves which have been opened up. I think you all know that in the spring of the present year we disposed of a part of our property to a new company. At the time we explained to you in detail our cause for doing this. The principal reason was that by doing so it became possible to deal with this land, and to prove it at once; otherwise it would in all probability have remained unworked for a number of years. The new company has a capital of 250,000 shares, of which the working capital is to be £75,000, and of this capitalisation we are to receive £135,350 in shares, and, in addition, £7,180 in cash. These figures do not quite agree with those given in the prospectus of the company when it was issued, the cause of that being that our company put back into the new concern part of the cash consideration which they were to receive in order to support the issue. The legal processes connected with the transfer of the land to the new company have, we understand, been completed, and we are now able to ask the new company to issue to us the shares, and the question arises, what shall we do with them? At the time that the new company was brought out the board issued a notice to you, in which they promised that out of the proceeds of the sale there should be a dividend, and it is now proposed to carry out that promise and to pay you a dividend in shares. The exact quantity of that dividend I am not able to tell you at present. We shall have to go into the question with the auditors, and after learning the profit that the transaction shows we shall have to go into the question of how much we see our way to pay away in dividend. I shall have to call on Mr. Edgar Taylor, in the course of two or three minutes, to address you in detail about the work which has been done in the mine during the last year; but, before doing so, I will make a few remarks on the general condition of the mine at the present moment. As you know, we unbottomed the old workings in the middle part of our property at a depth of about 700 ft., and we drove along the lode and opened up quite a good run of ground, which came to something over 1,000 ft. We then deepened our shaft 120 ft. and drove out again at the 820 ft. level, but here we found that the paying ground did not extend to more than about half the length we had encountered in the level above. Exactly what this means I am not prepared to say. It may mean a permanent shortening of this particular ore body in depth, or it may mean only a temporary shortening, and the next level below may show an increased length again. Both to the east and to the west of the part we are working we had a good deal of promising ground still to try. The Chairman formally moved the adoption of the report and accounts.

This was seconded by Mr. Edgar Taylor, and carried unanimously.

WARING AND GILLOW, LIMITED.

The ninth annual meeting of the shareholders in Waring and Gillow, Limited, took place in the Georgian Hall of the company's new premises in Oxford Street on Thursday. The chair was taken by Mr. S. J. Waring, junr.

The Chairman said: The year 1905 was the best which the company has yet had, not only as regards the volume of business done, but also as regards the profits earned, which are some £30,000 in excess of the preceding year. During the nine years of the company's existence there has been a continuous and unbroken record of increasing profits, and the fact that we are able, in addition to paying the regular dividends on the 7 per cent. cumulative ordinary shares for past year, to carry £30,000 to the general reserve, and also to bring forward nearly £15,000 to the credit of the present year's accounts, is one on which you may, I venture to think, be congratulated. I may mention that, in addition to our own reserve, which will now amount to £145,000, we are also building up substantial reserves in Messrs. Hampton's, the Waring-White, and other subsidiary companies, and have carried forward to their reserve for the past year an amount almost equal to our own. Respecting the Waring-White Building Company, in which you hold a half interest, I think it will be generally admitted, as proved by the actual results, that it is undoubtedly the most scientific and economical building organisation in Great Britain, and has met with a degree of success which is almost phenomenal. With regard to our own business, when you bear in mind its extraordinary resources and ramifications, you, as shareholders, may perhaps be pardoned for experiencing some degree of satisfaction. These resources comprise, as you know, the great factories of Liverpool, Lancaster, Hammersmith, and Paris, which have no equal in their effective capacity to produce good and sound work on an economical basis. Our well-established branches at Paris, Johannesburg, Liverpool, Manchester, Glasgow, and Madrid are all supplemented by the splendid buildings in which you are assembled, and constitute, to my mind, an organisation which is not only unique, but which affords at the moment no known parallel. The inauguration o this vast and comprehensive building in which we are now assembled took place in the second week of June. I feel quite sure that your interest in the undertaking has led you to follow with particular pleasure the altogether unprecedented character of the opening. For an entire week, from 10 in the morning until 10 at night, these vast galleries were thronged with crowds of delighted visitors, exceeding half a million. During several hours in each afternoon the pavement, for the distance of nearly half a mile, was occupied by a densely packed stream of fashionable people, and the roadway was blocked at frequent intervals by the unceasing arrival of carriages, motor-cars, and omnibuses. Nothing like the scene has ever been witnessed in this or any other country in connection with a purely commercial enterprise. Her Majesty the Queen graciously visited the galleries, spent over two hours here, and expressed her delight with everything she saw. Later in the week we were honoured with a visit from H.R.H. the Princess of Wales, who was equally generous in her tribute of appreciation. Many ladies of title and leaders of fashion, and many men of rank and eminence, accepted our invitation to see for themselves the way in which we propose to simplify furnishing and house equipment in the future. After dwelling upon other features and the bright prospects of the company, the Chairman formally moved the adoption of the report and accounts, which was carried unanimously.

THRELFALL'S BREWERY COMPANY, LIMITED.

The nineteenth annual general meeting of Threlfall's Brewery Company, Limited, was held on Thursday at the Cannon Street Hotel, E.C., Mr. Thomas Threlfall (chairman of the company) presiding.

The Secretary (Mr. W. J. Burnside, A.C.I.S.) read the notice convening the meeting, the report of the auditors was also read.

The Chairman, after alluding most feelingly to the death of Mr. W. A. Matheson, said: It is a disappointment that we are unable to recommend so large a dividend on our ordinary shares as has been distributed of recent years. Sixteen per cent. is, nevertheless, a very fine dividend, and when we look around and observe the ill-success that has attended the efforts of not a few very prominent brewing businesses we may well congratulate ourselves on the prosperity of this one. (Hear, hear.) Of course, there is no getting over the reduction due to the compensation levy under the Licensing Act of 1904. We have paid under this head £7,544 out of the profits for the year, which would otherwise have been available for dividend, and this new burden has been laid upon the trade concurrently with a general diminution in the consumption of alcoholic beverages, and on the top of a tax imposed for war purposes and conveniently retained during peace. Turning now to the accounts, it is gratifying to be able to announce that the profits for the year are slightly in excess of the year before. We have written off £6,039 for depreciation and £11,000—an unrealisable asset—the balance of the expenses of the issue of debenture stock, the corresponding figures twelve months ago being £3,083 and £5,492 respectively, or about half the amounts, and we carry forward £13,221, practically the same amount as last year. You will have noticed that we had a loan from our bankers of £100,000, and you will wish me to say something about that. (Hear, hear.) It will be in your minds that in January, 1904, the company made an issue of £1,000,000 4 per cent. debenture stock, part of an authorised issue of £1,500,000, specifically secured, in addition to the usual general floating charge, by a mortgage of freehold, copyhold and long leasehold properties valued by Messrs. William Wilson and Son, of Manchester, at £3,244,113; and that from the proceeds of this issue all the original 5 per cent. debentures of the company and all the mortgages have been paid off. Since this issue was made the company has acquired a number of additional licensed houses at the cost of £197,460, including a large purchase *en bloc*, to which must be added £26,936 for alterations and improvements, making together a capital expenditure of £224,396. Now, if the market had been favourable, we should most certainly have made a further issue of debenture stock, as authorised, and it was with much reluctance that we held our hand. Unfortunately when in a given trade, owing to ascertainable causes—whether of over-capitalisation, reckless or indifferent management, or all combined, we need not discuss—a number of companies do badly, the public begins to fight shy of that particular form of investment. It does not take the trouble to discriminate, and the consequence is that good and sound and well-managed concerns have a shadow thrown over them which obscures their brilliancy, and their stocks cease for the time being to continue to be a favourite investment. Under the circumstances we naturally had recourse to our bankers for financing the purchase of property. We shall make a further issue of debenture stock at a favourable moment. There are two announcements in the report with reference to the appointment of directors. The board, in the exercise of its powers under the articles of association, has elected Mr. Peter Joseph Feeny a director in the place of the late Mr. Matheson, and I am sure you will endorse the selection with your approval when I tell you that Mr. Feeny is engaged in business in Liverpool, where he is well known, and that he is not only a large holder of ordinary shares in the company, but as the late Mr. Matheson's son-in-law he indirectly represents the large holdings of the various members of that gentleman's family. The second announcement concerns two gentlemen whose connection with the business is much longer than the report states. It is true that they have been with the company since its incorporation, but they were also both taken on then—Mr. Tomson from Threlfall's, with which firm he had been since 1864, and Mr. Griffin from Matheson's, with whom he had been since 1873. So that we have here continuous service of 42 and 33 years respectively—service, so I must add, of the very best, and which, in the unanimous opinion of the board, is deserving of the reward of a higher position and a higher responsibility. (Applause.) It is the desire of the directors that Mr. Tomson and Mr. Griffin be made assistant managing directors, the one in Manchester and the other in Liverpool, and the only way this can be done is by first making them directors. This we recommend and invite you to do. Indeed, you will, I am sure, welcome to the board two men who have been so thoroughly well trained within our walls, and who will bring expert knowledge to its councils. I must further point out that it is not the intention to interfere with or in any way diminish the authority of Mr. George Barker. He will remain the managing director and supreme head in the management, and, if the assistance we propose to give him will in any way lighten his burden and allow him to pass on even a few of the multifarious details with which he so untiringly deals, we shall all rejoice. (Hear, hear.) The accession of Mr. Tomson and Mr. Griffin to the board will not swell the item directors' fees; they will, as hitherto, be paid by salary, and the readjustment which is contemplated avoids putting the company to increased expense. (Applause.) In conclusion, let me again congratulate you that in these troublous times we are able to meet you with such a satisfactory balance-sheet and report. The business is sound and successful and its prospects at the moment, with hops at an advantageous price, appear good. I cannot, of course, tell you what quantity of beer the nation will consume between now and June 30, 1907, nor can I say how much of it will have been brewed by Threlfall's Brewery Company, Limited, but I can tell you that those who drink the last-named will get absolutely the best. (Applause.) I have now the honour to move the adoption of the report and accounts, and that dividends be paid at the rate of 6 per cent. per annum on the preference shares and at the rate of 17 per cent. per annum on the ordinary shares for the half-year ended June 30, which, with the interim dividend at the rate of 15 per cent. per annum, makes 16 per cent. for the year. (Applause.)

Mr. Charles Threlfall seconded the motion, which was carried unanimously after a little discussion.

Answers to Correspondents.

H. D. R.—(1) Your first query has been answered by letter. (2) To properly reply to this question would involve the mention of securities, and that is against the rules. But since the investments must be trustee securities we doubt if you could much improve upon your present holdings. (3) No, it hardly follows that this will happen. You must take into account the always expanding commitments of all nations, and it seems to us that the only doubt is whether the gold supply will be sufficient to ensure for the world's huge operations a sure foundation. (4) Under existing laws it must never be assumed that a large gold supply will cause a rise in prices. Theoretically a large and plentiful supply of gold should cheapen the commodity, and thus cause prices to rise, but such is not the case in actual practice. You open up a big economic question, which cannot properly be disposed of in a few lines. Commerce does certainly get advantages from a large supply of gold, because it broadens the basis of credit, and enables bankers to lend more freely, and in due course stocks and shares might benefit, all other things being equal, because it is assumed that freer credit leads to greater profits. (5) This is the most difficult problem you propound. Constant observation, ability to clearly judge ever-recurring symptoms, and an important review of the world's economic and political conditions would all be helpful as a guiding principle, but it is, of course, quite impossible to predict the precise moment when any particular conditions may be expected to prevail. If it were otherwise we should all have made fortunes long ago.

Velox.—You may as well hold on a little longer, in the fair hope of lessening your loss, as the price can hardly go much lower. On a good rise you had better take your opportunity and sell out.

W. P.—(1) Yes, these seem to offer a very fair investment. The line, of couse, is not built yet, but it should in due course open up a very satisfactory traffic. The interest should be safe enough. (2) This is one of the best companies of its class, but the debentures hardly form a good permanent investment. (3) Yes, the company's properties should be valuable enough to safely secure the debenture issue.

Olive.—There is not much in it between the two, except that the preference are better secured. Against that you must remember that the preference are only 10s. paid, meaning that unless the balance is called up they receive a smaller dividend. The exchange is hardly worth making.

D. M.—At present prices we are disposed to think these shares offer a fair chance, the financial position of the company being very sound.

Charles Hoare and Company.

On July 6 last this private banking firm owed £1,927,386 on current accounts and £485,757 on deposits, being a moderate decline under each head compared with the corresponding date in 1905. Capital and reserve remain at £485,000 making the balance-sheet total £2,898,143 against £3,103,051. Cash at bankers and in hand is less by £40,671 at £400,761, and the money at call and short notice has been reduced nearly £100,000 to £400,879. Investments have also been lowered by £226,159 to £794,704 in order to allow for an expansion of £161,045 to £1,201,800 in the loans, overdrafts, and bills discounted. Freehold premises still remain at £100,000.

LONDON & COUNTY BANKING COMPANY

Registered under "The Companies Acts." Established in 1836. LIMITED.

CAPITAL £8,000,000, in 100,000 Shares of £80 each.

REPORT adopted at the HALF-YEARLY ORDINARY GENERAL MEETING, the 2nd August, 1906.

WILLIAM GAIR RATHBONE, Esq., in the Chair.

The Directors, in submitting to the Shareholders the Balance-sheet for the half-year ending 30th June last, have to report that, after paying interest to Customers and all charges, making provision for bad and doubtful debts, and allowing £28,715 0s. 8d. for rebate on bills not due, the net profits amount to £294,047 8s. 7d. From this sum have been deducted £25,000 transferred to Premises Account, and £50,000 carried to Reserve Fund (raising it to £1,500,000), leaving £219,047 8s. 7d., which, with £78,317 14s. 3d. balance brought forward from last account, leaves available the sum of £297,365 2s. 10d.

The Directors have declared a Dividend for the half-year of 10 per cent., which will require £200,000, leaving the sum of £97,365 2s. 10d. to be carried to the Profit and Loss New Account.

The Dividend, £2 per Share, free of Income Tax, will be payable at the Head Office, or at any of the Branches, on or after Monday, 13th August.

(Signed) GEORGE J. GOSCHEN, OSWALD MAGNIAC, W. G. RATHBONE, } Audit Committee of Directors.

G. J. RODOLPH, Head Office Manager.
W. G. GRIBBLE, Country Manager.
T. J. CARPENTER, Chief Accountant.

London and County Banking Company, Limited,
13th July, 1906.

In accordance with the provisions of the Companies Act, 1900, we certify that all our requirements as Auditors have been complied with, and we report that we have examined the Balance-sheet and Profit and Loss Account, dated the 30th June, 1906, have verified the Cash-Balance at the Bank of England, the Stocks there registered, and the other investments of the Bank. We have also examined the several Books and Vouchers and certified Returns showing the Cash-Balances, Bills, and other Amounts set forth, the whole of which are correctly stated; and in our opinion the said Balance-sheet and Profit and Loss Account are properly drawn up, so as to exhibit a true and correct view of the Company's affairs as shown by the books of the Company.

(Signed) HY. GRANT, THOS. HORWOOD, STUART PLEYDELL-BOUVERIE, } Auditors.

London and County Banking Company, Limited,
19th July, 1906.

LONDON AND COUNTY BANKING COMPANY, LIMITED.

Notice is hereby given that a Dividend on the Capital of the Company at the rate of 10 per cent. for the Half-Year ending 30th June, 1906, will be payable to the shareholders either at the Head Office, 21, Lombard Street, or at any of the Company's Branches, on or after Monday the 13th instant.

21, Lombard Street, 3rd August, 1906.

By order of the Board,
F. J. BARTHORPE, Secretary.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 449. SATURDAY, AUGUST 11, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Australian Wool.

Nothing is more gratifying about Australia than the way in which its pastoral industry has recovered from the crushing disaster inflicted by the prolonged drought. Under stress of this calamity the number of sheep on the Australasian continent fell from 72,209,000 in 1901 to 54,005,000 in 1902. Since that date there has been a continual increase, until in 1905 the total rose to 74,527,000. These are the figures given by Mr. Edmund Jowett in his always valuable review of the pastoral position published in the *Australasian Insurance and Banking Record.* Great, however, as the recovery has been in numbers, it has been still greater in the output of wool, thanks to the improvement in the breeds of sheep put upon the pastures. This is illustrated by a table which is so interesting that we extract it here for reference:—

AUSTRALIAN SHEEP AND CLIP RETURNS.

At End of Year.	Sheep and Lambs.	Bales Produced.	Bales per 1,000.
1894	100,930,418	1,608,000	15⅞
1895	91,800,270	1,499,000	16⅜
1896	91,395,565	1,475,000	16⅛
1897	83,823,154	1,307,000	15⅝
1898	80,301,677	1,277,000	15⅞
1899	71,957,650	1,200,000	16⅝
1900	70,602,995	1,250,000	17⅝
1901	72,208,736	1,294,000	17⅞
1902	54,005,276	1,018,000	18⅞
1903	57,428,863	988,000	17¼
1904	65,853,902	1,197,500	18⅛
1905	74,527,444	1,420,000	19⅛

An examination of these figures shows that the sheep and lambs shorn have cut per thousand last year 3⅜ bales more wool than the same number of sheep yielded in 1894, in other words, the 74,500,000 sheep estimated to be now in existence in Australia have cut about 270,000 bales more of wool than they would have done had the yield been at the rate of 1894. At £15 per bale this means a clear addition of £4,000,000 a year to the wealth of Australia, and it is an addition, Mr. Jowett says, entirely due to the skill and enterprise of the sheep-breeders of Australia. This improvement has, moreover, been effected in spite of the fact that eight of the intervening years between the two dates given were years of almost incessant drought resulting in appalling losses of breeding flocks, and the writer goes on to put in a word for the Australian sheep-farmer as an individual who has very considerably shared in contributing to the national prosperity. Of that there can be no doubt at all, for without the wool we do not know where Australia would stand to-day, seeing how heavily it is burdened by public debts and multiplied Governments. But the increase in the flocks and in the yield of wool per sheep are only two contributing agents in the revived prosperity now visible all over Australia. A still greater benefit has come from the increase in prices, and upon this point Mr. Jowett has some interesting observations to make with regard to the effect of gold production upon prices. That is an intricate problem difficult, if not impossible, to solve; but, broadly speaking, there can be no doubt that if the metal used as a medium of exchange increases rapidly or sensibly in volume the tendency must be for it to fall in its

exchangeable power as against commodities. We can see an indirect effect of the enormous increase in the world's production of gold in the movement of prices upon Stock Exchanges. These may not have risen; indeed, they have too often fallen, in spite of the great increase in the world's supply of gold, but there can be small question that the fall would have been much greater had the output of gold remained in the neighbourhood of the figures for 1900 and 1901. As little doubt is there that so far as wool is concerned there has been a remarkable rise in prices, in spite of the increased supplies, and that this rise has coincided with the great increase in the world's supply of gold. Upon this point we offer another illustrative table compiled by Mr. Jowett, the figures relating to the output of gold being furnished by Mr. Augustus Sauerbeck, one of the greatest living authorities upon price statistics and cognate subjects:—

Year.	World's Gold Production.	Highest and Lowest Prices for Wool. Merino Super 60's.	Coarse Xbred 40's.
	£	d.	d.
1899	63,100,000	32½ highest	17½ highest
1900	52,500,000	18½ lowest	10 lowest
1901	54,800,000	18½ to 20½	7 lowest
1902	61,000,000	20 to 24¾	8 to 10
1903	67,000,000	23¼ to 25¼	9½ to 13
1904	71,300,000	23½ to 24¾	12⅛ to 16½
1905	77,000,000	23¾ to 27	13 to 17
1906	—	28½ highest to date	19¼ highest to date

From this table it will be seen that directly the output of gold began to expand after the close of the war in South Africa the prices of wool of all descriptions began to advance, and in the middle of June last at the date when Mr. Jowett's article was published had reached the highest figures touched since 1899. And this rise has been coincident with a remarkable expansion in the quantity of wool produced by Australia and New Zealand, especially by Australia. In 1903 the total output for the six colonies of Australia and New Zealand was 1,370,000 bales. In 1904 this rose to 1,591,000 bales, and Mr. Jowett's estimate for 1905, the official figures not being yet available, is 1,850,000 bales. Other parts of the world, notably the Argentine Republic, are also increasing their output of wool and improving the quality and weight of the fleece, but notwithstanding all this prices have risen, and may go higher in the near future. A "boom" is not now looked for by Mr. Jowett, but he declares that the trade at home has "a very tight corner to negotiate between now and October next," although it is hardly to be expected that the extreme prices obtainable when he wrote will endure when the new clip comes forward, a clip which promises to be the largest ever harvested.

In money value the wool clip of Australia has naturally grown with the increase in the flocks, in the weight of fleece, and the advance in prices. To illustrate this we give still another table, from which it will be seen that the estimated value of the wool clip of this year is put at £30,525,000, the highest Australia has ever seen; in fact, the current year's clip promises to be what is called a record one, exceeding that of 1894, which was 1,983,000 bales, including New Zealand, the highest figure ever heretofore reached:—

Australian Wool Clip.

Clip of Season.	Bales.	Value per Bale. £	Total Value. £
1893-4	1,005,000	12	22 860,000
1894-5	1,083,000	11½	22 804,500
1895-6	1,862,000	12½	23,275 000
1896-7	1.848,000	12	22,808,000
1897-8	1,717,000	12¾	21,891,750
1898 9	1.675,000	13	22,725,000
1899-1900	1.600.000	16½	26,103,500
1900-1	1,646,000	10½	17,283,000
1901-2	1,700,000	12½	22,835,000
1902-3	1 452,000	14	20,328,000
1903-4	1,370,000	15	20,550,000
1904-5	1 501,000	16¾	25.853,750
1905-6*	1 850,000	16½	30,525,000

* Both the quantity and value of the 1905-6 clip are estimated.

London Road Car Company.

The half-yearly reports of the London horse omnibus companies will provide material for useful study for some time to come. These companies cannot start in the motor business with a clean sheet like an ordinary motor omnibus company, and probably a good many years must elapse before the rather complicated and unsatisfactory position which arises from the substitution of horse-drawn by mechanically propelled vehicles can be straightened out. It must not, however, be supposed that the motor ventures recently promoted and which have a few cars on the streets are likely to get the better of the contest. As we demonstrated in a recent article, the public response to the motor 'bus promotions was so poor that those which ventured to go to allotment will never be strong enough to seriously hurt the old companies, which, after all, still have the bulk of the road passenger business in their hands. Their horse 'buses are being replaced as speedily as possible by motor vehicles, and we have no doubt that they will still be carrying numberless millions of passengers per annum long after most of the mushroom motor ventures have smashed up and been quietly buried. Meanwhile a rather trying and anxious time must be faced because the changes now going forward swallow up a rare lot of money, and when the property of a discarded industry comes to be realised some capital losses are inevitable. It is rather more than 18 months ago since the company set seriously to work to put motor 'buses on the streets, and commenced by offering 19,334 £6 ordinary shares at par. Just about 10,000 seem to have been taken up, as the number of shares now issued is 74,000 out of an authorised total of 83,334, meaning an amount paid up of £444,000. The capital thus provided was insufficient to carry out the programme which the directors planned, and in May last £100,000 in 5 per cent. cumulative preference shares were advertised for subscription, forming part of an authorised total of £200,000. Again the response was rather poor, as we learn from the half-yearly report just issued that the amount taken up was only £51,390. The company, however, is not pressed for money yet as there is a credit to capital account of £44,009 and over £40,000 has still to come in from the preference shares placed, the amount at present called being £10,278.

The credit to capital account, however, is not all available, because for the time being and until the matter is put right from revenue we must set against it the "substitution suspense account" of £28,850 arising in this way. Twelve months ago the company set aside £14,491 from revenue in connection with the change to motors, and another £5,000 in January last. Then £3,664 was realised during the past six months by sale of horses, making £23,155 altogether provided. But for the three half-years ended on June 30 last the amount written off horses, cars, and harness was no less than £51,153, and £852 has been spent in the last six months on training motor drivers, &c., so that capital has in a manner disappeared to the amount of £52,005, against £23,155 allowed for making good, and thus we get a "substitution suspense account" of £28,850 to be written off out of profits as opportunity offers. This must prove a slow and tedious process because for some time the writings off must largely exceed the sums which can be allocated from the revenue, and in due course this substitution account must become a very big one. Note, for example, that the horses, horse cars, vans, &c., and harness have a balance-sheet value of £238,002, while plant, machinery, utensils, and office furniture are entered at £9,861. Freehold and leasehold land and buildings reach £222,867, and a good deal of expenditure will be entailed in converting the stables into motor depôts and workshops. But we have nothing but praise for the manner in which a difficult business is being handled, and if the directors are able to carry out their intention of meeting all capital deficits from revenue they will leave the finances in a very healthy position when the substitution of motors for horses

has been completed. Nor must we forget that there are reserve funds to the amount of £96,394, partly held against leases it is true, but all kept in high-class securities, and therefore immediately available. In this total is included a reserve of £1,000 for depreciation and renewal of motor chassis, and another £3,000 has been added from the past half-year's revenue, making £4,000 in all. Motor cars and equipments already in hand have cost £68,563, and £37,062 has been spent on those in course of construction, or a total of £106,625. From the past half-year's nett revenue there will also be allowed £2,500, against the substitution account, bringing it down to £26,350.

Concerning the working results for the opening half of this year, the directors say that the revenue has again suffered from the low earnings of the horse-drawn cars, largely due to the unseasonable weather prevailing and to the competition of the swifter running and more popular motor omnibus. Not only so, but the prices of feeding stuffs have again been considerably above the average, and compensation for accidents is much larger than usual in consequence of the company having been made jointly liable for claims in connection with an accident caused by an electric tramcar running into one of the company's vehicles. This decision has been appealed against. Number of passengers carried was 38,153,823 or 775,927 more than in the corresponding period, and from all sources the revenue was £223,644 an increase of £5,413. On the other hand, road expenses were up £4,074 and maintenance was larger by £2,394, the principal movements being an increase of almost £7,000 to £7,682 in motor fuel and lubricants, a drop of £2,664 in forage, including granary wages, and an absence of horse renewals, which for the previous three half-years cost £1,483, £686, and £12,171 respectively. Under general repairs the increase is no less than £18,174, car and motor-car repairs and renewals, including salaries, being £19,180 more at £30,843. Administration was also somewhat heavier, and the total car expenditure comes to £200,798, or an advance of £23,434. Add the outlay in the jobbing department, £421 more at £5,322 and the outgo under all heads comes to £206,120 against £182,765. Nett income therefore suffers a diminution of £18,442 at £17,524. Balance brought forward was £4,271 and profit on sale of investments gave £196, so that after providing debenture interest £3,000, contribution to leases and buildings renewal fund £650, and depreciation £435, the sum remaining is £17,906. Appropriations already mentioned require £5,500, interest to date on the preference shares takes the trifle of £142, and the directors now propose a dividend on the ordinary shares of 2s. 6d., or a drop of 1s. 6d. against the corresponding period, leaving £3,014 to be carried forward.

Economic and Financial Notes and Correspondence.

Our Foreign Trade in July.

It continues to grow at a pace rarely if ever equalled in our commercial history. Imports for the past month amounted to £48,609,674 in value. This was an increase of £3,868,000 in round figures on July, 1905, or 7.95 per cent. Exports of British and Irish produce went up even more brilliantly to a total of £33,442,962, which is £5,622,000 more than in the corresponding month, or an increase of no less than 16.81 per cent. Compared with these figures re-shipments of foreign and colonial merchandise seem almost to lag, although at £6,059,000 they show an increase of £286,000, or 4.72 per cent. All branches of business have contributed to this remarkable expansion. Of the three great categories, for instance, into which the Board of Trade officials subdivide imports, food, drink, and tobacco show an increase of about £1,518,000, in raw materials and articles mainly unmanufactured the increase is £1,112,000, and in articles wholly or mainly manufactured it is £1,240,000, all upon July, 1905. These increases are almost equal throughout to the increases of the previous year, so that comparing the past month with July two years ago, there is actually an increase of £7,653,000 in our imports in July this year. But this is beaten by the exports, and it is remarkable that there the increase in articles wholly or mainly manufactured alone was no less than £4,431,000 in the past month. The total increase for the month under all heads as already stated was £5,622,000, so that the greater portion came from exports of British manufactures. Raw materials and articles mainly unmanufactured exported rose by only £812,000, and food, drink, and tobacco

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.
The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

by only £212,000. Compared with two years ago the exports of the month just closed show an increase of £8,659,000. Looking a little more at details we do not find much increase in the quantities of raw materials imported; in fact, there was a decrease last month in the imports of wool, but in hides and undressed skins the increase was considerable, and amongst articles wholly or mainly manufactured we bought more Indian yarn and textiles, but less woollen and mixed goods. There was also a decrease in the import of iron and steel, and the manufactures thereof, as well as of other metallic commodities. We got considerably less wheat from Russia last month, but more from the Argentine Republic and Roumania. The Argentine Republic, in fact, has sent us larger quantities of wheat this year than even the United States, but we fear it will be unable to keep the pace up if what one hears about the effects of the drought there are true. Most cereals though coming from Russia have been received in reduced quantities, but not barley, for last month at any rate, or peas, and there was a slight increase in the receipts of maize. We, however, received more of that particular cereal from the Argentine Republic last month than from all the rest of the world put together, although for the seven months the United States still leads.

Our exports of coal and coke last month were larger than in the same month of either of the two previous years, and of a greater money value, but, generally speaking, we have not been sending raw materials out of the country in increased volume, and last month our exports of steel were decidedly less than for July, 1905, less even than the lower figure of July, 1904. We, however, sent upwards of 50,000 tons more pig and puddled iron abroad in July, and our total exports of iron and steel of every description were worth £3,515,000. This, of course, is exclusive of cutlery and hardware, machinery and millwork, and ships sold to foreign customers. Of this last alone the gross tonnage exported in July was 34,908 tons, of a value of £569,000, or more than double the amount for the same month in either of the two previous years. In cotton textiles we have again done a great business, and amongst the customers that have bought to a larger extent were Turkey, Egypt, Morocco, Foreign West Africa, Japan, several States in Central America, and the Argentine Republic. What will become of the tariffites we don't know, but we never heard of any business on its last legs doing so well. Did you?

The Post Office Report.

A highly prosperous undertaking is the British Post Office; in fact, it is too prosperous in some respects, because the nett profits are greater than they ought to be. We do not believe that the State has any business to conduct the Post Office with a view to large gains, or, indeed, to gains of any appreciable amount, and it seems a pity that some portion of the surplus accruing from the working of this department should not be devoted to paying better wages or to writing down the loss on the Post Office Savings Bank. That loss is still concealed, we regret to say, but at the current prices of the securities in which the money of depositors is invested we guess it to be about £15,000,000, and sooner or later this gap will have to be dealt with and filled up. Even if that cannot be done by withdrawing some portion of the Post Office profits, these profits surely ought to be utilised to some extent in order to provide for the capital requirements of the department, which are considerable every year. There was a balance of £397,000, after paying working expenses, on the telephone system, but the amount required for depreciation of plant and to pay interest at 3 per cent. on the capital of £5,890,000 sunk in that branch of the business was £353,492, so that the final profit was hardly appreciable. It was otherwise with the Post Office itself, whose revenues rose by about £349,000 to £11,795,000. After paying working expenses, there was a nett profit of £5,269,000, or £440,000 more than in the previous year, but there was a nett deficit on the telegraph service of £755,000, and this, although £165,000 less than in the year ended March 31, 1905, still made a large hole in the gains of the Post Office proper. Indeed, if allowance is made for the interest on the telegraph department's capital, which now amounts to £10,868,000, the actual deficit in the working of the telegraphs was £1,033,000 in the past year, so that the nett revenue of the postal and telegraphic services combined was only £5,236,000, an increase, however, of £605,000 on the previous year. In all probability the telegraph business will tend to become less profitable in proportion as the use of the telephone is extended. Indeed, cheap telephones would be certain to knock a large hole in the receipts of the telegraph department.

Chinese Trade in 1905.

It seems to have been swollen out a good deal by a rush of imports, due to the efforts of merchants to make the most of the expected revival of business when the war between Russia and Japan came to an end. Lately the import trade has, therefore, been overdone, and, according to the report of the Inspector-General of the Imperial Customs, summarised in our Board of Trade journal, much of the stock brought into the country is still in the hands of indenters and wholesale dealers. It will work off, however, in time if peace be maintained, for China has great recuperative power, and there was much money poured into the Northern provinces by the war, both Russia and Japan being customers to the Chinese farmer for food. During the past year the north has been fed by the war, while the south constantly supplies the considerable export of labour, the official report says. As to the figures, they bulk largely, imports being valued at 447,101,000 Hk. taels and the exports at 227,888,000 Hk. taels. There was thus an aggregate increase of 91,442,000 Hk. taels on the entire trade out and in, but the whole of this must be ascribed to imports, which rose by 103,040,000 Hk. taels, exports having declined by fully 11,598,000 Hk. taels. Of the total value of the exports, the Northern, Yangtsze, and Central ports contributed 63 per cent, and the southern ports 33 per cent., while the frontier ports gave only 2 per cent. Raw cotton, silk, and tea showed a reduced value of 25,000,000 Hk. taels, the reduction being attributable to bad crops of the main staples and adverse exchange, "marked by unexpected rises," to which the trade had not time to adapt itself. Of the total trade to China, the United Kingdom and its dependencies take by far the largest share. Last year, for instance, China imported 277,343,006 Hk. taels worth of goods from the United Kingdom, India, Australia, and Canada, the largest total being ascribed to Hong Kong, an *entrepôt* where the goods of all the world are interchanged. Of the exports also the British Empire took 106,575,000 Hk. taels, Hong Kong again figuring for the largest amount. This may be to some extent misleading, for the reason just stated, because much of the goods sent to Hong Kong or withdrawn from it may not reach any portion of the British Empire as their final destination. Next to the British Empire comes Japan, the imports from which came to 61,315,000 Hk. taels, and the exports to 35,465,000 Hk. taels. Japan thus outstrips all European countries together, except Russia, so far as exports to China are concerned, Europe having sent only 3,596,000 Hk. taels worth of goods thither last year, except, of course, what went *vid* Hong Kong and Macao. The imports of China from Europe, however, were rather larger than those from Japan at 36,013,000 Hk. taels, and the United States sent more goods to China than either Japan or the Continent, but does not buy so much there as either of these countries. Last year, for instance, the United States' exports to China came to 76,917,000 Hk. taels, but they imported from China only 27,031,000 Hk. taels. As for Russia, the war had a disastrous effect upon its business with China, at any rate so far as Russian exports are concerned. These were only worth 2,017,000 Hk. taels in the past year, compared with 4,467,000 Hk. taels in 1904. Thanks, however, to the war, the exports

of China to Russia rose from 5,056,000 Hk. taels in the earlier year to 9,432,000 Hk. taels in the later. Even so the Russian Empire cuts but a poor figure in the great and growing trade of the Chinese Empire, and much the same may be said of the trade between China and French Indo-China.

George Newnes, Limited.

There has been a good deal of grumbling in the market over the reticence of the directors of this company about the decreased profits of the past year. Sir George Newnes himself signs the report and makes it a personal matter, it being written in the first person. He states that he has agreed to make up the balance for the year to £57,000, which, after allowing for the dividend on the preference shares and the interim dividend paid on the ordinary shares in February last, will enable the company to now declare a dividend on the ordinary shares at the rate of 6 per cent. per annum for the half-year, making with the interim dividend a total of 8 per cent. for the year, and leaving £3,911 to carry forward. The question is how much did Sir George Newnes contribute to make up this total? What, in other words, was the amount of the "material reduction" in the profits which necessitated this step? Sir George declares himself satisfied that the reduction is of a temporary character due to losses incurred in connection with certain new periodicals and subsidiary branches of the business. He admits also that the reduction of profits thus caused has been considerable as compared with average years, but it is hardly fair to the large number of small investors who have confided some portion of their savings to this important company that the amount of this loss should be concealed. By reason of that concealment the profit and loss account for the year ended June 30 last is of no value whatever as an indication of the position of the business, because the £57,000 is entered without any explanation as including the amount "agreed" to be contributed by Sir George Newnes. And the balance-sheet is not a particularly strong one, since no less than £662,500 of the total £1,043,171 to which it foots up represents copyrights and goodwill against which there is a reserve fund amounting to no more than £12,500. That reserve fund, however, is invested, and the investments are entered at cost price. The company also holds £65,000 in shares in other companies taken at par. Sundry creditors, moreover, are quite £20,000 less than sundry debtors, the respective totals being—creditors £102,260, debtors £123,188; but the cash balances are only £18,246, and it takes £37,000 to pay the preference dividend and the final dividend of 3 per cent. on the ordinary shares.

Manila Railway Company.

Share and debenture holders of this undertaking have waited with commendable patience for some definite announcement concerning their future position and prospects. A state of suspense has existed ever since the Philippine Islands passed under American control subsequent to the Spanish-American war. As far back as 1903 an attempt was made to come to a settlement, but the authorities at Washington declined to sanction a provisional agreement on the plea that until the entire railway question had been renewed and some additional legislation passed it would be inconvenient to settle with this company. Therefore, the company in order to safeguard its position, agreed, with the Philippine Government, to construct and operate certain extensions aggregating some 87 miles. The finance question was naturally a difficult one, because the debentures were in a state of perpetual default, but Messrs. Speyer Brothers came to the rescue and lent £400,000 on notes at 2½ years' date, such notes, no doubt, being a floating charge, and coming before the prior lien bonds. This transaction took place in the middle of 1904, so that the debt is due for repayment at the end of the present year. With this in view every effort has, no doubt, been made to arrive at a settlement, and the directors are now in a position to outline the terms of an arrangement whereby in exchange for certain advantages and a clear definition of its position the railway company surrenders various claims against the United States. To make the agreement effective, the authorities at Washington require the consent of the various classes of stockholders, and to obtain this, as well as to arrange for the necessary reconstruction of the company, meetings of the share and bondholders will have to be held. An effort was made to get everything definitely arranged before the holidays, so that the position could have been explained and full details given, but the time available was too short. Therefore, in view of the fact that so many people are away just now, the directors decided to postpone until after the holidays the meetings of the shareholders to receive the directors' report and accounts for 1905, and of the bond and shareholders for their decision as to the settlement with the United States. Meanwhile, the parties interested are not left entirely in the dark as the terms of settlement provisionally arranged are indicated in the following brief summary of the agreement:—"(1) All claims against the United States Government or Philippine Commission to be waived. (2) All claims against the railway company by the United States Government or Philippine Commission to be waived. (3) Certain reductions in connection with local taxation. (4) The cancellation of the old Spanish concession, relieving the company of certain onerous conditions. (5) The transfer in some form of the Manila Railway Company to an American corporation which undertakes to construct about 420 miles of new railways which should hereafter greatly benefit the present property." According to the last report the claim against the United States Government was £247,947, and against the Spanish authorities £20,809, or together, £268,756. In addition the Philippine Government owed £23,253 for guaranteed interest and military transport, and as the company was also seeking payment of expenses incurred in prosecuting the claims the total sums demanded worked out at £349,340. All that must be given up under the settlement, and proprietors will most anxiously await the publication of the full terms. We wonder if the Speyer loan will be paid off or renewed.

Australian State Finance.

A little of the gilt is taken off the gingerbread of Australian State surpluses by some interesting statistics contained in the June issue of the *Australasian Banking and Insurance Record*. The purport of the article is to show that the surpluses paraded by finance Ministers are to a considerable extent illusory, and because they are so, it has proved impossible for any of the State Governments to remit taxation. As illustration, the position of the Treasury of Victoria is examined. At the closing of the accounts for 1904-5 in that State, the Treasurer was able to show a nominal surplus of £526,732, but all of this money was required for expenditures which, at least in part, should have been included in the estimates; that is to say the surplus was made up largely by postponing liabilities. For the two financial years ended with June 30, 1905, the aggregate surplus appeared to be £1,133,759 but there was an accumulated deficit at that date of £2,256,000, and £297,000 of this fine looking surplus was devoted to the redemption of part of that floating debt. Then another £250,000 went into railway construction, water supply, and irrigation construction, and the building of workmen's homes, while £43,000 more was required as special assistance to mining industries. Still another £413,000 went in improvements of swamp lands, in road making and bridge building, in painting and repairing schools, in erecting jetties, buying dredges, construction docks, lunatic asylums, a consumptive sanatorium, and hospitals of various kinds, while about £112,000 was absorbed by various railway funds. Adding £20,000 for repayment to licensing funds, the whole of the surplus vanished. When the

accounts for the current financial year appear, the writer goes on to say, another large surplus will doubtless be displayed, but expenditure on railway belated repairs will probably extinguish a considerable proportion of it, and while any leeway on account of the railways, notoriously in a dilapidated condition, remains to be made up, the position of the public finances of Victoria cannot be regarded as quite sound; in fact more revenue is wanted instead of less, and the writer points out that a graduated land tax might be a valuable adjunct in helping to fill the Exchequer. The income-tax, an impost borne with much grumbling, amounted in 1904-5 to about £317,000, whereas the proceeds of the land tax was only about £98,000. If, the article goes on, a land tax were levied on a democratic basis as in France, a very moderate rate would bring in a considerable revenue, and afford relief to a corresponding extent to the income-tax payer.

The Government and Small Agricultural Holdings.

A most interesting account appears in Thursday's *Daily Chronicle* of the steps about to be taken by Lord Carrington, as President of the Board of Agriculture, and his unpaid Parliamentary secretary, Mr. Richard Winfrey, M.P., to split up agricultural Crown lands amongst small tenants. At the present time it appears there are 3,383 acres of farm land in hand for want of suitable tenants, and it has been arranged that a beginning shall be made in breaking up these unoccupied farms amongst small cultivators. Fourteen years ago the *Daily Chronicle* called attention to the fact that the Crown owned nearly 70,750 acres of agricultural land in England, and pressed upon the Government of that day the splendid opportunity which this great national estate offered for the creation of small holdings, but nothing was done. Sir William Harcourt was cordially in sympathy with the proposals Mr. Winfrey then made to get some of this land for his Lincolnshire Small Holdings Association, but the Rosebery Ministry was defeated soon, and its successors would have nothing to do with any measure of social improvement such as this implies. All that is now altered, and Lord Carrington, who is himself a pioneer in the opening up of arable land to the industry of the small cultivator, has decided to make a beginning. A farm at Burwell, in Cambridgeshire, 903 acres in extent, which has been vacant for three years, is to be broken up into holdings of various sizes ranging from two acres to 20, and Mr. C. D. Rose, M.P., is to stand in as intermediary between the Cambridge Small Holders Association, which he had formed, and the Commissioners of Woods and Forests. He will be the responsible tenant, and at Michaelmas next the men will enter upon their holdings under him. There are some excellent cottages on the farm, two farm houses, and excellent farm buildings, and these are now being allotted to the various holders. Following upon the remarkable step taken the other day by the Government in introducing that Cultivators' Emancipation Bill for Scotland, in virtue of which holders of land rented up to a maximum of £50 will be granted fixity of tenure and the means of securing their holdings at a fair rent, we may look upon this step as the beginning of great changes for rural England. If our large and other landowners only saw things in the right light, and were alive to their own best interests, they would, one and all, imitate this movement on the part of the Government and do their utmost to attract a multitude of cultivators back to the soil, thereby contributing not only to the improvement of their own position as rent receivers, but to the revival of English agriculture, to the repeopling of country districts and a general improvement in the social life of the people.

Baker Street and Waterloo Railway.

It would be manifestly unfair to measure the future possibilities of this unfinished electric railway by the results attained during the brief period that a portion of the line has been opened. Until the entire system has been completed and placed at the disposal of the public, its earning capabilities cannot be properly judged. The section of the line between Kennington Road station, now called Westminster Bridge Road station, and Baker Street was opened for traffic on March 10. During the 16 weeks from that date to June 30 the number of passengers carried was 3,006,276 and the revenue receipts from all sources have reached £23,490. This result the directors consider encouraging, and although we cannot quite share their view, we think a very considerable improvement may be looked for later on. The Elephant and Castle extension from Westminster Bridge Road has just been completed and opened, and it is hoped that the section from Baker Street to Edgware Road will be ready before the end of the year. That will leave only the portion from Edgware Road to Paddington to build, but some time must elapse before this section is available. The company's Bill authorising a deviation of the Paddington extension still awaits the Royal assent, but the plans are now receiving the consideration of the board. When all is done we shall expect the railway to create a really good traffic, because hitherto the facilities for crossing London at the points touched by the line have been of the most primitive and unsatisfactory type. Moreover, there will be very little tramway competition to face. We think the revision of fares which has been carried out under the advice of Sir George Gibb, now a director of the company, will also be productive of good. Instead of a uniform fare of twopence as on the Central London, a system of fares has been adopted, fixed with reference to the needs and circumstances of the traffic between each pair of stations. Where the public is concerned it is well to recognise the natural reluctance to pay twopence for a distance not worth more than a penny or three-halfpence, and, on the other hand, "long distance" travellers must agree that a journey worth threepence or more cannot be taken for less. As above mentioned, the total revenue, which includes £234 for sundry receipts and transfer fees, amounted to £23,490. We cannot, however, discover how the position stands from a nett revenue standpoint because the company does not yet provide all its working expenditure. That for maintenance, repairs and renewals of rolling stock and general charges is payable by the Underground Electric Railways of London, and the amounts are not stated, which is a pity. This leaves the company with cost of power, traffic expenses, passenger duty, rates and taxes and compensation, which reached £16,681, so that the nett balance was £6,809. Add to that interest £934 and rents of property, &c., £340, and we get a total of £8,084. But interest on debenture stocks for 16 weeks was £8,180 and £836 was payable for rents, so that the Underground Electric had to find a further sum of £932. Not only so, but interest at 3 per cent. per annum on the share capital is payable by the same company during construction, and warrants for the past half-year's interest have been posted. The total length of line authorised is 5¼ miles, of which 3⅛ have been constructed, the capital expenditure to date being £2,881,560, not a heavy amount. In the half-year under review the sum laid out was £328,533, against receipts of £484,420, and the company now has a credit to the account of £63,112. Contractor's retention fund represents a further sum of £40,000, and Parliamentary deposits amount to £107,735.

Another Rhodesian Reconstruction: Goldfields of Matabeleland.

In an article on this Rhodesian parent company, in our issue of January 6 of the present year, we laid strong emphasis upon its hopeless position. The losses it has suffered in the past year or two by way of depreciation have been colossal, and anyone who had experience of Rhodesian mining knew well enough that these would never be recovered. No doubt the directors themselves felt convinced of this, but it is not always judicious to say what one feels, especially when there is a likelihood of inducing shareholders to throw good money after bad. In the last published accounts, to June 30, 1905, the directors, with a certain kind of courage, did write £15,965 off the cost of some shares

and debentures, but were far too timid to face the other losses. So the auditors wrote:—"The shares and debentures which have a published price, rather less than one-half of the whole (£409,931), showed in the aggregate a considerable depreciation. No evidence as to the value of the remainder has been produced to us." Thus it was impossible to get at the real position, but obviously, it was exceedingly bad. Accordingly, we said more money would have to be raised to replenish the company's coffers. But how? There were at that date 96,000 unissued shares out of a nominal capital of £500,000, but it was hardly possible to tempt anyone to take these up. So there remained reconstruction, but at the annual meeting the chairman announced his dislike of reconstruction. He expressed a preference for debentures, and suggested an issue of £100,000 carrying 5½ or 6 per cent. interest. Debentures, mind you, on the security of depreciated, almost worthless, assets! This desperate proposal of his has come to nothing, a fate it courted, and after many months of meditation the sequel is, after all, a scheme of reconstruction. Shareholders are asked to submit to penitential sacrifices; no less than to agree to a scheme whereby the £1 shares shall be reduced to 10s., and the new 10s. shares assessed to the extent of 3s. It is proposed to transfer what is called the business to a new company, with a nominal capital of £300,000, and the subscription of 200,000 shares, it is stated, has been guaranteed. "You are well aware," say the unsentimental directors, "that, owing to the depression which has prevailed for several years, no outside support has been given to South African ventures. . . . You will readily understand that it would be imprudent to now realise the company's investments in properties and shares; meanwhile, the available funds are not sufficient to conserve the assets and carry on our business." This would be delightful simplicity and ingenuousness if one could feel sure it was sincere, that the guileless directors deceived themselves. How on earth could they realise the shares on such a market? Where would they find buyers? And what would be the effect on the shaky Rhodesian market of an attempt to sell them? This, however, is the most cogent and powerful arguments their intellects can conceive, and we shall be surprised indeed if they favourably impress the impoverished shareholders. We cannot but feel these would be lunatics to subscribe another 3s. levy, for it is almost certain to go where all the other capital has gone. Will the Chartered Company get any of the money? At the meeting the resolutions were not supported by the necessary three-fourths majority, so the chairman demanded a poll, which is to be declared on Wednesday next.

Penhalonga Proprietary Mines.

Some little progress seems at last to have been made towards a dividend, and this would doubtless be pleasing could one feel assured that it would be maintained. And even should the improvement continue, it will have to be at a greatly accelerated pace if dividends are to be possible within a reasonable period of time. But such acceleration is not, of a certainty, foreshadowed. Up to the end of 1904 the losses had piled up to a total of £23,360, and it may take another three years to wipe these out, but as shareholders have shown patience for many years now, they may not mind waiting still. In 1905, the report for which is only now issued, 70,830 tons were milled for a recovery of 8,040 fine ozs., and in addition 1,084 tons of concentrates were obtained, the whole realising £84,059. Working costs absorbed £60,621, so the working profit was £23,438. To this are added £1,143 from interest and £24 from transfer fees, making a total credit of £24,606. Administration costs in South Africa and London took £3,329, interest on loan £1,053, interest on debentures £6,204, whilst a commission of £6,875 was paid to the guarantors of the debenture issue, leaving a nett profit of £7,144, which reduces the debit to £16,215. It may be argued, of course, that the above commission will not be charged to revenue in the future, and that profits will hereafter be swollen by its equivalent. They may be; if so, the dividend-paying date will be all the nearer. This will depend upon the quality of the ore treated, the quantity and the working costs. Hitherto the ore has been very poor, but last year it averaged the improved figure of nearly 23s. 9d. per ton compared with 16s. 1d. in 1904. At the same time working costs were higher—16s. 5d. per ton against 14s. 7d. per ton—so the profit increased from 1s. 5d. to 7s. 3d. per ton. It is explained that the increase in cost was the effect of milling a low tonnage towards the end of the year; likewise to the sorting out of more waste. In regard to the future, the consulting engineer expresses himself very guardedly, he will not commit himself to opinions too definite. "In view of the encouraging manner in which the mine continues to open up," says he, "I do not think any difficulty will be experienced in maintaining the milling grade of the past year, while the substantial increase in milling, which will soon be possible, should have the effect of reducing working costs, and thus increased profits per ton may be expected." There is a certain promise in this prospect, but it can be seen clearly enough that he has his doubts of the profits that will be possible. It should not be overlooked that the directors neglect depreciation, a matter to which the auditors call attention.. What seems rather strange is that the consulting engineer cannot give the assay values of the ore reserves, though he goes so far as to say these have largely increased, and that the position of the mine is satisfactory in regard to them. In the past two years the capital of the company has been greatly increased by issues of new shares and the raising of a debenture debt. In 1904 145,000 new shares were created, 110,000 of which are retained against the option of conversion of debentures, and the balance are reserved for future issue, and at the same time £137,500 was raised by an issue of 2,750 6 per cent. first mortgage debentures of £50 each, the conversion right to April 1, 1907, being at the rate of 40 shares for each £50 debenture. This explains how it is the company has, apart from concentrates in transit, cash assets a little in excess of the heavy sum of £32,243, owing to sundry creditors.

Westinghouse Electric and Manufacturing Co.

A report on this company's affairs covering six years to March 31 last has been issued by President Westinghouse, and cabled from Paris. It is a fine exhibit, and yet we cannot feel that it tells us the whole story; but great emphasis is laid upon the contract for building electric tramways in St. Petersburg which will involve an expenditure of $6,000,000, it is said. French bankers have been enlisted to assist in financing this big operation. A suitable modern electric manufacturing plant in Moscow controlled by these bankers has been absorbed by the Westinghouse Company, and a new company called the Société Westinghouse Electrique de Russie has been organised to purchase the works. The assets of the parent company will be increased by nearly $1,000,000 through this transaction, and the immediate working capital for the new company has been supplied by the financial interests referred to. It starts with large orders in hand, and under exceptionally favourable conditions, financial and otherwise. We trust it will do better than the British Westinghouse Company, and turn out better work. What, by the way, is the position of that British Westinghouse Company in relation to the plant it laid down for the Metropolitan District Railway? Does the District board still refuse to take over the machinery, and what is the British Westinghouse Company losing every week through this refusal?

A fine array of profits for the parent American company is made by lumping six years together. Gross earnings for that period are put at $114,618,537, and expenses at $97,726,008, leaving a nett profit of $16,892,529, besides $3,664,590 claimed as interest and discount, dividends and interest on stock and bonds owned, royalties and other miscellaneous income. Altogether the free revenue is, therefore, $20,557,119, out of which only $1,676,636 has been applied to write down property and plant, but another $620,524 has been devoted to writing down the values of stocks and bonds depreciated; in fact deductions from income

under all heads, including interest and tax on capital paid, bad debts written off, and discount and interest upon debt issues allowed for, this last item amounting to $2,955,105, aggregate $7,079,653, leaving only $13,447,466 as the revenue realised by the business of the six years under review available for dividends. But there was a balance at the credit of profit and loss on March 31, 1900, of $3,570,015, and this has been swelled out by premiums on stock issues, $4,415,230, to a total of $7,985,245, so that the final gross surplus is $21,462,711, from which $9,922,069 has to be deducted as representing the dividends paid on the capital during the past six years. Even so there was a total surplus on March 31 last of $11,540,642. For the five years ended March 31, 1905, the certified annual average profit of the company and its subsidiaries available for interest and dividends was put at $3,626,388, or an aggregate of $18,131,940, and for the eight months ended November 30, 1905, there was a further available sum of $2,488,641. And yet the balance-sheet does not look so enticing, because we cannot tell what it means. There is a large sum in cash set down, no less than $6,939,000, and that is good, but what does subscriptions to 5 per cent. convertible bonds, $2,032,000, mean, and from whom are the accounts and bills receivable to be recovered? The total of these is $10,661,542, and it is explained that this large sum includes operating manufacturing plants in Canada, England, France, and Russia, and selling companies with valuable patent rights in Germany, China, Japan, and other foreign countries whose par value is approximately $13,750,679. How much of that is money lost? The total investments in other companies amount to $22,587,191, and in addition there is $7,034,537 set down for charters, franchises, patents, office furniture, insurance prepaid, &c. The stock of raw materials, supplies, and work in progress is also heavy at $10,836,994. The effective share capital is small, amounting to rather less than $4,000,000 in preferred, besides about $21,000,000 in what is called assenting and non-assenting stock, much of which may be water; but there is a debenture debt in 5 per cent. funding gold bonds of $15,000,000, and the company owes $2,500,000 on debenture certificates, besides $6,000,000 on collateral notes secured by the Lackawanna and Wyoming Valley Rapid Transit Company. The company also has a contingent liability as guarantor of $850,000 in bonds issued by the Walker Company, due 1916, and secured by mortgage on property and plant of the Walker Foundry Company in Cleveland. Thus it is rather a mixed up affair altogether, but yet powerful in a way and endowed, so far as the States are concerned, with some of the monopolists' strength. Hence it has not yet been bankrupt.

Peek Brothers and Winch, Limited.

Twelve months ago we had to lament a very serious falling off in this company's business of wholesale tea and coffee dealers, a state of things which the directors attributed to the tea duty of 8d. per lb. Despite such misfortunes, which further crippled an already weak financial position, the directors looked hopefully to the future, and were brave enough to forecast an improvement in the coming 12 months. This prediction has been justified by events, for there has certainly been a notable recovery in business and earnings, welcome enough if it can be maintained. The "if" is big, for no profit and loss account is issued, but we are told that the profit amounted to £29,474, in comparison with £12,052 the previous year. This is reduced to £26,665 after deducting the debit balance standing in the previous year's accounts. Out of this balance the directors have already paid the debenture interest for the 12 months, also the arrears of preference dividend to June 30, 1905, and transferred £1,532 on account of depreciation on investments, leaving £9,883, out of which they pay the preference dividend for the latter half of 1905 and 6d. per share on account of arrears for the six months to June of the present year, leaving the small balance of £133 to carry forward. It is explained that this tiny credit is due to the fact that until all arrears of preference dividend are paid, the full distribution of the profits earned is enforced under Clause 119 of the articles of association. The directors seem conscious that there is scope for improvement in the working of the business, for they announce that after consulting with some of the largest shareholders certain plans are in course of adoption which might lead to more economical working and increased efficiency. Twelve months ago the whole of the reserve fund was utilised in writing off bad debts to the tune of over £24,300, so there is no accumulation to set against freehold properties and goodwill valued at £586,015, the depreciation allowed on which was only £500. The company has still to rely largely upon the generosity of the bankers, for temporary loans amount to £35,986, deposit accounts total £20,850, and liabilities of all sorts to trade creditors reach £88,001, an aggregate of £144,837, or £100 more than a year ago. But sundry debtors are down for £178,280, there are investments of a market value of £13,799, cash £4,588 and bills receivable £7,610, not to mention stocks of a book value of £154,021. It is clear, however, that no large portion of these assets can be regarded as immediately available. And with all the recovery in the past year it looks as if dividends on the ordinary shares cannot be resumed for a long time to come. They ought not to be until the water has been squeezed out of the capital.

Bass, Ratcliff, and Gretton, Limited.

We congratulate the directors of this magnificent brewery and public-house business on their resolution to make their figures public. Although the limited company has been in existence for a good many years now it has never hitherto published a balance-sheet notwithstanding the fact that a considerable amount of its capital has long been in the hands of the public. In now coming into line with other limited companies the directors make an exhibit which they have good grounds for being satisfied with. The profits for the year ended June 30 last came to £360,832, exclusive of £7,718 brought forward. With this addition the available total is £368,550, of which £216,800 has been absorbed in paying interest on the debenture stock, dividends on the preference stock, and an interim 5 per cent. on the ordinary shares, all tax free. This done a balance of £151,750 remains, out of which a further dividend of 9 per cent. on the ordinary shares, making 14 per cent. for the year, tax free, is distributed. Then £20,000 is added to the reserve fund, raising it to £1,370,000, and £9,350 remains to be carried forward. We learn from the balance-sheet that the amount due on trade and loan accounts by the customers of the company, less reserves, is £2,062,510. What the reserves are against these tied house liabilities is not stated, but evidently they are independent of the above-mentioned reserve fund, and doubtless add to the financial strength of the company. The total stocks of barley, malt, &c., including movable plant and stores, came to £841,083, and the freehold breweries, freehold and leasehold maltings and other business premises, fixed plant, licensed properties, goodwill, and trade marks stand at £3,005,725. Most of the reserve fund would appear to be absorbed in the business, but the company holds marketable investments to the amount of £341,260, including £200,000 in Consols taken at 88, and therefore brought into the balance-sheet at £176,000. Cash at bankers and in hand stands at £252,687. The capital of the company is (1) £1,920,000 in debenture stocks, of which £1,360,000 bears 4½ per cent. interest, and the balance 3½ per cent. interest. Both these stocks are redeemable at the option of the company after June 30, 1913, the 4½ per cent. stock at 117 per cent. and the 3½ per cent. at 110 per cent. Then (2) there is a 5 per cent. cumulative preference stock of £1,360,000, and an ordinary capital in £1 shares of a like amount, so that the share capital amounts to £2,720,000 all told against a debenture debt of £1,920,000, but there is in

addition various other obligations, including £200,148 due to depositors and £177,523 on sundry accounts, including £76,018 secured by mortgages. There is also a contingent liability on guaranteed mortgages amounting to the sum of £119,315, which is not brought into the balance-sheet. The total of the balance-sheet is £6,519,421. From the profit and loss account we learn that £48,379 was spent during the year on repairs and renewals of premises and plant, besides £56,741 assigned to depreciation of freehold and leasehold premises, licensed property and plant. There is also an item of £73,748 set down against bad and doubtful debts, depreciation of investments, and reserve for bad debts, and consignments, so that altogether the company devoted £179,000 last year to depreciation and upkeep. Its gross profits for the year on the sales of ale, stout and sundry products amounted to £821,156, and it also received £114,274 in rents, interest and dividends, so that including £46 received in transfer fees the entire gross income of the year was £935,477, a most handsome total, and the balance-sheet altogether looks satisfactory enough, especially so for a brewery in these days.

The African War Stores Report.

A very depressing State paper is the report of the Royal Commission appointed to inquire into the African War Stores scandals. It is less what is revealed that excites gloomy forebodings than what lies behind, for ever hidden. But even in regard to the revelations made one has the feeling that the Commission has been too lenient in its findings. No business man could bring himself to believe that the corruption surrounding the Meyer transactions arose from mere stupidity and lack of commercial training. Colonel Morgan may be as innocent as he says he is, as the Commissioners appear disposed to admit him to be, but his stupidity and lack of care plainly opened the way to the rascality of others, and some of these "others" must have been very high placed indeed. And all concerned, from the generals in command to the underlings, rank and file, and needy junior officers who took bribes, were about equally indifferent to the interests of the British taxpayer whom they allowed to be robbed with impunity by rascally contractors from the beginning of the war until long after it had ended. So much the better, the friends of peace, the enemies of all wars of aggression may say, and say with truth; but that consolation is not open to those who have been nurtured in the faith of the high destinies of England as a civilising and humanising power. If the public services of the country are so ineptly and hopelessly corrupt and inefficient as the report of this scandals commission faintly indicates, what is to become of our great Empire? Is it going to sink as all previous empires have sunk, smothered in its own filth? Certainly the temper of the nation towards these African scandals hardly indicates that firmness of moral fibre which might be trusted to put an end to similar exhibitions of turpitude in days to come, and one feels that the only real and abiding remedy would be to sweep the whole system of war making diplomacy and War Office and Admiralty corruption and incompetence clean out of existence. What place is there in modern democratic civilisations for the dry-rot spreading, hoary relics of a barbarous past when nation preyed upon nation, and the soil of every country was fertilised with the blood of its tillers?

American Business Notes.

The opening of the tenders for the 4 per cent. municipal bonds of the City of New York on July 25 was a serious disappointment to New Yorkers. The awards to bidders show that the average price obtained is only $100.97, and that only one bid for $25,000 worth was received at 105. Another feature in the transaction is that, while the entire $10,500,000 of 30-year bonds was taken, only $500,100 of the 20-year bonds and $29,000 of the 10-year issue were asked for. This leaves $499,900 of the former and $971,000 of the latter class unsold. All kinds of explanations are offered for this patent failure, the principal one being the recent marketing by the United States Treasury of the Panama Canal bonds and heavy investments of late in real estate and building speculation. Persons acquainted with the working of New York municipal affairs, however, hold other views, and consider it nothing extraordinary in view of the extravagance and "grafting" that pervade the whole system of city administration.

The New York *Evening Post*, commenting on the circumstance, regards it as one of the most striking incidents of the year. "The loans," it says, "placed by the city during 1905 at the then habitual rate of 3½ per cent. sold at so low a price that it became doubtful whether another sale of 3½ per cents. would bring par. Consequently, when $20,000,000 city bonds were offered last February, the rate of interest was advanced to 4 per cent. These bonds brought 108, but marked the highest interest charge of any city loan in a decade. Since then the finances of the city have been generally discussed. Mayor McClellan, in his Message of May 20, took as cheerful a view of the situation as circumstances admitted. He pointed out the $83,000,000 margin left for the city's borrowing operations after fulfilling the constitutional limitation that debt must not exceed 10 per cent. of assessed real estate valuation, and referred to the plan of issuing bonds against uncollectible taxes, thus enlarging the scope of possible borrowing. But he ended by warning the city that the policy of extending the debt, on the basis merely of increase in the ratio of real estate assessment, was a hazardous expedient." As under the present charter of incorporation, New York corporate stock may not be sold for less than par, nor pay a higher interest than 4 per cent., it seems time for the citizens of New York and their creditors to look about them. The nett indebtedness of the city is now $430,000,000 for some 4,000,000 of people, and the tendency is ever to increase it, in the majority of cases merely to spend the money in ways that if closely analysed would be found to put a third or half the money expended into the pockets of the politicians and their insatiable hangers on. It sometimes seems, as the New York *Evening Post* says, as if nothing short of a public crisis will drive a public body in the United States to serious considerations of its duty to economise the public resources. From the Federal Government to the private individual everything seems a riot of spending.

The discord reported at the last annual meeting of the Westinghouse Electric and Manufacturing Co. at Pittsburg on July 25 seems likely to lead to further developments. The trouble arose over the demand of a stockholder for information regarding $6,300,000 stocks and bonds of the Lackawanna and Wyoming Valley Rapid Transit Co. among the assets of the Westinghouse Co. The reply of the official addressed was characteristic. He said: "The report has been carefully prepared and audited by capable people, and they probably saw to it that the facts were noted, but we avoided details which will be embarrassing to our patrons." This led to a hot discussion during which it came out that "it was thought" that the amount was divided between $6,000,000 in bonds and $300,000 in stock. Then it developed that the capital stock of the rapid transit company is $3,000,000 and the cost of the road was $6,000,000, but "no one was sure that these figures were right, and there was more confusion." Finally, the first interrogator said: "We have $6,000,000 worth of bonds and $300,000 of stock. This company (Westinghouse) put up all the money and gets only $300,000 of stock. Why should this company have all the stock?" To this the official reply was that "it was thought there had been some mistake, and that, though the facts could not be called to mind, it was believed that the amount of stock held was $3,000,000." Much angry recrimination followed, one stockholder, a Mr. John Gregg, exclaiming, "I understand that these stocks were purchased from Mr. West-

inghouse, that this is a private corporation, and that Mr. Westinghouse unloaded the stock on this company," a voice adding, "At twice its value." At the subsequent election of directors two new ones were appointed, one to replace Mr. James Hazen Hyde, "removed to Europe," and the other to succeed a director who has left the company.

A closed meeting of the trustees of the Mutual Life Co. was held in New York on July 25, and to all inquiries of what took place it was announced at the President's office that nothing about the meeting would be made public. The rumours were that the sitting was particularly stormy, and it was conjectured that the question of the lists of policyholders and a notice which had been served on them on behalf of the International Policyholders' Committee, in connection with expenditure on laudatory advertising, &c., had been under discussion. The notice reads as follows:—

We herewith respectfully request that you require the return to the treasury of the company of the moneys thus expended by the officers responsible therefor, and beg to notify you that in default of such action proceedings will also be begun to enforce restitution of these moneys.

The completed returns of the exports of American canned meats for the last fiscal year show a total value of $9,233,410 against $9,577,045 for 1905. The great falling off was for the month of June, when the value was only $461,100, as against $797,127 for June, 1905. The quantity of canned beef exported was 64,523,359 lbs., compared with 66,688,563 lbs. in 1905. The United Kingdom was the largest purchaser of the exports to Europe.

The exports of petroleum products from the United States are being sensibly affected by the increased production in Roumania and Galicia, also by the increasing use in the East of the Sumatra oil products, by reason of their cheaper price, and the resumption of Russian exports. During the first five months of the present calendar year there was a decrease of 16,500,000 gallons in the exports of illuminating oil, nearly all in the months of April and May, but this is regarded as only temporary. Crude oil, naphtha, lubricating oil, and residuum all show increases, especially of crude and lubricating, the totals for 1905 and 1906 for the five months being 451,653,337 and 483,898,710 gallons respectively, illuminating oil included.

The passage by the United States Congress of a Bill permitting the construction of a ship canal between Pittsburg and Lake Erie, at the expense of its projectors, has put the enterprise in the way of accomplishment. The company has obtained 75 per cent. of its right of way, and property along the projected route is advancing rapidly in value. When completed great advantages are expected to accrue to Pittsburg from the reduction of freights on its exports and imports of coal and iron ores, and on manufactured goods of all kinds. The estimated cost of the undertaking is $50,000,000, the financial arrangements for which are said to be virtually completed.

In spite of the assurances given by prominent New York bankers that no money squeeze is likely to arise in New York during the coming autumn, the figures of the New York Associated Banks for the past week are rather ominous. Prices have been rising on the Wall Street Stock Exchange, and the invariable corollary of any such improvement is an increase in the advances made by the banks. Last week this increase was $18,776,600, which brought a corresponding increase of $16,482,400 in the deposits. At the same time there was a slight decline in the reserve, the holdings of legal tender notes having fallen off by $1,746,000, while the specie average was larger by only $1,100,000. It follows that the liabilities being greater the surplus reserve has declined rather sharply, being no less than $4,770,000 down to a total of $14,125,000. This is still $1,962,000 more than the figure at the corresponding date of last year, and perhaps San Francisco is going to continue filling the gap, no less than $23,567,000 having come back from that city in the shape of coin since the return flow set in after the subsidence of the apprehensions about a banking crisis there. Also, within the same period of time $2,855,000 in gold has come in from Australia. It will need a lot of gold, however, to sustain the present volume of speculation in the United States, and we shall not cease to be apprehensive until the reserve has been very much strengthened.

It is stated by Reuter's agency that the Washington Government is about to resume the purchase of silver for subsidiary coinage purposes at the rate of 100,000 ozs. per month. The first purchase will be made on Wednesday next, and thereafter every Wednesday, unless the market goes against the Government, when it will stand aside for a season, it having already obtained control of considerable amounts for future delivery. All this is quite prudent, but does the country really want the new subsidiary silver coinage, or is the step now taken prompted by the necessities of the silver miners of the Union?

A Kansas City promoter has incorporated a new beef packing company under the laws of the State of New Jersey with a capital of $1,000,000. Several New York capitalists are identified with the enterprise, which will begin operations by the erection of a packing plant at Beatrice in the State of Nebraska, afterwards extending them to other places in the West and South. This new venture has absorbed the American Dressed Beef Company, an independent concern.

As an evidence of the versatility required of candidates in some branches of government administration in the United States, is a notice issued by the Internal Revenue Department at Washington that candidates for employment in that service need only apply who "rank well in marksmanship, courage, and native resourcefulness," in addition to the other qualifications. The notice particularly applies to the States of North Carolina, Tennessee, and Kentucky, where desperate encounters between agents and illicit distillers in the mountain regions of the South are constantly being reported.

According to advices received in New York, the output of the sulphur deposits of Sicily which is sent to the United States is in future to be handled exclusively by the Union Sulphur Company, a concern which already controls the sulphur trade of the United States. Such competition as may hereafter be possible will originate with the small producers in the far western States and Japanese shipments to ports on the Pacific coast. As a result of the new arrangements it is expected that prices will advance and seriously affect manufacturers of acids, gunpowder, chemicals, newspaper and other paper pulp, matches, and fertilisers. The Union Sulphur Company, which now will control the United States market, owns the greatest sulphur mines of the world. These are near Lake Charles in the State of Louisiana, which produce and market more than two-thirds of the 250,000 tons annually consumed in the United States.

The result of the failure of the Corporation of New York to market its last issue of bonds at a fair price has been the dissolution of the syndicate formed to purchase its last preceding issue of $20,000,000 4 per cent. bonds, the syndicate having been unsuccessful in selling them. This syndicate was formed in February last by N. W. Halsey and Co., and J. and W. Seligman, to bid for the whole issue, which was sold at 108, yielding about $3.70 per cent. They obtained $12,000,000 and then united with R. L. Day and Co., of Boston, who already held $4,000,000 of New York City bonds, making their total holding $16,000,000. The low price at which the last issue was sold put it out of the question that they should obtain any profit on the previous one, and so there was nothing left to do but dissolve the syndicate.

The issue by the United States Treasury of the Panama Canal bonds had some curious features. One was a case in which a clerk in the American Express Company put in a tender for $5,800,000, on the resale of which after their being awarded him, it is stated he made a profit of between $25,000 and $27,000. The man gave no security that could be forfeited in the event of failure to take up the bonds, for none was

required, and so he was able to act as a man of straw for others who did not wish to appear in the matter. There were three other similar cases at Washington for lesser amounts. The affair is so curious that collusion on the part of some one or more persons in the Treasury Department is hinted at.

It was announced in New York on July 27 by Speyer and Co. that they are about to start a new bank in the city of Mexico in conjunction with the Deutsche Bank of Berlin. It is to be known as the Mexican Bank of Commerce and Industry, and will take over the interests of the Banco Aleman Transatlantico, until now the Mexican agency of the Deutsche Bank. The capital will be $10,000,000 Mexican, equivalent to half the amount in American currency, and will be contributed by American, German and Mexican interests.

Chicago reports describe a freight rate war that threatens to spread over the country east of the Missouri River. Two and three-quarters cents per hundred pounds have been cut off the rate on all grain and grain products from Missouri river points to Chicago, and 4½ cents off the rates from the same points to New York and other Atlantic ports. The cause of the trouble is said to be a quarrel over the elevator charges at the Missouri River and the action of the Great Western in issuing a low tariff on flour from Kansas City to Chicago.

A Washington despatch says in connection with the new Pure Food Law that misbranding will not be permitted. The matter of labelling and compounding is to be the chief point of the regulations in reference to the public, according to the Department of Agriculture, which thinks that "adulterated foods are not of real menace to the consumer" if food preservatives and deleterious colouring are done away with. A place in the United States, it seems, has been called Westphalia, in order to serve as a cloak for a label advertising "Westphalia hams," for which the purchaser is charged the price of the imported German article. Mr. Wilson, the Secretary of Agriculture, is quoted as saying that the new law will have the effect of putting a stop to frauds upon the American public, and will at once restore the foreign trade in American meat products. Mr. Wilson is evidently a sanguine man.

American capital is getting hold of Canadian enterprises of local as well as national importance. Two New Yorkers backed by New York and Western money have undertaken the construction of electric lines from Hamilton, Ont., near Niagara, which in the aggregate will cost over $1,000,000. This is said to be the beginning of a great network of electric lines in the Niagara peninsula, which is the richest part of the province of Ontario.

Passing Events.

We do not quite see how the Indian Government is in a position to surrender any part of its revenue from opium. The business is doubtless an unclean one, revolting to the moral sense, but it yielded £3,591,000 in the past financial year, and is expected to produce nearly £3,000,000 in the current year for the Indian exchequer. That the Chinese are anxious to control and reduce this traffic is doubtless true, but the revenues of that empire, as the Pekin correspondent of the *Times* points out, receive £830,000 per annum from the opium import duties, and China, moreover, is troubled by the rapid expansion in the internal output of opium as is indicated by the fact that, while the imported drug weighs only 3,000 tons per annum, the native produce is now annually ten times as much and rapidly expanding. Perhaps some remedy may be found by increasing the export duty in India and the import, and what may be called the Excise duties in China. That the trade is one which ought to be extinguished is beyond question.

There was much force in Mr. W. G. Rathbone's contention at the meeting of the London and County Bank last week, over which he presided, to the effect that banks ought to have representation on local administrative bodies. His own bank paid rates last year to the amount of £31,000, and the charge has risen more than 25 per cent. within a period of five years. The whole question of joint-stock representation upon public bodies is one that demands attention. It seems absurd, for example, that the head offices of all the joint-stock banks in London should only have the Parliamentary franchise through their resident porters, but apart from that larger question the problem of granting even local representation to joint-stock companies is beset by almost insuperable difficulties. Even if they were to put up representatives of their own for election it is doubtful whether the voters would in many cases accept them, and it must never be forgotten that all rates have gone up. The private citizen is suffering quite as much as the corporate bodies. Mr. Rathbone, however, did well to draw attention to a movement which tends to lessen the value of real property in many directions.

Last week's return of the hungry in India shows a total of 368,000, so that the destitution is gradually shrinking, and as the rainfall has been good nearly everywhere it seems probable that we shall see no acute and far-spread famine in India this year. There are still, however, 88,000 people in receipt of relief in the provinces of Agra and Oudh, 119,000 in the Punjab, 89,000 in Bombay, and 40,000 in Ajmer and Rajputana, and the worst of it is that when the people do manage to subsist without help from the State there are tens of millions of them always more or less hungry.

It is well probably that the strikes and military revolt throughout Russia have ended in nothing catastrophic, but it would be a mistake to jump to the conclusion that the revolution has been stifled and absolutism once more triumphant. So far is this from being the case that in all probability the agrarian war is only beginning, and will constitute by far the most serious trouble which the administration has to face. The peasants are taking the law into their own hands, and either leaving the harvests unreaped or appropriating the crops for their own use. The houses of landlords are being burnt down, and their properties stolen in many parts of the country, and as the winter comes on this agrarian revolt is certain to assume disastrous proportions. Meantime, the outbreaks amongst the troops in various parts of the empire at least serve to show that the army cannot be relied upon to suppress disorders. It may not even be possible to trust it to guard the Tsar and his family. All the more do we regret the summary extinction of the Duma. The language of some of its members may have been wild, but as a body it displayed remarkable calmness and sound political instinct, and it would have been better to have allowed disaffection to express itself through this representative assembly than to try to suppress by brute force every symptom of individualism, every manifestation of the right to think and act, independently of bureaucrat rules and formulas. Now the revolt is driven under the surface, and ferments there with results which cannot fail to be disastrous to established order from one end of the empire to the other.

We see from the *Pall Mall Gazette* that the Midland Railway Company is going to try electric traction over a short length of its system between Lancaster, Morecambe and Heysham. The mileage is not great, but none the less is the step a significant one, and we shall be interested to see how it succeeds. If the experiment conduces to economy in working it will become imperative upon all our railway companies to devote their energies to the electrification of their lines and not one of them has the money to do it with.

Sir John Rodger, Governor of the Gold Coast, having recovered from his illness, sails for West Africa on the 18th inst. During his stay in England he has had several conferences with the Colonial Office with regard to the development of the colony. Amongst the most important projects afoot is that of railway building to connect with agricultural and mining districts. It is proposed, for instance, to build a line from Tarquah to Prestea and Broomassie, which would greatly facili-

tate the transport of machinery. This question, indeed, has been practically settled. The line will be constructed by the Government, the mine-owners guaranteeing the interest on the capital involved should there be any deficiency in the receipts. We fear there will be a deficiency, if the line is to rely for its traffic upon machinery sent out, and the produce of the mines. Owing to the very poor returns from the mines and the difficulty of getting capital wherewith to buy machinery, the sources of revenue cannot be immediately prolific, and the companies can hardly afford to start any additional burden in the shape of guaranteed interest.

The directors of the Transvaal Estates and Development Company have issued a sort of pamphlet in which they set forth the terms upon which they have resolved to throw open the whole of the company's properties to prospectors; also its unoccupied farms to settlers who are prepared to make their homes in the Transvaal. In recommending these to would-be customers, the directors use the customary hyperbolical auctioneering language. "Notwithstanding the depression in Stock Exchange prices, resulting from causes which have no relation to intrinsic values, the material progress of the country since the war is undoubted." Is it, indeed? Those who live in those parts and have come from there are unanimous in describing the condition of affairs there as terrible, the effect of the policy of the mine bosses. Where on earth is the evidence of material progress? Does the employment of yellow serf labour give some testimony to this? We think not. Still, the company may as well offer its properties and its farms to prospectors and settlers, on the off-chance that some may succeed in making a good thing out of them. For to develop such itself the company would want more capital than it is likely to get.

Sir Charles Metcalfe is about to return to South Africa in connection with the opening of the Broken Hill section of the Cape to Cairo railway, a project that may or may not—the negative is the greater probability—bring some prosperity to Rhodesia and simultaneously rehabilitate the shrunken fortunes of the Chartered Company. Other railways in more populous parts of the country have not accomplished this feat, and one built in a region more or less resembling a desert is not likely to do it. Much has been made of this Broken Hill district, but the quantity of copper it has so far turned out has not made the slightest impression on the market. If the mineral is there in the quantity imagined by interested parties it may take many a year, even with the help of a railway, before it can be profitably exploited and developed. But the railway has to reach the copper mines first. Next month it is expected there will be a regular service of trains from Cape Town for a distance of 2,100 miles to Broken Hill. Beyond the latter place the survey is being continued north to the mines, a distance of about 110 miles, to Buonamacubwar, on the Congo frontier. If this railway is as successful as other lines, there will be no need to complain of a lack of opportunities to lose money.

At one time this year the shares of the Argyll Motor Company stood at a good premium, but lately some sinister stories concerning the position of the company have been floating about, and quite lately the shares dropped well below par. The chairman has therefore done the right thing in issuing a circular dealing categorically with the various statements made. We have not the space to set it out in full or even make extended reference to all the points dealt with, but it may be at once said that the interpretation placed upon certain events and incidents was altogether wrong. There had been talk of the suspension of manufacturing operations at Bridgetown, but this was only in accordance with the policy laid down in the prospectus, and if workmen were paid off it should be recognised that in the motor-car industry employment must constantly vary. Business, moreover, is 60 per cent. larger than for the corresponding period, and for the season ending in September, 1907, there are contracts on the books for £264,000. There are absolutely no dissensions on the board, as had been alleged, Mr. Govan has not resigned, and far from the chairman having sold 5,000 shares, his interests are now larger than ever. Nothing could be more emphatic than this, and the shares promptly improved when the true facts were made known.

A rumour has lately been current to the effect that the Schibaieff Petroleum Company intended to transfer the whole of its assets to a Russian firm. Like all stories that have no foundation, details to support the statement were entirely lacking, and the directors have now set the matter at rest by stating that imagination is alone responsible for the fiction. They have not at any time contemplated or even discussed such an arrangement.

Answers to Correspondents.

J. D. S.—No. 1, Yes, or a little of the preferred stock also. (2) Yes, this debenture is fairly secure. (3) No, too much risk. (4) The same answer applies here. (5) Yes, to a small extent, as the business is good. (6) No, not yet. (7) Yes, sell if you have no loss of moment. We cannot name stocks here, but if you spend the money as we have indicated it should be safe.

W. J. B.—The first-named is not a strong company, and sometimes only just scrapes through with its first mortgage interest. Therefore, if you can make the exchange without serious loss, it might be advisable to do so.

A number of pamphlets have reached us which deserve mention. First comes the reprint of Mr. W. R. Lawson's articles on the Bank of England, lately published in the *Financial Times*. They are brightly written in his well-known style, and with a good deal of what he says we are in agreement, but all we can do at present is to recommend these articles to those interested not only in the position of the Bank, but in the working of the London Money Market. By and bye we hope to have more to say about this subject. Then comes a pamphlet entitled "For the Arrest of Armaments. A Note for the Second Hague Conference," from the pen of Mr. G. H. Perris, well known for his advocacy for peace and goodwill between nations. It is cogently written and well worth reading. Another publication, hardly a pamphlet, but a useful annual, since this is its 38th year of publication, is Messrs. Charles and Edwin Layton's "Insurance Register" for 1906. It is packed full of most useful statistics relating to insurance companies of all kinds, and amongst others gives particulars of the premiums charged by the various companies on the leading forms of policies together with interest tables, comparative tables for immediate annuities, records of valuations made by the various companies, and abstracts of their income and expenditure accounts. In addition to this there is a directory of insurance officials, &c., the whole forming a most handy compendium.

Such of the Newnes publications as have strayed our way this month, the *Strand*, *Sunday Strand*, and *Grand*, seem each and all to fulfill as well as ever the conditions of their existence—to interest, amuse, and, let us hope, to elevate. Added to its usual attractions, the *Strand* this month has the additional one of being bound so that it opens flat, a great boon, and may all other magazines follow suit. Among its articles "The Chronicles of the Strand Club" shine as faily frivolous as ever, and Mr. Jacobs is as humorously Mr. Jacobs, but there is nothing in the whole that calls for special comment. Nor in the *Grand* either; what more is needed to recommend it than to say that a new serial is begun this month by those racy authors, Mr. and Mrs. Williamson? The *Sunday Strand*, amidst more trivial matter, has an interesting account of Lady Aberdeen's work for women.

The new issue of *Bourne's Handy Assurance Manual* for 1906, edited by Mr. F. Harcourt Kitchin, and published in various styles and prices from 1s. to 2s. 6d., has just made its appearance, and requires merely to be mentioned here. Of its kind it is the most compact and carefully edited of all these insurance handbooks. No new features have been introduced this year because, as the editor says, it has been found unnecessary to make them, but all those features which have made the *Manual* of so much service in the past have been maintained. It is not a book merely for insurance experts, but for the public, and if those who contemplate taking out policies would only study the figures here given relating to premiums, ratios of expenses to premium income and the like, they would avoid many mistakes.

The Earl of Cardigan has been induced to break new ground by writing an article for this month's *Financial Review of Reviews*. He deals with the question, "Can Money be Profitably Invested in Land?" Mr. Stefan Müller, of the *Neue Freie Presse*, the leading paper of Austria, writes on that nation's investments; and Mr. W. Reeve Ennals contributes a carefully considered article on the "Forces which Affect Trade and Industry." Dr. Henry Dyer, the well-known authority on matters Japanese, writes on "Legal Aspects of Foreign Investments in Japan."

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended July 21, $2,334, decrease $760.

Argentine North Eastern.—Traffic receipts for week ended July 6, $19,743, increase $3,599; aggregate from January 1, $520,716, increase $40,507.

Assam Bengal.—Traffic receipts for week ended June 30, Rs. 79,386, increase Rs. 24,980; aggregate from January 1, Rs. 18,54,544, increase Rs. 3,36,541.

Canadian Northern Railway.—Traffic receipts for 10 days ending July 31, $188,500, increase $61,800; total from July 1, $603,800, increase $208,700.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 7, Rs. 23,196, decrease Rs. 7,233.

The Investors' Review.

The Week's Money Market.

BANK RATE 3½ PER CENT. (Reduced from 4 per cent on June 21.)

Norfolk House, Friday Evening.

All the week banking credits have been cheap, but never very abundant. When business was resumed on Tuesday the supply of short credits seemed to be rather in excess of the market's necessities and overnight money was to be had in the afternoon at 1¾ per cent., but it has never been so cheap since, and as the end of the week approached rates hardened, thanks to the withdrawals of money for the provinces, the large holiday outflow of coin and the fact that in spite of low rates the market was never rich. Accordingly, joint-stock banks had little difficulty in getting 2¼ per cent. this morning on seven-day advances, and call money has been firm all day at from 2 to 2½ and even 2¾ per cent. The joint-stock banks, moreover, talk of asking on Monday 3¾ per cent., or the same as last time, for Stock Exchange money to the end of the month. But the India Council is still getting only 2½ per cent. on renewals or fresh month to month advances. One reason why the market is stiffening up towards the end of the week is just this coming Stock Exchange settlement demand, but there is also the fear that to-morrow the payment for the new batch of Treasury bills, which exceeds the total falling due by £500,000, may deplete the market balances. If the Japanese Government agents have absorbed the new paper this does not follow, but at best no fresh money can be put into the market by the transaction.

Discounts went down during the week, and have hardened up along with money at its close. For two or three days it was difficult to get 3 per cent. on three months' remitted paper, but the rate was steady at that to-day and the best houses quoted 2¾-3 per cent. for sixty-day bills, while six months' paper could not be done under 3¼ per cent., and was in some places quoted at 3¼ per cent. There has been a plentiful supply of paper all the week in the market, and to-day American bankers were free buyers, their action leading to the fear that a renewal of gold exports to New York may be imminent, notwithstanding the adverse position of the rate of exchange. It will be seen from the figures of the Bank return given below that the market is really not rich. Indeed, had it not been for the influx of £636,000 in gold from abroad there would have been a decrease of quite £500,000 in the banking reserve which is not high now at £24,735,000, and we should have heard talk of an advance in the Bank rate instead of a decline. Some people have this week been predicting a 3 per cent. rate almost immediately, but nothing in the Bank figures warrants any such anticipation. Other deposits are down to £42,241,000 and on such a basis we should not be greatly surprised if the market had to go to the Bank for help next week before it can carry through the Stock Exchange settlement.

Calls on new issues due next week aggregate about £1,139,000, but a good many railway dividends will then be distributed, so that the market may not be much inconvenienced in finding the money. On Wednesday no less than £875,000 becomes due, £500,000 on Great Central and Midland guaranteed stock and £200,000 on Buenos Ayres Pacific shares, being the largest individual items. £80,000 is due on Monday on the Thornycroft debentures, £165,000 on Thursday upon Lloyd Brasiliaro bonds, and on Wednesday, besides the other items named for that day, £90,000 on Chilian Transandine debentures, and £62,000 on J. Lyons and Company's preference shares.

SILVER.

An irregular business has been done in the silver market during the past week, but quotations have exhibited an upward tendency. On Tuesday a good demand from the Indian bazaars forced the price up ¼ to 30⅛d. per oz. for spot and to 30 1/16d. per oz. for two months' metal, and, this demand being satisfied, the quotation became steadier for both positions, but sharply recovered at the close to the best prices of the week, viz., 30 5/16d. per oz. for ready and 30¼d. for two months. Tenders for the Rs. 70,00,000 Council drafts on India on Wednesday amounted to Rs. 3,66,10,000 in bills and Rs. 80,00,000 in telegraphic transfers. Of these Rs. 57,46,000 were accepted in bills and Rs. 12,15,000 in transfers, applications at 1s. 4d. and 1s. 4 1-32d. receiving about 15 per cent. Next week the amount to be offered is again Rs. 70,00,000. The Banks of Bombay and Bengal have increased their rate of discount by 1 per cent. to 4 per cent.

Stock Market Notes and Comments.

We are still cultivating a good disposition on the Stock Exchange, and prices have this week shown a tendency to improve. There has been quite a cheering recovery in Consols, and market men are talking with hope of the near future. It all rests upon the outlook of the money market, which seems to promise moderately easy rates for at least a few weeks, perhaps quite to the end of September. That is long enough to execute a good many market strategic movements, but we do not yet discover that the public is much interested in what goes on. This may be because it is the holiday season, and business will perhaps revive by the beginning of next month. Much will depend on whether the markets in the interval are able to keep up a show of activity, and to send prices on the average upward. Upon this point we are doubtful, and, apart from Home Railway stocks, do not see much sign of strength even amongst the syndicates and groups by whose operations most of the improvement hitherto shown has been effected. Each man is larruping his own donkey. At the same time, the troubles in Russia have unquestionably brought considerable amounts of Russian money to this country to be invested in securities dealt in principally on our market, and by and bye the profits of the larger trade now being transacted by the merchants and manufacturers of the United Kingdom will begin to filter towards the Stock Exchange.

It will even then, however, take some time to clear away the accumulated masses of securities which are still carried on borrowed money, and we never know when the geyser in Wall Street may not make violent eruptions, whose suction influence upon our stock of gold might again throw us all into a state of apprehension. In other words, we still look for stormy times between now and the end of the year, partly because of the locked-up condition of so much of our finance, but more because foreign money markets are certain to be embarrassed. Rich though France is, her investors cannot but have suffered grievously by the state of affairs in Russia, and their sufferings seem only beginning. It will soon become a question with the great French banks how much further they can bear to lock up their means in sustaining Russian credit. The last Russian loan, so far as we can gather, has not been a conspicuous success even in France, and, apart from that, great embarrassment must have been caused there, not only to credit institutions, but to private financiers and the investor, by the severe decline which has taken place in all the older Russian securities. Disorganisation in the internal affairs of Russia must also have adversely affected the profits drawn by French companies and private investors through their investments and undertakings in Russia. This might come all right if the Russian people were to settle down and resume their old habits of slavish obedience to the powers that be, but this is just what they cannot be counted on to do. The further the disorganisation goes, the longer the turmoil and confusion are prolonged, the greater becomes the risk that the revenues of the Government will not be sufficient to cover the charges on the debt, and at the same time meet the internal expenditure which necessarily continues excessive. Moreover, no inconsiderable portion of the debt created by the war with Japan is still unliquidated, and the probability, therefore, is that as the end of the year approaches something like an acute crisis will develop in Russian finance, a crisis that must react with disastrous consequences upon the French money market, and through it upon the London one.

It is much the same in the United States for other yet similar reasons. There banking credit has been stretched to an extent which warns us of trouble to come. We have, indeed, looked for a panic on the Wall Street market more than once this year, and it has been averted from time to time only by the freedom with which British and latterly French banking credit has been utilised to prop the rickety fabric. But if we have trouble on European markets through the collapse of Russian credit they will all be temporarily powerless to go to the assistance of the United States; the means will not be available, and hence the probability that as the winter comes on the Wall Street Money and Stock Markets will reach a state of dangerous tension through their enormous over-burden of unplaced and over-valued securities. Financiers there are relying upon the splendid crops and the good prices likely to rule for what they have to sell in grain and cotton, but it may be that we shall not want much of their superabundance or so much as usual. Other parts of the world have good harvests, and it is possible that prices may go down instead of up, that the trade may be slow, and in that event it will be

increasingly difficult for New York bankers to finance their gigantic load.

The great standby of all markets is the large output of gold. That has saved the position for us time and again, and may save it this time. At present so favourable is the bullion market that the Bank of England is able to capture the supplies of raw gold coming in from South Africa, and we are so much a creditor country in various parts of the world as to be able to draw in gold almost at will from whatever source may be available. If we continue to get this gold for the next two months, then we may be able to look on without fear while other markets are wrestling with their difficulties; but that a demand for gold in the London market is certain to arise from various quarters between now and the end of the year appears to be well nigh indisputable, and hence we do not trust very much the present superficial manifestations of elasticity made by our Stock markets, not even the recovery in Kaffir shares, although that is cheering enough as far as it goes. We hope it may go on, and that those who have so long suffered by the decline may be cheered a little and given an opportunity to sell, but we cannot be sure, as so far the indications of improvement are of a quite hectic description. Why on earth should Rhodesian shares go up, for example? Or the shares in dozens of companies that never have done any good for their proprietors and offer no prospect of doing any? Whatever happens, keep cool and sane.

The Week's Stock Markets.

This has been a short week for business owing to the holidays, but dealers evidently declined to indulge in pessimistic reflections while the Stock Exchange was shut, as since the resumption on Tuesday a much happier mood has prevailed all round the House. There has not been a great upward rush in prices, which is all to the good, but quotations have gone steadily ahead in most departments, Yankees forming the only important exception. The low price of Consols and the fairly satisfactory money outlook attracted investors to the gilt-edged market, and the movement soon spread so that very quickly Home Railways, Foreign bonds and railways, and Kaffirs were embraced in the upward swing. The absence of disturbing foreign news was a very helpful influence, and if we may judge from the telegrams there is no immediate prospect of another serious outbreak in Russia. Apparently the strike was commenced somewhat prematurely, as for the moment the movement appears to have completely failed. The Bank return was fairly encouraging, all things considered, and the magnificent Board of Trade returns gave some hope that part of the severe losses lately entailed in Stock Exchange speculation are being made good in other directions. Consols opened firm and steadily improved, so that final figures show a substantial improvement compared with last Friday. All other British stocks naturally went forward as well, Home County and Corporation stocks showed a few improvements, and there was quite a striking marking up of prices in the colonial inscribed section.

Not only our own, but Continental bourses were also inclined to throw off their recent despondency, and the Foreign bond market was quick to share in the general buoyancy. All European issues marked higher prices, particularly Spanish, Turkish, and Bulgarian. Portuguese and Greeks were a little dull at first, but soon went with the rest. Russian bonds likewise recovered, and the 5 per cent., which ended last week at 10¾ discount, improved steadily to 9½ discount. Brazilian bonds were strong on Paris support, and Argentines went up sympathetically. Peruvians moved within narrow limits, early strength caused by "bear" covering later giving way to dulness. Cedulas attracted some attention, and there is now talk of the formation of an international committee to take charge of the united interests of the bondholders. It appears that the authorities are expected to call a meeting of Cedula holders in Buenos Ayres, at which a proposal of some kind will be submitted, and a deposit of bonds is being asked for, but holders very rightly think that the terms should be made known before they are asked to hand over their securities. Costa Rica issues were lower in the Central American group, Japanese closed firm and Chinese steady.

The Home Railway market was inclined to hang back at first, it was said, because the final batch of heavy dividends did not meet the most sanguine expectations. North-Westerns and Midlands were particularly dull, and the stocks of the Southern lines derived no benefit from the satisfactory holiday traffics. The mood, however, soon changed, and when the magnificent nature of the Board of Trade returns was fully realised and further good traffics were published prices commenced to go forward. North-Westerns and Midlands readily recovered from their early weakness, and most other stocks finished with fairly important gains. Scotch stocks were helped by favourable dividend anticipations, as the leading lines show pretty good increases in gross traffics for the half-year. The Furness dividend at 2¼ per cent. against ¾ per cent. per annum, with a good increase in the carry forward, was without influence as the improvement had been already discounted.

When other markets were down in the dumps the Yankee market was booming. Now we see almost the other extreme. A week ago the New York riggers were hoisting prices skywards with unflagging spirit, and were not content with modest advances of $2 or $3, but put them up by fives and tens. After keeping the game going merrily for a week or longer the reaction has come, and come simultaneously with an improvement in other departments. The fact is, the magnates have been disappointed. They expected the public to rush in in serried masses, instead of which outsiders, here and on the other side, have cautiously and wisely hung back. Not seeing them come forward except by half-dozens or so, the players have promptly taken their profits, and the insubstantiality of the boom is thus revealed, but not to disillusioned spectators. Last Saturday's return of the New York Associated Banks showed clearly how the rise has been the product of gambling, the loans showing an increase of £3,750,000 and the deposits one of £3,300,000. There was a decrease of £200,000 in the cash holdings, while the surplus reserves were a million lower, and the cry is for new money to sustain the inflation. In spite, however, of the break in the past day or two, prices on the week's movements are still higher, with gains of 2½ in such things as Chesapeake, New York Central, Pennsylvania and Illinois Central, and 1⅝ in Union Pacific, with quite a goodly number of improvements of $½ to $1. The biggest fall is 2½ in Chicago, Milwaukee common stock, while Great Northern preference are down 1½, Erie common 1, and Denver common 1, Atchisons and Baltimores being unchanged.

Canadian Pacific shares have continued to exhibit sustained strength throughout the week, and are on balance as much as 2½ higher at 172¾. Grand Trunks have not shared in this, but have on the whole been dullish, the market exhibiting some nervousness in awaiting the dividend. The consolidated stock is ⅛ better at 28⅛, and the first and second preferences are both a full point to the good at 121 and 111 respectively.

A pretty general rise took place in Foreign Railway stocks, and the Argentine lines again came into favour. Leading things like Westerns, Pacifics, and Rosarios were all firmer and Entre Rios stocks shared in the advance. A big improvement took place in Manila debentures on the arrangement with the United States Government outlined elsewhere, and some people are expecting holders to get about 150 for each debenture from the American Corporation which will take over the line. That estimate seems a little sanguine, although it must be remembered that the debentures

carry about 15 years arrears of dividend. Nitrate Railways were good and Paraguay Central shares and debentures improved on renewed talk of a settlement with the Government. Antofagastas and United of Havanas also moved up, but Mexicans were merely steady. Several Indian Railways were marked higher.

A fairly good tone prevailed in the Miscellaneous markets and business seemed a little better. Bank shares were still firm, and Breweries were a little less depressed. A big rise took place in Guinness on the splendid report and the bonus of 2 per cent. added to the 20 per cent. dividend. Bass debentures closed better but Showells issues lost ground. London Docks improved sharply because there was no stock to be had at the lately ruling low prices. Aerated Bread shares were in short supply, and therefore improved, and Argyll Motors recovered on a circular from the chairman declaring that there is no truth in the adverse rumours put about concerning the company's business. Cements were pretty steady, but Textiles showed some irregularity. Nitrates eased off after the recent rise, but the reaction was not important. Meat shares were rather firmer. Geo. Newnes shares were a little heavy as dealers are not altogether satisfied with the position and are anxious to know how much the chairman contributed to the past year's profits. Gramophones closed dull on profit-taking. Land shares hardened in a good many instances and Pekin Syndicates had a good rise. Gas and Insurance shares were likewise better, and in the Iron and Steel group Workingtons were carried up rapidly to 3 on the report dealt with elsewhere. Anglo "A" was only steady, but other Telegraph issues closed firm. London Motor Omnibus shares weakened on the evidence given at the Handcross inquiry.

Stock markets closed with the glow off this afternoon, mainly because the public has not responded to the playing of the professionals, but also because the Stock Exchange settlement is at hand and because of the fears current this afternoon of gold exports to the States. Kaffir shares were particularly buoyant in the morning and were bought a little from Paris, but left off dull with other things, Consols also losing a fraction of the highest price. The "Circus" seemed disappointed with the July gold output, though its aggregate value was £2,089,004.

There is again talk about the losses which the San Francisco fire is likely to inflict upon British offices, and every fresh discussion, we are sorry to say, raises the probable amount. It is now put at some £8,000,000, and many of the strongest companies will not for a good many years recover from the blow. The mere fact that so much money will be abstracted from quarters usually most steady sources of investment demand on the Stock Exchange will have a chilling effect upon business there for the rest of this year at the very least, and probably for a longer period, however serviceable the windfall of money may be to the over-committed Yankee financiers.

The market was rather disappointed with the Grand Trunk dividend announcement, many people having expected 10s. on the third preference stock. It gets nothing, but £16,500 is carried forward as against £7,423 a year ago, and the board explains that it has paid off the balance of the Michigan arrears of tax money instead of spreading the charge over two years as originally proposed.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2¾ p.c. Annuities ½, to 93-4, 2½ p.c. Acct. ⅜, to 87-87⅛, Irish Land Acct. 1, to 89½-90, do. MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

Despite the holiday, the oppressive weather, the approaching contango day, and the fact that this past week has been the fag-end of a nineteen-day account, the Kaffir Circus continues to exhibit much vigour and cheerfulness. The actual business done on the part of outsiders is still nothing to speak of, for the public are standing aside waiting to see how things develop.

But this does not affect the evident determination of the market players to put prices higher in the hope that outsiders will thereby be tempted to buy. They have been assisted in this by the controlling houses, who are supporting the market for the self-same end. For the bosses seem disposed to make the best of the new constitution, in the conviction that whatever policy they pursue they cannot alter facts and enforce the renunciation of irrevocable decrees. So now they know the Government's decision they may as well try to manipulate a rise as postpone it in the vain hope of finding a more favourable opportunity later. The effect of Sir Julius Wernher's politic speech at the meeting of the Central Mining Investment Corporation, in which he virtually advised his brother magnates to believe that all's well that ends well, so far from wearing off, is still potent in helping the advance. This has, of course, forced "bears" to cover. The rise, however, has not progressed without the inevitable recessions and reactions, for profit-takers have not been tardy in seizing their opportunities. Still, on the whole, prices are higher, substantially so in several instances, than they were a week ago, a spectacle pleasing to the "bulls" if to no others.

And the improvement has spread even to the Rhodesian section, in which many of the leading shares are likewise fractionally higher. The largest gains have been scored by Tanganyikas and Zambesia Explorings, but these are the product of capricious speculative impulses. In the past week or so these shares have moved upwards and downwards in a manner not unfamiliar. Presumably the directors of the Goldfields of Matabeleland have deemed this improvement a favourable time for launching a reconstruction scheme, in which they ask shareholders to pay 3s. on a share which can be bought on the market for less than a shilling apiece. And the Banket riggers have even pushed up the price of their inflated wares.

All is, however, exceedingly quiet in other sections, the movements being utterly sluggish amongst West Africans, Egyptians, and West Australians. Nothing has happened in any one of these worthy of mention. Elsewhere Indians have been quiet, with a slight tendency to fall away, whilst copper shares have also shown a disposition to weakness, Rio Tintos particularly.

The July Transvaal Gold Output.—According to the official returns rendered by the Transvaal Chamber of Mines, the aggregate was 473,385 ozs. fine for the Witwatersrand district and 18,408 ozs. for outside districts, making an aggregate of 491,793 ozs. fine of a total value of £2,089,004. This is an increase of 15,818 ozs. in weight and £67,191 in value compared with June, and is by just these figures the highest ever attained in any one month, yet the daily output averages about 10 ozs. less than that for the month of June. A year ago the total output was only 419,505 ozs. fine, worth £1,781,944, so that the progress is handsome. Returns as to native labour show that 6,760 natives were distributed to the mines during July, the loss by expiry of contracts and other wastage amounting to 7,322, so that the nett decrease in the blacks at work was 562, the total employed at the end of the month being 76,995.

African and European Investment Company.—A few weeks ago we dealt with this recently-formed parent company of the Lewis and Marks group, a concern that has not yet found time and circumstances favourable to the accomplishment of brilliant results. These may come in due time, but that will depend almost entirely upon the future course of the mining market. The consulting engineer reports encouragingly on the developments at Snyman's Drift, where work is being actively pushed ahead. The main adit is now in 208 ft., the panning results during the week giving from 3 to 15 dwts. over an average width of 14 in. In the winze sunk from the adit values of as high as 45 to 80 dwts. have been obtained. It is proposed further to open up the reef at a lower level by another adit from the side of the hill. Examination is being carried out to trace the extension of the reef into the company's adjoining farm. Regular washings have now been commenced on the Roberts Victor diamond mine, the first washing with the new plant giving a return of 75 carats from 100 loads washed. The diamonds are stated to be of high quality, and are roughly valued at £4 per carat. The company has now succeeded in obtaining a plentiful and continuous supply of water for washing purposes, and no difficulty is being experienced in getting sufficient native labour. This is wonderful. We were under the impression that hardly a black man was to be found in the whole of South Africa.

Waihi Grand Junction Gold Company.—Shareholders learn from the report for 1905 that 40 stamps, together with two tube mills and the entire cyanide plant, are ready to commence operations as soon as the aerial tramway, now in course of erection, is completed. In fact, the expectation is that everything will be in readiness by the middle of the coming month. The report assures one that the whole of the reduction plant, which includes all the latest improvements for obtaining a maximum extraction at a minimum cost, has been erected in a most substantial and permanent manner. The foundations for an additional 60 stamps are being prepared. Electric power has been erected under the superintendence of Mr. A. E. Armstrong and is now ready to supply power for working the battery and all other machinery. Available cash, however, has been exhausted in getting the extra stamps and other machinery and in acquiring mining areas. In view of the present condition of the market, it has for some time seemed improbable that the 10,000 option shares of £3, maturing at the end of July, would be called, and under these circumstances the directors have arranged a loan in order to avoid a further issue of shares.

Cherokee Goldfields.—In sending to the shareholders a notice of call the directors inform them of the progress of work at the mine up to June 30. It appears that the proposed sale of the Torres group of mines has been cancelled, the purchasers having failed to comply with the conditions for providing adequate working capital. The directors think the results of the development work carried out are excellent, accordingly they consider it in the best interests of the company to retain the mines. This remains to be tested. It is said that the vein can be traced on the surface for over 2,400 ft., and that four shoots of payable ore, aggregating 1,200 ft. in length, have been proved by surface trenching. Two cross-cut tunnels have been driven and have cut the vein at depths of 160 and 170 ft. below the surface, the average value of the ore in the face of the tunnels being about 50s. per ton for a width of over 4 ft. But money is wanted to provide additional air compressors and power drills, &c., and the shareholders are encouraged to furnish it by dangling before their eyes these visions of wealth to come.

Hannan's Reward and Mount Charlotte.—The working of this company's mine in 1905 was continued under the tribute system, by which 7,742 tons of oxidised ore were treated, producing 3,783 ozs. of gold, in addition to which 4,550 tons of sands were dealt with, yielding 413 ozs., making a total output of 4,196 ozs. Receipts from all sources totalled £15,812, and the expenditure came to £14,695, leaving a profit of £1,117. Adding £2,215 brought in, the credit was raised to £3,332. As no allowance was made in the previous year for depreciation, the directors are writing off £2,266, which leaves £1,066 to be carried forward. Though a larger tonnage was put through the mill, the yield was less than in 1904, the effect, so the explanation goes, of taking the bulk of the ore from an open cut, showing an average yield of only 4 dwts. per ton. Current liabilities are but trifling, and against these the company has £6,161 in cash.

Cerro Muriano Mines.—During the 12 months ending March 31 the general expenditure, consisting principally of the costs of the underground developments and dressing the ore, likewise depreciation, amounted to £26,147 against sundry receipts of £5,699 from the proceeds of the sales of copper ore, rents, interest, transfer fees, &c., the deficit of £20,448 increasing the excess expenditure in the balance-sheet to £43,824. At a meeting in October last a resolution was passed to increase the capital of the company by 75,000 new £1 shares, and 5s. per share has been called up on these. Development work carried out is said to have proved some good lengths of payable ore in the 820 and 700 feet levels, but Mr. Collins is unable to give a reliable estimate of the ore reserves available, for the reason that the ground has not yet been properly blocked out, labour having been directed to pushing on the lateral development of the mine as fast as possible. During the year 534 tons of dressed ore were produced, and 484 tons were shipped and sold in England, realising £5,153, an average of £10 2s. 11d. per ton.

Famatina Development Corporation.—In order to enable shareholders to follow as clearly as possible the mining reports published fortnightly by this company, the directors have issued a letter received from the superintendent, in which he writes:—"With reference to report No. 20 I desire to point out that No. 2 N.E. Upulungos is what has been previously known as N.E. from Francia Adit extension. There is absolutely no doubt now but that this is the Upulungos lode, and it is proposed to continue driving on it N.E. until we reach a total distance of 100 metres N.E. of Francia Winze, and then sink another winze. This is a very important point, and is opening up new ore reserves rapidly. The proposed new winze will be about midway between the Francia Winze and the point at which the station adit is expected to intercept the Upulungos lode. The values reported to-day in the White Lode winze and the S.W. end going towards it are very satisfactory, although the lode is narrow. There are a few interesting 'holing' points which we expect to come off shortly and to which I would like to direct the board's attention." These are detailed, and the superintendent adds:—"On the whole, I am pleased to say that the mine is developing very satisfactorily indeed, and it seems extremely probable that the shute on the Upulungos lode will be much longer than was originally estimated."

Grenville United Mines.—A circular issued by the chairman of the Grenville United Mines, which is a reorganisation of the Wheal Grenville Mining Company, states that the profit earned in the past three months is about £5,000. A dividend will be paid on the £1 shares, fully paid, and also a pro rata amount on the £1 shares, 5s. credited as paid thereon. This, however, cannot be done until the shares in the new company are duly allotted to the shareholders, which, it is hoped, will shortly take place.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

London and North-Western Railway.

In the six months ended June 30 last this company's gross receipts came to £7,247,430, or £307,331 more than in the first year of 1905. Working expenses went up £190,876 to £4,639,153, their proportion to receipts being 64.01 per cent., compared with 64.09 per cent. a year ago. The result was an increase of £116,455 in the nett profit from working the line, but as the

miscellaneous receipts were down by £524 on the comparison of half-years it followed that the actual increase in the available profit was only £115,931. Debenture stock interest, chief rents, lease, rentals, &c., however, took £6,202 less, so that the final increase in the nett receipts was £122,133, the total being £1,999,095. Add to this £93,874 brought forward, against only £84,533 a year ago, and the total available for dividend is up £131,474 to £2,092,969. It follows, as already announced, that after meeting all the preference charges the company is in a position to pay a dividend at the rate of 5¾ per cent. per annum, against 5 per cent., and has still £96,114 left to carry forward, against £74,494 at the corresponding date last year. The business was good in all its branches, and the nett revenue is in no sense the product of pinching at any point, every department of the undertaking having been to all appearance kept thoroughly up to the mark. Thus maintenance of way cost £28,000, locomotive power £68,000, carriage and wagon repairs £22,000, traffic expenses £57,000, and general charges about £6,000 more than in the first half of 1905. We still have to note that no particulars are given as to the revenue from the company's steamboat service, but we get the steamboat expenses and the depreciation and insurance on ships duly set down as part of the working charges of the property. This is hardly fair to the stockholders, although we have no doubt at all that the accounts are kept with the utmost exactitude. Last half-year the capital expenditure was £305,210 nett, there having been a credit of £32,327 from surplus land sales and sundries. Of this expenditure £183,321 gross went into lines open for traffic and £111,622 into new working stock. In the current half-year capital expenditure is put at £463,500, and presently a fresh issue of stock in some form would seem to be necessary, as the capital account is at the present time overdrawn by £2,633,719. The company, however, possesses as trustee about £3,336,000 in the form of superannuation fund, widows' and orphans', savings bank and other funds, so that the margin to draw upon is still large. The dividend warrants will be posted on the 21st inst.

Midland Railway.

In the June half-year this company's gross receipts increased by £247,977 to a total of £6,027,330. Expenses equal to 63.97 per cent. of the gross receipts came to £3,682,457 or £175,000 more. It follows that the nett income was about £67,500 larger at £2,344,873, and after deducting debenture interest, rents, &c. which came to £545,512, or about £7,570 more, mainly because the rental of the Great Central and Midland line comes for the first time into the accounts, £1,799,358 is left exclusive of £56,828 brought forward, making an aggregate of £1,856,186. Out of this the directors were able to declare a dividend at the rate of 4¾ per cent. per annum on the undivided ordinary stock which gives £1 2s. 6d. for the half-year on the deferred stock. After meeting this and the preference and preferred dividends a balance of £23,483 is left to carry forward. This result is not quite so brilliant as the increase in gross receipts might have led people to expect, but the company's ratio of expenses to income is still high, and every important item in the current expenditure showed an increase which, from the point of view of efficiency, may be looked upon as satisfactory. Maintenance of way, &c., is up nearly £30,000 compared with the June half of 1905, locomotive power has risen about £64,000, carriage and waggon repairs about £29,000, traffic expenses £21,000, and rates and taxes some £14,000. The only large category of charges which shows a satisfactory decline is compensation, the decrease in which is about £12,000 on the comparison of half-years. Capital expenditure in the six months amounted to £245,423 on lines open for traffic, but exclusive of sundry expenditures upon subsidiary lines which added bring the aggregate up to £317,000. Capital, however, is in credit for the half-year to the extent of about £762,000, through the amounts received on account of the expenditure upon the Great Central and Midland joint lines in accordance with the Act of 1904, so that the nett decrease in the company's own capital for the half-year was about £436,000. But it is only a change of name, as the increased fixed charges show. In the current six months the estimated outlay from capital is only £260,000, and as the balance at the debit of this account is only £636,406, while the various trust funds in hand amount to nearly £1,600,000, it is obviously unnecessary to make any immediate further issue of new capital. Following the unsatisfactory examples set by other companies the Midland gives no particulars whatever about its steamship enterprise. Steamboat expenses and depreciation appear in the current outlays of the half-year, and aggregate £67,035, which is £25,000 more than in the first half of the past year, but there is no entry setting forth what the steamboats have earned. Apparently there is no statutory obligation on the part of railway companies to provide this information, but it ought to be given, and we must continue to emphasise the defect. Coaching traffic in the past six months gave an increase of £67,269, and merchandise and minerals contributed upwards of £180,000 more, but live stock gave less by £125. All the increase in the passenger income came from third-class and season tickets with an addition of about £18,000 more from parcels, horses, carriages, and mails. Including the mileage run for other companies the total work done by the trains, mineral, motor car and goods, showed an increase of 1,037,000 miles at a total of 24,002,198 miles compared with the June half of last year. The dividend warrants are payable on the 25th inst., and will be posted the day before.

Great Western Railway.

Gross receipts for the half-year ended June 30 were £5,973,288, increase £135,051, and the working expenses £3,860,044, increase £100,382, proportion of expenditure to gross income for the railway only 65.30 per cent. against 65.05 per cent. Like most other lines the company suffered a diminution in the number of first and second class passengers carried, and there was a sharp decline in the second class revenue, but first class produced rather more and, the number of third class passengers being up almost two millions, the receipts were larger by £46,689. This gives an increase in total passenger revenue of £36,909, apart from season tickets, which showed the satisfactory improvement of about £9,000. A rise in this item is always encouraging in these days of growing and strenuous tramway and omnibus competition. Mails yielded very little more and the advance under merchandise of £28,749 seems small when compared with the achievements of the other heavy lines. Live stock traffic was actually smaller by £2,000, but minerals rose by £41,000, and should give increasingly good results in view of the activity in the iron and steel trade and the removal of the export duty on coal. Dock and harbour dues, wharfage, &c., were some £3,000 better, and the canal traffic was very little altered in the aggregate. Rents of property, cottages, &c., were larger by £2,310. On the expenditure side the movements are of moderate dimensions and in directions where they might have been expected. On maintenance of way the increased outlay was only £2,000, but locomotive power cost £21,347 more and there was an advance under carriage and wagon repairs of £7,296. Traffic expenses were up £26,131, general charges advanced £4,901, Parliamentary expenses £1,500, and compensation £17,818, the total of the last-named being no less than £60,685. For the half-year the company paid £315,009 in rates and taxes, an increase of more than £14,500, Government duty was a little less, and the steamboat charges showed a trifling increase, but mileage and demurrage cost over £6,000 extra. The canal traffic does not pay, as the expenses were £11,617 against the revenue of £6,633, but of course the railways have done their best to kill the business of carriage by water and probably make no effort to develop even those canals actually owned. We cannot say what sort of result is produced by the steamboats because no details of income are published. Balance of nett revenue was larger by £34,219, a comparatively small sum, the total being £2,113,244, but the credit brought forward was slightly larger at £46,947 and income from other sources gave an additional £4,791 at £30,663. Aggregate amount for disposal is therefore larger by £40,780 at £2,190,854, but the company is devouring capital at such a terrific speed that an increase of almost £15,000 in the fixed charges causes no surprise. Preference charges were the same, and the directors can do no more than provide an increased amount of £12,469 to maintain the dividend on the ordinary stock at 3¾ per cent. per annum, carrying forward £13,418 more at £42,002. This cannot be considered in any sense a brilliant display, and when we come to examine the capital account the prospect is decidedly the reverse of encouraging. In the past half-year the company spent the stupendous sum of £1,158,285, of which £469,878 was on lines already open for traffic, and which cannot, therefore, be expected to become remunerative to any extent, even though part of the outlay was on the electric power station at Park Royal in connection with the electrification of the Hammersmith and City Railway. Another £228,387 went on working stock, £320,078 in lines and works in course of construction, and £136,000 on subscriptions and advances to other companies. Under these circumstances the proprietors may consider themselves fortunate that Parliament rejected sundry Bills which the directors promoted. Without the expenditure that these would have involved the company is committed to enormous outlay, of which £900,000 will be incurred during the six months now current. The undertaking is therefore spending at the rate of fully two millions a year, and in May last an issue was made of £2,000,000 ordinary stock at the price of 125, the whole of which was readily subscribed. It ranks for dividend from January 1 next, and if the present yearly dividend of 5¾ per cent. is to be maintained this will mean an additional annual payment of £107,500. To raise such sum gross revenue must increase by fully £300,000 a year, and if that is to be done trade will have to continue wonderfully prosperous, more so perhaps than we can expect. The acquisition of the Rhondda and Swansea Bay railway will involve the company in additional charges, and the company now controls the Halesowen Railway jointly with the Midland Company. Fortunately the amount of capital received during the past six months was pretty substantial at £1,158,744, including £500,000 raised on debenture stocks, so that the present debit to capital account is not very heavy at £643,084. Dividends payable on the 21st inst.

North-Eastern Railway

Last half-year's gross revenue was £4,742,148 and the expenditure £3,017,403, receipts showing an increase of £294,466 and expenses an increase of £177,325, so that the increase in the nett revenue was £117,141 and the proportion of expenses to gross receipts was 63.62 per cent., compared with 63.84 per cent. a year ago. The mileage is identical for the two half-years, and the increase in expenses seems to be fairly distributed over the various leading items, such as maintenance of way, &c., nearly £84,000 up, locomotive power about £52,000 more, carriage and wagon repairs £27,000 more, and traffic expenses £21,000 more. With all this £36,488, part of the cost of permanent way renewals, has been carried to the accounts of the current half-year. Rates and taxes, it may be noted, are down £5,631. As already intimated, after meeting the interest, rental, and preference charges, the balance of £887,161 left over enables the directors to pay a dividend at the rate of 5¾ per cent. per

annum for the past half-year, leaving £62,627 to be carried forward, against £41,349 brought in. A year ago the dividend was at the rate of 4¾ per cent. Expenditure on capital account in the past half-year was £467,987, of which £165,495 went into lines and works open for traffic, £134,586 into new lines, and £87,906 into new rolling stock. In the current half-year the expenditure on capital account is expected to reach £607,000, of which £255,000 will go into lines and works open for traffic and £50,000 into additional working stock. The Hull Joint Dock is expected to absorb £100,000 in the current six months. At the date of the balance-sheet the capital account was overdrawn by £2,267,165, and the trust funds in hand stood at only £1,973,000. It is stated by the directors that in consequence of the resignation by Sir George Gibb of his position as general manager, Mr. A. Kaye Butterworth, who has been solicitor of the company since 1891, has been made general manager, while Mr. R. F. Dunnell, secretary and assistant solicitor, has been appointed solicitor, and Mr. Philip Burtt, deputy general manager, became chief traffic manager. Mr. Dunnell and Mr. Burtt continue to hold their appointments as secretary and deputy general manager. The Right Hon. Lloyd Wharton has been appointed chairman in succession to Sir Edward Grey, and Lord Knaresborough as deputy chairman jointly with Mr. Henry Tennant. The dividends are payable on the 18th inst.

North London Railway.

For the half-year ended June 30 the gross receipts were £253,849, a decrease of £1,664, while the working expenses were £160,609 or £6,062 less, the ratio between expenditure and income showing a reduction of 1.96 per cent. to 63.27 per cent. The passenger revenue was down by £2,978, the result of a drop of 198,518 in the numbers carried, attributed by the directors to growing competition of motor omnibuses. To meet this rivalry it has been found necessary to reduce daily fares and season ticket rates in some districts. The directors might also consider the expediency of making the third-class carriages more like passenger coaches and less like cattle trucks. Parcels, horses, carriages, &c., gave £152 more, merchandise increased £1,282, and minerals £367, while a decrease under live stock was unimportant. The directors have been economising on the maintenance expenditure, which may not be good, but decreases under locomotive power and traffic expenses should be all right. Parliamentary charges rose sharply by £1,603, but the company accomplished its object in assisting in getting the London Outer Circle Railway Bill thrown out by a committee of the House of Commons. Rates and taxes showed the very important drop of £2,311, and we learn from the report that an arrangement has been come to with the Shoreditch Borough authorities so that the appeal against the reassessment made in that district was not proceeded with. The general result of the quinquennial reassessment of the company's property is described as satisfactory. Dock and wharf charges were less, and receipts from other companies and sundries slightly improved. Balance of nett revenue amounts to £93,240 or an advance of £4,398, and there was an improvement of £1,278 in the balance brought in, so that despite the fact that nothing is this time taken from the reserve against £7,000 a year ago, the sum for disposal is only about £1,000 less at £98,313. Fixed charges showed little change, and preference interest was the same, but the directors very wisely reduce the ordinary dividend from 5 to 4½ per cent. per annum, so that the carry forward can be raised by £3,767 to £5,220. We hope the company has had its worst experience, at any rate for a time, but the prospect is not altogether brilliant, because later on the County Council northern electric tramway system will come into operation. Capital expenditure in the half-year was only £403, and the outlay for the current six months is put down at £820. The account at present is overdrawn by £99,048, but there is a reserve fund of £85,000. Dividends payable August 11.

Waterloo and City Railway Company.

The separate existence of this small but useful undertaking will end with the current half-year. Proprietors have already agreed to sell to the parent South-Western Company, and the Bill has received the Royal assent, so that the line will be handed over on January 1 next. Waterloo and City shareholders make a good thing out of the transfer, as in exchange for each £100 of stock they can have £67 of South-Western ordinary stock, or £105 of 3½ per cent. preference stock, or £110 of 3 per cent. debenture stock. Any proprietor not signifying his intention will be given preference stock, and we should not be surprised if a good many stockholders took this security. We assume that when the South-Western Company takes complete control it will issue through tickets to the City, and that all season tickets will include the privilege of travelling on the electric line. Number of passengers carried in the half-year to June 30 was 2,181,068 or 38,075 less than in the corresponding period, but there was an increase of nearly 200 in the number of season tickets, so that the railway receipts were only £133 smaller at £17,039. Transfer fees gave £8 against £6, but rents were down £77 to £328, the revenue from all sources being £17,375 compared with £17,583. Of this the South-Western Company is entitled to £7,969 against £8,146 for working, &c., and general charges reach £223 or £18 more, leaving the nett credit £49 lower at £0,183. Including balance brought forward, rent charge, &c., the entire nett credit is £10,216, which provides debenture interest and rent charge and 3 per cent. per annum on the ordinary stock, carrying forward £738. There was no capital expenditure in the half-year and nothing is put down for the current six months.

Hull and Barnsley Railway Company.

For the half-year ended June 30 the gross revenue was £272,462, or an increase of £36,754, against which the working expenses went up £15,804 to £161,886, the ratio between expenditure and income declining from 61.98 per cent. to 59.42 per cent. Balance of nett revenue is £110,576 against £89,926, and there was an improvement of £557 to £9,541 in the sum brought forward, so that the nett credit shows a substantial increase. It enables the board to provide all fixed charges together with the dividend on the preference shares, and carry forward over £22,000 more at £42,163. Thus the outlook for the ordinary stockholders at the end of the year is substantially brighter, and the directors could, had they chosen, easily have paid an interim dividend at 1 per cent. per annum on the ordinary stock. Ships of a total tonnage of 885,811 tons entered the Alexandra Dock during the half-year, 827,639 tons being steam vessels and 58,172 sailing ships. This tonnage shows an increase compared with the corresponding period of 205,603 tons. Dock receipts, however, were less than £1,000 larger. The company does not do much in passengers, and the revenue was very little greater, while the increase in merchandise was also under £1,000. In fact, practically all the improvement was in minerals, which went up £35,933. Mileage and demurrage was lower by £1,137. On the expenditure side there was a very small drop under maintenance, but engine power cost £6,540 more and carriage and wagon repairs rose over £3,000. Traffic expenses were up by £4,762, general charges increased £608, and there was a rise in dock expenses, including maintenance, of £1,209. Rates and taxes were about the same. There was actually a credit to account of capital expenditure of £2,800, but in the current six months the outlay is put at £90,900, including £50,000 for the Hull joint dock. Present debt to the account is £80,819.

Alexandra (Newport and South Wales) Docks and Railway.

Gross receipts for the six months to June 30 showed an increase of £6,649 at £127,804, but the expenditure took £8,367 more at £75,771, or 59.29 per cent. of the revenue against 55.63 per cent., and as nothing came in from interest compared with £466 a year ago the nett revenue was £2,184 lower at £52,033. Debenture interest and fixed charges required £269 extra at £13,521, leaving a balance of £38,512, and after meeting the full dividends on the "A" and "B" preference stocks for the half-year the amount carried forward is further reduced by £2,719 to £15,081. Outlay on renewals amounted to £8,275 or £2,022 less, but of this only £1,784 had been provided out of the previous half-year's income, and the remainder had to be found out of the current revenue. Capital expenditure was decidedly heavier at £88,807, of which £66,503 was on the dock extension and £12,103 on lines and docks open for traffic, and it is estimated that during the present and subsequent half-years £244,400 will be spent. As the debit on this account is now £72,074, while the loan from bankers has risen to £191,742, it is evident that steps will have to be taken to raise further capital almost immediately, but the company has stock created and not yet issued of £108,618 as well as unexhausted borrowing powers of £177,856.

East London Railway.

The report for the half-year to June 30 states that the passenger traffic was again adversely affected during the six months ended April 30 by the withdrawal of the District Company's trains and by the severe competition of the County Council tramways and showed a decrease of £921 at £18,384. Receipts from goods traffic also suffered by the reduction in building material and similar consignments, being £459 down at £6,212, making a total income of £24,596. The company therefore receives only its minimum guaranteed rent of £15,000 for the half-year less £750 for income-tax, and with miscellaneous receipts and £10,118 brought forward had a disposable balance, after providing for administration and other charges, of £23,826. Out of this interest is paid on the first and second charge Class "A" debenture stocks and £10,607 is carried forward.

Sheffield District Railway Company.

The Lancashire, Derbyshire, and East Coast Company handed over £338 more at £2,145 as the proportion of gross receipts due to this company for the six months ended June 30, and with £3,750 from the Midland and £48 from rents, &c., the total income was £327 up at £5,943. Expenses came to £464, or a trifling increase of £4, but the amount brought forward and receipts from interest were both smaller at £297 and £130, so that the nett balance showed an improvement of no more than £184 at £5,906. Debenture interest absorbed the usual £2,886, but rent of the Midland passenger station was cut down to half last year's figure at £63, and the directors are therefore able to pay the full dividend of 5 per cent. on the preference shares compared with 4½ and 3 per cent. for the corresponding periods of 1905 and 1904, and to carry forward £457 or only £3 less.

Arthur Guinness, Son and Co., Limited.

During the year ended June 30 this wonderful business earned a profit on brewing of £1,992,301, and rents and transfer fees gave £1,243, or a total of £1,993,544. This compares with £1,849,385 in the previous year. Excise duty rubbed off nearly the odd £992,000, the exact sum paid being £963,200, while other charges were £15,811 for maintenance, £12,698 for directors' and auditors' remuneration, &c., £4,492 for London office expenses, £3,800 for rents, and £191 for bad debts. Altogether the outgo was £1,000,198, leaving the nett profit at £993,347. Dividends on investments and interest produced £42,959 and

£67,120 was brought in, making £1,103,425 as the sum at the disposal of the directors. A year ago the total was £967,075. Debenture interest at 5 per cent. takes £75,000 and preference dividend £120,000, besides which £200,000 has been appropriated to pay an interim dividend at 16 per cent. per annum on the ordinary stock, and balance of income-tax is £36,394. Then the fortune of £220,000 or £80,000 more is reserved for capital expenditure and contingencies, and £30,000 goes to the depreciation fund in addition to £6,977 charged as departmental working expenses. Credit still left is £422,031 and the directors are in a position to add a 2 per cent. bonus to the final 12 per cent. dividend on the ordinary stock, making the total return for the year 22 per cent. or 2 per cent. more, carrying forward £72,031. The ordinary reserve fund is just one million and the reserve for capital expenditure and contingencies is increased to £1,470,000 by the addition now made from revenue. Against these funds the company has investments of £1,368,506, but at current market figures they show a depreciation of £120,631. Cash and bills amount to £612,121, and the book debts reach £230,820 against creditors of £317,564, including £114,555 left on deposit. Capital expenditure for the twelve months was £95,800 and the present value of the property, after providing for depreciation, is £5,887,931. Stocks on hand are valued at £1,186,341 and the aggregate of the balance-sheet is £9,285,720. The report does not refer to the recent debenture conversion.

Parker's Burslem Brewery, Limited.

This business had a rather better experience during the year to June 2 last than in the previous 12 months, and the directors blazon forth in very large type in the report that, "after paying the sum of £3,766, the amount of contribution *re* Licensing Act of 1904, there has again been provided the sum of £2,000 towards the amount payable during the current year." It is all very well to state the fact like this, but just note that the £2,000 brought forward last year naturally went in relief of the amount payable for the period under review, so that actually only the one sum of £3,766 was provided from the past year's profits. That is how we read the position, but should be glad to learn that we are wrong, and that £5,766 has been set aside this year. Gross profit, after providing for bad and doubtful debts, is returned at £84,569, or £4,913 more than in 1904-5, rents were again less at £13,862—not a very good sign—and transfer fees gave £39, making £98,470 in all against £94,053. General expenses, such as salaries, travelling charges, &c., amounted to £20,676, repairs of houses, plant, and brewery cost £9,999, directors' and trustees' fees were £1,300, and the licensing contribution was £3,766, leaving £62,729, an increase of £1,707 only. Debenture and other interest absorbed £20,806, so that with £4,356 brought forward the directors have £46,279 at their disposal. They are, therefore, able to meet the preference dividend and pay 8 per cent. on the ordinary shares, being 1 per cent. less, adding £7,500 or £2,500 more to the contingencies fund, and carrying forward the largely increased balance of £2,500. The balance-sheet cannot be counted a very strong one, although the reserve is £183,000 against a property valuation of £1,106,123. Nett additions for the year were £4,129, but £15,070 has been transferred to a trade investments account, so that the item is somewhat less than it was a year ago. We should like to see this property entry set out in greater detail, particularly in view of the diminishing income from rents. What are the licensed premises valued at, and how much is put down for the brewery? The cash balance looks pretty good at £75,483 until we note that £71,607 has been borrowed from bankers, and debtors are only slightly above the sums due to creditors. Sundry properties have been mortgaged for £35,450, while mortgages and loans granted amount to £15,657. Stocks are valued at £25,897. A year ago the contingency fund stood at £7,500, but £5,579 was spent during the year on repairs, alterations, and additions, reducing the account to £1,921. It will, however, be raised once more to £9,421 by the appropriation from the past year's profits.

Mitchells and Butlers, Limited.

Fortune seems to distribute her favours very capriciously where the brewery business is concerned. Some undertakings can evidently do no wrong, while others are destined to struggle against adversity from beginning to end. The company under notice is one of the lucky ones, and the directors are pleased to announce that the result of the year's trading has been satisfactory. This is for the period to June 30, and the good display is attributed to the abnormally low price of malt and hops. Strange that other companies do not seem to benefit from these things. But, says the report, "in view of the increasing Government and local charges, and the unsettled state of the trade in regard to licensing, your directors feel they are bound to further strengthen the financial position of the company, and for that purpose they propose to reduce the customary dividend on the ordinary shares by 2 per cent. and to add the sum of £30,000 to the reserve, making that amount £430,000." We are not altogether clear as to what this means, but the brewery is situate in Birmingham, and that fact may explain much. However, a 2 per cent. reduction will not matter, because the ordinary dividend is still 18 per cent., a rate which does not leave much room for grumbling. In the 12 months the profit came to £212,885 or £4,416 more than in 1904-5, and as the balance brought in was the fine one of £113,786 the total credit is £326,671. Interest on debentures, mortgages and loans requires £47,141, managing directors' salaries and directors' fees amount to £6,900, and interim dividends to the amount of £44,691 have been already paid. To complete the preference dividend takes £10,014, and to pay a final 12 per cent. on the ordinary shares, making 18 per cent. for the year, absorbs £69,355. Contribution to employees' superannuation fund is £1,000, and after adding £30,000 to reserve the carry forward is increased to £117,570. Compared with a year ago there is a reduction in the mortgages of the large amount of £117,625 to £372,390, and the directors now propose to add from the cash resources of the company a sum of £25,000 to the mortgage and debenture fund, making it £102,912. Besides the mortgages, the undertaking has a debenture debt of £702,100, and the board is unquestionably pursuing the right policy in reducing these liabilities at a good pace. Loans and deposits are small at £12,592, and only £88,863 is owing to trade creditors and for rents payable, &c., a very moderate amount for a business of such magnitude. On the other side book debts, loans, rents receivable, &c., reach £33,501, also a small sum, but cash at bankers and in hand is important at £143,048, and cash at bankers and money invested on account of the mortgage and debenture redemption fund is £77,912. Property account stands at the enormous figure of £2,266,204, an increase on the year of £36,853, and the anxiety to increase the reserve at the expense of the ordinary shareholders, although commendable, seems a little significant. Stocks as valued by the managing directors are in at £145,341, and rolling stock, loose plant, and stores of £57,596, similarly certified, complete the balance-sheet total of £2,723,604.

Workington Iron Co., Limited.

The buying of this company's shares during the past two or three months has been one of the striking incidents of the iron and steel share market. The securities of the company have not been officially quoted so very long, but our records show that within much less than a year the price of the ordinary shares has about doubled. As recently as January last the shares stood at 25s. only, and now the price is almost 60s. And it must be confessed that the annual report just issued provides a good deal of justification for the advance. We wonder who were the lucky people to know of the abnormally good times which the company was experiencing. The company pays no less than 30 per cent. on the ordinary shares, and the present price includes the final dividend of 5s. per share or 25 per cent., the interim dividend paid in February last having been 5 per cent. In their report which covers the twelve months to June 30 the directors say that spiegel has been in good demand during the last eight months of the year at remunerative prices, and one furnace has been worked on ferro manganese with gratifying results. The quality has given every satisfaction, and the company has already secured an extensive market in the United States, Canada, and the Continent, besides the home trade. Another sufferer from protection, clearly! The new spelter plant commenced working a month ago with good prospects of becoming a valuable addition to the business, and the sinking of the shaft at the Bigrigg mine is nearly completed. What seems to be a valuable body of ore has been proved. In these circumstances the company's sudden jump into prosperity may not turn out to be a mere flash in the pan, and if the price of the shares seems high the modest capitalisation and the good financial position must be taken into account. In a word an eye should be kept on this enterprise. Capital is £125,000 in equal amounts of 6 per cent. cumulative preference and ordinary shares, there is no debenture debt, and the directors have dealt so prudently with the profits that the reserve is now £37,000. Balance from trading account was £70,455, and cottage rents and transfer fees gave £199, or a total of £70,655. From that £12,000 or more than 11 per cent. is provided for depreciation, relining, renewals, and repairs, and £36,200—more than half the profits—is put to reserve. Sum still left is £22,405, and £197 was brought forward, making £22,601. Dividend on the preference shares takes £3,750 and 30 per cent. on the ordinary shares £18,750, so that just £101 is carried to the credit of the current year. Capital additions for the year were £11,859, and after deducting the allowance for wastage, &c., the expenditure stands at £03,098. The reserve is invested in Consols bought at 87, a good stroke of business, shares in the Bigrigg Mining Company are held to the value of £10,881, and against creditors of £27,602 there are stocks £36,684, sundry debtors £15,200, and cash and accrued interest £15,645. The preference shares must be considered very well secured, and the company is none the worse for being small.

Manchester Ship Canal Company.

The traffic of this famous waterway made further progress during the six months ended June 30. Sea-borne traffic passing over the canal reached 2,112,813 tons, or an increase of 247,207 tons compared with the corresponding period, while the barge traffic increased from 127,521 tons to 130,323, making total improvement of 250,009 at 2,243,136 tons. Ship canal revenue receipts were £233,176, or an advance of £24,431, and apart from rents there was an increase under all important heads. Working expenditure was larger by £13,431 at £133,881, an extra £12,000 being spent on maintenance, and rates and taxes showing an increase of £1,187, but compensation was down by £1,188. Balance of nett revenue reached £99,295 compared with £88,295, and the profit on the Bridgwater department rose by £3,557 to £18,258, so that the sum at the disposal of the directors is larger by £14,557 at £117,553. Revenue of the Bridgewater canals was £12,422 greater at £146,624, and the expenditure rose £8,866 to £128,367, traffic expenses in this case advancing most. Including £1,477 for bankers and general interest

the sum for disposal is £119,030, from which the directors provide interest upon first and second mortgage debentures £44,743, interest on debenture stock £3,497, interest on mortgage of surplus lands £1,000, and rents of docks and transit sheds £15,630. A sum of £54,160 then remains which can be paid to the Corporation of Manchester on account of interest on the debentures they hold. A further sum of £36,757 has been paid in preference shares and charged to capital account in accordance with the Act of 1904, this being on account of sums owing up to December 31, 1905. Other capital expenditure was £26,513 after deducting £16,036, the proceeds of sale of land and plant, and there is now a credit to the account of £206,357.

Samuel Fox and Company.

In the past year ended June 30 last this Sheffield company made a profit of £37,297. Adding in £8,331 brought forward, the available total is therefore £45,628, and out of this £30,000 is devoted to the payment of a dividend of 10 per cent., tax free, upon the £300,000 of share capital. Part of this dividend was paid in February last, and after meeting the whole of it a balance of £15,628 will be left to carry forward, or nearly twice as much as was brought in. The directors state that they have arranged to make considerable extensions and improvements in the works and plant, and also for effecting improvements throughout in order to bring about economies in working. From the balance-sheet we see that the land, buildings, fixed plant, machinery, and colliery properties are put down for £196,365, and stock-in-trade, loose tools, &c., for £74,661. Sundry debtors are mixed up with investments at £51,702, and cash and bills in hand and at bankers amount to £33,981. The company has £69,000 sunk in the Stocksbridge Railway, exclusive of £15,000 of debentures in that railway, against which there is a Stocksbridge Railway share and debenture purchase fund of £55,000, the only thing that can be described as a reserve. Sundry creditors stand for £47,581.

Pearks' Stores (Africa), Limited.

The directors issue their third annual report, covering the 12 months to the end of February, but we are unable to make any comparison between the accounts for the past two years, as this is the first time a copy has been sent to us. Profit on trading is set forth at £27,100, and as the expenses in the lump totalled £17,165, the nett profit was £9,935. Interest and discount took £2,392, depreciation £719, £527 is written off the outlay on the extension of the business, £2,000 is reserved for bad and doubtful debts, leaving a credit of £4,297, to which has to be added £1,149 from the previous year. The dividend is again at the rate of 10 per cent. per annum, and this allows £2,740 to be carried forward. In the report itself the directors say nothing whatever of the business done or likely to be done; in fact, they are profoundly reticent on matters that would be greatly interesting to the shareholders, who are allowed to imagine what they please. But they can see plainly enough that the financial position of the company is not sound, and hardly justifies the high dividends paid. Current liabilities total £75,159, against debts for £46,300, and cash is only £838, out of which to provide £8,300 for interest, depreciation, bad debt reserve, dividend, &c. The depreciation is inadequate, especially as capital additions amounted to £15,610. The general reserve is only £1,000, invested in the business, and shareholders, in their own interests, should insist upon this being added to without delay.

Colne Valley Water Co.

The gross revenue for the six months ended June 30 rose by £1,239 to £19,182 at the cost of an increase of £559 to £7,565 in expenditure leaving nett profits £680 up at £11,617. To this were added £1,879 or £461 more brought in and £117 from interest making a total of £13,613, and after providing for debenture and preference interest another £1,000 is put to contingency account and £117 is written off for depreciation on investments. Out of the balance of £10,917 left dividends are paid of 9 per cent. on the 10 per cent. maximum shares and 7 per cent. on the 7 per cent. maximum shares against 8½ per cent. and 7 per cent. last year and £1,479 or £345 more is carried forward. A sum of £3,000 has been charged to contingency account in connection with the erection of a new beam engine to take the place of the two old horizontal engines, and £42 was spent on renewal of mains, leaving £5,029 in hand, of which a further £2,000 will be taken when the engine is completed. Capital expenditure for the half-year amounted to £2,151, but £3,840 nominal was received from the issue of new shares together with £6,585 from premiums, and the credit balance of this account now stands at £5,400.

Vallombrosa Rubber Co., Limited.

This Edinburgh company was founded in April, 1904, to acquire about 2,260 acres of land in the Straits Settlements and has since purchased about 275 acres from natives and leased another 2,000 acres from the Government. Of this total 930 acres have trees ranging from five to eight years in age and a further 204 acres were planted in 1905 and 1906. During the year ended March 31 39,113 lbs. of rubber were harvested at a cost of 1s. 1½d. per lb., and yielded £10,745 or about 5s. 6½d. per lb., while profits on contracts and seeds sold gave £645, coffee and cocoanuts produced £406 and transfer fees £12 making a total income of £11,808. Estates expenditure, cultivation of native holdings and administration expenses took £6,935 and interest required £106 leaving nett profits at £4,767, out of which it is proposed to write off £428 for preliminary expenses and to carry forward £4,338 subject to directors' fees. The directors state that they consider it in the best interests of the shareholders not to recommend the payment of any dividend at present, as the cost of increased acreage and of development has largely exceeded the amount of working capital provided on the formation of the company. They hope, however, to be able to make an interim distribution within the next few months out of the proceeds of the crop of the current year. Capital expenditure on the estates now amounts to £48,072, in addition to which £4,538 has been spent on development work, and as the paid up capital is only £50,600 it has been found necessary to raise £2,850 by temporary loans. Liabilities to sundry creditors are small at £1,159, and as against these there are assets consisting of rubber in transit and in store valued at £4,942, sundry debtors amounting to £583 and £447 in cash, the self-denial now proposed will leave the company in fair condition to continue the necessary development of the properties.

Otago Harbour Board.

Owing to the heavy reductions made in the dues collected on the staple lines of export and on shipping the ordinary revenue for 1905 fell off by £3,228 to £72,515, but at the same time there was a decrease of £3,850 to £71,329 in the ordinary expenditure. Including £5,953 from debentures sold at a premium of £453 and £10,400 refunded from sinking fund account the total income amounted to £110,569, and the outgo with £5,500 drawn bonds to £76,829. Then £4,000 is transferred to plant renewal fund, £500 to marine insurance fund, and £10,383 to sinking fund, leaving a balance of £18,856, of which £17,941 was in the hands of the bankers to meet the coupon due on January 1. The usual comparative analysis of dues for the years 1904 and 1905 show that receipts from imports fell off by £1,869 to £33,395 owing chiefly to a decrease in general goods, coal and timber being both slightly larger, while exports yielded £1,049 less at £3,847 through big reductions in general goods, cheese and butter and frozen meats.

Weldons, Limited.

The fashion books and papers published by this company evidently fill a felt want with satisfaction to its clients and advantage to itself, as nett profits for the year ended June 30 showed a further substantial increase of £1,192 at £34,616. A larger balance of £3,789 was brought forward giving a disposable sum of £38,405 or £1,616 more, and after paying the preference dividend the ordinary shares get their usual 10 per cent. and another £5,000 is put to reserve, leaving £5,405 to be carried to the new account. With prosperity like this it seems a pity that the directors do not make some effort to reduce the item of goodwill and copyrights, which stands at £337,415 or nearly 89 per cent. of the issued capital. Against this the present transfer from revenue brings the reserve fund up to £20,000, of which £15,000 is invested in securities specifically earmarked, and in addition there is another £15,000 in various railway stocks, but all these are taken into the balance-sheet at cost and shareholders have no opportunity of judging from the figures given how near this valuation approximates to present market quotations. Liabilities to sundry creditors are small at £8,604, while sundry debtors owe £18,284, and as cash is £1,178 up at £22,467 the current position seems excellent.

London Trading Bank, Limited.

This curious little institution, now registered under the Limited Liability Acts, earned a gross profit of £3,523 in the half-year to June 30, and brought forward £638, making £4,161. The profit is larger by £294 compared with the corresponding period, and after providing current expenses and interest the directors write off £65 against joint-stock formation expenses, pay the usual dividend at 5 per cent. per annum, and carry forward £709 subject to rebate on bills discounted. The called-up capital is £38,529, out of a nominal amount of £68,095 subscribed, but £526 is in arrear, so that the amount figuring in the balance-sheet is £38,007. Current, deposit, and other accounts have grown from £72,123 to £77,136, and on the other side bills discounted and advances amount to £89,481 or £9,849 more. Investments stand at £24,381, £9,000 of Consols and annuities being entered at par, but there is a reserve of £5,000 against depreciation of securities and doubtful debts. Cash balance is £8,117, and the joint-stock formation expenses still stand at £868.

Dominion Iron and Steel Company.

The directors of this much-bolstered Canadian enterprise are hammering at the Ottawa Government for an extension of the bounties they have been receiving upon their output, and they have good reason to do so, for the record of the business so far has not been particularly brilliant. In the directors' report for the year ended May 31 last we learn that "great progress" has been made in developing the output of pig-iron, billets, rails, and wire rods, but the total sales for the year of all these lumped together came to only about 190,000 tons, and the company was not able to keep its wire rods mill in operation for the whole year because the production "would exceed the entire consumption of Canada." Nevertheless, the profits for the year amounted to $625,595 after payment of all interest charges and of the sinking fund on the first mortgage bonds. This handsome-looking result was reached in spite of the fact that for the first four or five months of the year little more than

fixed charges was earned, so that the surplus shown has practically been earned since October, and it almost all came from Government bounties, since the amount of such received out of the revenue of the Dominion for the year was $638,653. But the bounties were reduced on July 1 last to 70 cents on pig-iron and $1.05 per ton on steel ingots, and unless extended they will cease altogether on June 30, 1907. What will the Dominion Iron and Steel Company do then? Even in the current year and on the average production of the past six months the income provided for the company by the humble taxpayer will only be $491,605 in the current year. This will never do, and it is not at all to be wondered at that the directors declare the company to have "strong claims" for consideration in the matter of an extension of the bounties. The greatest claim is undoubtedly the capitalisation of the company, which tends to increase, and is already excessive. The common stock amounts to $20,000,000 and the preferred to $5,000,000, but there is a bonded debt of various kinds of fully $15,000,000 more, the aggregate capitalisation being over $40,000,000. In other respects, too, the situation is not a particularly strong one, for there is a floating debt of about $3,200,000, exclusive of accrued interest on the mortgage bonds, and the company does not seem to have any cash in hand.

Millwall Dock Company.

Business at the docks of this company during the first half of the present year was far from flourishing. The number of ships entering was exactly the same as in the corresponding half of 1905, viz., 621, but the tonnage was 7,024 less at 528,072. This, however, shows some recovery, for the decrease in the first half of 1905 was considerably greater. Despite this falling off the business done was a little more remunerative, for the revenue from import and export rates, dues, and rents on goods and shipping was £708 larger at £97,862, whilst more was received from rents, transit and railway. On the other hand, there was a slight drop in interest, with 10s. less from transfer fees, the total received being £104,767 against £103,504. Mainly because wages cost more and rates and taxes increased, the expenditure went up by £293, which left a gain in nett revenue of £969 at £7,701, after paying the debenture interest. The directors recommend the distribution of a sum of £10,119 on the 1st prox. to the perpetual 5 per cent. preference stockholders, this being the balance standing to the credit of these stocks at the end of 1905. The provision made for renewing and replacing buildings and works and sinking fund for leases was £4,163, but the cost of the work done was £5,556, which reduces the fund to £4,200. Notice having been received that it was the intention of the Government to deal with the Port of London question next session, and that if the amalgamation Bill promoted by this company and the London and India Docks Company were proceeded with, the Government would require the insertion of a sterilisation clause, it was decided by mutual consent to allow the Bill to drop.

Leyland and Birmingham Rubber Co., Limited.

Twelve months ago the directors of this company had to record a very serious decline in profits owing almost entirely to the high price of raw rubber. During the past financial period, ending June 30, the high prices of rubber and other raw materials have been maintained, but as selling prices have simultaneously advanced there is an appreciable recovery in the earnings. The trading profit increased from £9,508 to £23,592, whilst £259 was brought in, making £23,851. After allowing for depreciation, reserve for discounts and bad and doubtful debts, there is left a surplus of £19,258. Out of this £2,000 is put to reserve and the dividend is raised to 6¼ per cent. for the year from 1¼ per cent., and at the same time the forward credit is considerably larger at £2,661. The depreciation represent 2½ per cent. on buildings and 5 per cent. on machinery, plant, &c., but nothing has been written off fixed assets at Johannesburg. Moreover, the additional capital outlay exceeded the allowance, so the directors need have been in no great hurry to pay the larger dividend. Trade creditors have been reduced from £59,195 to £37,075, but the bank debt is £4,000 higher at £10,210. Against these debtors owe £59,077, but cash is rather low at £720.

Regent's Canal and Dock Company.

Revenue for the six months to June 30 amounted to £40,994 compared with £44,160 for the corresponding period of 1905, thus showing a considerable drop. On the other hand the expenses were appreciably reduced, by £1,463 to £17,621, so the nett revenue was £1,702 lower at £23,373. The much larger balance of £2,109 was brought in and £77 was received from interest, making £25,559 for division against £26,072. About the same amounts are required for debenture interest, pensions and annuities, and the directors again pay a dividend at the rate of 2 per cent. per anum, leaving £1,040 to be carried forward. Credit to capital account has fallen from £4,396 to £1,378, and the financial position is tolerably good.

Grand Canal.

This company did not do quite so well in gross revenue for the half-year ended June 30 as in the corresponding period, the total income being £46,725 against £48,664. Expenses, however, were cut down in several directions, especially under maintenance and carrying trade account, so that the nett balance comes out £690 higher at £13,779. Add to that £5,074 brought in, and the total credit is £18,853, from which debenture interest takes £521, and preference dividend £4,994. Having placed £1,000 to the accident insurance fund, the directors now propose a dividend at 4 per cent. per annum, the same as before, on the ordinary stock, income-tax takes £583, and £6,261 is carried forward. There is a debit to capital account of £18,162, but the company has various reserves aggregating £22,829.

TRADE AND PRODUCE.

Wheat.—Markets were closed on Monday, and business, when resumed, was more or less of a holiday nature. It has kept exceptionally quiet throughout the week, but prices have been firmly held, the check on harvesting operations due to last week's storms having had a steadying effect. English wheat, as usual, has been in short supply, and farmers' deliveries last week amounted to 9,480 qrs., averaging 30s. 9d. against 5,062 qrs., averaging 31s. 11d. in the same week of 1905. Imports were heavier, amounting to 594,323 qrs., against 538,767 in the same week last year, and quantities of wheat and flour on passage to the United Kingdom are almost as great as last week —2,635,000 qrs., against 2,640,000. American markets have had a fairly steady week also, weather advices and the unfavourable Russian news having a bullish effect. Bradstreet's estimates were heavier than last week, but not so heavy as was anticipated, amounting to 41,211,000 bushels in sight East of the Rockies, against 39,633,000 last week. The visible supply has increased 1,303,000 bushels against last week. Later markets reacted a little from the early advance, large operators selling freely.

Wool.—As in other markets, holidays this week have restricted business, which has only been partially resumed. No weakening tendency is visible, merinos and crossbreds going still against the buyer, and for home produce staplers are still demanding full market rates. Yarns are fairly active on home account, but for the time being not much is doing in them for export, and spinners don't show any signs of encouraging business by lowering their quotations. The manufacturing trade round Leeds and Huddersfield is in vigorous condition, some of the mills working continue to produce medium and lower-class goods for winter.

Linen.—The activity in yarns is steadily increasing, lines and tows finding ready purchasers at top prices, tow wefts being quoted at 6s. 6d. per bundle, line wefts of ordinary quality at 5s. 3d. Manufacturers' prices also have an upward tendency, brown linens, housekeeping goods, &c., all participating in the improvement. All over, says the *Linen Market*, the position of manufacturers is a strong one. In bleached and finished goods demand equals output, and if prompt delivery is expected orders for the autumn should be given at least two months earlier than usual.

Cotton (from our Manchester correspondent).—During the past week we have experienced a generally quiet market. Few transactions of importance have been arranged, and the general demand for cloth and yarn continues on a small scale. The raw material in Liverpool has been easier, advices with regard to the American crop being on the whole favourable to a large yield. In cloth for export buyers have had few orders of weight to place. No particular pressure has shown itself for new business, but manufacturers' order lists are slowly running down, and owing to the stiffness of American yarns the margin for producers of cloth is nothing like so satisfactory as a month or two ago. India buyers have only bought small lots of a sorting up character. Reports from Calcutta are disappointing, and goods behind contract time in delivery have been cancelled in several instances. A fair demand continues for Bombay, but the orders are not large The outlook for our dependency is healthy as a whole, the crops in most districts are doing well. Rather more offers have come to hand from China, but business develops very slowly. Here and there transactions have been arranged for distant delivery, but the trade has not been large by any means. Reports from Shanghai are of such a nature that shippers here are not stimulated to anticipate their future requirements. The South American markets have been fairly busy a number of small orders being given out. For the Levant and Egypt only a quiet trade has been done. Buyers for these outlets find difficulty in obtaining the delivery which they require. Burnley goods have moved slowly, prices varying according to the position of individual producers. Glossop cloths continue firm owing to engagements. T-cloths and Mexicans have not been active in demand, and there is some weakness here and there in price. In coloured woven goods and sateens makers have found rather less business coming round. In home trade American yarns the production of the spindles has hardly been sold. Spinners, owing to their engagements, have been able to hold for satisfactory prices, very little change in quotations as compared with last week showing itself. Buyers, on the other hand, have for the most part held aloof. Manufacturers are not inclined to purchase for distant delivery. In export bundles a fair China trade has again been done in doubled 32's. Certain producers of these numbers cannot complete orders now being booked until June next year. Cops for the Continent have met with some attention. Bolton spinnings have met with rather better demand for distant months, and the position of spinners has improved somewhat. The commoner kinds, however, in carded descriptions continue to drag.

Cotton in New York opened with a gain of about 3 points and further advanced on better cables and buying from foreign sources. Subsequently prices gave way on European selling

and "bear" pressure. Though there was a partial rally later, the market continues weak up to the close.

Spot cotton in the New York market has remained quiet and steady all the week, but futures here fluctuated a good deal, the end of the week (Thursday) finding them 18 to 22 points down a decline, due to a heavy liquidation on the part of one or two prominent operators.

Coal.—If it were not for steam coals the trade would be sluggish at this moment, but seldom has this branch shown more activity. There appears to be no reduction in the requirements for home use, and large quantities are still sent to the Hull ports for export. In the North sales are now made at 6d. per ton higher than could be got in the autumn of last year, and the realised price of Durham coal has improved so much, according to the *Engineer*, that the Conciliation Board gives the miners a 2½ per cent. advance of wages, commencing this week. Holidays are the leading feature of the trade in Wales at present, but before they began things were looking up a little, and next week, when business is in full swing again, it will be more vigorous than of late. Quotations remain practically without change both at Cardiff and Swansea, but the tendency, if any, is upward.

Copper.—Dealing in refined copper is reported much more active, and in Germany it is said that transactions are on a larger scale than ever before experienced. In many cases orders for this year's delivery are refused by the big electrical establishments, which are unable to cope with the work in hand. Prices started with an upward tendency, but business was very slowly resumed after the holidays and dulness soon set in. Supplies, however, are apparently small, and a little inquiry put quotations to about the opening figures. Some irregularity followed, and prices were £82 17s. 6d. for spot and £82 10s. for future delivery.

Tin.—The strong bullish movement noticeable at the close of last week was continued after the holidays on strong American advices and important purchases effected in the East. "Bears" covered freely, and a substantial advance in prices ensued. A small reaction due to profit-taking was only the signal for another rise, but just when prices looked like going ahead something of a collapse took place. Easier advices from New York and very small supporting orders changed the sentiment, so that when America ceased to buy a loss of several pounds was the work of a very little time. Selling pressure forward prevented any immediate recovery, but the lower prices induced some buying before the end, and the final figures were not the worst. Quotations were about £179 10s. for cash and three months, or much the same as a week ago.

Iron and Steel.—Markets generally have developed a stronger tendency since the holidays, and good orders all round have imparted an appearance of greater healthiness and activity. In some places works have restarted earlier than expected, in order to meet these orders, consumers being in need of supplies. In the north there has been a strong demand for pig-iron and warrants, both of which show substantial advances, G.M.B. being quoted at 52s. 3d. and warrants at 52s. 2½d. Hematite is increasingly inquired for at 65s., whilst foundry and forge share in the improvement. Finished iron and steel are firm, all mainly the effect of the improvement in shipbuilding. A similar condition of things prevails in Scotland, pig-iron warrants rising on the excellent American and German reports. For the past half-year the output of manufactured iron was 36,712 tons, and the average nett selling price was £6 10s. 4d. for the months of May and June, an advance of 1s. 3d. per ton on the preceding two months.

Sugar.—Further purchases for American account at the end of last week, to quote Mr. Czarnikow, rendered "bear" sellers rather uneasy, and covering operations drove prices up about 4½d. for August, while new crop only advanced 1¾d., since when there was a reaction of 1½d.; prompt granulated likewise improved about 3d. to 2¼d. per cwt. It is the fear of further American demand which makes sellers very reluctant, while with increased orders, due to the hot weather, the trade shows more confidence. The market for refined has been very firm, and although the holidays made their moral influence felt, a large trade was done at fully 3d. advance. Tate's cubes, No. 1, 19s. 3d.; No. 2, 18s. 3d.; Lyle's granulated, 17s. 10½d.; No. 2, 16s. 10½d.; yellow crystallised, 16s. 1½d.; foreign cubes, 12s. 9d.; "first marks," granulated, 11s. 3d., f.o.b. Old crop is now quoted at nearly 3d. premium over October, December, a rather remarkable result, says Mr. Czarnikow, after a season giving us two million tons excess production in Europe, of which only 640,000 tons excess was left on July 1, owing to enormous Eastern shipments, and a large increase in European consumption. We cannot expect same during next season, nor would the growing crop on average yields supply such demand at present level. Sellers evidently expect a falling off in deliveries compared to our present exceptional season, and quotations at a fraction more only were even made for the following crop. The German July exports are 99,000 against 74,000 tons, Austria about 58,000 against 59,000 tons; the Hamburg stock decreased 34,000 tons in July, only 20,000 tons of the excess exports going to United Kingdom, therefore, shipments elsewhere are again larger than last year. Consumption in France is about 49,000, against 41,000 tons, Austria 48,000 against 43,000 tons, which, with the United Kingdom increase of 30,000 tons, gives a total improvement of 43,000 tons for the three countries and 48,000 tons for America. New York market has been strong—3.87 cents for 96 per cent. Centrifugals, 3.37 cents for 89 per cent. Muscovadoes, and 4.75 cents for granulated.

MINING RETURNS.

African Gold Dredging and Mining Concessions.—69 ozs. recovered.

Akrokerri (Ashanti).—Crushed 1,650 tons, 1,407 ozs.; assay of tailings, 3 dwts.; by cyanide 930 tons sands, 114 ozs.; total 1,521 ozs.

Ashanti.—Recovered 351 ozs.

Ashanti Goldfields.—Obuasi, Crushed 3,836 tons, 3,111 ozs. Accumulated tailings:—At Obuasi, recovered by No. cyanide, 98 ozs.; at Ayeinm, recovered by cyanide, 109 ozs.; total 3,318 ozs.

Associated Northern Blocks.—Milled 3,598 tons ore, treated 458 tons slimes; yield, £15,323.

Associated of W.A.—Milled 8,750 tons ore, treated 4,174 tons slimes; yield, £17,056.

Balaghat.—4,550 tons, 3,541 ozs.; 4,004 tons tailings cyanide, 403 ozs.; total 3,944 ozs.

Barrett Gold.—481 ozs., valued at £1,900.

Bernheim (Mazoe).—Crushed 1,000 tons, 511 ozs. (equals 10.22 dwts. per ton); tailings assay 3 dwts. per ton.

Bibiani.—Crushed 3,451 tons, 1,710 ozs.; 2,930 tons tailings by cyanide, £2,667: total, 2,387 ozs.

Bonanza.—Crushed 6,600 tons, 2,078 ozs.; cyanide and slimes 7,085 tons, 1,348 ozs.; total, 3,426 ozs.

Briseis Tin.—Black tin cleaned up 87 tons 16 cwt., in addition to New Brothers Home No. 1, 27 tons 18 cwt. Briseis Company's proportion 104 tons.

British Broken Hill Proprietary.—2,491 tons crude ore produced 430 tons concentrates, containing 271 tons lead and 12,470 ozs. silver.

Broken Hill Proprietary.—Refinery products: fine silver, 228,539 ozs.; soft lead, 3,912 tons; antimonial lead, 38 tons.

Broomassie.—Crushed 670 tons, 784 ozs.; 7 tons concentrates of an assay value of £27 10s. per ton.

Burbank's Birthday.—Crushed 96 tons, 90 ozs.

Burbank's Main Lode (1904).—Crushed 740 tons, 528 ozs.; by cyanide, 690 tons, 103 ozs; total, 631 ozs.

Burma Ruby Mines.—139,000 loads washed, producing rubies value Rs.99,000; royalties, Rs.16,000.

Carrington's Lion.—Crushed 300 tons for £530.

Champion Reef.—16,404 tons, 10,283 ozs.; tailings (cyanide), 18,638 tons, 2,071 ozs.; total, 12,354 ozs.

Chillagoe.—Treated 2,202 tons copper ore, producing 500 tons copper matte containing 208 tons copper and 31,535 ozs. silver.

Chinese Engineering.—Output of coal 18,500 tons; sales, 20,000 tons; consumption, 1,175 tons.

City and Suburban.—Crushed 25 000 tons, 9,864 ozs.

Consolidated Langlaagte.—18,134 tons, 6 029 ozs

Consolidated Main Reef.—Crushed 18,056 tons, 4,026 ozs.; sands and concentrates by cyanide 18,056 tons, 2,371 ozs.; total, 6,397 ozs.

Coromandel.—850 tons, 325 ozs.

Crown Deep.—Crushed 27,277 tons, 7,592 ozs.; sands by cyanide 16,800 tons, 2,346 ozs.; slimes, 8,706 tons, 746 ozs.; total, 10,684 ozs.

Crown Reef.—Crushed 21,143 tons; from mill, 6,503 ozs.; from sands and concentrates, 2,857 ozs.; from slimes (current and accumulated), 1,236 ozs.; total, 10,596 ozs.

Dolores.—Tonnage, 1,150; value, $48,500.

Duff Development.—Recovered 65 ozs.

Durban Navigation Collieries.—Output, 15,500 tons; sales, 12,000 tons.

Durban Roodepoort Deep.—Crushed 10,665 tons, 2,923 ozs.; sands, by cyanide, 6,516 tons 660 ozs.; slimes, 3,534 tons 228 ozs.; total, 3,811 ozs.

Eaglehawk.—Crushed 840 tons, 312 ozs.; 136 ozs. from cyanide.

Ferreira.—Crushed 21,200 tons, 9,271 ozs.; sands, 14,000 tons, 2,854 ozs.; slimes, 6,913 tons, 807 ozs.; total, 12,932 ozs.

Ferreira Deep.—Crushed 21,129 tons, 9,333 ozs.; sands by cyanide, 14,000 tons, 2,450 ozs.; slimes, 6,756 tons, 624 ozs.; total, 12,413 ozs.

French Rand.—Crushed 18,000 tons, 4,125 ozs.; tailings and slimes, 18,545 tons, 2,312 ozs.; total, 6,257 ozs.

Gaika.—Crushed 1,272 tons, 673 ozs.

Geldenhuis Deep.—Crushed 28,025 tons, 6,513 ozs.; sands and concentrates by cyanide, 18,385 tons, 2,547 ozs.; slimes, 9,195 tons, 619 ozs.; total, 9,679 ozs.

Geldenhuis Estate.—Crushed 17,205 tons; from mill, 4,499 ozs.; from tailings by cyanide, 2,082 ozs.; from slimes, 642 ozs.; total, 7,223 ozs.

Giant of Rhodesia.—Treated, 4,573 tons, 2,440 ozs.; slimes plant 4,573 tons, 107 ozs.—total 2,547 ozs.

Ginsburg.—7,522 tons, 2,302 ozs.

Glencairn Main Reef.—14,600 tons, 4,265 ozs.

Glynn's Lydenburg.—Crushed 2,370 tons, 636 ozs.; cyanide 1,650 tons, 566 ozs.; slimes 720 tons, 317 ozs.; total, 1,519 ozs.

Glen Deep.—Crushed 18,780 tons, 4,646 ozs.; sands by cyanide 11,940 tons, 1,990 ozs.; slimes 6,610 tons, 456 ozs.; total, 7,092 ozs.

Golden Pole.—Crushed 1,505 tons 772 ozs.; sands 1,228 tons, 310 ozs.; concentrates 6 tons, 15 ozs.; slimes 570 tons, 77 ozs.; total, 1,174 ozs.

Great Boulder Proprietary.—Sulphide mill 12,676 tons, 12,307 ozs.; tailings (old) 1,963 tons, 352 ozs.; total, 12,659 ozs.

Great Fingall.—Ore 21,101 tons, 5,958 ozs.; tailings by cyanide 22,380 tons, 3,107 ozs.; concentrates 327 tons, 1,541 ozs.; total, 10,606 ozs.

Hutti (Nizam's).—Crushed 875 ozs. from 2,200 tons, tailings 278 ozs. from 2,000 tons.

Ivanhoe.—Crushed 17,450 tons, 2,052 ozs.; sands 7,790 tons, 1,782 ozs.; slimes 7,820 tons, 3,709 ozs.; concentrates 1,840 tons, 2,798 ozs.—10,341 ozs.

Jumpers.—Crushed 11,600 tons, from mill 3,632 ozs.; from tailings by cyanide 1,418 ozs.; total 5,050 ozs.

Jumpers Deep.—Crushed 18,972 tons, 4,924 ozs.; sands by cyanide 10,395 tons, 1,149 ozs.; slimes 7,362 tons, 437 ozs.; total 6,510 ozs.

Kamfersdam.—Diamonds recovered 1,013 carats; 22,269 loads blue ground deposited on floors.

Kelantan.—Recovered 32 ozs.

Killarney Hibernia Gold.—Crushed 4,274 tons, 1,452 ozs

Koffyfontein.—2,450 carats diamonds recovered.

Lancaster Gold.—Crushed 15,530 tons, 3,076 ozs.; cyanide 10,876 tons, 1,545 ozs.; total 4,621 ozs.

Lancaster West.—Crushed 6,630 tons, 1,428 ozs.; cyanide 5,857 tons, 688 ozs.; total, 2,116 ozs.

Langlaagte Deep.—Crushed 22,320 tons, 5,660 ozs.; sands by cyanide 15,004 tons, 1,660 ozs.; slimes 7,262 tons, 353 ozs.; total, 7,673 ozs.

Le Roi No. 2.—Shipped 2,100 tons, net receipts $48,181, being payment for 1,905 tons shipped, and $1,700, being payment for 81 tons concentrates shipped.

May.—Crushed 14,250 tons, 3,565 ozs.; cyanide 9,740 tons, 1,922 ozs.; slimes 3,912 tons, 352 ozs.; total, 5,839 ozs.

Meyer and Charlton.—Crushed 12,430 tons, 2,261 ozs.; from cyanide 3,351 ozs.; all sources 5,612 ozs.

Morven (Rhodesia).—Crushed 1,783 tons, 590 ozs.; by cyanide 1,452 tons, 144 ozs.

Mount Boppy.—6,200 tons, 1,062 ozs.; cyanide 3,534 tons, 1,248 ozs.; slimes 1,890 tons, 799 ozs.; concentrates 27 tons, 151 ozs.; total, 3,260 ozs.

Mount Morgan (Queensland).—Chlorinated 20,209 tons, 8,088 ozs. Converters produced 333 tons blister copper.

Mount Zeehan.—Output 400 tons silver-lead ore, containing 240 tons lead and 28,000 ozs. silver.

Mysore.—16,100 tons, 15,401 ozs.; tailings cyanide 13,000 tons, 1,864 ozs.; total, 17,265 ozs.

Mysore West—Mysore-Wynaad.—Crushed 1,870 tons, 402 ozs.; cyanide 2,496 tons, 139 ozs.

New Goch.—Crushed 22,075 tons, 2,720 ozs.; 4,665 ozs. from cyanide; 7,385 ozs all sources.

New Modderfontein.—Crushed 16,200 tons, 4,328 ozs.; tailings 8,696 tons, 1,185 ozs.; total, 5,513 ozs.

New Primrose.—17,863 tons, 7,354 ozs.

New Reitfontein Estates.—12,955 tons, 6,965 ozs.

New Queen.—Crushed 187 tons, 144 ozs.; £523 obtained from 948 tons by cyanide; concentrates, £99.

New Ravenswood.—Crushed 1,060 tons, value £3,849; concentrates 155 tons, value £1,490; tailings plant, 100 tons concentrates produced, value £1,020.

New Rhodesia.—Ophir: Crushed 1,500 tons, 554 ozs., equivalent to an extraction of 7.38 dwts. per ton.

New Unified Main reef.—8,812 tons, 2,623 ozs.

New Zealand Crown.—Crushed 2,065 tons, value £3,381.

Nigel Gold.—Crushed 7,920 tons, 3,834 ozs.

North Broken Hill.—41,800 tons of crude ore treated, producing 337 tons concentrates, containing 239 tons 12 cwts. lead and 4,785 ozs. silver.

North White Feather.—Mill crushed 1,720 tons, 928 ozs.; cyanide 1,242 tons, 107 ozs.; total, 1,035 ozs.

Northern Blocks.—1,000 tons, yield £825.

Nourse Mines.—Crushed 29,120 tons, 7,471 ozs.; sands and concentrates by cyanide 18,286 tons, 3,442 ozs.; slimes 10,090 tons, 901 ozs.; total, 11,814 ozs.

Nundydroog —6,900 tons, 5,352 ozs.; 7,020 tons tailings (cyanide), 689 ozs.; total, 6,041 ozs.

Ooregum.—10,150 tons, 4,614 ozs.; 9,689 tons tailings (cyanide), 1,010 ozs.; total, 5,624 ozs. of gold.

Oroya Brownhill.—Crushed 10 810 tons, 12,505 ozs.

Peña.—Output, 14,675 tons; shipments of ore, 12,964 tons.

Penhalonga —Crushed 5,400 tons, 742 ozs.; concentrates, 105 tons, 451 ozs.; total, 1,193 ozs.

Princess.—Crushed 7,375 tons, 2,398 ozs.; cyanide, 4,809 tons, 927 ozs.; total, 3 325 ozs.

Queensland Copper.—Ore treated, 1,337 tons; production, 268 tons matte, containing 157 tons fine copper; shipment, 319 tons matte.

Rezende.—Crushed 3,100 tons; sands, 1,875 tons; 20 tons concentrates, 1,037 ozs.

Roberts Victor Diamonds.—2,223 loads washed; producing 1,648 carats, equal to 74 carats per load.

Robinson Gold.—Crushed 29,646 tons; from mill, 14,446 ozs.; from tailings (by cyanide), 4,365 ozs.; from slimes, 1,752 ozs.; total, 20,563 ozs.

Rhodesian Consolidated.—Nelly.—Crushed 1,720 tons, 1,210 ozs.; cyanide, 1,070 tons, 317 ozs.; total, 1,527 ozs. Sabi.—Crushed 92 tons, 23 ozs.; cyanide, 250 tons, 89 ozs.; total, 1,639 ozs.

Robinson Central Deep.—Crushed 17,250 tons, 8,440 ozs.; sands and concentrates by cyanide 11,200 tons, 2,114 ozs.; slimes 5,834 tons, 594 ozs.; total, 11,148 ozs.

Roodeport Central Deep.—Crushed 7,791 tons, 2,229 ozs.; cyanide, 5,103 tons, 990 ozs.; total, 3,219 ozs.

Roodepoort United.—Crushed 10,510 tons, 3,169 ozs; from cyanide 1,473 ozs.; all sources 4,642 ozs.

Rose Deep.—Crushed 28,300 tons 6,794 ozs.; sands by cyanide 17,225 tons, 2,169 ozs.; slimes 10,059 tons, 617 ozs.; total, 9,580 ozs.

St. David's.—Crushed 1,710 tons, 82.16 ozs.

St. John Del Rey.—Gold produce £19,190; yield per ton ·52 of an oz. troy.

Selukwe.—Crushed 7,006 tons, 1,394 ozs. (equals 3·97 dwts. per ton); tailings assay 2·12 dwts. per ton; cyanide 4,698 tons, 477 ozs.; total, 1,871 ozs.

Sheba.—Output, 4,432 ozs.

Sons of Gwalia.—Ore crushed, 11,221 tons, 2,842 ozs.; tailings by cyanide, 6,660 tons, 949 ozs.; concentrates, 255 tons, 585 ozs.; total, 4,376 ozs.

South Kalgurli.—Crushed 8,525 tons, 3,316 ozs.

Sulphide.—1,786 tons middlings and 7,679 tons tailings treated, producing respectively 638 and 2,807 tons zinc concentrates, 542 tons leady concentrates, 549 tons residues, and 4,231 tons purchased ores smelted, yielding 1,327 tons lead, containing 113,795 ozs. silver and 8,227 ozs. gold; also treated 380 tons zinc concentrates, producing 108 tons spelter.

Talisman.—Tons of ore, 4,010; value, £11,941.

Tanganyika Concessions.—Ruwe: Output by sluice boxes, 858 ozs.

Tasmania Gold.—Crushed 812 tons, 313 ozs.; 461 tons concentrates, 497 ozs.; cyanide, 2,831 tons, 254 ozs.; total, 1,064 ozs.

Tasmanian Smelting.—Silver-lead bullion shipped contained 810 tons lead, 125,000 ozs. silver, 275 ozs. gold.

Tolima.—46 tons, value £2,600.

Tomboy.—Crushed 7,500 tons, value $49,000; concentrates shipped 350 tons, $30,000.

Transvaal and Delagoa Bay.—Output 33,000 tons.

Treasury.—Crushed 8,789 tons, 1,693 ozs.; tons of sands and concentrates by cyanide 8,789, 1,053 ozs.; total, 2,746 ozs.

Tyee Copper.—Smelted—Tyee ore 1,792 tons, customs ore 395 tons; total, 2,187 tons; Matte produced 220 tons.

Um Rus.—Crushed 529 tons, 248 ozs.; 423 tons tailings stored of an average assay value of 3 dwts. per ton.

Van Ryn.—Crushed 23,330 tons, 7,369 ozs.; cyanide 23,073 tons; tailings 3,044 ozs.

Village Main Reef.—Crushed 36,200 tons, 10,146 ozs.; cyanide, sands and concentrates, 23,829 tons, 3,531 ozs.; slimes, 11,866 tons, 665 ozs.; total, 14,342 ozs.

Vivien.—3,002 tons, 594 ozs.; tailings, 2,000 tons, 207 ozs.

Vogelstruis Estates.—Quartz milled, 6,400 tons, 1,893 ozs.; tailings, 4,700 tons, 483 ozs.; total, 2,376 ozs.

Wanderer (Selukwe).—Treated by cyanide, 16,147 tons, 2,394 ozs.

Willoughby's Consolidated.—Crushed 1,433 tons, 717 ozs.

Windsor.—Crushed 5,103 tons, 695 ozs.; cyanide, 3,918 tons, 644 ozs.; total, 1,339 ozs.

Witwatersrand Deep.—Crushed 28,540 tons, 7,667 ozs.; sands and concentrates by cyanide, 28,738 tons, 3,567 ozs.; total, 11,234 ozs.

Witwatersrand Gold.—31,340 tons, 10,090 ozs.

Wolhuter.—Crushed 18,350 mill tons; sands and slimes, 18,350 tons; from mill, 3,626 ozs.; from sands, 2,775 ozs.; total, 6,401 ozs.

Worcester Exploration.—1,162 ozs.

Zeehan Montana —Output 320 tons silver-lead ore, containing 210 tons of lead and 24,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Clonakilty Extension.—Half-year to June 30 at the rate of 1 per cent. per annum, carrying forward £117.

Furness.—For half-year ended June 30, at the rate of 2¼ per cent. per annum on the ordinary stock, carrying forward £5,354.

iii.

FIXTURES AND REPAIRS.

By W. de B. Herbert.

A GLOSSARY OF COLLOQUIAL, SLANG, AND TECHNICAL TERMS, in use on the Stock Exchange and in the Money Market. Edited by A. J. Wilson. Price 3s.

"A good deal of useful information is here presented in a very handy form."—*Times.*

"The work is a most useful one, and admirable in many respects."—*Pall Mall Gazette.*

"The book fills a gap among works of reference."—*Morning Post.*

"A book that will be found useful in the offices of a large class of business houses."—*Scotsman.*

"The explanations will be found helpful to all who wish to have a clear understanding of the language of the money and stock markets."—*Dundee Advertiser.*"

The Investors' Review.

Vol. XVII. (January to June, 1906.) Price 16/6 (by Post 9*d.* extra).

Cases for Binding 1/6 (Postage 4*d.* extra).

Prices of the Back Numbers of the Review *from its commencement in 1892 may be had by applying to the Publisher.*

BY A. J. WILSON.

Practical Hints to Investors.

Price in cloth, 1s. 6d. net (post free, 1s. 8d.); paper cover, 1s. net. (post free, 1s. 2d.).

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 450. SATURDAY, AUGUST 18, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **2s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired. The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Money Market Prospects.

We have never been able to see cheap money beyond the end of the present month. How dear it may get later in the year it would be unwise to attempt to forecast, but the warning our Money market has received this week from New York should teach us to avoid any sanguine anticipations of quiet and easy markets during the coming autumn and winter. Little more than a week back it seemed as if New York would avoid disturbing our market for another week or two, but the position disclosed by the Associated Banks statement on Saturday last, and the rapid fall in the exchange, prepared us for the stroke delivered on Monday by which the raw gold bullion then for sale was snatched away from us. So urgent had the demand for the metal become in the States that New York had to buy all the available supply here at any price.* It paid 77s. 10¼d. per oz. for about £575,000 worth, an advance of 1d. on the price of the week before. And this is only the beginning, if the New York credit system is to avoid a dangerous panic later in the year. By financing the splendid harvest in advance, it may be possible for Wall Street to get all the gold required to prevent a collapse in the native rickety credit structure, but the supply from the mines will not be enough, even with South African gold thrown in. We cannot reckon on much more than £2,000,000 a month from South Africa, and, according to the New York correspondent of the *Observer*, the Western banks have power to withdraw £20,000,000 from New York to enable them to finance the ingathering of the grain and cotton harvests. At the same time, money is being required in various other directions, not least at Panama by the United States Government, and the capital requirements of the railways and of industrial undertakings without number throughout the country press severely upon the whole credit distilling apparatus. We may thus count upon a steady, or at the very least violently spasmodic, demand for gold on American account in our market, and the Bank of England has none to spare.

Credit jobbers in the City are counting upon help from the Argentine. They tell us that £500,000 in gold is certain to come here from Buenos Ayres, and possibly that small parcel may be followed by other considerable amounts. We may also get some further help from the Simla Government, which last week released another £250,000 of its stock of the metal held here, but all such helps and anything that Australia may be ably to supply, whether direct to the States or London, might very well prove to be insufficient for the autumn requirements in the States and here, because we ourselves are conducting the largest foreign trade the country has ever had to handle. Even if its position does not later on involve miscellaneous export demands upon our gold, its magnitude imposes additional burdens upon our banks and merchant capitalists. And our own harvest has also to be financed, besides which the demands of holiday-makers upon the currency are probably greater this summer than in any previous season. With all this the

*We assume it is New York, but there is uncertainty on the point, some saying the metal is for Russia, part of the proceeds of the English portion of the loan recently issued, others that it is for Berlin—which might mean the same thing—and others still that the metal was bought "on spec'" and may reach the Bank after all, a most improbable supposition.

Bank of England is not strong in gold. It has gathered up a certain amount of bullion in the last few months, but the total is still insufficient to meet foreign and domestic requirements.

It is, in fact, less than the total of a year ago, and in ordinary course will tend to diminish from now onward. Already the "other" deposits in the Bank return are, to say the very best of them, only about £2,000,000 above the point at which the market is always driven to lean upon the Bank for assistance. In no direction, therefore, can we see a prospect of money remaining cheap. Day-to-day loans may continue to be obtained at between 2 and 3 per cent. for a little while longer, but the very ease of this floating money should warn us against the expectation that discount rates or rates on loans for fixed periods can long remain at their present figures. The question, indeed, is not now when will the Bank rate come down, but how soon may it go up? It went from 3 per cent. to 4 on September 28 last year with the banking reserve at about £24,000,000, and the coin and bullion at £34,628,000, so there is not much margin now between us and a rise.

Nor in looking at the position of the market must we forget the probable influence of the Russian revolution upon the French and German markets, but especially the French market. Many people have lately been flattering themselves with the hope that the worst of the Russian turmoil was for the present over. Autocracy has seemed to be triumphing, the Duma has been wiped out, and the policy of repression is again in full swing. Strikes, attempted in order to demonstrate against the abolition of the incipient constitutional authority, have proved abortive, and the official story is that barring a few agrarian disturbances here and there, some turmoil in one or two cities, and the trouble in the Caucasus or in Poland, everything is in a fair way to return to the *status quo ante*. We do not believe in this calm at all, and look for a troubled autumn and winter in Russia, such a state of confusion, executive and territorial, as may result in the destruction of the power of the Czar's Government to finance its obligations abroad. Whether Russia actually stops payment or not within the next six months is more than we dare attempt to forecast, but that there will be frequent spasms of fear that default is imminent appears to us beyond question, and fear of an event which may not happen is quite capable of doing irreparable mischief to the frail and rather slimly-constructed credit fabric of Continental markets. Neither France nor Germany, neither Paris nor Berlin are in a position to endure a succession of shocks tending to disturb the public faith in the stability of their credit institutions, and one effect of any outbreak of terror as to what may be the consequences to French and German banks of the Russian revolution is certain to create a demand for gold which can only be satisfied in the London money market.

Again, we have, therefore, to insist that valuable as the supply from the mines is it is not sufficient to sustain the ever distended credit of the world against blows to which it may be subjected. But for the African gold, the gold from the American and Mexican mines, the gold of Australasia and India, we quite think that there would have been a world-sweeping financial panic long before now. But because the gold has hitherto averted this supreme catastrophe, it does not follow that it will continue to do so, if for no other reason than that the creators of credit have presumed upon the stability that metal gives to extend their commitments wholly beyond reason in all directions. And we must never forget that much of the credit created during the past six years is represented by no prolific assets whatever, often by none of any kind. We have added heavily to our own public debt to pay for a war that has brought us only sorrow and affliction, continuous loss. Russia and Japan have sunk hundreds of millions in a war which also leaves consequences of the most distressing kind, consequences that threaten the complete destruction of the Russian autocracy; and the United States is not without its tale of war losses, so that in considering all these alone we should have expected the money markets of the world to act with caution, to avoid multiplying public obligations, mortgages upon industry in one form or another—to act prudently, in a word. Instead of this we have had the most complete indifference shown to the losses induced by wars. Enterprises have been initiated, not only in the United States, but here and on the Continent, demanding enormous supplies of banking credit, just as if we had every penny of our resources available, as if all the money lost in war were revenue yielding as an investment. All therefore that the gold from the mines has done has been to postpone the day of reckoning, and the longer it is in coming we may be quite sure the worse will the account be that we shall have to settle. It is for reasons like these that we dread the future and deprecate always any heedless plunging into speculation of any description. Until we have mastered our losses and assimilated the countless millions of securities which have been created regardless of these losses, we can have no certainty for a week on end that the money markets of the world will enjoy peace, the calm of affairs in order and well in hand. Much of the credit now kept alive and efficient as wealth absorbing investments on the world's money market is really dead credit, credit represented by no assets of equivalent value; much of it is merely a floating debit carried until pay-day comes along to put all market wealth or rumours of wealth to the proof.

The District Railway.

The energy and pluck displayed in attempting to rescue this undertaking from the fate which awaited it under the old conditions are not meeting with the success deserved. A steadily declining property for a great number of years, as the statistics covering more than 30 years furnished in the report clearly show, the company must have gone into bankruptcy already had not certain American capitalists been impressed with the potentialities of the line if the motive power could be successfully changed from steam to electricity. The stupendous nature of such a task cannot be realised by the untutored and untechnical mind, and many unjust criticisms were levelled at the company and its engineers because of the slight inconvenience sometimes caused to the travelling public while the conversion was being carried out. All the difficulties were expected to be overcome and smoothed away without causing a moment's delay to a single passenger, and when one or two small accidents occurred through the adoption of an axle not quite strong enough for the weight of the motor-cars the foolish and unthinking talked a lot of nonsense about the electrified District being a failure. We are quite ready to admit that if English engineers and English firms had carried out the whole of the work it would probably have been better done, but since America found most of the money she no doubt considered herself entitled to reap the benefit. Moreover, time pressed, and we think we are right in saying that the majority of the cars were built in France. To some extent, however, these are minor matters. What the undertaking is really suffering from is the crushing weight of capital under which it has always had to labour. A dividend on the ordinary stock has never been even approached, and although the system serves some of the best traffic-producing localities in London, the movement of people on the route never has been and never can be large enough to produce a revenue in decent proportion to the cost of the line. Now to the original capital has been added the expense of electrification, so that at the present time the sum expended is little less than £12,000,000. The uphill battle has been rendered the more severe by the fact that while the great change from steam to electricity has been going forward competition of an acute kind has sprung up in various directions. Although the Central London line is not directly on the company's route, it doubtless drew away an important amount of traffic, and while that enterprise has now done its worst—business on the line having about reached its zenith—a new menace has to be faced in the advent of the motor 'bus. These vehicles are not perfect yet, but they are improving every day, and must exercise

a certain influence in the future. Since the year 1900, when the line came under its existing control, many reductions have been made in fares, but experience has shown that these concessions were too great and too numerous. No doubt with reluctance, the directors have come to the conclusion that the company cannot reasonably be expected to work the railway with so full and frequent a service of trains as is now provided on the basis of existing fares, and that a revision is necessary. Steps are therefore being taken to bring a revised scale of fares into operation at an early date.

Certain it is that the business cannot proceed on present lines, because although in its undeveloped state the system earned a gross traffic increase for the past half-year of £14,453 at a total of £221,055, the working expenses increased by £52,032 to £166,912, meaning a ratio between expenditure and income of 75·52 per cent. against 55.60 per cent., an increase of 19.92 per cent., indicative of a very disturbing state of affairs. We say undeveloped, because the electrification of the District is only part of a stupendous scheme, embracing not only that company, but the Baker Street and Waterloo Railway, the Charing Cross, Euston and Hampstead, the Great Northern, Brompton and Piccadilly, and the London United Tramways. Each of these enterprises is expected to act as a feeder and creator of traffic to the others, and until all are finished and working it is impossible to predict what the future may have in store. For the moment the prospect seems dark, that much cannot be denied, but for the sake of the enterprising people who have put down the money, and for the travelling public—because we cannot expect further facilities to be provided if those already given turn out badly—we hope that ultimately all hopes will be fully realised. As might have been expected, the whole of the former second-class traffic has been transferred to the third-class. In the June half-year the number of second-class passengers was only 83,586, being those carried in the North-Western Company's trains, producing a revenue of £685, whereas in the corresponding period the income was £21,596 and the number handled 3,195,937. Unfortunately very few second-class passengers have become first, the increase being only 20,627, and, thanks to the reduction in fares, the receipts shrank from £27,074 to £25,680. Now we come to the third-class, and cannot help regretting that so vast a traffic should produce such poor financial results. Over 29,000,000 passengers were carried in the six months, an increase of considerably more than 8,000,000, and the revenue therefrom rose by £50,151 to £166,720. Under all heads, and including the estimated number of journeys taken by season ticket holders, the passengers reached 32,759,662 in number against 27,669,075, and the revenue £204,028 compared with £187,048, the season ticket income being down by £1,227 to £10,942. In these totals are included 8,663,154 workmen's fares, being an increase of 1,579,104 or 22.29 per cent., but the District Company's share of the receipts, after deducting other companies' proportions in respect of through traffic, has been only 0.65d. per passenger, and a substantial loss is incurred, the directors tell us, in the carriage of this traffic. Parcels, &c., fell off by £809, and sundry receipts dropped £1,438, but goods and minerals and transfer fees gave a little more.

Turn now to the expenditure side for the real explanation of the distressingly poor result. First it must be remarked that the train miles on the District Railway rose by 383,902 to 1,199,569, or an advance of 47.07 per cent., while the total mileage, including joint and foreign lines worked over, was up by 473,125 to 1,617,852. Whether the reason be neglect in the past or greater wear and tear under the new conditions we do not know, but the company considerably more than doubled the outlay on maintenance of way and works, the figures for the two half-years being £11,127 and £24,135 respectively. For the six months ended June, 1905, locomotive power cost £46,101, while the working of the electric trains for the period under review reached very nearly double this sum at £91,455. This is a most disturbing prospect in view of the economies which were expected when the conversion was complete, and when we note an increase of £18,079 at £23,644 in car repairs the position excites a feeling of alarm. The sum of £5,565 spent in the corresponding period may not have been a normal one, because no particular effort was made to keep up the old rolling stock, in view of the change to electric traction, but there can be no doubt that the expenditure now incurred is altogether abnormal. If £23,644 has to be spent on the upkeep of the cars and motors before they have been six months in use, what must we think of the prospect when the coaches become really old. The wear and tear must be something fearful, more so, we should think, than on the Metropolitan, where the cars seem to start, run, and stop with immeasurably greater ease and smoothness. Traffic expenses fortunately showed a decrease of £9,697 at £22,957, the only item showing an important saving, and there was a trifling decline under general charges. Law and Parliamentary expenses were also down, but compensation showed the important increase of £1,610. Rates and taxes were nearly £1,000 larger, but joint lines and station expenses were as much lower, and the company received £33,167, or £14,319 more, for services rendered to other railways. The result is a total expenditure of £166,912, being an advance of £52,032, so that the balance of nett revenue is only £54,143 against £91,722. Sundry other items raise the total to £78,821, a drop of £39,134, and as the fixed charges reached no less than £118,805, an advance of £5,902, the deficiency on this account alone is £39,984.

But no matter what the position, the guaranteed stock is entitled to a dividend from the revenues of the City lines and extensions, and receives ¾ per cent. for the half-year, requiring a further sum of £9,375. This in a way is direct loss, because while the revenue derived from these City lines was only £9,375, the nett sum payable to the joint committee was £10,815. All told, then, the deficiency for the half-year on actual outgo was £49,359, which is charged to capital account under the company's statutory powers. Dividend shortage on the 4 per cent. guaranteed stock is now £171,602, another item which will have to be capitalised, and Sir George Gibb, the new chairman, and managing director of the Underground Electric Railways, is faced with one of the most stupendous tasks ever encountered by a railway expert. He has our heartiest good wishes in his enormous labour, and no despairing note is struck at present, because the directors think they have every reason to believe that when some economies in working now under consideration have been effected and the proposed revision of fares has been brought into operation the nett revenue will show a substantial increase. We must remember that the Baker Street and Waterloo Railway was opened for traffic on March 10, and the interchange facilities between that railway and the District at Charing Cross have created a very convenient route for passengers between District stations and all stations on the Baker Street Railway between Elephant and Castle and Baker Street, as well as stations on the St. John's Wood extension of the Metropolitan Railway beyond Baker Street and on the City and South London beyond the Elephant. Arrangements have been made to issue tickets at through fares between stations on the District and the Baker Street line, which will shortly be put in operation. Capital expenditure continues important, and last half-year the company laid out £151,915 nett, including £47,626 for preparation and equipment of line for electric traction, £26,613 capital deficiency for the six months to December 31, 1905, and £47,428 for electric rolling stock. The actual sum spent on the rolling stock was £49,062, but £1,814 was received from old stock sold. In the current half-year the outlay is estimated at £80,000, and as there is already a debit of £100,457 besides the revenue de-

ficiency, involving temporary loans of £165,000, the company seeks authorisation for a further issue of £900,000 second preference stock, with the usual one-third borrowing powers.

The Situation in San Francisco.

(From a Californian Correspondent.)

Now that the excitement of the earthquake and subsequent fire has somewhat abated, the exuberance which marked the first few days or weeks has to some extent subsided, and we are beginning to find out that the loss of some £100,000,000 is no small matter. San Francisco is not yet rebuilt, and, with the exception of a few temporary wooden shanties to house the principal shops, &c., no serious building has been done. The payment of insurance losses is progressing very slowly for several reasons. The first of these affects all companies, good and bad alike, and is that the complication of earthquake and fire losses makes the adjustment much more difficult than it would otherwise be. To read the daily papers one would almost suppose that there had been no earthquake at all, at least no damage done by it, while one has only to travel through the unburnt districts, where brick buildings are the exception (wooden buildings scarcely suffered at all) to know how serious the damage must have been in the business part of the town, where these conditions were reversed. This lays the companies open to many fraudulent claims, and many such are being made, and hence there is much greater delay in settlement than there would otherwise have been. There are, however, many companies which are by no means good. There are local companies which, having all their eggs in one basket, may be unable to pay; but there are others which have been doing an enormous business on practically no capital, dividing up their profits each year to the last farthing, and then, when a great conflagration like this one comes, they collapse. There are others, again, which may not be able to pay in full, and others which, finding the loss heavier than they like, are trying to compromise for 60 and 70 per cent. of the amount called for by their policies. Such companies are using the most preposterous arguments to support their actions. They say, for instance, that, when these policies were written, no one could have contemplated that there would be an earthquake which would destroy the water mains of the city, so that there was no possibility of fighting the fire, and, consequently, that they are not liable at all, or, at least, not for the full amount of the policies. Such companies are, for the time, doing a very profitable business, for the necessities of some of the insured compel them to accept the compromise offered, while others do the same thing from the dread of a long litigation, and the doubt whether the companies would be able to pay in full, even if they won their suits against them.

There is, however, still another class of companies, and many of them most respectable, which had an earthquake clause exempting them from liability, should the fire be caused either directly or indirectly by earthquake, explosion, &c. The general opinion in San Francisco seems to be that such a clause will not hold good, except in cases where buildings were set on fire by having had their chimneys broken, or by live electric wires having been brought in contact with them by the shock, &c., and would not affect losses on buildings to which the fire, started elsewhere, had afterwards spread. People are too apt to believe what they hope, and to the writer it seems more than doubtful whether the Courts can accept this view of the question, and must not in the end allow the exemption. As a matter of fact, the one case in point is a decision in which a cotton mill was set on fire by an explosion in an adjoining mill, and the Court held that the insurance company was not liable. What is most remarkable, however, is that, while torrents of abuse are being poured on the insurance companies, it does not seem to have struck anyone that the policyholders were responsible for their own misfortunes. No one was obliged to take out a policy in a wild-cat company, when he could get a policy at the same rate from many first-rate companies which have over and over again, and nowhere more than in this country, proved that they are both honest and solvent. No sane man should have taken a policy with an earthquake clause, especially in a country where earthquakes were very frequent and often sufficiently severe to warn us of the damage which one somewhat more severe might do, when he could get a policy from an equally good, or an even better, company at the same rate. No country in the world suffers such loss from fire as does the United States. No country has ever suffered such losses from fraudulent insurance companies, local insurance companies, and companies doing too large a business on too small a capital. After the Chicago fire the large English companies made up their enormous losses in a few months by the increased business from this country, which, for the time, had learnt to be more prudent in placing its risks. Now the same lesson has been taught by the San Francisco fire, but how long are we likely to remember it? The companies which have defaulted will start again under some other name, and again one will be told that no one ever reads an insurance policy, and that often one does not know the name of the company in which one insures. There must be some reason for this, and in my opinion it is not far to seek. We have in California, and, I believe, in every other State, an Insurance Commissioner. What the scope of this gentleman's duties is I do not profess to know, but since the fire the California Commissioner has been very much in evidence, and was practically unheard of before. He has been exposing some companies and threatening others with many pains and penalties if they do not pay up, and he has explained that the earthquake clause is not worth the paper on which it is written. Possibly he has done all that is required, possibly even all that he could have done. I have nothing against the gentleman; it is with the office I find fault. It is only one more instance of how incapable any Government is of doing any single thing well. It is before and not after a fire that the companies doing business in a State on an insufficent capital should be exposed, and in a country celebrated for the frequency of its earthquakes, it was, or ought to have been, the duty of the Commissioner to point out that some companies had introduced the earthquake clause. Then the interference of the Government might have done some good; as it is, it does much harm, for the idea that they are being protected lulls people into a sense of false security from which they too often have a rough awakening. When Government does not interfere people know that they have to take care of themselves, and this they can do far more effectually than any Government can do it for them.

(To be continued.)

Economic and Financial Notes and Correspondence.

The Customs Report.

It is small wonder perhaps that those people who are continually agitating for increased expenditure upon an army declared by the principal experts to be totally inefficient, and a navy whose "first-class" ships of the day before yesterday are ready for the scrap heap the day after to-morrow should be advocates of a return to the system of protection, a system whereby citizens can be deprived of their money without quite knowing how or where it goes. Certainly the latest report of the Commissioners of His Majesty's Customs points to a decline in some of the indirect sources of revenue which is well calculated to fill the minds of our Blue Funkists and other advocates of warlike extravagance with something like dismay. The population is drinking less, and therefore the drink revenue falls off. There was not much decline in the gross Customs income last year, and what did arise came principally

from the reduction in the tea duty, but it is none the less true that there has lately been from the spend-thrift's point of view an unpleasant decline in the consumption of foreign wines and spirits by the population of this country. The total quantity of wine retained for home consumption in the past year was only 11,784,193 gallons as against 15,399,407 gallons as recently as 1902-3, the years ending always on March 31. Consequently instead of a revenue of £1,524,000, such as came in in that earlier year, the State received last year only £1,176,000 from this source. There has also been a considerable decline in the revenue from imported foreign spirits, and it has been an almost continuous decline. For the past few years at any rate except in 1902-3 the decline has been continuous, and in that year it went up less than ½ per cent. in the amount paid over to the Exchequer. The decline in the past year was 5.23 per cent. on the yield for 1904-5, and the total received only £1,135,000. If the excise returns gave the same indication of growing sobriety in the statistics of drink revenue from domestic distilling and brewing, then, indeed, the outlook might begin to seem black unless we could cut down the waste of the Budget. Knock £15,000,000 per annum as an ultimate goal off the expenditure on war furniture in times of peace, and we could contemplate the loss of large slices of the drink revenue with equanimity. It might even be possible then to bear this and still to dispense with the sugar duties, to further reduce the duty on tea and compel the Exchequer to depend much more than it does now upon direct taxation, which, however inequitable it may be in its incidence, is much more educative and valuable to the citizen than any form of indirect taxation.

The entire revenue from Customs last year was £34,485,000, exclusive of £170,000 paid over to local taxation accounts, and it is a very large sum of money, a sum of which no less than £13,000,000 came from tea and sugar and £13,381,000 from tobacco. The consumption of tobacco is rapidly increasing in this country, whether for good or evil we are not sure, but incline to think for evil. Only five years' figures are set forth in the text of the Commissioners' report, but that period is sufficient to indicate the tendency. As recently as the year ended March 31, 1902, the total quantity of leaf and stripped tobacco entered for home consumption was only 65,432,000 lbs. Last year ended on the same date it was 83,184,000 lbs. The nett revenue in the earlier year was only £9,795,000, and last year it was £12,713,000. Add in the foreign manufactured tobaccos or Cavendish manufactured in bond, the cigars and other forms of manufactured leaf brought into this country, and the total Customs receipts from the tobacco duties last year amounted to £13,381,000. This meant an aggregate weight of 85,589,000 lbs. of tobaccos of all kinds retained for consumption within the country, an increase of 194,000 lbs. on the previous year. No less than 1,738,000 lbs. of cigars were imported and retained for home consumption in the past year, but there was a slight decrease in the quantity of cigarettes imported. The main fact, however, is that the consumption of tobacco tends to increase, and has now attained a very serious magnitude. It is increasing faster than the consumption of tea, although that rose in the past year to nearly 259,000,000 lbs., a stimulus having been given by the reduction in the tea duty. We are in some respects sorry to see that the revenue from sugar continues handsome. It amounted last year to £6,178,000 nett, and the trade appears to flourish under the impost thanks to the cheapness of the raw material, so that we fear no very powerful or effective agitation for its abolition can be looked for. At the same time consumption has not gone up, was in fact less last year than in any of the five year figures which are before us. In 1901, for instance, taking the calendar year in this instance, the import of sugar retained for home consumption was 34,451,000 cwts., and last year it was 29,215,000 cwts. The exports of British refined sugar have also fallen off on the average of years, and amounted in the past year to only 647,394 cwts. against 1,029,000 cwts. in 1903. Cane sugar, strangely enough, does not seem to have benefited by the coddling of the late Government. In the same manner the export duty on coal does not seem to have very materially hurt that branch of British trade, but we know that German coal has been able to compete with British on Continental markets thanks to this duty in a manner that would have been impossible had it not been imposed. And in proportion as our export trade is hindered our shipping trade suffers.

Foreign Life Insurance in the United Kingdom.

A report has been issued by the Select Committee of the House of Lords appointed to inquire and report upon any steps which should be taken to protect British policy-holders in life insurance companies whose chief offices are outside the United Kingdom. It is in some respects an inadequate report. We are not quite in sympathy with the view of the actuaries and managers of British offices when they say that it would be a mistake to compel foreign companies doing business in this country to deposit funds here as a security for their British policy-holders. It may be reasonable from one point of view if by "deposit" investment in purely British securities is understood, but it is not reasonable to say that British policy-holders should not have some direct control over their own moneys, no matter to what company, English or foreign, these moneys are entrusted. After all, a life insurance office is primarily a trustee for its policy-holders, and we should not in this country care to make foreigners trustees of private property under the wills of British citizens or otherwise to endow them with the control of material portions of our savings. Our contention has all along been that to begin with no foreign life office ought to be allowed to do business in this country without first giving a substantial guarantee of its solidity and good faith. Such guarantee is not furnished by that deposit of £20,000 with the Board of Trade of which so much is made, and which under present arrangements can be withdrawn after a certain time. We should not allow a foreign office to begin business in this country under any pretence without as a preliminary depositing at least £100,000 with the British Government to be held permanently as some kind of safeguard against loss by British policy-holders. It is a mistake to say that these alien offices ought to be placed in all respects on the same footing as British offices. They have no right to be so, because they are dealing with trust moneys, and trust money ought not to go out of the control of those interested in its conservation and increase.

Further, it is our view that even if the whole of the money collected from British insurants by foreign life offices is not held in this country, invested in British securities, it ought to be entirely in the control of British trustees representing policy-holders here. Apparently the actuaries who gave evidence before this Committee were almost if not quite unanimous in deprecating any interference with freedom of trade in insurance business, but there can be no freedom of trade in a business involving an important public trust such as life insurance is, and we do not see that any benefit of a substantial kind has ever accrued to British policy-holders in foreign companies by the competition of these companies here. Much vexation, no small loss, and frequent spasms of anxiety have certainly attended the developments of that alien form of life insurance business within the United Kingdom. Therefore we should saddle these foreign companies with disabilities in the way of preventing them from taking the funds they gather here out of the control of those to whom they belong. The mere appointment of representatives of British policies on the boards of directors sitting in New York, Ottawa, Montreal, Sydney, Melbourne, or other places would be of very little value whatever; the money must be kept within reach of those to whom it belongs here, and if the foreign companies do not like this restriction then there is no neces-

sity for them to enter into competition with home offices perfectly capable of doing all the business of the country without assistance. This may seem rude, but we lean more and more to the view that life insurance is not transplantable. It should be native to the soil in every country, and we are not sure that the same should not be said of fire insurance.

Other recommendations of the Committee are reasonable enough, to the effect that foreign companies should be compelled to issue accounts here modelled in all respects on the same lines as those furnished by home companies; but there is no real, no trustworthy remedy for extravagance, waste, or robbery in that arrangement, and never could be any unless the forms under which British companies must shape their accounts are likewise materially altered and extended, and unless some faculty to punish delinquents is bestowed upon the Board of Trade. At present that Government department is perfectly helpless against insurance roguery, whether of domestic or foreign production. It cannot even remonstrate with any beneficial effect when the accounts furnished to it are obviously imperfect and perhaps fraudulent. We are against the extension of bureaucratic control over the ordinary channels of business, but life insurance is not an ordinary thing, and it would be of great value to those who are doing clean business of this kind throughout the kingdom if the Board of Trade had power to intervene and stop fraud, if its officials were able to notify that the scale of expenses is excessive, that the premiums do not justify the benefits promised, and that the character of the investments is not such as to inspire confidence. "The Government would be taking responsibility and giving certificates of solvency," it is asserted when any statement of this kind is put forward; but we do not see how this could follow, and believe that good would result if the Board of Trade were in a position to criticise balance-sheets, to demand fuller accounts, to investigate the principles on which valuations have been conducted, and in other ways to intervene for the protection of those great masses of citizens who constantly strive to make some provision against the catastrophes of life and who are so often victimised by the pushing, seldom scrupulous, alien or other venturesome insurance agent.

The Banket "Rig."

Last week we asked the question: "Why on earth should Rhodesian shares go up?" The answer is: "To tempt fools to buy." For instance, look at the Banket rig and its ludicrous sequels. The old, old tactics are repeated. During the many months in which the Kaffir Circus and the Rhodesian markets were plunged in the depths we never so much as heard a whisper about "Bankets," and certainly not a word about the progress of work—assuming that work of some kind was being done—at the property. Mr. Abe Bailey and his pals were exasperatingly taciturn, a silence strikingly in contrast with their loquacity when off-loading shares by the thousands on the gulled and stupid tip-swallowers. We believe even that that irrepressible chatterer in the *Sunday Times* has been silent, but now he also is chirruping away as cheerfully as any other interested party. We know he has been, and perhaps still is, a large holder of "Bankets," and that being so, he might, at least, have the modesty to keep silent and let the value of these wares speak for themselves. Actions, says the proverb, speak louder than words, and the sensible man must be more profoundly impressed by unloading that he can be by the absence of news and results from Rhodesia. Why is it we hear the alleged values of these shares loudly vaunted by "Magpie" and others only when prices suddenly go up? How is it that simultaneously with a rig there are rumours and canards of promising progress? Has there been no progress to chronicle in the intervening months of market depression? These are questions which the intelligent must solve for themselves; their own common-sense must give the answer, the directors will not, nor will the bucket shops eager to create a boom out of which to assuage their own hunger. Just listen to the "Magpie" for a moment or two. He informs us that results are everywhere satisfactory and that extremely rich ore has been found in the third level. But this is nothing new. We were told the same yarn two years ago, and nothing has come of it yet except unloading by the promoters. "The Rand experts who visited the properties a few months ago agreed that the formation was undoubtedly a sedimentary conglomerate." They did, did they? Perhaps that is why Mr. Abe Bailey and others have been so ready to lay a conglomerate sediment of paper in the hands of the public and take cash for it, and why a similar kind of rubbish has been deposited in Scotch and minor banks to a scampish extent? We don't know, of course. We only remember how the revelations in the *Rhodesia Review* a few weeks ago caused these banks to throw the dangerous stuff overboard, lest the accumulating sediment should sink them. Some minds may have forgotten this inglorious episode, other, and the greater number, may still have a vivid recollection of it.

But if these experts came to this agreement months ago, how is it we only hear of it at this time of day? Why is it considered of such vital importance to impart the news at this particular moment? Not that we place the least value upon the "expert" opinion. Whether the formation be a sedimentary conglomerate or something purer it gives no satisfaction to the man who wants to know why a millionaire like Mr. Abe Bailey prefers cash to the shares he has manufactured and which he is presumed to be proud of. Nor is it the least guarantee that the gold therein will be rich and permanent and will yield dividends that will repay the purchaser of the shares at past and present inflated prices. All this is comical enough, but probably the most ludicrous development of the latest "bull" fake is the publication in the *Financial News* of Tuesday of Mr. Garthwaite's report, which is only twelve months old. This is clever "Old Harry's" excuse for unearthing the musty document: "In consequence of the renewed interest recently manifested in Bankets, it has been thought desirable to reprint a summary of Mr. Garthwaite's report to the directors of the company, originally issued to the public in September of last year." Will the republication of this tempt the public to buy? Have the directors, we ask again, nothing fresher than this? A leaderette in the same issue runs: "It is claimed that the recent important improvement in Rhodesians, and in Bankets in particular, has not come about without a certain amount of sufficiently solid reasons outside market manipulation." Who claims this? And what are the solid reasons except to give the manipulators another chance of unloading? The rise is not supported by the public, and if not by the public, by whom? By public benefactors? "The recent Banket developments are believed to be excellent." "Believed" to be! It would be interesting to learn what disinterested person believes anything of the kind, and why a vague, pious belief should be considered a solid reason for a rise. This is what is considered good enough for gudgeons who have no fastidious stomachs. But if the Banket promoters and riggers depended upon the prudent only how could they make their fortunes?

Yorkshire Indigo and Chemical Company.

This wretched Yorkshire combine is going from bad to worse, and although the report is so skilfully worded that some people might be deceived into thinking that another six months' arrears of preference dividend had been caught up, the actual fact is that nothing in this direction has been accomplished. Just let us explain how the discrepancy arises. It will not occupy much space, and is decidedly instructive. The report covering the year to June 30 states that "after providing for depreciation of plant and machinery, bad debts, directors' remuneration and all other charges there remains a profit, including the amount brought from

last year's account, of £11,435. From this the dividend on the preference shares paid in respect of the eighteen months ended December 31, 1905, has to be deducted—viz., £10,260—leaving a balance, which your directors recommend should be carried to next year's account, of £1,175." What would you infer from that? The sum brought in being actually £709, the directorial statement gives the impression that the profits were £10,726, and that from those profits a year's dividend and six months' arrears are provided. But the actual position is nothing like this, as we shall proceed to show. So deplorable was business in the period under review that the trading profits and income from investments (including profits of all the subsidiary companies and branches) after providing for depreciation and remuneration of the directors and managers of the subsidiary companies, were no more than £9,456. This is a decline compared with the previous twelve months of £2,572, and is, we believe, by far the worst thing ever perpetrated. A further sum of £60 came in for transfer and registration fees, &c., making £9,516, out of which we have to deduct £1,970 for general charges and £240 for income-tax, leaving £7,305 against £8,799 last year, when other charges to the amount of £836 were also provided. Now, it is quite obvious that a sum of £7,305, the true profit, will do little more than provide one year's dividend at 6 per cent. on the £120,000 of preference shares, and the directors produce their eighteen months in the following manner: Twelve months ago they recommended 1½ years of dividend on the preference shares, two-thirds of which had been paid when the report was issued, leaving six months still to be distributed. To do this the sum of £2,170 brought into the account was reduced to £709, the sum really carried out. But the amount now brought forward appears at £4,129, and actually includes the six months of dividend declared at the annual meeting held twelve months ago! Therefore, in speaking of eighteen months of dividend in the present report, the directors to all intents and purposes declared one-third of this payment a second time, although it was probably paid immediately after the annual gathering in 1905. We do not say any shareholder was deceived by this curious procedure, because the size of the dividend warrant would quickly set him straight, but the directors had no right to say in the report that the profit, including the amount brought forward, was £11,435, because it was nothing of the kind. And the fact that other companies sometimes create similar confusion is no excuse. There are still six months of dividend in arrear, and if the company can accomplish nothing better than last year's performance during a period of exceptional prosperity in the textile trade the chances of picking this up seem exceedingly remote. We have examined the items of the balance-sheet a good many times, but it will do no harm to refer to them again. The land, buildings, water rights, plant, machinery, horses, carts, office furniture and goodwill are rather less at £171,118, and of this the goodwill only represents £140,000, roughly 80 per cent. No wonder the company thrives and prospers! Stock-in-trade is down at £24,872 and sundry debtors and bills receivable reach £20,981 against £3,323 owing to sundry creditors, about the only good point in the balance-sheet. Cash is £21,182, and £5,548 of Consols are valued at 90, and therefore appear at £5,000. Formation expenses remain at the old figure of £2,340, and it is almost superfluous to say that no reserve is possessed. One of the directors has died during the year, and another has resigned, leaving the directorate with three members.

The Argentine Budget.

The Federal Government of Argentina is taking too heavy a toll from the products of the people's industry. In the end of last week the Minister of Finance in Buenos Ayres laid the Budget for 1907 before the Congress. It showed an expenditure of almost £19,600,000. This is on the top of all the State expenditures, and constitutes a burden really too grievous to be borne. A surplus is shown of about £20,000, the revenue being put at £19,620,000, but none the less is the demand made upon the people excessive. For Argentina is not going to enjoy uninterrupted prosperity. There will be seasons of bad harvests as the present one promises to be, thanks to the widespread drought and the ravages of locusts, but even if the prosperity were assured and the export trade to continue year after year to expand, there is no benefit accruing to the community to justify such a Budget. Of the total, £3,035,000 is to be spent on public works the nature of which the brief Reuter's summary does not disclose, and there is to be a decrease of £157,000 in the army estimates, due to economies it is said, not to reduction in the forces, although what Argentina now wants with an army we cannot imagine. She has made a permanent peace with Chili and has no designs of conquest, so far as we know, against Uruguay or any probability of another fight with Paraguay or with Brazil. She has, therefore, no use for an army, and ought to be content with civil police and local militia. To maintain the army in that Republic with the old antagonism between the upland provinces and the province of Buenos Ayres still slumbering is only to provoke another internal rebellion; but there it is, and the rulers of the Republic are spending money with both hands so that when the lean years come we may be be prepared to see a renewal of difficulties in connection with the Argentine debt. At present there is a fund for the conversion of the paper money amounting to rather more than £2,000,000, which has to be added to, so the summary tells us, to the extent of another £1,000,000 in the Budget for the coming year. This is all very well, but it does not represent the repayment of debt. It is only a conversion fund, money gathered up to guarantee the convertibility of the various issues of notes made by the Republic, so as to insure against renewed depreciation. And outside this, the abounding revenue notwithstanding, the public debt swells year by year. Altogether we cannot avoid the expression of some disappointment that the rulers of the Republic should have been so bereft of caution and prudence.

The Beira Railways Voting Scandal.

One may always count upon the directors of the Chartered Company to disregard ordinary rules of business. It is nothing to them that the object pursued may be inequitable and unjust if it is in their power to carry out their purpose, no matter how. We have an illustration of the spirit which has always animated the conduct of this company's affairs in what took place at the recent meeting of the Beira Railways debenture-holders. The committee of these debenture-holders, which has been struggling so long and persistently to obtain justice, was beaten at that meeting by votes representing rather less than £11,000 in debentures. That is to say, the resolutions proposed by the committee were supported by votes representing £382,200, and negatived by votes representing £393,030; but this triumph of the Chartered Company's board was attained only because that company voted on £123,000 of debentures pawned with it as security for a much smaller sum of money advanced. Not only so, but, according to the circular issued by the bondholders' committee, these debentures formed part of an issue of £1,100,000 "which has not yet been either created or sanctioned." This would be regarded as sharp practice were any other company to proceed in like fashion, but everything is lawful to the British South Africa Company, the chartered libertine of latter-day finance. Such a defeat is really a victory for the committee, and we are glad that it is going to persevere, glad also that it does not intend to test the validity of the voting in a court of law. It will be simpler, less expensive, and far more satisfactory if the bondholders will only bestir themselves and send their proxies to the committee against another meeting which must be called. The last one was held in the holiday season, on July 30, at about the worst date possible for those who are fighting

to get justice. Next time the withholders of justice must be beaten.

New South Wales Debts.

The most impressive aspect of Colonial finance is always connected with the position of the public debts, and a recent number of the New South Wales Statistical Register gives us the figures of that Colony's public debt down to June 30, 1905. As usual, the information is full and clear, and it is with no small pleasure that we note how faithfully the acting Government Statistician, Mr. W. H. Hall, is following in the footsteps of Mr. T. A. Coghlan. Mr. Coghlan is now the Colony's agent in London, but he for many years occupied the position of Government Statistician, and proved himself to be one of the most intelligent, painstaking, and in all ways capable functionaries in Australia. From the figures in the number of the Register before us we gather that the total public debt of New South Wales appeared to amount a year ago to about £98,000,000. That at least is the gross debt, but the nett debt is made to figure at £82,322,000, which is £55 13s. 9d. per head of the population. In 1855 the debt per head was only £3 12s. 1d., and as recently as 1890 it was only £43 2s. 7d., which was about £1 15s. per head less than the dead weight in 1899. Since 1900, however, the progress upwards has been almost uninterrupted, the nett aggregate of the debt having risen from £48,383,000 in that year to the figure named above. In a corresponding way the charges for interest have gone up in spite of the growth of population, and in 1905 amounted to £3,199,000, or £2 3s. 9d. per head as against £2 0s. 6d. in 1902, £1 18s. 8d. in 1900 and 1901, and £2 0s. 4d. in 1900. What has been done with the money? No less than £44,954,000 has been sunk in railways, and £4,094,000 in tramways, while public buildings and sites have absorbed the formidable sum of £4,110,000. Another £10,417,000 has been spent upon water supply and sewerage, and £1,057,000 on conservation of water, artesian boring, &c. Roads have taken up £1,741,000, and harbours and rivers a gross amount of £5,467,000, which, however, is offset to the expenditure of £1,321,000 transferred to the Sydney Harbour trust. That trust itself accounts for £5,187,000, and the Darling Harbour wharves resumptions have required £835,000. As against these mighty totals the mere £568,000 advanced to settlers and £194,000 spent on immigration, or including the sum spent prior to the inauguration of a loans account £919,000, look pitifully small. But another £3,420,000 has been spent upon the various Commonwealth services, telegraph and telephone lines, post and telegraphic offices, lighthouses, Customs building, quarantine buildings, and £1,446,000 on fortifications and defence works paid for out of borrowed money. Of the old loans £17,132,000 have been repaid by new loans issued or by Treasury bills outstanding to the amount of £6,493,000. Thus the gross total of the debt has crept up to £97,905,000, for the sinking funds which are paraded against the various loans do not really amount to much, and when an old loan falls due it has always to be replaced by a new one, or temporarily covered by issues of accommodation bills upon the market. It is interesting to bear in mind that in spite of a reduction in the average annual interest charge from 3.71 per cent. in 1896 to 3.57 per cent. in 1905, and of the in recent years comparatively rapid increase in population, the debt charge absorbs more than the entire public revenue from taxation. This class of revenue for the year ended June 30, 1905, was only 15s. 3d. per head, or £1,114,408. All the remainder of the public income came from other sources, lands yielded £1,761,000, or £1 4s. 1d. per head, and the railways and tramways £5,355,000, or £3 13s. 4d. per head, while miscellaneous sources of income gave £3,106,000, or £2 2s. 6d. per head, the gross revenue of the State coming altogether to £11,337,000, or £7 15s. 2d. per head. It is naturally enough contended that the debt is not a burden upon the taxpayer, seeing that the nett revenue from the railways and tramways, as well as the interest received for lands sold, and the rent of lands cannot be in any way regarded as taxation. We are not so sure, but one thing is obvious enough, no small part of the revenue from the land represents capital returned by purchasers and treated by the state as ordinary revenue. And it must never be forgotten how expensive the Government of a colony like New South Wales is. In the year ended June 30, 1905, for instance, the nett expenditure, including advances, was £11,208,000, that, of course, including the working expenses of the railways and tramways. Of this total £3,176,000 in all was absorbed by the public debt and its administration, old age pensions took nearly £497,000, and the Chief Secretary's department £113,000, while the Attorney-General and the administration of justice cost more than £299,000, and the Public Works department £841,000, public instruction, labour, and industry going away with £898,000, and mines and agriculture with £141,000. The Secretary for Lands required another £307,000, and salaries, licences, and pensions took £178,000 odd. For a community the population of which is at the present time only about 1,500,000 these figures imply a load that might prove crushing were another series of drought years to come upon Australia, or were the home loan fountain to dry up.

American Business Notes.

Last week's New York Bank return was rather a staggerer not only to the Wall Street market but to our own, and yet nothing else was to be expected, because Wall Street is making demands upon the banking resources of the country greater than they can bear, and the Western drain of currency has begun. This is shown to some extent in the decrease of $13,695,000 in the deposits compared with the previous week and in a reduction of $6,608,000 in the specie and of $2,667,000 in the legal tenders. Thanks to the reduction in the deposits the loss in the legal reserve represented by the withdrawal of coin and notes is not proportionately so great as it would have been had the deposits kept up, but the surplus is none the less $5,851,000 lower on the week, and represents the lowest total at the same date since the panic of 1893. No wonder that gold is being hurried into the country as fast as ships can carry it!

As a result of the sending of numbers of samples of Japanese goods last year to Buenos Ayres for exhibition in the museum there, a commercial house in the Argentine capital sent an order for over $5,000 worth of Japanese wares through the Kaitsu Sha of Yokohama. Another large order was given for glassware. These are the first business transactions between Japan and the Argentine Republic.

The New York Municipal Banking Commission has, it seems, discovered a way of getting back at the banks doing business in the city that discredited the recent issue of city bonds. A hint has been given to them that they must not expect to be any longer on the list of those banks receiving deposits of city funds. The result will be the withdrawal of the city's business from several of the banks.

The Treasury statement for July 31 showed that there were in circulation in the United States on that date National Bank notes to the amount of $561,481,045. The Government bonds on deposit in the Treasury as security for the notes and public deposits amounted to $606,116,835, of which $545,337,660 were in 2 per cent. Government Consols of 1830, and $7,025,825 in State, city, and railway bonds.

New York heard on August 1 that besides Mr. John D. Rockefeller, the oil magnate who has been summoned before the Federal Court in Chicago to give answers to questions regarding rebates, subpœnas have been issued against more than 40 Standard Oil officials and employees. Among the number are William Rockefeller, Henry H. Rogers, Henry M. Flagler, Oliver H. Payne, Charles M. Pratt, and John D. Archbold, the most prominent men in the com-

pany. The case was to begin before the Grand Jury at Chicago on August 6.

The *New York Herald* relates a story to the effect that one day at the end of July two carloads of books and papers belonging to the Burlington R.R. Company were unloaded at a lonely spot on the line near Greeley Centre, Nebraska, and were set fire to after having been saturated with four barrels of kerosene. Two men who superintended the operation were recognised as one of the auditors of the company and a roadmaster from Omaha. This fact, and some of the unburnt documents that were carried by the current of heated air caused by the fire over the prairie, having been found to be rebate cheques made out to a firm in Concordia, Kansas, has, says the *Herald* correspondent at Sioux City, Iowa, who sent the information, raised the suspicion that the company was destroying evidence that would have told against it in an inquiry into its transportation dealings with some of its customers. The incident reads like a story of commercial romance.

There is some uncertainty as to an agreement regarding the Wabash R.R. Company's proposals for the retirement of its "B" debentures for new 4 per cent. bonds to the extent of 70 per cent. of their holdings and 50 per cent. in common and 50 per cent. in preferred stock of the road. An alternative of 90 per cent. cash was included in the terms offered, and it is said that this is one of the causes of the delay in the underwriting arrangements.

While a certain class of Canadian woollen manufacturers are calling out for still further protection against British competition with a 30 per cent. tariff in their favour, the *New Era*, of Clinton, Ont., Canada, says that the shares of the Penman woollen mills of Paris, Ont., issued at $100 have lately realised $346. It says that this handsome figure cannot be reconciled with the statement that the Canadian woollen industry is not receiving fair treatment, and suggests that if some Canadian manufacturers are not flourishing the fault cannot be laid at the door of the tariff. The product of the Penman mills has no difficulty in meeting British competition in any part of Canada, and the fact that British or German investors have purchased the Penman mills, and that the same syndicate is acquiring other interests in Canada is considered a sign that Canada is about to receive an influx of European capital.

It is reported from Ottawa that the Canadian Government will during the next two months have the readjustment of the tariff under consideration. It is said, however, that the increases in it that may be made will be very few. The feeling is gaining ground in Canada that the interests of the consumer are being too much subordinated to those of the manufacturer.

The Toronto, Canada, *Sun*, speaking of the effort of the Temiskaming Railway Commission to dispose of the mining rights in the right of way through the Cobalt region for a cash bonus of $50,000 and a graduated royalty on output varying from 10 per cent. on ore worth $400 per ton to 50 per cent. on ore worth over $1,000 per ton, tells a curious story. It seems that no response was received to the invitations to bid on that basis, but that the Commission has accepted an offer made by a syndicate to pay the cash bonus and a royalty of 25 per cent. on all ore mined without regard to the value per ton. The fact has also come out that a son of one of the members of the Commission is a member of the syndicate whose offer has been accepted.

The following editorial note from the New York *Evening Post* of July 28 last is an example of how legislation in the United States is worked on behalf of "interests," without the American public knowing anything about it until months after through a chance revelation in a newspaper:—

Congress could not remove a single tax for the benefit of the Filipinos, but it managed to clap an odious new tax upon them. The legislative record of it is given in full by the Indianapolis *News*. A Bill imposing a tax of 100 per cent. upon the cheap grade of cottons which the Filipinos most use, was reported to the House on January 25; on February 9 it was called up and "explained" by Chairman Payne, and passed without a division; in the Senate, it was sent to Lodge's Philippine Committee, and on February 22—fitting day!—was reported out and passed without question or division. Now, who originated this legislation, and with what motive? It was not proposed by the Philippine Government. It was stoutly opposed by our own collector of customs at Manila. But certain cotton manufacturing "interests" of New York asked for it. On what ground? Frankly and brutally, on the ground that they could not compete with Englishmen in making this particular kind of cotton, as their looms were not adapted to making "splits"; therefore, the poor Filipino must be forbidden, practically, to buy them, and compelled to purchase the more costly American product. No meaner, greedier piece of legislation has ever been enacted, but Congress passed it without debate, and the President signed it without a protest. Yet we know, of course, that we are treating the Filipinos with a generosity unparalleled in the history of colonisation—or of cant?

Passing Events.

Our harvest promises to be a good one. It will not make any very material difference in the dependence of the country upon foreign cereals, but it is something to know that our farmers are enjoying some measure of prosperity. Down in the south, and especially in the south-east, of England the weather has been untoward, hot and dry, injurious, therefore, to cereal crops, and all over the country the oat crop seems to have been subjected to more or less untoward influences, but the wheat yield promises to be excellent both in weight and quantity, and the barley crop is also said to be passing good in most places, so that all we now require is a fine harvest season to give the farmers a chance. The hay crop, however, in many parts of the country has been rather short and light, but not so in Scotland where a crop above the average has been yielded as well as an excellent crop of wheat. Lately, however, the weather has been bad over the whole of Scotland and some parts of the north of England, so that it is too early yet to sum up the position there. We can only hope that the promise of the summer will be fulfilled in the autumn.

From the *Finanzherold*, of Frankfort, we learn that three of the principal German fire insurance companies will lose very heavily by the San Francisco fire. The Aachen-München Company has a total liability of about $4,156,000 on account of this fire, which is $1,663,000 more than the entire amount of its reserves. Then comes the Hamburg-Bremer Company, with commitments amounting to $3,839,000, involving a loss of $1,336,000 in excess of its reserves, and there is a Stettin company, the Preussiche National-Versicherungs Gesellschaft, with a gross liability of $1,276,000 on its policies, whose nett losses over and above the reserves are put $618,000. A good deal of the business done by the German companies seems, however, to have been re-insured, in part at least, with American companies, but as these American companies are not meeting their obligations in any very satisfactory manner there may not be either help or consolation in that fact.

Taking into account the somewhat indifferent results which have generally attended the company's operations, shareholders of the Texas Land and Cattle will doubtless close with a good offer for the purchase of the company's lands. The intending buyer is Mrs. H. M. King, who, in 1901, acquired from the company about 110,000 acres of land at $3 per acre. Now the company can sell a large tract for $797,896, say, £162,000, equal to $4.40 per acre nett, on 181,340 acres, the adjusted figures on which the negotiations are based. One-third of the purchase price is payable in cash on delivery of the deed of conveyance, and the balance in four equal annual instalments with interest at 4 per cent. per annum. A further tract will be sold for $28,404, equalling about £5,000, or $4 per acre, the money to be paid at the end of four years without interest, the company meanwhile having the use of the land. The total price receivable exceeds book values by about £19,000, and while the directors think there may be some deficiency when the cattle comes to be

realised, they are convinced that the cattle business could only be continued with very inadequate results in proportion to the capital sunk in the land. Sales during the current year realised satisfactory prices, but the calf brand, owing to the unfavourable conditions which prevailed during part of 1905, will be much less than that of the two previous years, and losses are heavier than usual, so that the prospects of a dividend are uncertain. The present proposals for sale are strongly recommended by the board, and as the full realisation of assets will probably result in a return to the shareholders within the next four or five years of about the full amount of the present capital, £4 10s. per share, any opposition to the scheme is most improbable. A first return of £1 per share will be possible towards the end of the year.

The textile trades must indeed have flourished last year for the swollen and overcapitalised Calico Printers' Association to be able to provide 4 per cent. dividend on its share capital. This is an increase of 1½ per cent. compared with the distribution for the previous 12 months, and we gather that the profits have increased over £160,000 to a total of £358,223. This sum is arrived at after providing depreciation, maintenance, &c., and debenture interest. With £131,437 brought forward, there is a sum for disposal of £489,660, and when the 4 per cent. dividend has been deducted there will remain a big sum to be carried to next account. It is worth noting that in the opening half of the year the profits reached £171,818 against only £6,889 in the corresponding period, while in the second six months the income was £186,405 compared with £188,791, so that business was not only better, but much more stable and regular.

Grumblers at the motor 'bus, and they form a good proportion of London's population, did not get much sympathy from Mr. J. Howard Moore, the chairman of the Road Car Company, when he addressed the shareholders at the half-yearly meeting on Tuesday. The chairman of the Great Eastern Motor Omnibus Company was equally uncompassionate at his meeting on the following day. Mr. Moore hinted that if the Road Car Company had not been forced to go ahead at such a great speed with the motor 'bus business, owing to the advent of other ventures, a better vehicle might have been on the streets. The existence of smell and noise could not be denied, but better times were in store, and it had to be remembered that the streets were not altogether pure and noiseless before the motors made their appearance. Patience must be exercised all round, and there is probably no doubt about the fact that the people who cried out loudest for the motor 'bus are now in the forefront of the somewhat ridiculous wholesale condemnation.

The statutory report of the newly amalgamated music businesses of E. Ascherberg and Co. and Hopwood and Crew was published a day or so ago. At one time Hopwood and Crew did a flourishing trade, but has lately fallen on evil times, thanks to the activities of the pirate music publisher. Now that the Government has taken up the Musical Copyright Bill the new company may do better, because it must be supposed that the robbery of other people's brains and property will be put an end to even though Mr. Caldwell is never reconciled. Under the terms of agreements the new company allots 130,000 fully paid preferred ordinary shares of 10s. each to the shareholders of Hopwood and Crew, so that each proprietor will receive a number of shares equal to those formerly held. There is also an allotment of 10,000 1s. management shares, but who gets these is not very clear. The consideration paid in shares for Messrs. Ascherberg and Co.'s business is 50,000 of the preferred ordinary shares, so that apparently the capital consists of £90,500, in 180,000 10s. preferred ordinary shares and £500 in 10,000 1s. management shares.

In a communication to the *Westminster Gazette* a shareholder in that fine dividend-paying New Zealand mine, the Progress, calls attention to the fact that the working expenses for the past year were under 18s. per ton, whilst mine development accounted for only 2s. per ton more, in all 20s. The ore yields over the plates just 25s. per ton, "so there is little room for managerial extravagance in working. Even the Rand, with the cheap coolie labour, cannot beat this." No, it cannot, and what is more the bosses do not want to work too cheaply, lest there should be no perquisites and pickings for themselves. New Zealand, however, as we have frequently pointed out, and demonstrated by figures, is not the only gold field where mining costs are lower than on the Rand without the aid of serf labour of any colour. We have given figures to show that even in Western Australia and far away Alaska the costs are frequently as low as 20s. a ton. Yet the scientific appliances in use on the Witwatersrand are supposed to be more modern, perfect, and complete than elsewhere. The only thing that is far from perfect or complete there is honesty, and dishonesty is the main cause of the high costs that are made the excuse for slave labour.

It would seem that a mine manager's life, like a policeman's, is not the happiest on this rough-living globe. Both run risks which the ordinary man is able to escape from the criminally inclined. Despatches from Melbourne state that one of the underground managers of a well-known mine recently found some of the men "napping" stone, and picking it over in search of gold. The men were engaged in a portion of the workings on the reef at a depth of 2,200 ft. The manager spoke to the men, whereupon one of them challenged his right to interfere, and a fight followed. Some of the men were sent to the surface, and one of them, on being reprimanded by a mine officer, rushed at him. The officer, it is stated, drew his revolver and fired a shot in the air, after which the man left the mine. It is understood that as a result of the incident a number of the men have been dismissed. Which is the most natural effect in the world.

At the adjourned meeting of the Goldfields of Matabeleland, held on Wednesday, the directors triumphantly announced the result of the poll taken on the reconstruction proposals, which those who attended last week's meeting wisely rejected. The directors, of course, knew they had sufficient proxies to overwhelm the common-sense decision of those they would describe as recalcitrants, so they could calmly talk the matter over in the interval. There was not the least anxiety to suffer in regard to their fees, for the result of the poll was 77,219 against 9,713, a majority of 67,506. The trouble may be to gather in the harvest of money. True, two-thirds of the capital has been guaranteed by a well-known underwriting concern, and if shareholders are wise they would let this firm take the whole 200,000. Manipulation and rigging tactics will not alone be the salvation of a company such as this.

It is pleasant at last to see some reduction in the amount of Exchequer floating debt represented by Treasury bills. On the 26th inst. £2,000,000 of these bills fall due, and, according to the *Gazette* notice, only £1,000,000 is to be renewed. Whether the Japanese hold these expiring bills or whether they are in the market we do not know, but trust the market will somehow obtain the use of the money thus set free, for it will require all it can get during the rest of this year at least. What is most satisfactory to us is the reduction in the total amount, and really what with the great windfalls from millionaire estates and other increases in the public income, there does not seem any valid reason for the existence of a floating debt of nearly £20,000,000 in this form.

Still, the numbers of those in receipt of public works relief in India decline. Telegraphing the facts relating to the week ending August 4, the Governor-General says that the total number was then down to 256,000, of whom Agra and Oudh furnished 95,000, Ajmer and Rajputana 37,000, Bombay 81,000, Central India 18,000, and Eastern Bengal 15,000. The only unpleasant fact in his message is that prices are still rising, at any rate in Eastern Bengal and several other dis-

tricts, in spite of the fact that crop prospects are good or better. There is, however, scarcity still in five districts of that province. Elsewhere conditions and prospects appear to be distinctly on the mend, and we hope the rain still needed in some States will be bestowed upon them. In Rajputana prices are falling, cattle improving, and pasturages available.

There is some difficulty in understanding the financial policy of the Canadian Pacific Railway Company, and the market was justifiably disappointed in the dividend declared on the common stock. It was at the rate of 3 per cent. per annum, the same as hitherto, in spite of the increase in the gross receipts and nett income. Excluding steamships, the gross earnings were £12,333,000 in the company's year ended June 30 last, and the working expenses £7,739,000, leaving a nett income of £4,594,000. Adding in £130,500, said to be the nett earnings of the steamships and £263,000 income from other sources, the entire free balance was £4,982,000, from which £1,610,000 had to be deducted to cover fixed charges. Taking away also £100,000 placed to steamship replacement fund, and £16,000 given to the pension fund, the available revenue was £3,202,000, out of which only £1,549,000 was distributed as dividend on the common stock, leaving £1,653,000 to be carried forward. Is this money to be utilised to develop the property, or what? If it is to be so utilised, why did the directors recently issue that large amount of common stock at par when they could have got at least 50 per cent. premium upon it?

If what the London correspondent of the *Manchester Guardian* says is true, that the mine bosses in South Africa have kept back the repatriation petitions of the Chinese, it will be difficult for the present Government to avoid much longer the assumption of a more direct responsibility for the conduct of the industry. When will it have the courage to confiscate the mines in the best interests of shareholders, workers, and the local Government alike?

No less than eight separate meetings of the share and debenture holders of Thos. Salt and Co. were held this week, and at one and all the scheme for amalgamation with Allsopps was carried by a large majority. The chairman went over the well-worn ground in an effort to account for the company's deplorable position, and the non-payment of debenture interest. The accumulated losses for the 4½ years to January, 1906, were no less than £138,903, and proprietors doubtless agreed to the scheme on the idea that matters could hardly be worse. Owing to the altered condition of trade, business had shrunk in all directions, properties had been thrown on the company's hands, and considerable losses ensued both in regard to loans and in carrying on the houses under management. No hope was held out of successfully continuing the business under present conditions, and disaster was predicted if an attempt were made to realise the properties piecemeal.

Debenture holders of the unfortunate Coliseum—the shareholders hardly count—will be interested to learn that an offer has been made for the purchase of their magnificent theatre. It seems that a French syndicate is anxious to acquire the building with a view of converting it into a grand opera house, to be open all the year round, for which purpose we should think it is admirably adapted. The syndicate offers £160,000 in cash, and the proposal will be laid before the debenture holders as soon as a meeting can be convened.

Proposals have been put forward for the amalgamation of two businesses engaged in the general cycle trade, the Ecco Works, formerly known as the Albert Eadie Chain Company, and the Abingdon Works. Neither has had exactly a brilliant career, but the Ecco company, whose capital consists of 10,000 7 per cent. preference and 55,000 ordinary shares of £1 each, has been doing a good deal better lately. During the worst time of the depression in the cycle trades the ordinary shares received no dividend, and arrears were accumulated on the preference shares, but these were speedily made good, and for the past two years 6 per cent. has been paid on the ordinary. The Abingdon Works is a much older enterprise, having been formed originally to carry on gun manufacture, but some years ago the business of cycle components was added. In this case the capital is £60,400 in equal amounts of 7 per cent. preference and ordinary shares, but profits have been steadily going down hill for many years, and from 20 per cent. paid for 15 months ended August, 1897, the dividend on the ordinary shares has gradually shrunk to nothing. Moreover, the preference dividend has only been met with the assistance of drafts from the reserve fund. Whether a combination of these two concerns will mean increased strength it would be hard to say, but evidently the directors think so, and the new company to be formed to take them over will have a capital of £100,000 in £1 shares. Of this £40,200 will be preference, £30,200 carrying 6 per cent. dividend, and 10,000 bearing 7 per cent. interest, and it is provided in the scheme that each company will meet its own preference dividend for the current year. The balance of the capital will consist of 59,800 ordinary shares, of which the Ecco shareholders will be entitled to 35,300 and the Abingdon proprietors to 15,100. On recent achievements this division seems to rather favour the Abingdon people, but in view of the fact that the Ecco company made fairly good profits in the past two years, it will be given an extra £15,000 on account of goodwill.

"It is commerce that rules the world now." So said Mr. W. C. Robertson at the meeting held to inaugurate the new home of the British Chamber of Commerce in Paris, and he at least foreshadowed a comforting truth. Diplomacy is not yet dethroned, but it is becoming on all ordinary occasions more and more an instrument in the hands of the merchant, and that makes for international peace. This very Chamber of Commerce, whose flourishing condition was amply made manifest at the gathering of men of business and diplomatists held on June 20, is proof that commerce is becoming supreme, that the manufacturer and merchant are learning to take larger views of their functions, to form saner conceptions of the relations of nation with nation. It has been a success throughout, this Paris Chamber, and we cordially bid it good speed in its new, its own, home there.

In an interesting report by Mr. F. Harford, Secretary to His Majesty's Legation in Buenos Ayres, on the finances of the Argentine Republic we learn that the total of the so-called Conversion Fund is to be brought up to £6,000,000, towards which £2,323,501 had already been accumulated by December 31 last. That is, gold is to form the basis on which the paper currency will be, as it were, guaranteed at the fixed exchange established by law. This fund, however, must not be confounded with the gold deposited in the Conversion Office, the total of which is £18,030,400, no less than £7,062,000 having been deposited since December 31, 1904. The gold is exchanged for paper at the rate of $1 in paper for 44c. in gold in accordance with the law of November 4, 1899. The Conversion Fund itself is presumably a fund destined to guarantee convertibility of the notes on this basis of exchange and to guard the Republic against any unforeseen drain upon its metallic reserves. Dr. Terry, the Minister of Finance in the late President Quintana's Administration, had a project for introducing a new gold currency, the "unit" of which was to be a new coin equivalent to 20c. gold or one franc, but the new Government is sticking to the paper peso or dollar, worth 44c. gold, and it is difficult to see how the substitution could have been effected, since the proposed new unit would have been worth 2c. less than half the value of the paper peso as established by law. But the change is not now to be made, and need not be discussed. What, however, is of interest is the effect of the continued Argentine demand for gold upon our market. Clearly, unless the restoration of the currency is to be postponed, the Government of the Republic must continue to draw the metal into the country and not allow it to be exported to any large amount.

THE DOLCOATH REPORT.

The directors of the Dolcoath Company have issued what we believe to be the best report they have ever drawn up since the company became a limited liability concern. This is not due to any remarkable virtues of their own, but mainly to extraneous circumstances which they have welcomed, and for which they have not been responsible. The first six months of the current year was distinguished by a substantial rise in the price of tin, which at one time advanced to well over £200 per ton, and though this high price was but momentary, the average figure for the period helped this great Cornish company considerably. But if this happened outside the controlling powers of the directors, they, at any rate, deserve hearty commendation for thrift and economy, for they have actually reduced the working costs. This is the more surprising inasmuch as it was the admitted policy of the board to spend more money out of the increased earnings on development and plant improvements, a policy from which ultimately considerable benefit must be derived, particularly from improvements to the plant. In the past the Cornish mining industry has been seriously handicapped by the old-fashioned plant in use at the various properties, and refusal to spend money on more modern methods has been the undoing of many a promising property. This, however, is now generally recognised, and advantage is being taken everywhere of the strength of the tin market to introduce more up-to-date machinery. By reason of the unexpected and agreeably surprising reduction in the expenditure a much larger profit has resulted than was looked for; in fact, it happens to be by £7,750 the highest earned in the company's career since it ceased to be a cost-book undertaking. The nett profit was £40,165, and £6,997 was brought in. But £6,000 which stood at the debit of profit and loss account last year on account of development has now been written off, together with other sums amounting to £3,482. Thus the available balance is £37,680, and as the dividend of 1s. 6d. per share will require £24,296, there will remain a balance of £13,383 to carry forward. The dividend is at the rate of 15 per cent., compared with 5 per cent. Can this comfortable percentage be maintained? The directors, it will be seen, are not dividing anywhere near the last penny, and they have declared it to be their intention to build up a dividend equalisation fund, so they presumably see their way to make 15 per cent. their standard. Much will depend upon the future of the tin market, and one cannot foreknow that. As far as can at present be seen, the high price of tin is likely to be maintained for some time, and the near prospects of this company, therefore, look promising. Apart from the metal market, the condition of the mine itself is very hopeful. Not only is it developing promisingly at depth, but the manager foreshadows a further saving in costs and a better rate of extraction. Should there be a fall in the price of tin these factors will materially lessen its consequences to the company. In the six months a greater quantity of tin was treated and more black tin was sold, the quality of the ore improved, whilst the average selling price of black tin was £13 15s. 5d. above that for the preceding half-year. Thus there was an increase of £17,598 in the amount realised, equal to 22 per cent., but if it is compared with the first half of 1905 the improvement was as high as 44½ per cent., the nett profit of £40,165 comparing with £27,825.

Dealing more in detail with the results the quantity crushed was 49,934 tons of tin ore and 920 tons were sold. The produce per ton of ore was 41.28 lbs., and the average price £1 18s. 11.5d., but the average price per ton of black tin was £105 13s. 4d., whilst the total sum realised was £97,268. Exclusive of slimes the black tin sold was 858 tons, for which the average price realised was £107 11s. 8d. per ton, compared with 812 tons in the previous half-year, fetching £93 7s. 6d. So the rise was £14 4s. 2d. The slimes sold amounted to 61 tons for £79 6s. 2d. per ton, an advance of £9 9s. 11d., thus showing an improvement all along the line. The quantity of ore treated was greater by 1,462 tons; 53 tons more black tin was sold; the quality was 1.22 lbs. per ton better, the value of a ton of ore treated was 6s. 11.04d. higher, and the selling price of black tin was £13 15s. 5d. more than in the latter half of 1905, as already stated. Under the head of working costs, wages and tribute were £359 less, coals and freight £250 lower, and other materials, stores, &c., £129 less, making a total saving in these items of £739. On the other hand, rents, rates, and taxes were higher by £459, and there are other small items, making a nett increase of £92, so the whole working charges were lower by £188. Royalties increased by £586, charged to profit and loss, making the whole expenditure on that account £398 more than in the previous half-year. Including interest, which yielded £368 against £59, and £140 from transfer fees, the total income increased by £18,178. Cash, bills, Consols and debtors are larger by £38,855, whilst creditors are more by only £252.

City of Tokyo 5 per Cent. Sterling Loan.—Allotment letters may be lodged with the Yokohama Specie Bank, Limited, for exchange into scrip certificates on and after Monday next, August 20.

The Royal Mail Steam Packet Company intimate that an arrangement has been concluded with the Crown Agents for the Colonies for a fortnightly intercolonial mail service between Barbadoes, St. Vincent, Grenada, and Demerara, and a four-weekly mail service between Barbadoes, St. Lucia, Dominica, Montserrat, Antigua, Nevis, and St. Kitts. This intercolonial mail service is quite distinct from the West Indian and New York Transatlantic service of the R.M.S.P. Company, which service is now being performed without any subsidy from the Government.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and August 11, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Aug. 11, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Aug. 12, 1905.
	£	£	£
Balances, April 1:			
Bank of England	—	9,334,212	6,352,909
Bank of Ireland	—	1,117,275	1,077,369
		10,451,487	7,430,278
Revenue.			
Customs	32,230,000	12,223,000	12,120,000
Excise	30,200,000	9,968,000	10,087,000
Estate, &c., Duties	13,200,000	5,959,000	5,278,000

Treasury, August 14, 1906.

The directors of the Beira Railway Company have issued a letter presumably in reply to the circulars of the Bondholders' Committee—"so-called committee," as they dub it, oblivious of its voting strength. There is nothing by way of answer in the letter; it just covers a copy of Mr. Justice Warrington's judgment which has been, or will be, appealed against. But the letter does say with regard to traffic that "negotiations are still being carried on with a view to secure the bulk of it for Rhodesia entering at Beira." And Rhodesia is such a busy, populous, and prosperous joint-stock State! You know that this must mean dividends! No? Well, dream of them all the same.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended Aug. 7, $2,404, decrease $634.

Argentine North Eastern.—Traffic receipts for week ended July 13, $15,753, increase $110; aggregate from January 1, $536,469, increase $40,617.

Assam Bengal.—Traffic receipts for week ended July 14, Rs. 71,894, increase Rs. 10,701; aggregate from July 1, Rs. 1,45,587 increase Rs. 17,820

Canadian Northern Railway.—Traffic receipts for 10 days ending Aug. 7, $125,900, increase $46,700; total from July 1, $729,700, increase $255,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended July 14, Rs. 20,250, decrease Rs. 1,391.

Mersina Tarsus and Adana Railway.—Traffic receipts for week ended April 15, £383, increase £44.

Quebec Central Railway.—Traffic receipts for the 1st week of Aug., $19,098, increase $5,005; aggregate from January 1, $541,869, increase $82,127.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended July 14, Rs. 20,250, decrease Rs. 1,391.

White Pass and Yukon Railway.—Traffic receipts for the week ended July 31 amounted to $104,466.

English.

Cleator and Workington Junction.—Receipts for week ending August 11, £1,156, increase £19; aggregate from July 1, £6,780 decrease £211.

Cockermouth and Keswick Railway.—Receipts for week ending August 11, £1,364, increase £141; aggregate from July 1, £6,783 increase £295.

East London Railway.—Traffic receipts for March, £4,206, decrease £188.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending August 11, £123, increase £27; aggregate from July 1, £1,595, increase £73.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Blessington and Poulaphouca. — Traffic receipts for week ending August 8, £60, increase £6; aggregate from July 1, £180, increase £20.

Bristol Tramways and Carriage.—Traffic receipts for week ending August 10, £6,959, increase £466; aggregate from July 1, £34,716, increase £986.

British Electric Traction.—Receipts of all the Associated Companies for the week ending August 10, £40,160, increase £3,160; aggregate from January 1, 1906, £948,240, increase £113,285; 428½ miles, against 422¾.

Burnley Corporation.—Traffic receipts for week ending August 11, £1,317, increase £47; aggregate from July 1, £7,572, increase £618.

Dublin and Blessington.— Traffic receipts for week ending August 8, £230, increase £2; aggregate from July 1, £1,017, decrease £3.

Dublin and Lucan.—Traffic receipts for week ending August 10, £187, decrease £1; aggregate from July 1, £871, decrease £37.

Dublin United.—Traffic receipts for week ending August 10, £6,605, increase £607; aggregate from July 1, £33,677, increase £413.

Edinburgh and District. — Traffic receipts for week ending August 11, £5,067, decrease £4; aggregate from January 1, 1906, £159,026, increase £3,371.

Hastings and District.—Traffic receipts for week ending August 9, £1,794.

Isle of Thanet.—Traffic receipts for week ending August 11, £2,211, increase £236; aggregate from October 1, £22,171, decrease £1,058.

London County Council.—Traffic receipts for week ending August 4, £25,508, increase £9,952; aggregate from April 1, £478,156, increase £205,614. Miles 94¼ against 51⅛.

London General Omnibus.—Traffic receipts for week ending August 11, £23,269, decrease £732; aggregate from July 1, £149,507, decrease £6,568.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending August 11, £3,842, increase £2,656.

London Road Car.—Traffic receipts for week ending August 11, £7,949, increase £266; aggregate from July 1, £51,903, decrease £205.

Rossendale Valley. — Traffic receipts for week ending August 10, £206, increase £3; aggregate from July 1 £1,232, decrease £3.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending August 12, £1,322, increase £24; aggregate from anuary 1, £26,542.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending August 12 £15,670, increase £2,613; aggregate from January 1, £472,885, increase £50,751.

Barcelona. — Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of May, 1906, £11,691, increase £776.

British Columbia Electric.—Nett earnings for June, $29,696, increase $3,858. Nett earnings from July 1 to June 30, $491,294, increase $129,614.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending July 22, £3,492, increase £69; aggregate from January 1, £103,390, increase £6,203.

Buenos Ayres Electric. — Traffic receipts for week ending June 9, £1,247, increase £134; aggregate from January 1, £32,082, increase £6,316.

Buenos Ayres Grand National.—Traffic receipts for month of June, $271,500.

Calcutta. — Traffic receipts for week ending August 11, Rs. 43,895, decrease Rs. 940; aggregate from July 1, Rs. 2,62,008, increase Rs. 7,846.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of July, £4,049, increase £604. Total from January 1, £31,515, increase £11,532.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of June, $484,590, increase $92,062; aggregate from January 1, $2,554,608, increase $383,138. Nett traffic receipts, $269,046, increase $54,371; aggregate from January 1, $1,340,226, increase $208,283.

The Investors' Review.

The Week's Money Market.

Bank Rate 3½ per cent. (Reduced from 4 per cent on June 21.)

Norfolk House, Friday Evening.

At the time of writing the mystery of the gold purchase of last Monday is still unsolved, but those who ought to know insist that it was bought for Russia, and add that the small supply of about £312,000 due in from South Africa on Monday will also be bought for Russia, no doubt out of the proceeds of our part of the loan. Why such mystery should be maintained is not difficult to understand in the present disturbed state of that country, but it may be that the gold is not going further than Berlin, if it really does go. We shall lose it, any way, that is the main thing. Meanwhile all continental exchanges are moving further against London and the New York sight rate is also down to a figure which again makes it a plausible guess that American bankers may compete for the metal next week.

All this should prevent our short credit market from falling into a condition of unobservant optimism. The mere fact that seven-day money has mostly been obtained at 2¼ per cent. this week, and that even on Wednesday, when the Stock Exchange settlement payments had to be met it did not rise above 2½ per cent. makes it no more probable that money will continue easy for any length of time. Call loans have fluctuated between 2 and 3 per cent. or more, but closed to-night at 2 to 2¼ per cent., with just enough credit to go round, but no surplus. Next week there will be a variety of transitory demands on banking credit represented by the heavy railway dividends, which begin to-morrow with about £1,300,000 paid out by the North-Eastern. Next Wednesday upwards of £4,000,000 will be disbursed on account of the North-Western with £1,997,000, the Great Western whose total is £1,372,000, and the Great Northern which pays away £688,000, and the collection of that money will help to keep the market bare while its dispersal does not immediately bring relief. We therefore expect rates to be rather jerky next week with a tendency to firmness, and if the Bank of England again fails to get the gold, advances for more than a week will almost certainly become dearer. The India Council is getting 2¾ per cent. now for renewals and fresh loans for about a month.

It is this view of the future which continues to assist bill brokers in maintaining their rates. They have never quite let the three months' bank bill rate down to 3 per cent. Occasionally a transaction may have taken place at that figure, but, generally speaking, 3 1/16 per cent. has been the minimum, with a constant effort to raise it to 3⅛ per cent. Some days more business has been done at the higher quotation than others, but it has never quite become the lowest rate current. This morning the feeling was that it should be 3⅛ per cent., and some of the discount houses claim to have done considerable business at the figure, but the market was none the less 3 1/16 to 3⅛ per cent., in spite of the good supply of bills, and with exchanges adverse in tendency there is no valid reason for letting quotations down.

Many people think that the Bank return points to greater ease, and the reserve is certainly better by £1,147,000 at £25,882,000, coin and bullion having risen by £721,000 during the Bank week, thanks to £440,000 in from abroad and some return of coin from the circulation. The open market, however, is none the richer for this money. It has all gone on to the public deposits, the increase in which is £1,051,000. In fact, the market is slightly poorer, other deposits being down £135,000 owing to the repayment of £174,000, the amount of the decrease in other securities. Until the Government releases money or the Bank piles up an additional amount in gold, we do not see how the open market is to become rich enough to maintain low rates throughout the autumn. The Government, however, is not likely to reduce its balances very far, and next Tuesday it will draw £1,050,000 away from the market on Irish Land stock so that the end of the month may again see rates firm and the market driven to lean on the Bank. It had, by the way, to go to the Bank for a little money on Wednesday to help it through the Stock Exchange settlement, so narrow is the margin between enough and not quite enough.

Silver.

The silver market has been firm throughout the week, with a steady advance in prices. It has been perceptibly helped by the announcement of the American Government that it will buy 100,000 ozs. weekly for subsidiary coinage purposes, but the main support has come from the Indian bazaars and the Indian Government. On Saturday prices for spot and two months were quoted at 30 5/16d. per oz. and 30¼d. per oz., and to-night they close at 30 9/16d. and 30½d. per oz., a reaction from the highest quotations of 30⅝d. and 30 9/16d. respectively on Thursday. Tenders for the Rs. 70,00,000 Council drafts on India on Wednesday amounted to Rs. 5,70,50,000 in bills and Rs. 78,00,000 in telegraphic transfers. Of these Rs. 60,06,000 were accepted in bills and Rs. 9,94,000 in transfers, applications at 1s. 4 1-32d. and 1s. 4 1/16d. receiving about 12 per cent. Next week the amount to be offered is Rs. 80,00,000.

Stock Market Notes and Comments.

Seldom has the outlook on the Stock Exchange been more difficult to estimate than at present. Apparently no complications exist in the market itself. We have had warnings, however, that beneath the surface plenty of unsoundness may lurk, and as long as we know that unwieldy masses of unplaced stocks, not a few of them in the first rank, weigh upon the credit resources of the City, we must continue to be on the watch for unpleasant surprises. Meantime prices are being raised in all directions, and at last an upward movement of some strength has begun in Home Railway stocks. It was the one quarter which has for some time seemed to us likely to offer scope for those who buy in anticipation of a rise, yet we hope the buying will never become heedless or indiscriminate just because of the hidden weaknesses with which the market is beset. Let those who contemplate buying Home Railway stocks for an advance calculate first the rate of interest yielded at current prices on the basis of the last two dividends. To this they may add some estimate of further improvement in the current half-year, because unless business takes a sudden turn for the worse, which we see no indications of at present, the end of the year should again see substantial increases in the gross receipts, at least 50 per cent. of which ought on the average to be available for distribution amongst the stockholders on the basis of recent experience. Something like economy indeed is discernible in the working of many of our railways for the past half-year, and slight though the change may be, it gives encouragement to those who estimate for better dividends at the end of the time. And gross receipts expand well. Already the North-Western Company has added £60,000, the North-Eastern £86,459, the Great Western £48,400, the Midland £40,629, and the Great Central £27,854, to the estimated gross income compared in each instance with the figures of the corresponding half of last year. This growth has but to continue and the holders of all Home Railway stocks will, barring untoward incidents, be certain of better dividends for at least the current half-year, and possibly enough for a considerable further period lying ahead. Such being the probability, we cannot discourage those who are buying these stocks now. On the contrary, as a market operation the prospects are good.

We are not sure though that the Scotch railway stocks should be included in this estimate of chances in the near future. They have already had something of a rise, and it seems to us to have discounted any benefits likely to accrue, at any rate from the increased earnings of the past half-year. Possibly enough the real increase in receipts may turn out to be greater than the published estimates show, but we can only go on the known figures, and these do not indicate any remarkable increase in the dividends. When we remember that it takes upwards of £20,000 to pay ¼ per cent. per annum more on the ordinary stock of the Caledonian Railway and that the published increase of the company for the half-year aggregated only about £44,000, there does not appear to be much prospect of a substantial increase in the dividend its Board can distribute. The North British shows up better with an increase of about £58,000 in the public receipts, and as the deferred ordinary stock of the company requires only about £15,000 to pay ¼ per cent. per annum more, there seems a probability of an increase of ½ per cent. per annum there. The Glasgow and South-Western, familiarly known in the market as the "Ayrshire" Company, may also pay something like ½ per cent. per annum more, seeing that its gross increase is about £26,000, and that less than £8,000 is required to give its ordinary stock an extra ¼ per cent. per annum. Any hope, however, of buyers of the stocks of these companies now must rest in the main upon the prospects of the current half-year. These are good on the whole, but not thus far indicative of such a further increase as would put the companies in a position to give important additions to the sums distributed in dividends to their shareholders at the end of their current half-year. If, therefore, the rise in Scotch railway stocks is carried much further we incline to the opinion that holders should sell rather than add to their commitments.

Most other sections of the Stock Exchange are still in that condition which the French Bourse reporters describe as "calm." Nothing particular happens in them, and business is of a scattered, spasmodic, and altogether miscellaneous description. In Foreign Government securities scarcely any business outside a little arbitrage goes on from one week's end to the other, and there is wonderfully little doing in Foreign Railway stocks or in any of the trustee classes of securities embraced in the Consol market. Miscellaneous securities are also very much left out in the cold. There has been a little activity in the stocks of the various London dock com-

panies, but it is purely speculative, based upon hints and surmises regarding the scope and tenor of the Port of London Bill to be introduced into Parliament next Session. We deprecate any active gambling on a basis so conjectural, and although we fully believe that all parties should benefit by the consolidation of the dock interests in London under one more or less fully representative governing body, we cannot see that any equitable arrangement of the various interests thus brought under one authority should add much to the value of existing stocks. Another point at which there is a fair amount of gambling springing up is Hudson's Bay shares. Buying goes on because of the glowing accounts of harvest prospects in the Canadian North-West and the still more brilliant statistics about the rapid increase of population, but the price of the shares seems to us quite high enough for those at least who buy with the intention of keeping what they have bought. There will be downs as well as ups in the Canadian North-West, and nothing will convince us that a territory, however rich its soil may be, which is frost-bound for half the year, is going to be uninterruptedly prosperous and a place of abode for the millions of inhabitants vividly fancy-fed immigration agents see in the near future.

Most puzzling of all is the upward movement in the Kaffir Circus. It may be described as Sir Julian Wernher's "boomlet," for it was his speech at the meeting of the Central Mining Corporation which gave the signal to the tipsters and punters to begin operations. We quite grant, and have always done so, that if the management of the mining industry of the Transvaal were consolidated and economies of all kinds rigorously introduced, were the highest scientific skill and the most perfect instruments available applied to the extraction of the gold, the business would probably yield a much larger nett income to shareholders than it does now. We, however, see little indication of either economy or science, and even were the best efforts of all mine controllers directed to the thriftiest possible methods of extraction, were all excrecencies of princely salaries and directors' fees, of secret and other commissions lopped off, the benefit would only accrue to a small number of mines. The great bulk of the shares dealt in and whose prices are now being raised by the operations of the gambler are not worth their present prices, and we cannot see what is to make them so. At the same time we are not going to cry wolf just yet, because it is a matter for congratulation that prices are moving upwards, and if the speculators and finance agencies, the joint-stock and other bucket shops, by dint of diligent touting, do succeed in further considerably lifting the prices of over-capitalised, non-revenue-yielding or otherwise more or less worthless properties we shall make no objection. An opportunity will thereby be given at last for those who have suffered these many years back by injudicious investment in such "securities" to escape. That should be the one aim of every man of sense. The glamour of profit from market operations should be rigorously excluded from the mind, and a cold determination adhered to to be done with the whole snare on the first opportunity.

We have nothing more to say this week about the Yankee Railroad market, except to congratulate the British public on keeping clear of it. Brokers of the more reliable class say that their clients are doing nothing in "Yanks," and these clients are showing wisdom in thus remaining passive. Let the market alone in the hands of the professionals, kerbstone punters, financiers who live by and upon credit, and whose engagements every now and again threaten them with destruction, because there must be a recoil where everything is so inflated and where speculation is so regardless of facts. Gold is great, but it will not sustain all the insanities of the never-resting plotters, who busy themselves with the manufacture of paper wealth out of combines, absorptions, extensions, monopolies, and the printing Press.

The Week's Stock Markets.

The Stock Exchange has managed to keep its little boom going fairly well. Business has certainly shown signs of broadening out, and if the pace is not made too fast the recovery from the recent severe depression may be sustained without much trouble. The danger is that rising prices usually bring a lot of unhealthy speculation in their train, meaning that all the good which results from a genuine investment demand is frequently neutralised. The gilt-edged market has been rather dull which is not a good sign, but the fact that the Bank of England did not secure the gold offering in the open market at the beginning of the week was probably responsible for the easier tendency. Home Railways, which usually follow Consols, this time shook themselves free from the influence of the premier security and went ahead in good style. Foreign Railways were another particularly strong spot, and various Miscellaneous securities attracted more attention than they have done for months, almost years past. The fact that the Kaffir Circus has kept up its end was partly responsible for the general cheerfulness, because the frightful losses sustained there have been not a little responsible for the recent weakness all round the House. Interest in the Yankee section was centred on sundry dividends, which unhappily were not announced much to the disappointment of the "bulls." The adjustment of one of the traditionally evil 19-day accounts was carried through during the week, but there was nothing to complain of this time in the appearance of the making-up list, and although one smaller failure occurred on Monday the settlement went through without real difficulty. The joint-stock banks charged 3½ per cent. for fortnightly loans, and outside the rate was generally 3¾ per cent., although it occasionally touched 4 per cent. Consols opened easier, and after showing very small fluctuations were practically unaltered at the end. Other British Funds were dull as a rule, and while Bank of Ireland stock rose 2 Bank of England stock was ½ down, after being 1 better. Home County and Corporation stocks were steady, and a considerable number of Colonial Inscribed and other stocks again improved, including sundry Cape and Transvaal issues. These securities were carried over at 3½-4½ per cent.

There was not a large business passing in the Foreign bond market, and when the Continental bourses were closed for assumption day dealing became very narrow. The market did not have any striking character, and movements were usually confined within narrow limits. Russian bonds opened weak on the terrible news still coming from that country, and the new 5 per cent. loan quickly fell to 10 discount. A steady recovery to 9 discount followed in which the older issues participated, but the quotations showed symptoms of dulness again before the end. The reported illness of the Sultan did not appreciably affect Turkish bonds one way or the other, and after being a little dull the Continental group braced up, so that early losses in Spanish, Greeks and Turkish were recovered. Italians hardened. Argentines kept steady on the figures of the budget, and Cedulas were pushed higher by speculators. Peruvians improved on rumours that negotiations with the Government, which must have a loan, would soon be resumed, and Brazilians and Chilians were moderately good. Uruguays were dull, while Cuban 5 per cent. enjoyed a moderate rise. Colombian and Venezuelan rose slightly in the Central American section. Japanese were quiet throughout, but Chinese were sold a little from Berlin and showed some weakness. All the leading South American stocks were continued at 3-5 per cent., with about ⅛ per cent. more charged on Central Americans and Peruvian ordinary and preference. Chinese and most Japanese likewise cost 3-5 per cent. to carry over, but Japanese, 1902, were done at 2-4 per cent., and the 4 per cent. sterling at 1-3 per cent. On Russian, 1889, the rate was 1-2 per cent., and on the 5 per cent. about 5-5½ per cent., while Spanish were taken in at 3-4 per cent. Turkish were still scarce, and

again commanded a back. Argentine, Brazilians and Chilians nearly all made up better, and where substantial declines occurred dividend deductions were responsible. Greeks were 1¼ to 1⅝ higher, Japanese rose ¼ to 3, Russians 1⅜ to 3, Spanish 1¼, Turkish 1⅞ and Venezuelan and French Rentes 1. Some Chinese issues were slightly lower, Costa Ricas dropped 1 and Uruguay 3½ to 1¼.

A series of excellent advances were scored by leading Home Railway stocks, and the buying appeared to be of a fairly good character. The public has become perhaps a little impressed by the recent good dividend declarations and by the fact that the magnificent position of the country's trade gives promise of favourable results for the current half-year. Prices, too, are still quite low compared with figures ruling earlier in the year, and jobbers are apparently not too well supplied with stock, despite the severe decline which went on for so long. This is apparently due to reluctance to overload their books when the outlook seemed so dark, prices after being marked substantially lower on the appearance of a seller without any stock changing hands. The market opened with a fine show of strength, and on Monday advances ranging from ¼ to 3 were recorded. Districts alone dragged, but that is not to be wondered at after the issue of such a dismal report. The fares charged by the company are to be revised, and at the half-yearly meeting on Thursday Sir George Gibb, the chairman of the company, gave examples of the projected increases. We are all glad to have low fares, but cannot expect railways to be run at a loss, and in the case of the District the reduction undoubtedly seemed to be carried rather too far. Scotch stocks were still sustained by dividend anticipations. After the initial outburst there was a little hesitation, and the pace slackened somewhat, some prices actually going back a fraction, but the publication of good traffic figures resulted in another advance. Even Districts picked up, but towards the close the temptation to take profits could not be resisted, and final figures are well under the best. Underground Electric notes were particularly flat. Contango rates were not much changed in the majority of cases, the general run on leading stocks being 4½-5½ and occasionally 6 per cent., but the charge for continuing North-Western was distinctly stiff at about 7 per cent. Apart from a decline of 1½ in Districts and in Underground Electric notes, making-up prices for all leading stocks were higher, Brighton "A" taking the lead with a gain of 6¼. South-Eastern ordinary made up 6 better, and the preferred and deferred each showed a rise of 5½. City and South London, Great Eastern, and North-Eastern improved 3½, North-Western and Great Central preferred put on 3, and Caledonian ordinary and deferred, Great Northern deferred and "A," Great Western, South-Western deferred, and Metropolitan all advanced 2½. Other gains extended from ⅜ to 2⅛, and the list was quite pleasant to behold.

The Yankee market has been comparatively quiet and subdued. With no help from a prudent public, the magnates and professionals have not exerted themselves over much, knowing the uselessness of it. Now and then, however, the dulness has been enlivened by the usual volatile spasms, just as New York has willed, prices being jerked up one moment and pulled back the next. In the last day or two great attention, mainly professional, has been directed to Southern Pacifics and Union Pacifics—two allied companies—on anticipations of the dividend announcements, Unions to be put, it is said, on a 7 per cent. basis, and at one time the latter touched 165, the highest ever reached. But quotations slipped back on the announcement of the postponement of the dividends, though both are several dollars better on the week. According to the weekly return of the New York Associated Banks large sums were lost in cash, which fell as much as $6,610,000, with a decline of $2,200,000 in legal tenders, which was partly off-set by a diminution of $13,700,000 in the deposits. The loss in the surplus reserve is $5,385,000 at $8,275,000. Pennsylvanias have been helped by "short" covering, against whom the stock has been bid up, whilst a fair amount of support has been given to Readings. A denial was given to the rumour that the Chicago North-Western is preparing a new issue of stock, whilst the Chicago Milwaukee announces the issue of $25,000,000 new Common stock at par. This was authorised in July, and is equivalent to 23 per cent. of the present holdings. It was followed by a fall, whilst Chicago North-Western was depressed by the revival of the report of a proposed $100,000,000 increase.

Contango rates on American Railroad stocks were generally easy. From 4 to 4½ per cent. was the rate at which loans could be had in the early part of the day, and these eased off, until at the end 4 per cent. was the top figure. On Canadian Railway stocks, too, money was comparatively cheap. On the fortnight practically all the leading stocks were higher, ranging from $⅛ to over $7 dollars in such things as Southern Pacifics and $11 in Union Pacifics, in which there has been considerable excitement since.

The market has been considerably disappointed over the Canadian Pacific dividend, for it confidently expected a fair bonus, of 2 per cent. as a minimum. Instead of being so generous the directors announced the customary distribution of 3 per cent., at the rate of 6 per cent. per annum, carrying forward a huge surplus. In their chagrin, speculators promptly banged the price, after so diligently and successfully hoisting it to dizzy heights, and much energy has been spent in giving vent to annoyance and vituperation. The earnings for the twelve months were, of course, colossal, while the expenditure was creditably moderate, and no less than $8,258,082 is carried forward, which raises the accumulated surplus to $28,178,980. In contrast with the weakness in Canpacs, Grand Trunk stocks have exhibited consistent firmness, as though they were benefiting from the disappointment felt elsewhere.

One of the strongest and busiest sections was that for Foreign Railways. Speculation broke out with considerable force in the Argentine group, and prices were carried up at a good rate, both the Argentine Budget figures and the excellent traffic returns acting as stimulants. There was revived talk of an amalgamation between the Argentine Great Western and Buenos Ayres and Pacific Companies, the former to be guaranteed a 6 per cent. dividend. Mexican Railways of all kinds were also strong, and a further sharp recovery took place in the railway bonds of the Guayaquil and Quito Railway. Colombian Railway bonds scored a moderate advance and Antofagastas were rushed up on dividend rumours. Anticipations run high, and on the published traffics dealers are looking for anything between 15 and 20 per cent. on the deferred. Arica and Tacna shares rose sharply to 5 on a revival of the hopes that this line will after all be required in connection with the Chilian Bolivian Railway project. San Paulo, United of Havana, Leopoldinas, Paraguays, and other prominent things participated in the upward rush, and altogether the market had a fine time. South American Railways were carried over at 4¾-5¼ per cent., and on Mexicans the rates were 4½ per cent. for the first preference, 5½ per cent. for the seconds and 6½ per cent. for the ordinary. "Bulls" had a pretty good time during the account, as Antofagasta ordinary made up 9½ better, Paraguay debentures rose 8, San Paulo 5 and Guayaquil and Quito bonds 4. In the Argentine list the rises were from ⅛ to 2¾, Argentine Great Western ordinary, Buenos Ayres and Pacific, Buenos Ayres and Rosario ordinary and deferred, and Buenos Ayres Great Southern preference doing best. Nitrates were up ⅛ to 1¼ and Interoceanic 7 per cent. debentures 2½.

Miscellaneous markets were more active than we can remember for some time. A long string of advances took place amongst bank shares, and dock stocks continued their upward movement in striking fashion. Dealers are said to be very short of stock, and as the inquiry was quite good prices rose rapidly. Aerated

Breads were firm, the supply of shares being small, and Bell's Asbestos still went up. Sharp fluctuations took place in Associated Cements, and Argyll Motor shares were inclined to ease off. Textiles were in good demand, and it is said that all the companies are doing extremely well. Coats, in particular, is expected to make a brilliant display, and we hear that the Russian business has been affected much less than might have been expected. The Calico Printers dividend of 4 per cent. did not fulfil the most sanguine expectations, some dealers having looked for 5 per cent., and State bulls realised. Eastman Kodak common shares went up again, taking the preferred with them to a smaller extent. Meat shares were pretty good, and caterers steady. Harrod's and Home and Colonial Stores were bought a little, and Nitrates were still disposed to advance. Mazawattee preference were better apparently on the declaration of the usual interim dividend. Hudson's Bays had a good rise, and quite a large business took place in Pekin Syndicates and Shansi shares at steadily rising prices, although the close was below the best. Other land shares were good, and trusts, gas, and insurance securities went ahead on investment buying. The iron and steel section was one of the busiest, and a large number of orders for well-known shares came from the provinces. The result was a steady rise in prices, and the close was round about the highest figures touched. Shipping shares firmed up, including Furness Withy, and in the telegraph section Anglo "A" and Eastern Telegraph were still good. Buenos Ayres and Belgrano Tramways sharply improved, and London General Omnibus stock put on £1, but London Motor Omnibus shares closed easier. Carry-over rates were much as usual in this section, allowing for the shorter duration of the account, and making-up prices were mostly better. Aerated Bread rose 9/16, Cement ordinary and preferred ¼ and ¼, Bell's Asbestos 3/16, B.E.T. preference ⅜, Gordon Hotels preference ⅜ and the ordinary ½. General Nitrates 1/16 to ¾, and Mazawattee Tea preference 5/16. Pease and Partners were ⅜ better, Watney, Combe issues were up 2 to 6½, Hudson's Bays rose 2¼, Pekin Syndicate 1⅞, the deferred 10, and Shansi shares 2s. On the other hand, Apollinaris fell 3/16, D. H. Evans 3/16, Geo. Newnes 6/1½, Westminster Electric ⅝, Allsopp 4 per cent. debenture stock 2, and National Telephone preferred and deferred 3¼ and 3 due to dividend deductions.

Stock markets continue excellent in tone, and they had quite a sensation to-day in the sudden rise of Union and Southern Pacific shares, thanks to the dividend announcements. The directors of the Union Pacific Company have declared the usual 3 per cent. dividend on the half-year with a 2 per cent. bonus, being at the rate of 10 per cent. per annum, assuming a bonus at the same rate to be given six months hence. The Southern Pacific is to distribute its first dividend, and as the rate, 5 per cent., was 1 per cent. more than the market had reckoned on the shares went rushing up, but not so fast as Union Pacifics, which were lifted $9 higher in a very short time. From the highest prices touched there was some reaction, but not very much. The Yankee market accordingly seethed with excitement all the afternoon, and prices were lifted in all directions.

Then the Kaffir market, too, was active, and business therein unquestionably broadens out. Some brokers tell us that they have done as much this month in these shares as in all the earlier part of the year. At first the waiting multitude sells, glad to be out of it, but as prices go on rising they come in to buy again, and there is every probability that business will spread and assume large proportions as the holidays draw to a close if the rise can be maintained. Paris was not selling to-day!

Rio Tinto shares were weaker on continued profit-taking by Paris and Brussels, but the market is by no means a bad one, and the buying here has been vigorous. In Home Railway securities trading continues narrow, and Consols have not been very elastic either; but there has been a bigger business in Argentine Railway stocks, and to-day speculative buying was directed with noticeable force on Peruvian Corporation stocks—why, nobody seemed to know. Grand Trunks were good, too, on a fine traffic increase. Altogether, the Stock Exchange leaves off for its Saturday holiday in much better heart than we have seen it this long while back.

Critical Index To New Investments.

Block Light, Limited.

This company has a capital of £110,000, divided into 50,000 preference and 60,000 ordinary shares of £1 each. Of these 25,000 preference shares have already been subscribed by the directors and their friends, and the board would like to place another 20,000. They are entitled to a 7 per cent. cumulative dividend, after which 7 per cent. is to go to the ordinary shares, and of the balance one-half will be credited to a reserve until it equals the outstanding preference capital, the remainder being divided equally between the two classes of shares. The company appears to have been formed in March of the present year to acquire and work certain inventions in respect of the Block Incandescent Light and for other purposes relating to lighting, cooking and heating. It is said that the demand for the Block Light is steadily increasing, and a profit of £40,000 a year is not considered at all unreasonable. Unfulfilled orders should produce £20,448 gross, we are told, so the directors ought not to have much trouble in getting the extra £20,000 privately subscribed. It will be plenty of time to come to the public when actual instead of estimated profits can be produced.

British Guiana 4 per cent. Immigration Loan.

This is a 4 per cent. loan offered on the tender system, with the minimum price fixed at par, and the Crown Agents for the Colonies, acting on behalf of the Consolidated Immigration Loan Commissioners of British Guiana, announce that applications will be received up to 12.30 p.m. on Monday, August 20. The loan is secured on all the colonial revenues of British Guiana not specially appropriated by any ordinance in force prior to September 2, 1864, and will begin to bear interest from August 15. Principal is repayable at par in August, 1916, so that the loan is of very short duration, a fact which may deter some investors from applying. It ought to be possible to get any quantity required at the minimum price.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c—**Rise:** Bank of England Stk. 2, to 282-286, Bank of Ireland Stk. 2, to 331-336. **Fall:** 2¾ p.c. Annuities ¼, to 93-93⅜, 2½ p.c. WATERWORKS.—Rise: Tarapaca ½, to 10¾-11¼.

MINING NEWS AND NOTES.

**** Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The advance in South African shares has been maintained during the week with admirable persistence and for a considerably longer period than we have witnessed at any time since the war ended. This, of course, comes of the determination of the professional players, assisted by the magnates, to keep it going as long as they possibly can, without exhaustion, in the hope that outsiders will be attracted. It is fully recognised that a tremendous effort is needed to tempt the public, not so much because many thousands have been bled and ruined, but because they have lost all confidence in market men and the bosses. They want no more Kaffir shares; all they desire is to get rid of those they have with the least possible loss, hence the greater readiness to sell than to buy. But the positions of the professionals and of the magnates are almost as desperate. Gamblers must live somehow, and on some people, whilst the bosses cannot multiply their fortunes without public money. More capital is needed to the extent of millions, and how can they hope to get it unless they can generate renewed confidence in the minds of the public? There is nothing now to go for, nothing political, that is, except the pockets of the public, and it is not so easy to exploit these as it was before the Boer war. Hence the feverish energy with which the game has been sustained in the midst of summer, when the ordinary man has scarcely strength enough to wipe his perspiring brow, and when thoughts dwell on holidays and rest. Still, the rise is welcome, for all that, not only because it is preferable to dark depression, but because it gives an opportunity to so many tired holders to reduce their losses. What a relief it must be to them! So happy are the speculators that they are already talking of the coming boom, and there is some justification for the talk. "The public are sure to come in after the holidays," they cry. They may and they may not. It remains to be seen. They are not in the market at the moment, except in half-dozens, and the business is purely professional and "shop," helped by "bear" covering.

The following dividend has been declared:—

	Dividend.	Issued Capital.	Amount.	Yield.	Allowing for Amortization, 6 Years.
	%	£	£	%	%
Salisbury....	10 ..	100,000 ..	10,000 ..	20 ..	5

There have been the usual reactions in prices from time to time as the gamblers have taken their profits, but quotations have generally quickly recovered and most shares are higher on the week's fluctuations.

Diamond shares have also been firm, Premier deferred again being the strongest and most conspicuous, with a fairly good rise, at first, part of which was lost at the end.

There have been signs of exhaustion in the Rhodesian market, as though the players there have gone the pace too breathlessly. The ardour of a week ago has calmed down considerably and the market is now quiet and unexcited. Tanganyikas have fluctuated more than any other share in the group, as the insiders have paid more attention to these. Rumour declares that Mr. Rockefeller and the Standard Oil group are finding the money for the completion of the Lobito Bay railway, but the officials of the company neither deny nor confirm the report. This is presumed to be the basis of the recently developed strength. The Rhodesian output for July is be-trumpeted as a "record." So it is so far as the aggregate goes, but, as we show elsewhere, there is a big fall measured by the daily average.

West Africans and Egyptians are as heavily asleep as ever, and there has been very little movement in the Australasian section. Great Fingalls have shown a tendency to improve, and are slightly higher, but other leading shares have been consistently dull.

Changes amongst copper shares have likewise been erratic, with the exception of Rio Tintos, which have gained substantially on French and English buying.

Indian shares have been notably weak, particularly Mysores, which cannot be due solely to the slight decline in the quality of the ore. It has, in fact, been suggested in more than one quarter that Sir Charles Tennant's holdings are being gradually realised, and there may be something in it.

African and European Investment Company.—The consulting engineer reports that he has now completed the sampling of the workings on the company's farm, Snyman's Drift. In the main adit 42 samples were taken at regular intervals of 5 ft., starting from the mouth of the adit, the results showing 37.8 dwts. over 13.9 ins. From the winze put down in this adit 14 samples have been taken, which average 21.7 dwts. over 10.2

ins., the total length sampled being 65 ft. He considers the results most encouraging, the reef being promising in appearance and opening up well. It is proposed to press on with the development and open up the reef more extensively before considering the question of treatment.

Red Hill (Westralia) Gold Mines.—The directors publish the serious news that a profitable output cannot be kept up much longer unless there should be a great improvement in the bottom of the mine. Evidently they are far from hopeful that this improvement is probable, for they have purchased for the sum of £2,000 a lease known as the Sons of Erin North Extended. The manager's report on this property states that, assuming the sampling to be correct, there should be about 2,250 tons, of an average value of 22 dwts. to the ton, or £8,650 above the 50 ft. level. This is arrived at by taking the length at 600 ft. by 50 ft. deep by 1 ft. wide. To obtain this result, however, an expenditure of £7,650 would be required, including the purchase price of £2,000. So the directors rejoice that they have secured a "very cheap property," but it may turn out to be a very dear one in the long run. They are fairly confident that the purchase price is in it down to 50 ft., but they admit that the mine cannot be considered more than a surface show, "although development work may prove it to be a very valuable property." This remains to be seen, of course, but owners are not ready to part with valuable properties for nothing, and if they felt there was plenty of gold down below they would ask a much higher price for it. So cheapness is not the most tempting recommendation. The Red Hill has had anything but a successful career, and we can hardly believe this new property will bring the change in its fortunes sought for. It was reconstructed as recently as 1902, and the old mine, as we see, is practically exhausted.

Great Boulder Perseverance Gold Mining Company.—In sending out the figures of the July return, the directors inform the shareholders that the latest mail news regarding the East Boundary lode, in respect to which there has been so much anxiety, is more encouraging. The seam of telluride which was met with in cross-cutting from the Associated company's boundary appeared to be of only local extent, when breaking out the chamber preparatory to sinking the winze from the 1,177 ft. level to the 1,300 ft. level. During June, however, the extension of this telluride seam was picked up revealing values ranging from 6 dwts. to 7½ ozs. per ton, and yielded 200 tons of high grade ore from stoping operations, averaging 5 ozs. to the ton. How far this seam extends has not yet been determined, but it is hoped that it may be found on the 1,300 ft. level, and an effort is being made to locate the seam at that level by diamond drill.

Lyell Comstock Consolidated Copper Company.—The accounts are old, and cover quite a lengthy period—from October 31, 1903, to December, 1905, whilst the Australian accounts are brought up to September, 1905. There is no satisfaction to be got from them, for the company is in very poor circumstances. The income was a mere £363, including £80 received from the insurance company for damage by fire, and £30 from the sale of plant. As the expenditure amounted to £3,003, the debit balance grew from £29,891 to £32,531, and it is likely to keep on mounting for some time to come. As the available funds were all exhausted at the date of the balance-sheet, the directors made an issue of £20,000 in 6 per cent. debentures, and should all this be subscribed it will enable the company to carry on for a while. The negotiations with the Mount Lyell Mining and Railway Company terminated fruitlessly, so the directors say the company must rely upon its own resources for the treatment of its ore. Messrs. Alexander Hill and Stewart have been called in to advise upon the best system of treatment, and they suggest that before spending further money on development 10 tons of representative ore be sent to England for experimental treatment. This suggestion has been acted upon, and in due time the directors will report the result to the shareholders, who will probably be asked to subscribe further capital.

Weardale Lead Company.—As the effect largely of the better price of lead, the accounts of this company for the past 12 months show a considerable improvement. At the same time the output was greater, 3,255 tons of ore being raised, 3,264 tons dressed, and 3,192 tons smelted, for a production of 2,370 tons of pig lead, which realised £15 12s. 1d. per ton, compared with £12 8s. 4d. in the preceding 12 months. The gross revenue amounted to £47,254, against £28,131, and the nett profit advanced from £1,747 to £15,641. Add £4,034 brought in, and the available surplus is £19,676. Out of this three interim dividends of 3d. per share have already been paid, and are supplemented by a final payment of 9d. per share, making 10 per cent. for the year, against 3d. for 1904-5. The directors have also resolved to pay a further 2s. per share, but the shareholders will not have the joy of handling this, for a call of a similar amount is to be made on the unissued shares. The total of the call will be £9,792, and there would be little to complain of if the directors needed the money. But evidently they are not in immediate need of it, for they intend to keep it in hand for future capital requirements. So there appears to be little or no justification for the call, and there is likely to be much grumbling amongst the shareholders. When times are good and large profits are earned shareholders are entitled to them, seeing that they suffer when times are bad. If the directors wish to appropriate so much of the profits for unforeseen requirements, why cannot they utilise it by making it the nucleus of a reserve fund? Surely this would be a wiser policy. And the money could be invested in first-class securities. The balance carried foward is £2,540. Mine prospects still look promising, and if only the lead market holds up good profits will be earned in the current year. As the result of an application to the Stock Exchange, the shares are now quoted in the Official List. The financial position of the company leaves little or nothing to be desired, cash totalling £10,281, but the balance-sheet would be improved by the addition of a reserve fund.

Durham Prospect Gold Mines.—This company was registered in the beginning of 1905, and the report and accounts cover a period of fourteen months to the end of March. As, however, work did not commence until the month of April, the revenue comes from less than twelve months' operations. The gold won realised £14,792, upon which there was a nett profit of £3,652, carried forward. It is urged by the directors that when starting a new mill at least one month is required to set the plates and get everything in smooth working order, and that owing to the scarcity of water the mill from July to December worked short time, thus diminishing the profits. On the other hand, the profits anticipated from the New Prospect mine have not been realised, the difficulty of getting the ore from that mine to the battery being more serious than was foreseen. For the first three months of the current year the returns show a substantial improvement and the company may eventually earn dividends.

Djebel Clarra Mining Company.—This company's dressing plant was started in the month of March, 1905, and though there were many stoppages during the remainder of the year the accounts show a profit of £858, from which £79 is deducted for the purpose of writing down preliminary expenses, leaving £779, which is carried forward. The debit of £1,973 appearing in the previous balance-sheet has been placed to mine development, which explains how there is now a credit balance. In the month of October the capital was increased to £85,000 by the creation of 25,000 new £1 shares, of which 14,000 have been issued and the proceeds applied in part redemption of £9,800 second mortgage debentures. Also £1,826 of first mortgage debenture debt has been redeemed, leaving £8,174 outstanding. The policy of the directors has been to pursue the development of the mine rather than to raise a large tonnage of mineral.

Siberian Proprietary Mines.—An extraordinary general meeting of this company is convened for the 20th inst. for the purpose of considering a proposed contract of sale between it and the Troitzk Goldfields, Limited. The secretary explains that the formation of the latter concern results from the acquisition by the Siberian Proprietary of an option to purchase the Preobragensk and Alexandrovsk Gold Mines, situate in the Orenburg Province of South-Eastern European Russia. The capital of the company will be £600,000, and the consideration 500,000 shares of £1 each, 14s paid up. This arrangement will ensure to the new company a cash provision of £150,000 for its various purposes, and the directors anticipate that substantial results will be forthcoming at an early date.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Furness Railway.

In the June half-year the gross revenue was £276,256, or an increase of £32,434 against a growth in expenditure of £9,434 at £140,227, leaving the nett balance better by £23,001 at £136,029. The company's fortunes are largely bound up with the prosperity of the iron and steel trades, and as these have shown distinct improvement during the half-year business has benefited accordingly. The mineral traffic went up over 300,000 tons, meaning a gain in revenue of £19,461, and although the quantity of merchandise handled was a trifle less it must have been better paying traffic or the haul must have been larger because the receipts were up £10,767. Smaller improvements were shown by passengers, including season tickets, live stock, steamers and ferry, and carriage and wagon mileage and demurrage, but special and miscellaneous receipts gave a little less. There was a sharp advance of £5,757 in the expenditure on maintenance of way, and locomotive power, again including £3,000 for engine renewals, cost nearly £3,000 more. Traffic expenses were up £1,125, and general charges £1,733, but there was a decline of £1,786 under carriage and wagon repairs, and another of £623 on law charges. Rates and taxes showed a small saving, which is worth noting in face of the universal complaint against municipal extravagance, because this is not the only railway company which has been favoured with a reduction on account of the past half-year. What some people seem to forget in connection with railway rates and taxes is that business is continually growing and that new stations and premises for new lines and extensions inevitably mean heavier taxes. In addition to the increase in nett revenue the company brought forward a rather larger sum of £4,688, so that altogether the available balance is £140,717. Debenture interest was the same, but general interest was only £113, compared with £2,433, so that although £500 more at £2,000 is transferred to the steamers' depreciation fund the fixed charges drew off only £48,043, against £49,863, leaving £92,674 available for dividend, an improvement of £25,417. Preference dividends reach £57,597, and the directors are able to give the ordinary stockholders nearly £20,000 more at £29,722, meaning a payment of 2¼ against ¾ per cent. per

annum, with an increase in the carry forward from £1,293 to £5,354. Capital expenditure in the half-year was small at £11,907, comparing with £11,907 authorised, and the directors say they have only considered it necessary at present to order 60 out of the 100 15-ton open goods wagons sanctioned in the previous report. Of these 32 are still under construction in the company's shops, and will be completed in the course of the current half-year. During this period the capital outlay is estimated at £32,266, and the existing debit is only £15,332. A matter of some importance is that an agreement has been entered into with Vickers, Sons, and Maxim for the widening of the Buccleuch Dock Bridge Passage Way, in order to enable war vessels and other large ships of a beam up to 95 ft. to be built at Barrow. Vickers have agreed to bear one-half of the cost of carrying out the work and to relieve the company from all liability in excess of £35,000.

Dublin, Wicklow, and Wexford Railway.

This company's gross revenue for the six months ended June 30 was £130,439, showing a decrease of £592, while the working expenditure went up by £2,854 to £89,498, leaving the nett revenue down by £3,446 at £40,941. With £414 brought in the sum for disposal is £41,355, against £44,986, but thanks to a decline of £3,000 to £15,000 in the rent of the leased Dublin and Kingstown line and an absence of any contribution to reserve, against £500, the balance available for dividend is £6,976 compared with £6,872. The directors therefore provide the dividend on the 1857 preference stock, carrying forward £976. There was a drop in the passenger traffic for the half-year of £1,269 and a decline under goods of £373, but moderate improvement took place in parcels, coal, minerals, and cattle. The principal reason for the larger expenditure was the increased revenue charge for locomotive power. Actually the expenditure was only about £1,200 higher, but a year ago relief from the reserve was given to the amount of £3,000, whereas now the credit is only £1,279, so that the direct charge increases by £2,926. Then carriage and wagon repairs cost £1,478 more, traffic expenses rose £755, Parliamentary expenses £395, and rates and taxes £217. On the other hand, the cost of the Kingstown line arbitration, which in 1905 made away with £2,737, was missing. That money must be accounted well spent, since the company seems to save £6,000 a year under the award. There was no capital expenditure in the half-year, and the debit remains at £74,837. It has been decided to establish experimentally a service of rail motors between Bray and Greystones with a "Halte" at Bray Head. Two cars have been constructed, and will, it is anticipated, be ready for use during the present month.

Neath and Brecon Railway.

For the half-year ended June 30 the gross receipts amounted to £32,445, increase £4,459, and the working expenditure £19,725, increase £1,316, leaving the nett balance up from £9,577 to £12,720. Passengers, parcels, mails, &c., improved by £654, merchandise and live stock rose £618, minerals £3,088, and rent and general interest £104. On the expenditure side the principal advance was in locomotive and carriage and wagon expenses, which showed an increase of £851, traffic and general expenses rose £223, and maintenance £176. From the balance brought forward from the December half-year the directors have paid a full year's interest on the "A2" debenture stock and reserved the remaining sum of £508 for renewals. They now propose to pay interest on the "first" and "A1" debenture stocks the same as for the corresponding period and the half-year's dividend on the "A2" debenture stock, which, as above indicated, had to wait until the current year before receiving its full year's dividend. A sum of £3,542 is then carried forward. There was no capital expenditure in the half-year and nothing is immediately contemplated, so that the existing debit of £1,371 is not likely to be increased.

Charing Cross, Euston, and Hampstead Railway Company.
